Silverblend

Particular description of goods.—Coats, Vests, Trousers, Knickerbockers, and Overcoats for Men, Youths, and Boys.
Claims use since Mar. 1, 1926.

231,114. (CLASS 39. CLOTHING.) J. SCHOENEMAN, INCORPORATED, Baltimore, Md. Filed Oct. 26, 1926. Serial No. 239,271.

Twist Knit

Particular description of goods.—Coats, Vests, Trousers, Knickerbockers, and Overcoats for Men, Youths, and Boys.
Claims use since Mar. 1, 1926.

231,115. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) COMPRESSED SPRUCE PRODUCTS COMPANY, INC., West Orange, N. J. Filed Nov. 19, 1926. Serial No. 240,292.

Particular description of goods.—Pulleys, Gears, and Rollers for Endless-Belt Conveyers, Made from Compressed Spruce.
Claims use since on or about Apr. 1, 1926.

231,116. (CLASS 37. PAPER AND STATIONERY.) THE DIEM & WING PAPER CO., Cincinnati, Ohio. Filed Dec. 2, 1926. Serial No. 240,850.

GUNMETAL KRAFT

Particular description of goods.—Gray Kraft Paper.
Claims use since May, 1926.

231,117. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RUPERT E. BARNETT, Nashville, Tenn. Filed Dec. 13, 1926. Serial No. 241,385.

SOLIFIED BUTTERMILK

Particular description of goods.—Condensed Cultured Buttermilk Animal Food.
Claims use since Sept. 1, 1924.

231,118. (CLASS 38. PRINTS AND PUBLICATIONS.) BRIEF ENGLISH SYSTEMS, INC., New York, N. Y. Filed Jan. 11, 1927. Serial No. 242,655.

Speedwriting

Particular description of goods.—Printed Lessons and Examination Sheets Issued from Time to Time.
Claims use since Dec. 29, 1924.

231,119. (CLASS 39. CLOTHING.) N. Y. MFG. CORP., New York, N. Y. Filed Feb. 8, 1927. Serial No. 244,023.

BOBBY LEE

Particular description of goods.—Boys' Hats and Caps.
Claims use since January, 1920.

231,120. (CLASS 10. FERTILIZERS.) INTERNATIONAL AGRICULTURAL CORPORATION, New York, N. Y. Filed Feb. 12, 1927. Serial No. 244,305.

PREMIUM PRODUCER

Particular description of goods.—Fertilizers.
Claims use since February, 1925.

231,121. (CLASS 39. CLOTHING.) PERSBURY CLOTHING CORP., New York, N. Y. Filed Mar. 11, 1927. Serial No. 245,578.

TAILORED TOT-KOAT

Particular description of goods.—Boys' Suits, Topcoats, Overcoats, and Reefers.
Claims use since June 1, 1926.

231,122. (CLASS 39. CLOTHING.) ALEXANDER & OVIATT, Los Angeles, Calif. Filed Mar. 30, 1927. Serial No. 246,582.

OVIATT MODEL

Particular description of goods.—Outer Suits, Flannel Trousers, Coats, Hats for Men, Neckties, Dress Vests, and Sweaters.
Claims use since 1919.

231,123. (CLASS 39. CLOTHING.) GATES, MILLS & DRISCOLL, INC., Johnstown, N. Y. Filed Apr. 2, 1927. Serial No. 246,830.

CORDSEWN

Particular description of goods.—Gloves Constructed of Leather or Fabric or Combinations of Said Materials.
Claims use since Oct. 15, 1925.

231,124. (CLASS 39. CLOTHING.) NATHAN E. BERMAN, New York, N. Y. Filed Apr. 9, 1927. Serial No. 247,161.

SHRINK-PROOF

Particular description of goods.—Dress, Negligee, and Work Shirts for Men and Boys.
Claims use since about Feb. 18, 1926.

231,125. (CLASS 39. CLOTHING.) NATURES RIVAL CO., Chicago, Ill. Filed Apr. 11, 1927. Serial No. 247,281.

PARISFORM

Particular description of goods.—Women's Fitted Garments Comprising Brassières, Small Corsets, and Combinations of the Same.
Claims use since Feb. 8, 1922.

231,126. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) WILLIAM B. BEUCKMAN, Rochester, N. Y. Filed Apr. 18, 1927. Serial No. 247,593.

Beuckman's

Particular description of goods.—Cleaning Fluids Used for Cleaning Fabrics, to Remove Dirt, Grease, Etc.
Claims use since January, 1912.

231,127. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MARGARET S. TENNENT, doing business as "Hard Cold Hanky Company," Caledonia, N. Y. Filed Apr. 20, 1927. Serial No. 247,761.

HARD COLD HANKY

Particular description of goods.—Emergency Handkerchiefs.
Claims use since Feb. 1, 1926.

231,128. (CLASS 39. CLOTHING.) WAERBEETER NECKTIE CORPORATION, New York, N. Y. Filed May 18, 1927. Serial No. 249,206.

WAERBEETER NECKTIES

Particular description of goods.—Neckties.
Claims use since 1922.

231,129. (CLASS 39. CLOTHING.) ROYAL MANUFACTURING COMPANY, Allentown, Pa. Filed May 19, 1927. Serial No. 249,288.

Princeton

Particular description of goods.—Men's Union Athletic Textile-Fabric Underwear.
Claims use since Oct. 5, 1923.

231,130. (CLASS 39. CLOTHING.) A. S. UNIFORM MFG. CO., INC., Brooklyn, N. Y. Filed May 20, 1927. Serial No. 249,317.

MIDDLESEX BLUES

Particular description of goods.—Men's Military Uniforms.
Claims use since about April, 1923.

REISSUES

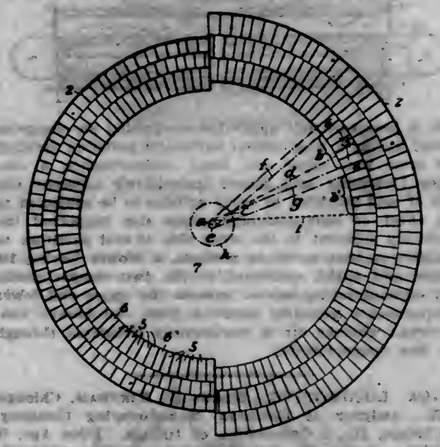
AUGUST 9, 1927.

16,694. EXPANSION PEDESTAL. JOHN N. HELTZEL, Warren, Ohio. Filed Dec. 17, 1925. Serial No. 76,131. Original No. 1,488,633, dated Apr. 1, 1924, Serial No. 639,426, filed May 16, 1923. 43 Claims. (Cl. 25—118.)

20. A device of the character described comprising expansible means to be disposed between flanges of a concrete form rail and clamped against said flanges, and a stake-engaging member connected to said means.

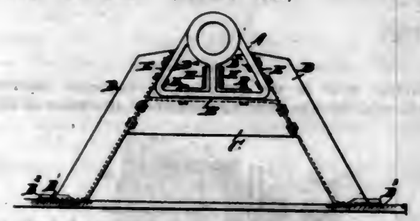
16,696. MEANS FOR STARTING INTERNAL-COMBUSTION ENGINES. CHARLES FREDERICK HEYWOOD, Detroit, Mich. Filed Jan. 11, 1926. Serial No. 80,682. Original No. 1,481,091, dated Jan. 15, 1924, Serial No. 495,916, filed Aug. 27, 1921. 15 Claims. (Cl. 60—16.) Division A.

1. In a device for starting and applicable to the operation of internal combustion engines, means for supplying compressed fluid, means for supplying fuel, receiving means for said fluid and fuel, said last mentioned means provided with means for distributing compressed starting fluid to one cylinder when its piston is on its working stroke for starting by the expansion of said fluid, and a compressed carburetted mixture of fluid and fuel to another cylinder when its piston is on its compression stroke, said distributing means being capable of effecting the continued distribution of said fluid and mixture to working and compression cylinders in cyclic manner during the operation of the engine.



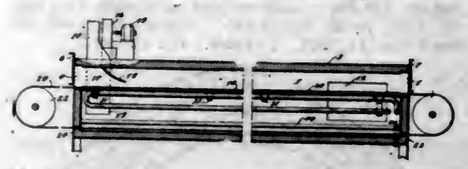
16,696. MEANS FOR STARTING INTERNAL-COMBUSTION ENGINES. CHARLES FREDERICK HEYWOOD, Detroit, Mich. Filed Jan. 11, 1926. Serial No. 80,682. Divided and this application filed June 11, 1927. Serial No. 198,287. Original No. 1,481,091, dated Jan. 15, 1924, Serial No. 495,916, filed Aug. 27, 1921. 10 Claims. (Cl. 60—16.) Division B.

3. In a device for starting and applicable to the operation of internal combustion engines, a distributing receiver, means for supplying carburetted fluid under compression to said receiver, inlets individual to each cylinder, a rotary valve in the receiver for controlling the inlets, a port in said valve permitting admission of the carburetted fluid to the cylinders in sequence, smaller ports in said valve permitting concurrent admission of the



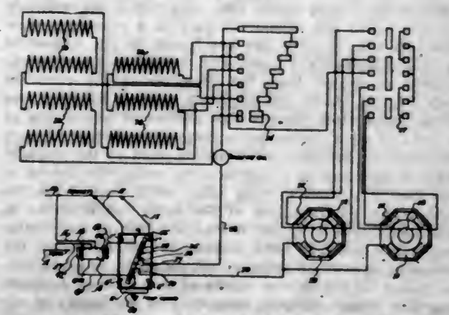
carburetted fluid to the inlets of the cylinders next in progressive firing order, and means for rotating said valve.

16,697. BLAST FURNACE. WALLACE A. STUART, Cleveland, Ohio, assignor of one-half to Brooke L. Jarrett, Sewickley, Pa. Filed June 27, 1927. Serial No. 201,943. Original application filed Dec. 27, 1924, Serial No. 758,483. Continued and application filed Jan. 26, 1926, Serial No. 83,847. Original No. 1,632,633, dated June 14, 1927. 2 Claims. (Cl. 72—93.)



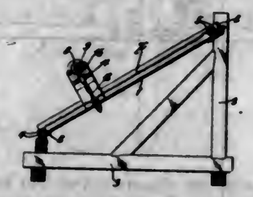
2. A circular furnace wall construction of nonuniform diameter having blocks laid in horizontal courses, of a plurality of rows, each row containing a complete set of key blocks having radial sides and which are segments of a circle and are capable of turning a complete circle when laid side by side, the key blocks in the respective rows being segments of concentric circles, each row whose diameter is greater than the diameter of the circle of which its key blocks are segments, having at least one straight-sided block therein, the number of key blocks in the rows of each course being integral multiples of each other and the circumferential spaces filled by the straight blocks in each row of a course being equal, the blocks in each row of a course being offset with respect to the blocks of an adjacent row of the same course so as to break joints therewith, the blocks in a row of one course being offset laterally with respect to the blocks of the corresponding row of the next course so as to break vertical joints therewith, the blocks of each row of a course being of a length different from that of the blocks of the corresponding row in the next adjacent course, so that the joints between the ends of the blocks are broken vertically.

16,698. VEHICLE SHIPPING JACK OR BRACKET. ISADOR LEO FRIEDLAENDER, Detroit, Mich. Filed May 13, 1925. Serial No. 30,122. Original No. 1,521,613, dated Jan. 6, 1925, Serial No. 660,431, filed Aug. 31, 1923. 13 Claims. (Cl. 105—368.)



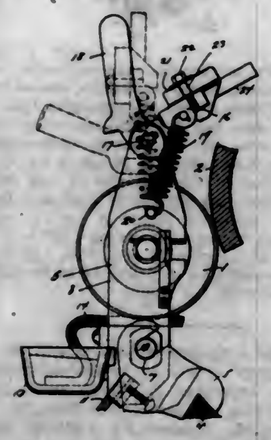
1. In a device of the character described, a single unit fitting tapped to receive a screw threaded part of the vehicle and including combined attaching and operating members integral with said unit whereby to manipulate the unit for attaching the fitting to a support and the screw threaded part of the vehicle.

16,699. APPARATUS FOR HEATING, COOLING, OR DRYING MATERIALS. VERNON CANO, Elizabeth, N. J. Filed Oct. 28, 1926. Serial No. 144,884. Original No. 1,502,078, dated July 13, 1926, Serial No. 55,432, filed Sept. 10, 1925. 4 Claims. (Cl. 34—12.)



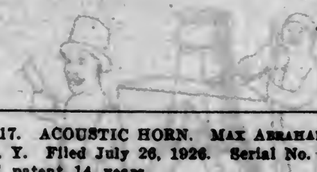
3. A heat exchange apparatus comprising an elongated tunnel having a longitudinal horizontal partition dividing the same into upper and lower compartments, a conveyor traversing said tunnel immediately adjacent one side of said partition to carry articles to be subjected to the effect of heat exchange, pipes also supported immediately adjacent to the other side of said partition to circulate a heat exchange medium, a blower having its intake and outlet connected to the two compartments, and communicating means between the upper and lower compartments remotely situated from the blower connections; whereby air is continuously circulated through the two compartments.

16,700. LOCOMOTIVE. SIDNEY W. FARNHAM, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 6, 1927. Serial No. 181,578. Original No. 1,558,971, dated Oct. 27, 1925, Serial No. 758,023, filed Dec. 26, 1924. 2 Claims. (Cl. 191—8.)



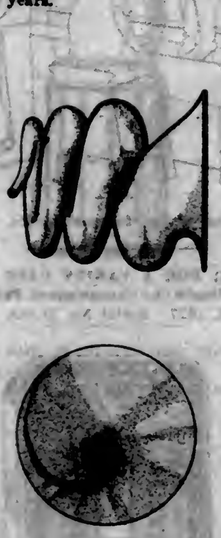
1. In a gathering locomotive provided with control and reverse drums, and with a motor circuit adapted to be selectively connected with a source of power supply through a trolley or a gathering reel, a double conductor cable and rotating contactor devices associated with said gathering reel, and switching means independent of said reverse drum for completing said motor circuit through the trolley and a ground connection on the locomotive frame in one position, and completing the circuit through the double conductor cable and contact devices on the gathering reel, when in a second position, said last named circuit being wholly disconnected from said locomotive frame.

16,701. METHOD OF AND APPARATUS FOR SCREENING GRANULAR MATERIALS. RICHARD A. LEAHY, Bonne Terre, Mo. Filed Dec. 18, 1923. Serial No. 681,441. Original No. 1,456,067, dated May 22, 1923, Serial No. 456,431, filed Mar. 28, 1921. 18 Claims. (Cl. 209—347.)



5. The method of screening granular materials comprising, vibrating a stretched screening medium by downward deflection thereof intermediate its ends, releasing the same, suddenly arresting each upward movement of the medium and before it reaches the end of its otherwise normal upward vibrating movement, and passing the material over the vibrating medium, whereby the particles will be thrown upwardly with forces proportional to their masses.

16,702. SLITTING MEANS. ROBERT MCC. JOHNSTONE, Roselle Park, N. J., assignor to Cameron Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed June 16, 1927. Serial No. 199,387. Original No. 1,597,800, dated Aug. 31, 1926, Serial No. 636,134, filed May 2, 1923. 7 Claims. (Cl. 164—60.)

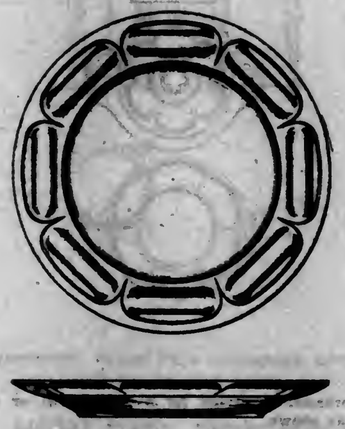


2. Slitting means comprising: a backing roll, a score cutter, a pivotal support, an upright cutter supporting lever mounted at its lower end on the pivotal support, and a spring member, for pressing the cutter against the backing roll, connected to the lower end of the cutter supporting lever.

DESIGNS

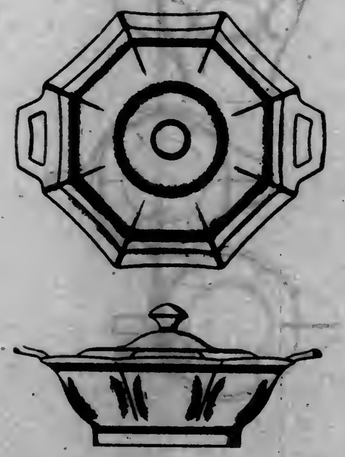
AUGUST 9, 1927.

73,217. ACOUSTIC HORN. MAX ABRAHAMS, New York, N. Y. Filed July 26, 1926. Serial No. 18,488. Term of patent 14 years.



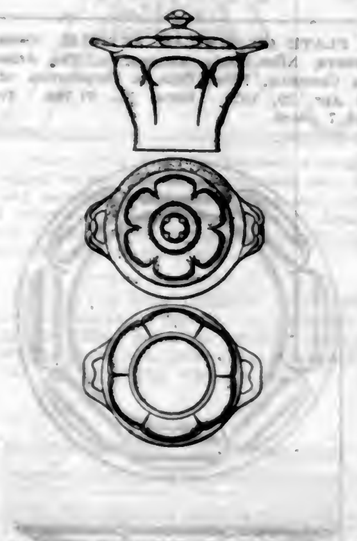
The ornamental design for an acoustic horn as shown.

73,218. ACOUSTIC HORN. MAX ABRAHAMS, New York, N. Y. Filed Aug. 13, 1926. Serial No. 18,785. Term of patent 14 years.



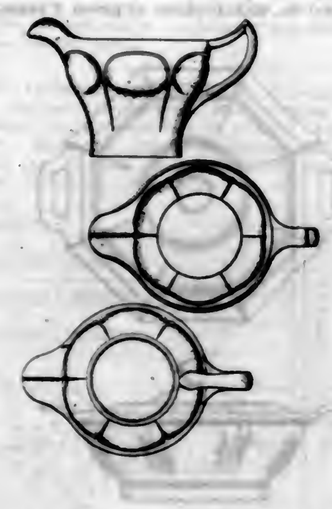
The ornamental design for an acoustic horn as shown.

73,219. PLATE OR SIMILAR ARTICLE. GEORGE R. AHRENDTS, Niles, Ohio, assignor to The Atlas-Globe China Company, Niles, Ohio, a Corporation of Ohio. Filed Apr. 29, 1927. Serial No. 21,789. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

73,220. CASSEROLE. GEORGE R. AHRENDTS, Niles, Ohio, assignor to The Atlas-Globe China Company, Niles, Ohio, a Corporation of Ohio. Filed June 6, 1927. Serial No. 22,341. Term of patent 7 years.



The ornamental design for a casserole as shown.

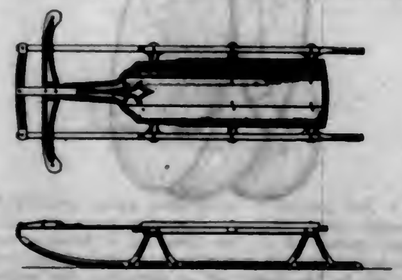
73,221. SUGAR BOWL OR SIMILAR ARTICLE. GEORGE R. AHRENDTS, Niles, Ohio, assignor to The Atlas-Globe China Company, Niles, Ohio, a Corporation of Ohio. Filed June 6, 1927. Serial No. 22,342. Term of patent 7 years.

The ornamental design for a sugar bowl or similar article, as shown.

73,222. PITCHER. GEORGE R. AHRENDTS, Niles, Ohio, assignor to The Atlas-Globe China Company, Niles, Ohio, a Corporation of Ohio. Filed June 6, 1927. Serial No. 22,343. Term of patent 7 years.

The ornamental design for a pitcher, as shown.

73,223. STATUETTE. SAMUEL I. BERGER, Newark, N. J. Filed May 14, 1925. Serial No. 13,443. Term of patent 7 years.



The ornamental design for a statuette, as shown.

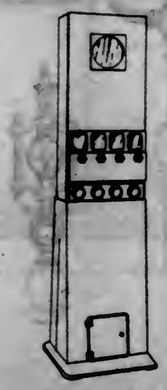
73,224. COVER FOR A VANITY CASE OR SIMILAR ARTICLE. PERCY J. CALLOWHILL, Providence, R. I. Filed Mar. 28, 1927. Serial No. 21,868. Term of patent 7 years.

The ornamental design for a cover for a vanity case or similar article as shown.

73,225. SLED. WILLIAM HENRY ELFRETH, Westtown, and GUSTAV B. WEISS, Philadelphia, Pa. Filed Jan. 20, 1927. Serial No. 20,447. Term of patent 14 years.

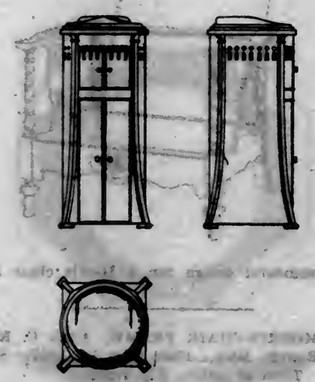
The ornamental design for a sled, substantially as shown.

73,226. BOTTLE. MORRIS FOX, Norwich, Conn. Filed May 19, 1927. Serial No. 22,099. Term of patent 14 years.



The ornamental design for a bottle, as shown.

73,227. DIAL FOR WATCHES OR CLOCKS. JULES JACOT GUILLARMOD, New York, N. Y. Filed Mar. 1, 1926. Serial No. 16,706. Term of patent 14 years.

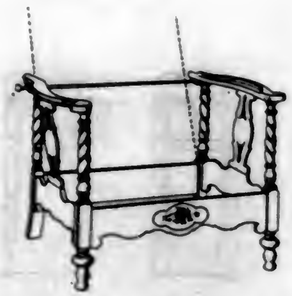


The ornamental design for a dial for watches or clocks.

73,228. DISPENSING-MACHINE CASE. PENROSE R. HOOPES, Hartford, Conn., assignor to The New England Enameling Company, Inc., Middletown, Conn., a Corporation of Connecticut. Filed May 3, 1926. Serial No. 17,538. Term of patent 14 years.

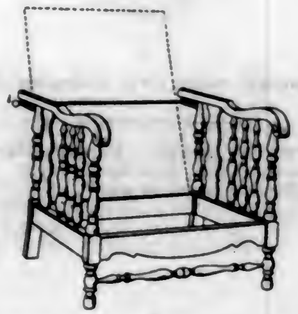
The ornamental design for a dispensing machine case, as shown.

73,229. PHONOGRAPH CABINET. ALEXANDER HUDSON, Round Lake, Minn. Filed Apr. 5, 1927. Serial No. 21,458. Term of patent 14 years.



The ornamental design for a phonograph cabinet, as shown.

73,230. DISPLAY STAND. WILLIAM EVANS KEHOE, San Francisco, Calif. Filed Apr. 20, 1927. Serial No. 21,650. Term of patent 14 years.

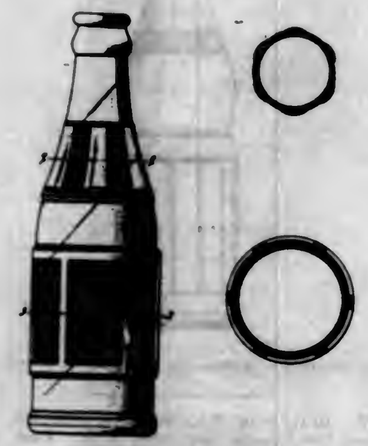


The ornamental design for a display stand, as shown.

73,231. MORRIS-CHAIR FRAME. CARL C. KUSTERER, Grand Rapids, Mich. Filed Mar. 14, 1927. Serial No. 21,135. Term of patent 3½ years.

The ornamental design for a Morris chair frame as shown.

73,232. MORRIS-CHAIR FRAME. CARL C. KUSTERER, Grand Rapids, Mich. Filed Mar. 14, 1927. Serial No. 21,136. Term of patent 3½ years.



The ornamental design for a Morris chair frame as shown.

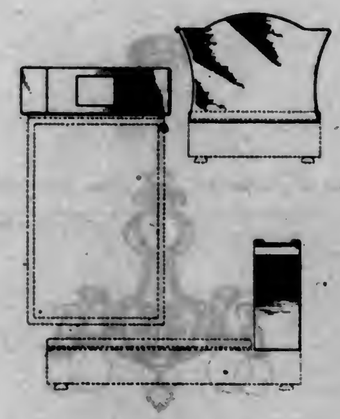
73,233. BOTTLE. JOHN P. LASATER, Paris, Tenn. Filed May 19, 1927. Serial No. 22,098. Term of patent 7 years.

The ornamental design for a bottle, as shown.

73,234. BOTTLE. FRANK R. MILLER, Evansville, Ind., assignor to The Graham Glass Company, Evansville, Ind., a Corporation of Indiana. Filed May 16, 1927. Serial No. 22,003. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

73,235. LIGHTING FIXTURE. THEODORE J. NELSON, Chicago, Ill., assignor to Colonial Lamp & Fixture Works, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1927. Serial No. 21,625. Term of patent 3½ years.

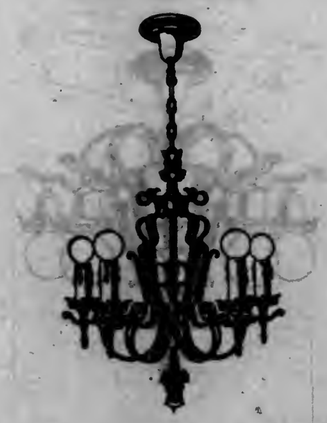


The ornamental design for a lighting fixture, as shown.

73,236. VALVE BODY. HENRY D. RAHLING, East Aurora, N. Y., assignor to Steel Drum Accessories Corporation, Buffalo, N. Y., a Corporation of New York. Filed June 12, 1924. Serial No. 9,867. Term of patent 14 years.

The ornamental design for a valve body, substantially as shown.

73,237. SCALE HEAD. JOHN W. ROCKEFELLER, Jr., New York, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1927. Serial No. 20,905. Term of patent 14 years.



The ornamental design for a scale head substantially as shown.

73,238. PLATE. FRANK H. SEBRING, Jr., Salem, Ohio, assignor to The Salem China Co., Salem, Ohio. Filed May 26, 1927. Serial No. 22,174. Term of patent 7 years.

The ornamental design for a plate, as shown.

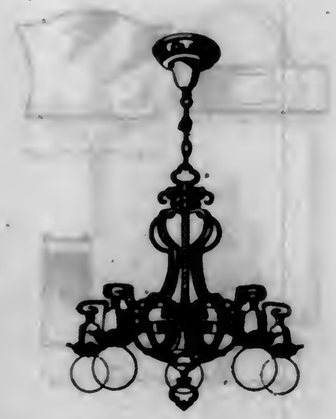
73,239. LIGHTING FIXTURE. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1927. Serial No. 21,592. Term of patent 3½ years.

The ornamental design for a lighting fixture as shown.

73,240. LIGHTING FIXTURE. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1927. Serial No. 21,593. Term of patent 3½ years.

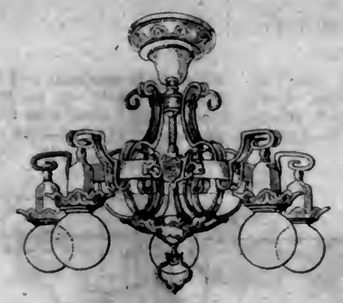
The ornamental design for a lighting fixture as shown.

73,241. LIGHTING FIXTURE. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1927. Serial No. 21,594. Term of patent 3½ years.



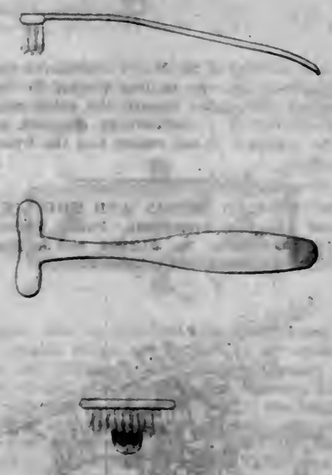
The ornamental design for a lighting fixture as shown.

73,242. LIGHTING FIXTURE. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1927. Serial No. 21,595. Term of patent 3½ years.



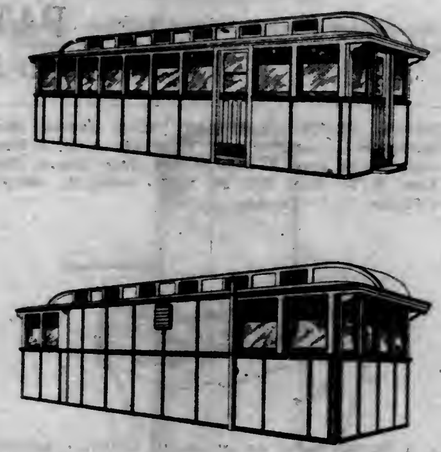
The ornamental design for a lighting fixture as shown.

73,243. LIGHTING FIXTURE. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1927. Serial No. 21,596. Term of patent 3½ years.



The ornamental design for a lighting fixture as shown.

73,244. LIGHTING FIXTURE. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 14, 1927. Serial No. 21,597. Term of patent 3½ years.



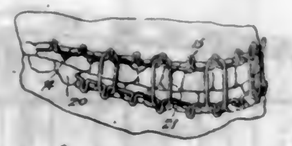
The ornamental design for a lighting fixture as shown.

73,245. TOOTHBRUSH. ROYDEN EDWARD STRAEHLY, Chicago, Ill. Filed May 18, 1925. Serial No. 13,478. Term of patent 14 years.

The ornamental design for a toothbrush, as shown.

73,246. DINING-CAR BODY. CHARLES A. WARD, Silver Creek, N. Y. Filed Jan. 17, 1927. Serial No. 20,415. Term of patent 3½ years.

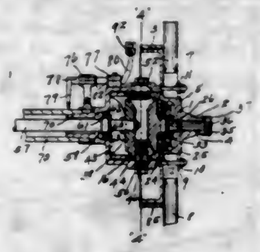
The ornamental design for a dining car body as shown.



73,247. CATAFALQUE. JAMES R. ZENTZ, Los Angeles, Calif., assignor of one-half to Edgar B. McCormick, Los Angeles, Calif. Filed Nov. 29, 1926. Serial No. 19,873. Term of patent 3½ years.

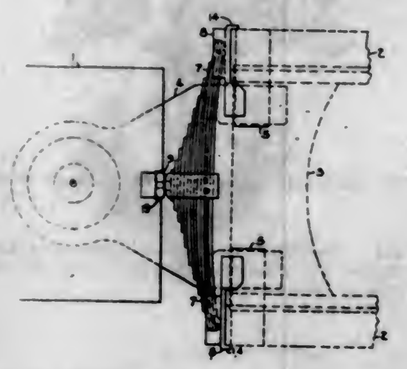
The ornamental design for a catafalque, as shown.

PATENTS



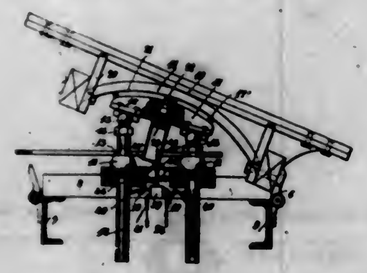
GRANTED AUGUST 9, 1927.

1,638,006. FRACTURE SPLINT. HUGO ADERER, East Orange, N. J., assignor to J. F. Jelenko & Co., a Firm composed of Jesse F. Jelenko and Hugo Aderer, New York, N. Y. Filed Feb. 26, 1926. Serial No. 90,894. 4 Claims. (Cl. 128—89.)



1. A fracture splint or orthodontic appliance comprising an arch shaped to fit the dental arch, and a wire bent upon itself to form a series of loops, said wire between the loops being secured to the arch.

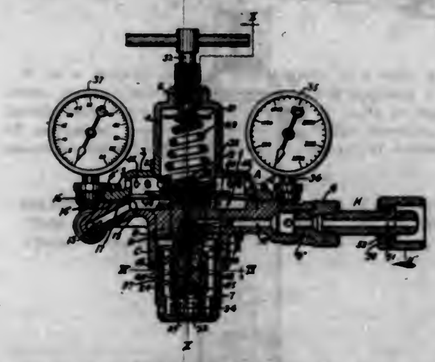
1,638,007. FRONT-WHEEL-DRIVE BRAKE MECHANISM. CHARLES S. ALLEN, San Francisco, Calif., assignor of one-twentieth to John Sperekas and Frank Coures, Cincinnati, Ohio; Therron J. Allen administrator of the estate of said Charles S. Allen, deceased. Filed Apr. 26, 1924. Serial No. 709,091. 2 Claims. (Cl. 180—43.)



1. In a four wheel motor-drive as described the combination of a wheel hub formed with a spindle bearing and a brake drum, the said spindle bearing being provided with a fluted spindle aperture; a primary yoke formed with pivot apertures journaled in said wheel hub; a gear housing provided with an axle aperture secured to said primary yoke; a secondary yoke provided with pivot apertures and flanges mounted over said gear housing, the said flanges partially covering the axle aperture and forming a dust-proof housing; the pivot apertures of said secondary yoke are aligned with pivot apertures of said primary yoke and have pivots mounted therein; an axle passed thru the secondary yoke, journaled in said secondary yoke and extended into said gear housing; a gear secured to said axle; a pinion rotatively mounted on one of the pivots meshing with said gear on said axle; a gear provided with a fluted spindle journaled in said primary yoke, said gear meshing with said pinion and having its fluted spindle secured in said fluted aperture of said hub; and braking means mounted upon said brake drum and said secondary yoke.

1,638,008. BUFFER. OSCAR E. BERGENDAHL and ROBERT A. RIMEL, Erwin, Tenn., assignors of one-third to William S. Moseley, Erwin, Tenn. Filed June 25, 1926. Serial No. 118,485. 10 Claims. (Cl. 105—175.)

1. In a locomotive of the Mallet articulated type, means disposed between the two engines thereof to cushion the movement of one engine toward the other engine, said means consisting of a horizontally disposed spring engaging the cylinders of one engine and the frames of the other engine.



1,638,009. TIPPING WAGON AND THE LIKE. JEAN ETIENNE FELIX CAMBESSÉDÈS, Paris, France. Filed Jan. 16, 1923, Serial No. 612,908, and in France Jan. 24, 1922. 5 Claims. (Cl. 298—22.)

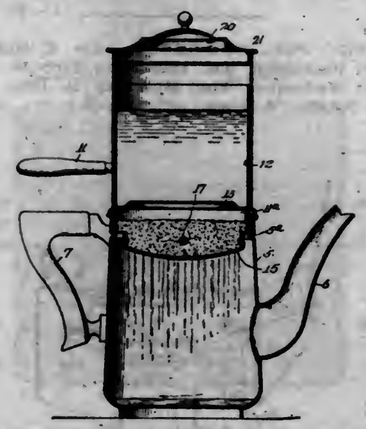
5. In an apparatus for tipping the floor of a vehicle, cooperating concave and convex members carried by said floor and the chassis of said vehicle respectively, an antifriction roller carried by one of said members and coacting with the other and a plurality of jacks for elevating said convex member relatively to said chassis.

1,638,010. REDUCING VALVE. ARTHUR J. FAUSEK and IRWING F. FAUSEK, St. Louis, Mo. Filed Nov. 2, 1923. Serial No. 672,319. 9 Claims. (Cl. 50—10.)

3. A reducing valve comprising a housing having an inlet passageway and a discharge passageway, and an automatic valve device for opening and closing communication between said passageways, said valve device including an abutment member having a port formed therethrough and a closure member, and means whereby the passage of fluid through the port formed in said abutment member may be controlled when said closure member is in an open position, said last mentioned means comprising valve mechanism including a valve head, a valve stem on which said valve head is mounted, guide

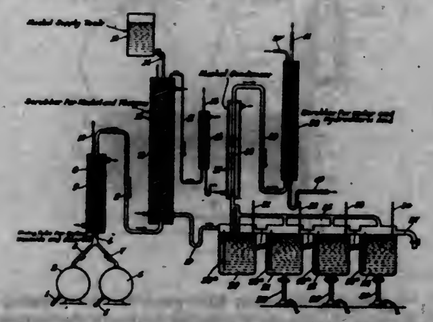
members secured to said valve stem and adapted to contact with the wall of the port in said abutment member, a valve seat, and a spring associated with said valve head and arranged to urge said valve head against said valve seat, said valve stem having a flared lower end portion which contacts with said closure member whereby said valve head and said closure member move simultaneously.

1,638,011. MITER BOX. CLARK GRUBBS, Santa Ana, Calif. Filed June 9, 1926. Serial No. 114,630. 1 Claim. (Cl. 143—89.)



In a miter box as described, the combination with a table, a lockable swivel bar pivoted to the underside of said table and adjustable saw guides releasably secured to said swivel bar, of a plurality of adjustment holes provided in said table in spaced relation to the longitudinal medial line of said table; and adjustment pins releasably engaging said adjustment holes, whereby the work may be centered on said table with respect to said saw guides.

1,638,012. BLANK FOR GEARS AND METHOD OF MAKING THE SAME. ADDISON C. HOOF, Hinsdale, Ill., assignor to General Electric Company, a Corporation of New York. Filed Apr. 11, 1924. Serial No. 705,742. 25 Claims. (Cl. 154—43.)

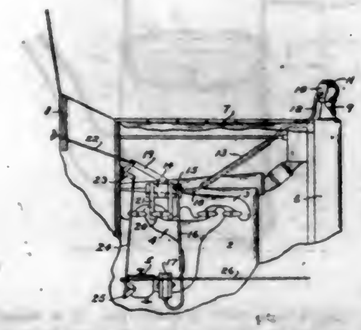


1. As an article of manufacture, a blank for gears comprising relatively short pieces of cord made of textile material which are arranged in layers perpendicular to the axis of the blank, and non-flexible means for holding the cord in a highly compressed state to form a rigid structure.

1,638,013. COFFEE MAKER. THOMAS MAGLIANO, River Forest, Ill. Filed Jan. 25, 1926. Serial No. 83,429. 2 Claims. (Cl. 53—3.)

1. The combination with a coffee pot, of a vessel for hot water having a cylindrical wall, a closed bottom, and an open top, the upper end of the wall being adapted, when the vessel is inverted, to telescope and connect with the upper end of the pot to discharge into it, and having an annular outwardly bulged shoulder indented therein, and a perforated container for ground coffee fitting into the vessel and invertible therewith and provided with a cylindrical wall extending downwardly into the vessel, said shoulder being provided with a leak-port extending therethrough, the port being adapted to admit air into the vessel and around said last mentioned cylindrical wall when the vessel and container are in their inverted position.

1,638,014. MANUFACTURE OF ALKYL CARBONATES. HARRY GILBERT MITCHELL, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed July 14, 1924. Serial No. 725,835. 12 Claims. (Cl. 260—106.)

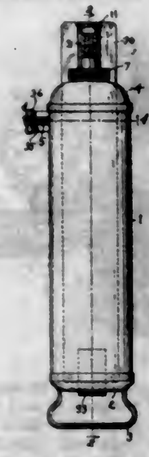


1. The process which comprises forming phosgene from producer gas and chlorine with the aid of a catalyst, producing an alkyl carbonate from the phosgene and an

aliphatic alcohol and eliminating the inert gases from the product.

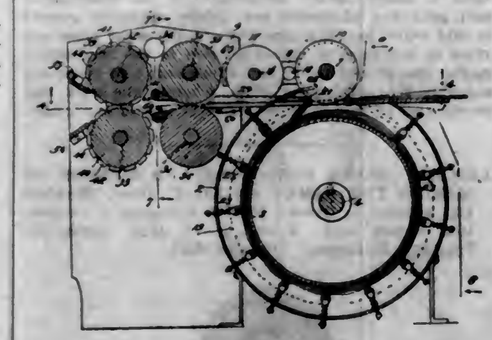
7. The process which comprises continuously forming phosgene from carbon monoxide and chlorine, bringing the vapors into contact with a liquid aliphatic alcohol so as to form a chlorocarbonate and heating the chlorocarbonate and an alcohol while continually carrying off the dialkyl carbonate formed.

1,638,015. FUEL ECONOMIZER. RIN N. MURAKAMI, Port Washington, Wis., assignor to Harry W. Bolens, Port Washington, Wis. Filed May 24, 1922. Serial No. 563,250. 6 Claims. (Cl. 123—25.)



1. In combination with a water cooled internal combustion engine having a radiator, a carbureter, intake and exhaust manifolds, and means for securing said manifolds to the engine, of a fuel economizer comprising a vapor collector associated with the radiator filling orifice, a vapor heater mounted upon the exhaust manifold and held in place by the manifold securing means, a vapor injector between the carburetor and the intake manifold, and connections between said collector, said heater and said injector.

1,638,016. HAIR-PIECE ATTACHMENT. JESSE OPPENHEIM, New York, N. Y., assignor to Hyman & Oppenheim, New York, N. Y., a Corporation of New York. Filed Feb. 16, 1927. Serial No. 168,592. 4 Claims. (Cl. 132—53.)

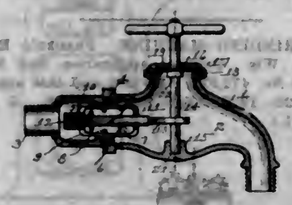


1. The herein described hair piece for the dressing of bobbed hair comprising a gripping device in the nature of a closely coiled spiral spring, means attached to the ends of the spring for stretching it to enable the individual coils thereof to enter the natural hair like a comb, and a mass of auxiliary hair carried by the stretching means aforesaid.

1,638,017. FIRE EXTINGUISHER. JOHN RAUS, Cleveland, Ohio, assignor, by mesne assignments, to The National Formetal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 22, 1923. Serial No. 614,123. Renewed May 21, 1927. 1 Claim. (Cl. 169—31.)

The combination with a fire extinguisher comprising a liquid container having a nozzle near one end, a reciprocable plunger projecting from one end, and a handle at the opposite end, of a bracket having near one end a pair of arms adapted to secure said plunger in supporting and movement preventing relation, a flexible arm at the opposite end of said bracket to engage said receptacle yieldingly, and a spring arm projecting laterally from one side of said bracket and having at its free end a pad adapted to cover said nozzle.

1,638,018. MACHINE FOR STRIPPING AND CUTTING TOBACCO LEAVES. DAVID H. SIMPSON, New York, N. Y. Filed Dec. 22, 1923. Serial No. 682,151. 18 Claims. (Cl. 131—57.)



1. In a machine for stripping and cutting tobacco leaves the combination of a cutting mechanism to sever the leaf from its stem, means for cutting the stem into strips, means for advancing the stem from the leaf severing mechanism to the stem cutting mechanism, and means for transmitting power to said leaf severing and stem cutting means.

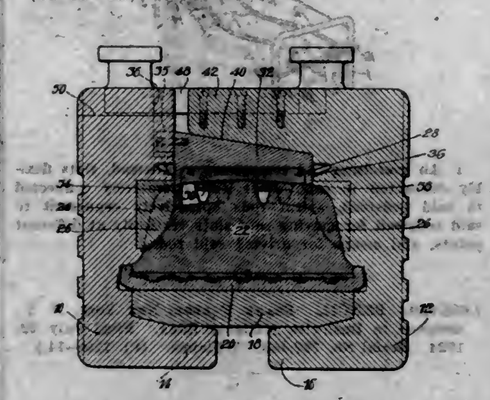
1,638,019. ATTACHING MEANS FOR LOAD-LIFTING DEVICES. ARTHUR E. SMALL, Oak Park, Ill. Filed Mar. 17, 1926. Serial No. 95,422. 11 Claims. (Cl. 105—355.)

2. In a railway car, the combination of a roof, a roof frame member having oppositely disposed portions, a ring loosely suspended from said portions so as to be capable of movement longitudinally of the frame member, and means to temporarily restrict said longitudinal movement.

1,638,020. FAUCET. FREDERICK TIBBLE, Grand Rapids, Mich. Filed Sept. 16, 1925. Serial No. 56,755. 21 Claim. (Cl. 251—40.)

In a structure of the character described: a pipe having an internally and externally threaded end portion; a body internally threaded on the pipe's externally threaded end portion and having a fluid passage, a bearing whose axis extends transversely to the body's longitudinal direction, and an opening disposed oppositely to said bearing; a member externally threaded on the pipe's internally threaded end portion and having a fluid passage and a valve seat; a valve carried by said member longitudinally movable into and out of seating position on the valve seat; a removable cap adapted to close said opening and having a rotary bearing concentric with the first-mentioned bearing; a rotatable shaft journalled in the second-mentioned bearing and axially-removably journalled in the first-mentioned bearing and carrying an eccentric cam engaging the valve to move the same, the shaft and cam being movable into and out of the body through said opening.

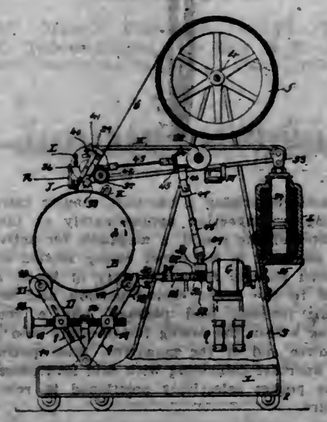
1,638,021. METHOD OF TREATING HYDROCARBONS. ALEXANDER B. WAY, Lynn, Mass., assignor to Lewis A. Way, Pittsburgh, Pa. Filed Mar. 10, 1924. Serial No. 700,381. 13 Claims. (Cl. 196—4.)



1. The process of treating hydrocarbons to demulsify the same and increase their fluidity which consists in subjecting the initial hydrocarbon to the action of a mixture of naphthalene and nitro-benzol in solid state and divided form.

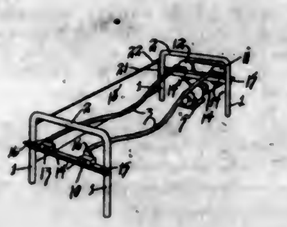
4. The process of treating hydrocarbon, oils to demulsify the same and increase their fluidity which consists in subjecting the initial hydrocarbon to the action of a mixture including a crystalline aromatic hydrocarbon and nitro-benzol, said mixture being in solid state and divided form.

1,638,022. MATERIAL FOR THE TREATMENT OF HYDROCARBONS. ALEXANDER B. WAY, Lynn, Mass., assignor to Lewis A. Way, Pittsburgh, Pa. Filed Mar. 19, 1924. Serial No. 700,382. 4 Claims. (Cl. 252—1.)



1. As an article of manufacture for the treatment of hydrocarbons to demulsify the same and increase their fluidity, a material comprising naphthalene, and a nitrated aromatic hydrocarbon in the primary stage of nitration associated with the naphthalene as the principal active agent of the material.

1,638,023. TIRE MOLD. HARRY WILLSHAW, Buffalo, N. Y., assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Oct. 13, 1924. Serial No. 743,184. 2 Claims. (Cl. 18—44.)



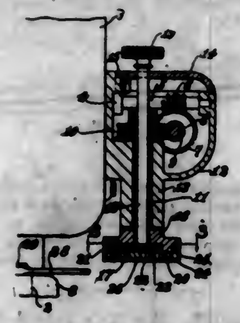
1. A tire mold including top and bottom rings of relatively tough metal having die cast side pieces secured at peripherally spaced intervals to each of said mold rings, a supporting shell adapted to be clamped between the mold rings and an unmachined cast tread ring secured to said shell and having integral projections and depressions adapted to serve as a mold for the tread surface of the tire.

1,638,024. ARC-WELDING MACHINE. HARRY R. WOODROW, New York, N. Y., assignor to Thomas E. Murray, New York, N. Y. Filed June 18, 1919. Serial No. 305,089. 12 Claims. (Cl. 219—8.)

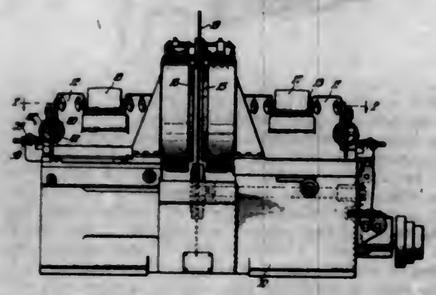
1. An arc welding machine, comprising means for rotating the work, a fusible electrode, and mechanism for continuously feeding said fusible electrode to the welding joint, the said rotating means comprising two groups of work supporting rolls, and means for driving one of said groups.

1,638,025. EXERCISING BED. WALTER W. EVERTS, Fort Worth, Tex., assignor to Sid Post, C. H. Clarke, and A. G. McMath. Filed June 29, 1926. Serial No. 119,843. 5 Claims. (Cl. 128—33.)

1. An exercising bed comprising a bedstead, slats flexibly connected to each other and operatively connected to said bedstead, spiral rods operatively connected to said bedstead for moving said slats vertically at different points, and means for driving said rods.



1,638,026. PENCIL. FRANK FURRDY, New York, N. Y., assignor to Bushwick National Bank. Filed July 22, 1924. Serial No. 727,459. 7 Claims. (Cl. 120—14.)

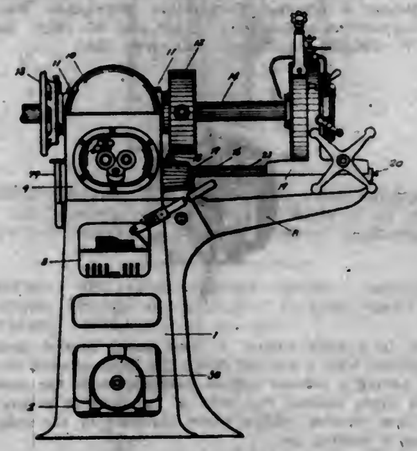


3. A pencil comprising a two-part tubular casing, the parts having a connection approximately at the longitudinal center of the pencil, a magazine for active leads rotatively mounted in the upper casing section and providing spaced pockets for a plurality of leads, a member located in the lower casing portion and having a longitudinal, inclined lead passage, and a removable spacing plug within the casing intermediate said member and the lower end of the magazine, said spacing plug having an aperture coinciding with said lead passage and a magazine pocket selectively positioned in relation to said aperture.

1,638,027. FAN-OSCILLATING MECHANISM. JOHN F. GALVIN and WILLIAM B. KOCHNER, St. Louis, Mo., assignors to Galvin Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed July 16, 1925. Serial No. 43,925. 10 Claims. (Cl. 230—1.)

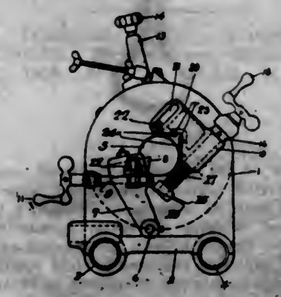
1. In a fan having a base and a motor thereon, oscillating mechanism comprising, a head connected to be driven by the motor, a crank mounted for adjustment on said head, an element mounted on said head and having an adjusting connection with said crank, and a manipulative member having a stem extending downwardly toward and connected to operate said element.

1,638,028. GRINDING MACHINE. FREDERIC E. GARDNER, Beloit, Wis. Original application filed May 27, 1921, Serial No. 472,977. Divided and this application filed July 20, 1925. Serial No. 44,729. 6 Claims. (Cl. 51—111.)



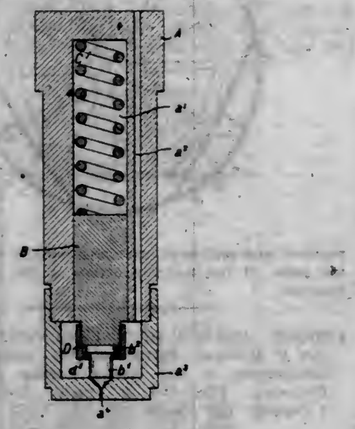
1. A grinding machine having, in combination, a main base, a support pivotally mounted thereon to swing in one direction, means for adjustably fixing said support in different positions, a second support pivotally mounted on the first support for adjustment in a different direction, means for adjusting the second support into different positions with relation to the first support, a carriage slidable on the second support, and a rotary grinding element mounted on said carriage.

1,638,029. ROLLER BEARING. MAURIZIO GUIDI, Savona, Italy. Filed Dec. 24, 1925, Serial No. 77,536, and in Italy Feb. 5, 1925. 5 Claims. (Cl. 308—207.)



1. A roller bearing for a rotating shaft comprising in combination, a plurality of links forming a connected chain, a roller rotatably secured in each of said links, a pair of rings forming a concave race, each of said links having a convex portion adapted to rest in said race, means for connecting the ends of said chain, and means for moving said rings relatively to each other.

1,638,030. PIPE-THREADING MACHINE. LESLIE S. HALL, Brantford, Ontario, Canada, assignor to Williams Tool Corporation, Erie, Pa. Filed Feb. 18, 1924. Serial No. 693,604. 3 Claims. (Cl. 10—89.)



3. A threading machine comprising a base provided with a pair of parallel supports projecting therefrom, a head and carriage slidable on said supports, a hollow boss on said base beneath said supports, a removable bed beneath said head supported at one end by said supports and at the opposite end by said hollow boss, said bed having a projecting trough receivable in said boss.

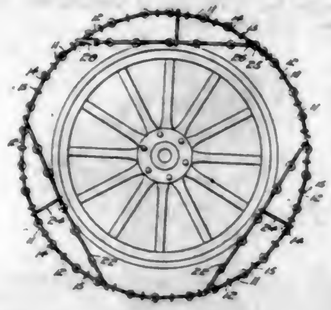
1,638,031. STEADYING BLOCK FOR THREADING MACHINES AND THE LIKE. LESLIE S. HALL, Erie, Pa., assignor to Williams Tool Corporation, Erie, Pa. Original application filed Feb. 18, 1924, Serial No. 693,604, and in Canada Mar. 20, 1924. Divided and this application filed Mar. 25, 1925. Serial No. 18,249. 1 Claim. (Cl. 10—89.)

In combination with a die head, having an opening therethrough, bearings on said head projecting laterally from one face thereof, a threaded shaft rotatable in said bearing, a threaded sleeve encircling said shaft adjacent said face, and adapted to travel on said shaft, and a single laterally extending flange on said sleeve adjacent to and parallel with said face, provided with a V-shaped steadying surface adapted to move over said opening, a guide slot in the free end of said flange parallel with said shaft, and a pin carried by said face projecting through said slot.

1,638,032. FUEL-INJECTION DEVICE FOR INTERNAL-COMBUSTION ENGINES. KARL HIMMELSBACH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 26, 1925, Serial No. 11,813, and in Germany Feb. 27, 1924. 2 Claims. (Cl. 299—133.)

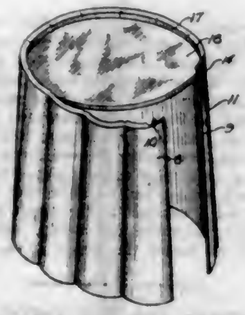
1. A fuel injection device for internal combustion engines of the kind referred to, consisting of a fuel valve comprising a casing, a valve needle and a conical seat for the needle, the valve needle being made up of two superimposed separate parts, the upper part constituting a spring-pressed steering piston mounted for reciprocation in the casing and the lower part forming the valve proper, and means connecting the two needle parts in such a manner as to hold them against tilting movement with relation to each other, but to allow the lower part to move radially with relation to the upper part in all directions so that the valve will always adjust itself centrically to its seat under the action of the valve spring.

1,638,033. MEANS FOR RENOVATING PRINTER'S TYPE. ISIDORE HIRSCH, New York, N. Y. Filed Oct. 14, 1926. Serial No. 141,458. 1 Claim. (Cl. 141—1.)



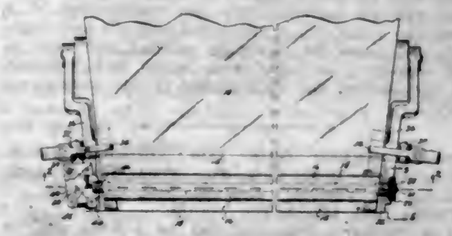
Type cleaning apparatus of the character designated, comprising a wash-tray formed with a series of reticulated type pockets coincident in number and arrangement with the individual type box compartments of a compositor's type case, a reticulated cover for said wash-tray, and means for detachably securing said cover to said wash-tray, the latter being formed with trunnions for the purpose and substantially in the manner set forth.

1,638,034. TREAD GRIP FOR VEHICLE TIRES. CARLTON L. HOWE, York, Pa. Filed Mar. 1, 1922, Serial No. 540,321. Renewed Sept. 26, 1925. 4 Claims. (Cl. 152—14.)



1. A transverse connecting link for a tread grip for vehicle tires consisting of a rigid bar adapted to be placed transversely of the vehicle tire on its tread portion, said bar being turned radially inwardly at the

sides of the tire so that the contour of the bar will approximate the contour of the tread surface of the tire, said bar having its end portions turned to receive a grip



member, and said ends extending radially outward beyond the plane of the central portion of the bar to increase traction.

1,638,035. METHOD OF MAKING CONTAINERS. EDWIN F. HULBERT, Milwaukee, Wis., assignor, by mesne assignments, to The Master Package Corporation of Delaware. Filed Oct. 23, 1925. Serial No. 64,474. 5 Claims. (Cl. 93—36.)

1. The method of forming the tubular siding of a container which consists in pressing a flat fibre sheet blank to form a series of spaced indentations on its inner side and solidified segmental curved portions between said indentations, bending the finished blank along said indentations to tubular form and joining the end portions together.

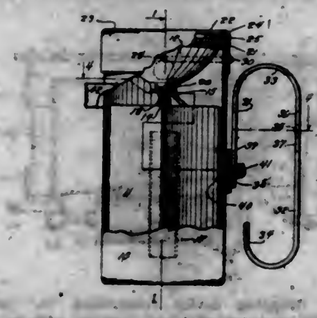
1,638,036. TYPOGRAPHICAL MACHINE. CHARLES E. IRELAND, Jamaica, N. Y., assignor to Rich & McLean, Inc., a Corporation of New York. Filed June 24, 1926. Serial No. 118,182. 5 Claims. (Cl. 199—46.)

1. A matrix storage magazine for typographical machines having a rotatable matrix locking bar eccentrically mounted relative to the path of movement of the stored matrices and formed to provide an abutment movable by its rotation into or out of the path of movement of said stored matrices, external means connected with one end of said bar for hand manipulating the same, and means cooperative with said manipulating means for selectively retaining said bar in active or inactive position.

1,638,037. HORN PUSH BUTTON. EDWARD N. JACOBI, Milwaukee, Wis., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 27, 1920. Serial No. 406,290. 5 Claims. (Cl. 200—159.)

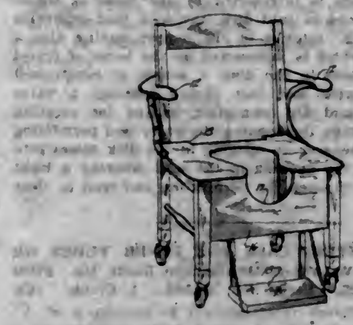
3. In a push button, a sheet metal contact member provided with a toothed opening, a stem secured thereto by having a reduced portion passed through the opening and upset against the teeth of the opening to prevent it from turning, and a screw threaded in the stem to form a binding post.

1,638,038. CONTAINER FOR BLASTING CHARGES. WELLINGTON E. JENKINS, Pittsburg, Kans. Filed July 20, 1926. Serial No. 123,776. 2 Claims. (Cl. 102—6.)



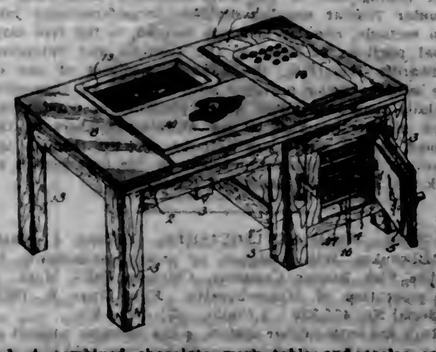
1. A device of the character described comprising a water-proof flexible container having a tubular neck portion provided with an open upper end and a lower bulb portion formed integral therewith, a relatively small tubular member carried by said bulb portion and adapted to receive an explosion cap, and a rigid retaining member in which said container is adapted to be arranged.

1,638,039. COMBINED FLASH LIGHT AND HANDLE. ISAAC JONES, Denver, Colo. Filed Mar. 6, 1924. Serial No. 697,245. 2 Claims. (Cl. 240—10.5.)



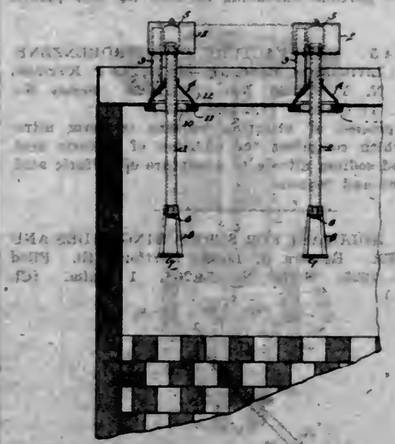
1. In combination with an elongated lamp casing, for a portable electric projector light having its lens element closing one end of said casing, a unitarily combined handle and hanger support therefor, associated with the longitudinal wall of said casing, comprising a short arm forming an approximately U-shaped continuation of

a substantially parallel longer arm that terminates in an open hook disposed towards the said short arm, and means so connecting said short arm to the longitudinal



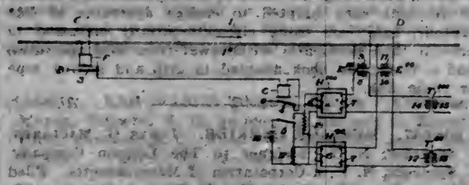
wall of said casing as to permit of the rotary adjustment of said unitarily combined support while at all times otherwise maintaining the same against displacement.

1,638,040. INVALID'S TOILET CHAIR. GEORGE B. KILLEN, Chicago, Ill. Filed Nov. 12, 1926. Serial No. 148,082. 4 Claims. (Cl. 4—134.)



1. A roller chair for conveying hospital patients to and from the toilet comprising a chair mounted on rollers and having an open seat and an open back, the latter to receive the open seat and cover of a toilet when the chair is backed over the same.

1,638,041. COMBINED CHOCOLATE DIPPING TABLE AND COOLER. JOE KORKAMES, Temple, Tex. Filed May 12, 1926. Serial No. 108,589. 9 Claims. (Cl. 62—81.)



1. A combined chocolate work table and cooler, comprising a cabinet, a refrigerant compartment positioned within said cabinet, a receiving tray positioned above the said compartment and on which the finished chocolates are placed, and a closed tray-storage compartment within the cabinet and spaced from the refrigerant compartment to permit air to circulate in contact with the outsides of said compartments to maintain the air within the tray-storage compartment in a dry, cold condition.

1,638,042. DEVICE FOR DISTRIBUTING LIQUIDS. ELDON L. LARISON, Anaconda, Mont. Filed June 28, 1926. Serial No. 119,228. 2 Claims. (Cl. 299—58.)

1. A device for distributing liquids comprising as a unitary structure a straight conduit having a nozzle at one end thereof, a splash-plate positioned in front of said nozzle and supported from said conduit, a receptacle surrounding the other extremity of said conduit and fixed thereto, and means for removably supporting said unitary structure in co-operation with an apparatus for contacting gas and liquid.

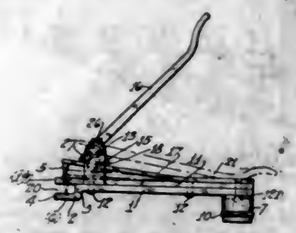
1,638,043. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. FREDERICK W. LEE, Baltimore, Md., and LARS O. GRONDAHL, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 27, 1926. Serial No. 144,482. 8 Claims. (Cl. 246—34.)

1. In combination with the track rails of a railway, a source of alternating current connected with said rails through a reactor, and means for periodically varying the effect of said reactor.

1,638,044. HANDWHEEL. JOHN WESLEY LEE, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 14, 1922, Serial No. 606,931. Renewed May 7, 1925. 2 Claims. (Cl. 74—33.)

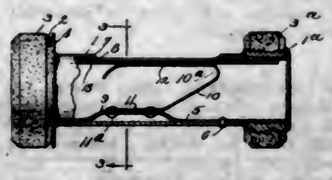
1. A handwheel spider comprising: a metal hub having a sleeve portion adapted to be secured to a shaft and a star-shaped flange portion at the upper end of said sleeve portion, said flange and sleeve portions having a flat upper face; and a plurality of spider arms integrally

formed from a piece of sheet metal, said sheet metal lying flat upon the said upper face of said flange portion and having portions bent down around the star points of



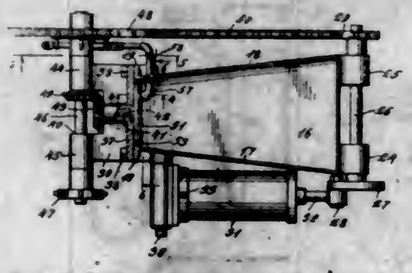
said star-shaped flange and having other portions bent down and pressed firmly against the vertical surfaces of the concave portions extending between the star points.

1,638,045. MANUFACTURE OF NITROBENZENE. JOHN W. LIVINGSTON, Hamburg, and LUCAS P. KYRIDES, Buffalo, N. Y. Filed Nov. 27, 1922. Serial No. 603,657. 11 Claims. (Cl. 260—142.)



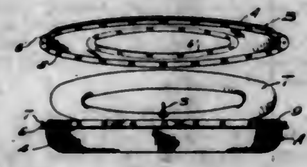
1. The process of nitrating benzene to form nitrobenzene which comprises the addition of sulfuric acid, benzene and sodium nitrate to a mixture of sulfuric acid, nitrobenzene and benzene.

1,638,046. HOLDFAST FOR STRETCHING HIDES AND LEATHER. ERNEST G. LOWE, Hertford, Ill. Filed Sept. 3, 1925. Serial No. 54,268. 1 Claim. (Cl. 149—21.)



A hold-fast for securing and holding sides of leather and hides to a frame for dehydrating them, comprising a cam actuated pricker adapted to pierce the marginal edge of sides of leather and hides, a shoulder adapted to limit the distance from the edge of sides of leather and hides that said pricker can pierce the said hides and sides of leather, a cam for actuating said pricker, a spring for withdrawing said pricker, a lever arm for actuating said cam, a pintle about which said cam rotates, upwardly turned ears providing bearings for said pintle, a guard protecting the point of said pricker, a plurality of resilient ears adapted to engage apertures of like contour, said ears being circumferentially embossed to prevent their accidental withdrawal from said apertures, and a triangular hook adapted to grip and hold a rope or chain link.

1,638,047. MESSAGE CARRIER. JAMES G. MACLAREN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Mar. 19, 1926. Serial No. 95,876. 8 Claims. (Cl. 243—35.)



1. A message carrier for pneumatic tube systems comprising a tubular shell open at one end and having a constantly open lateral window through which the contents can be inspected.

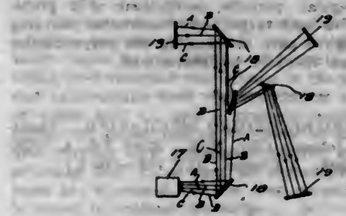
1,638,048. SUGAR-BEET-SEED DROPPER. ANDREW A. MATHESON, Denver, Colo. Filed Mar. 30, 1926. Serial No. 98,443. 4 Claims. (Cl. 221—124.)

1. A beet dropping device comprising, in combination, a hopper provided with an inclined bottom and a vertical wall extending upwardly from the lowest part of the hopper, a shaft mounted for rotation in the hopper, a perforated disk secured to the shaft so as to have one side in contact with one surface of said vertical end wall, a plate secured to the end wall and lying against the other side of the disk, said disk being in communication with the interior of said hopper through an opening which is intersected by the locus of travel of the perforations in said disk, the wall that separates the disk from the interior of the hopper having also a small opening which is intersected by the locus of travel of the perforations in the disk, a source of compressed air connected with said last named opening, a valve mechanism in said air connection, means for rotating the disk and means for opening the valve and permitting a flow of air whenever an opening in the disk comes into alignment with the opening in the wall whereby a blast of air will pass through the perforation and tend to clear the same.

1,638,049. TESTING CASE FOR INNER TUBES OR THE LIKE. WILBUR E. MCASHLAND, Reeds, Mo. Filed June 30, 1925. Serial No. 40,586. 1 Claim. (Cl. 73—51.)

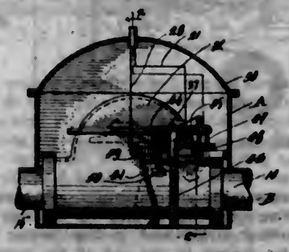
A testing case of the class described comprising an annular tubular member divided circumferentially into two sections, annular members secured to the free marginal portions of each of the sections and extending outwardly therefrom, the annular members of one of the sections being provided with a series of circumferentially spaced openings, and a plurality of outstanding hook members carried by the annular members of the second section and adapted to be inserted through the openings in the annular members of the first section to lock said sections in assembled relation.

1,638,050. FIRE EXTINGUISHER. GEORGE J. MEAD, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 6, 1921. Serial No. 475,336. 1 Claim. (Cl. 169—9.)



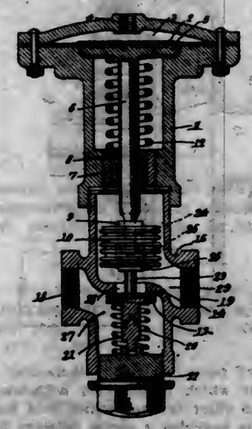
In a fire extinguisher system, a gas pressure conduit or pipe, a plurality of holders suspended from said pipe and in communication therewith, each of said holders adapted to contain a liquid chemical for extinguishing fire and

provided at its lowermost point with an outlet having a sprinkler head closure therein, and a freely movable ball within the holder adapted to float on said liquid chemical,



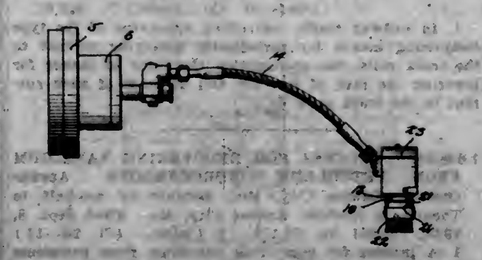
a seat at the bottom of the holder adapted to receive said ball when the liquid is exhausted and be held to its seat to close the outlet against the exit of gas from said conduit.

1,638,051. AIR WRITING WITH SEARCHLIGHT BEAMS. WLADIMIR W. MITKEWICH, Brooklyn, N. Y., assignor of thirty-three and one-third per cent to Richard Vitolo and thirty-three and one-third per cent to Daniel Andre Rodionoff, New York, N. Y. Filed May 17, 1926. Serial No. 109,730. 5 Claims. (Cl. 41—30.)



4. In a process of the character described, consisting in transmitting light beams in the air from different positions and in different directions, and arranging the light transmitting means so that the beams transmitted form the outline of a character.

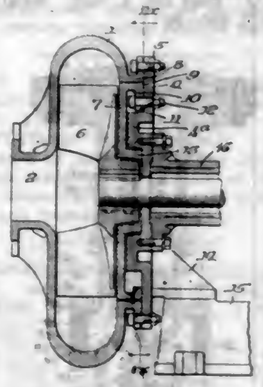
1,638,052. AUTOMATIC CUT-OFF AND DRAINAGE VALVE. GEORGE A MOORE, Wilmington, N. C. Filed Mar. 28, 1924. Serial No. 702,667. 7 Claims. (Cl. 137—139.)



5. In a valve of the character described, including a casing body designed to be connected between a supply pipe and a distributing pipe, comprising means within said casing to set up a tubular body formed integral at one end with the distributing pipe connecting side of the casing, and having the other inner end formed to set up a valve seat, a shaft extending transversely through said casing and revolubly mounted on said body, means carried by said shaft for supporting a valve member positioned to be placed upon said seat, a valve controlled drain line leading from said body for draining said distributing pipe when the inner end of the body is closed and means carried by said shaft exteriorly of the casing body, for opening the valve controlled drain line when the shaft is oscillated to swing the arm carried thereby to valve closing position.

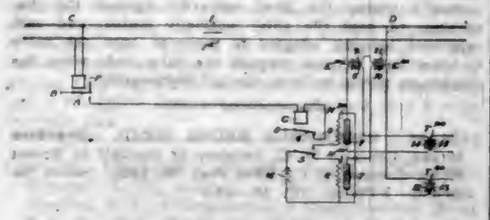
1,638,053. WATER REGULATOR. JOSEPH MÜLLER, Dayton, N. J. Filed Oct. 5, 1925. Serial No. 60,544. 1 Claim. (Cl. 236—92.)

In a device of the character described, a valve body having an inlet and an outlet opening, a partitioning member within the valve body and separating the inlet and outlet openings, said partitioning member having an opening establishing communication between the inlet and outlet openings, of the body portion, a spring pressed valve operating in the body portion and adapted to normally close the opening in the partitioning member, a rod carried by the valve and extending upwardly through the opening, an expansion element to which the rod is connected, a cylinder mounted on the valve body, a diaphragm mounted at one end of the cylinder, a rod having connection with the expansion element and having a head engaging the diaphragm, a coiled spring for normally urging the head upwardly against the diaphragm, to hold the valve normally seated, and said expansion element adapted to move to open the valve to allow fluid to pass through the valve body when the diaphragm moves to force the rod downwardly.



1,638,054. REMOVABLE BRUSH HEAD. EBENEZER MYERS, Concord, N. C., assignor of one-half to Ernest Hicks, Concord, N. C. Filed Sept. 30, 1925. Serial No. 59,666. 1 Claim. (Cl. 15—28.)

In a device of the character described, a brush support including outwardly extended curved flanges, a brush including a head, outwardly curved flanges extend-

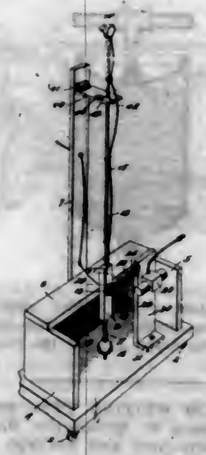


ing from the head and adapted to be positioned over the first mentioned flanges to removably secure the brush head to the brush support.

1,638,055. ROTARY PUMP WITH LINER PLATE. PERRY I. NAGLE, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 11, 1926. Serial No. 134,767. 6 Claims. (Cl. 103—114.)

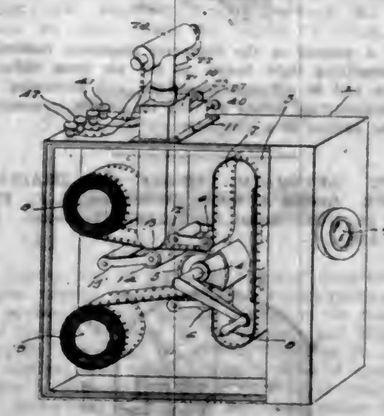
1. In a rotary pump, an end wall member and a shell member, one of which is provided with an axially extending annular offset through which said members meet and by which is provided a recess between the end wall and the working space of the pump; and a liner plate located in said recess and having an annular stepping flange that is radially within the said offset and extends axially away from said working space and meets said end wall member and means interengaging with said flange to secure the plate and wall member together.

1,638,056. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LEWIS L. NETTLETON, Edgewood Borough, and LARS O. GRONDAHL, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1926. Serial No. 143,379. 7 Claims. (Cl. 246—34.)



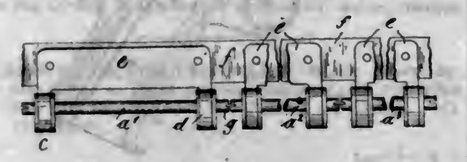
1. In railway traffic controlling apparatus of the type comprising means for periodically supplying current to the track rails, the combination therewith of means for lowering the rate of increase and decrease of such current in the track rails.

1,638,057. PROCESS FOR RECOVERING VANADIUM FROM PETROLEUM HYDROCARBONS. ALFRED OBERFELL, Kansas City, Mo., assignor of one-half to Thomas E. Scofield, Kansas City, Mo. Filed Sept. 8, 1925. Serial No. 55,171. 3 Claims. (Cl. 23—17.)



1. A process for recovering vanadium from petroleum hydrocarbons, consisting in exhausting hydrocarbon products by combustion and collecting the deposited vanadium compounds in an absorptive material.

1,638,058. APPARATUS FOR EXERCISING EYE MUSCLES. JOHN MILLS POWELL, Galax, Va. Filed June 4, 1926. Serial No. 113,766. 11 Claims. (Cl. 128—25.)

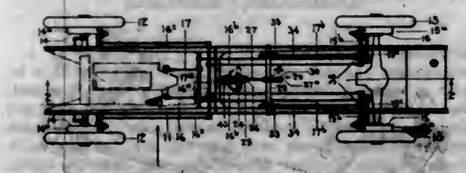


1. An apparatus for the purpose described, comprising a suitable base, an observation target pivotally supported on the base to move about a horizontal axis, and means for imparting regular, periodic, oscillations of a predetermined length to said target, each oscillation carrying the target through a path intersecting the perpendicular extending through the said horizontal axis.

1,638,059. SOUND-RECORDING MECHANISM. FERDINAND PUCEK, Johnson City, N. Y. Filed Feb. 4, 1926. Serial No. 85,999. 3 Claims. (Cl. 179—100.1.)

1. A sound recording mechanism, comprising a tubular casing, having one end formed to movably receive a sound recording strip, said casing having a narrow elongated slot formed in the end of the casing movably receiving said film, a source of light mounted in the opposite end of the casing, movable means mounted in the last named end of said casing, a movable reflector operable to reflect light from said source into the end of the casing formed with the slot onto said strip, resilient means connecting the reflector and said movable means, manually rotatable means for operating the movable means for adjusting the normal position of said reflector, and electro-magnetic means adjustably mounted in said casing energizable for cooperation with the resilient means to oscillate said reflector to record variations of the energization of said electro-magnetic means on said film strip.

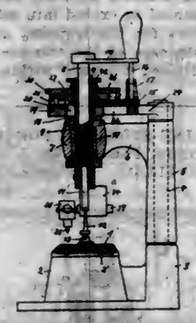
1,638,060. BOBBIN-DRIVING SHAFT FOR WINDING FRAMES AND ITS BEARING ARRANGEMENT. WILHELM REINERS and GUSTAV KAHLISCH, Munich-Gladbach, Germany, assignors to W. Schlafhorst & Co., Munich-Gladbach, Germany, a Corporation of Germany. Filed Mar. 1, 1926, Serial No. 91,595, and in Germany Mar. 2, 1925. 4 Claims. (Cl. 242—18.)



1. A bobbin driving shaft for winding frames comprising a plurality of shaft sections interconnected by flexible couplings.

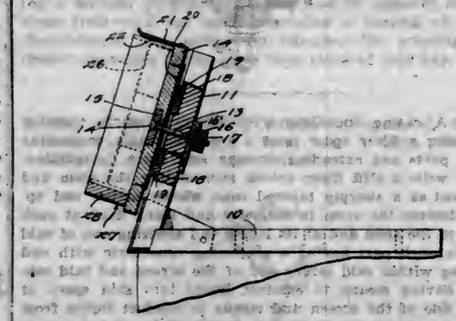
1,638,061. METHOD OF DRY DISTILLATION OF ALKALIZED WASTE LIQUOR FROM THE SODA CELLULOSE MANUFACTURE. ERIK LUDVIG RINMAN, Djursholm, Sweden. Filed June 4, 1924, Serial No. 717,739, and in Sweden June 6, 1923. 4 Claims. (Cl. 252—7.)

1. The process of treating waste liquor from the soda cellulose manufacture, which consists in alkalising said waste liquor by the addition of hydrate of lime, dry distilling said alkalised waste liquor in the presence of steam and interrupting such dry distillation at a temperature of about 400° C., and afterwards removing and granulating the retort residue to pieces of about 3 mm. size and burning such granulated residue at a temperature of about 750° C. so that all organic substances in the same are consumed and the lime present in said residue is burnt to calcium monoxide.



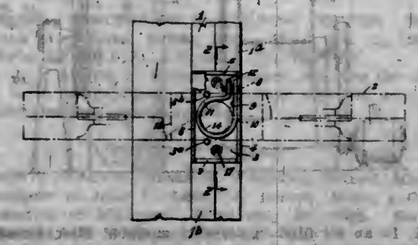
1,638,062. AUTOMOBILE LOCK. KARL SCHERER New York, N. Y. Filed Apr. 8, 1925. Serial No. 21,5 3 Claims. (Cl. 188—265.)

1. In a vehicle having wheel brake mechanism, a device adapted to be mounted on the vehicle frame for releasably locking said mechanism to said frame, said device including a rock shaft mounted on the frame, a pawl carried by the shaft, a thrust rod having one end connected to the said mechanism, the other end of the rod having means for releasably engaging said pawl, and manually operated means for controlling said pawl and thrust rod engagement to seectively lock or release said device.



1,638,063. LENS-CUTTING MACHINE. WILLI SCHLÜTER, Brunswick, Germany, assignor to the Firm Grimme, Natalis u. Co. Aktiengesellschaft, Braunschweig, Germany. Filed Sept. 20, 1926, Serial No. 136,699, and in Germany May 14, 1924. 6 Claims. (Cl. 33—28.)

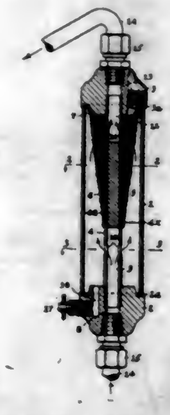
3. A spectacle glass cutting machine, comprising a stationary column, a cantilever swingably supported on said column, a glass cutter, a driving shaft journalled vertically in said cantilever and arranged parallel to said column and carrying said glass cutter, an adjustable stroke device for the driving shaft including a part transversely adjustable on and with the shaft, and a forked arm



fixedly connected with said column with the prongs arranged on opposite sides of and in contact with the part on the shaft, substantially as and for the purposes set forth.

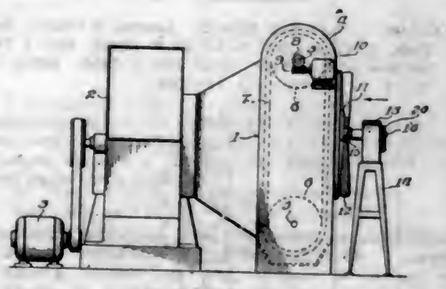
1,638,064. HOLDING FRAME FOR SUPPORTING HONEY BOXES. WILLIAM A. SHOOK, McGaheysville, Va. Filed Feb. 1, 1927. Serial No. 165,224. 8 Claims. (Cl. 6—12.)

1. In a device for holding honey boxes while applying foundation starter strips thereto, a base, a table supported from the base to rotate in a plane at an acute angle to the base, the upper face of the table having a plurality of blocks attached thereto and adapted to interiorly fit the honey boxes and means for yieldably maintaining the honey boxes in engagement with said blocks.



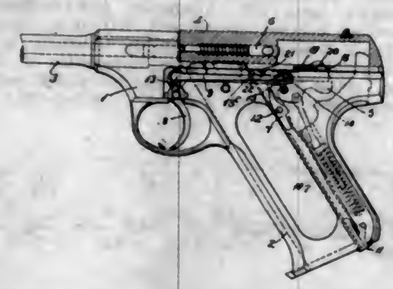
1,638,065. TRANSOM HINGE. LESTER S. SIMON, New York, N. Y., assignor to Lester S. Simon, Inc., a Corporation of New York. Filed Jan. 8, 1926. Serial No. 79,916. 7 Claims. (Cl. 16—140.)

1. A device of the character described, including, in combination, a frame and transom, a housing seated in a recess in the inner face of said frame and having out-



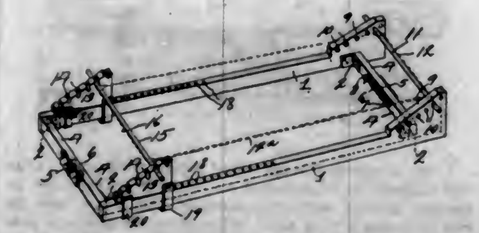
turned flanges, certain of which has a cut-away portion at the outer edge thereof to provide a recess positioned below the outer face of the housing, and an adjustable strap journal mounted within said housing, a pintle plate mounted upon said transom adjacent said housing, and having a pintle adapted to extend into said journal so as to provide a support for the transom, said pintle plate projecting above the face of the transom to which it is attached and positioned to move within said recess in the flange.

1,638,066. GASOLINE STRAINER FOR AUTOMOBILES. THOMAS A. SMYTHE, Paterson, N. J. Filed June 14, 1926. Serial No. 115,816. 2 Claims. (Cl. 210—165.)



1. A casing including a plurality of parts together forming a filter space, and a stem separably connecting said parts and extending through said space, in combination with a stiff filter screen surrounding the stem and formed as a sharply tapered cone whose smaller end approximates the stem in diameter and being fixed at such end to the stem and at its larger end abutting one of said parts, such part having a projection concentric with and fitting within said larger end of the screen and said casing having means to conduct liquid into said space at one side of the screen and means to conduct liquid from said space at the relatively opposite side of the screen.

1,638,067. AIR-FILTER DRIVE. ERNEST SZEKELY, Evanston, Ill., assignor of one-half to Drying Systems Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1926. Serial No. 136,655. 6 Claims. (Cl. 183—52.)

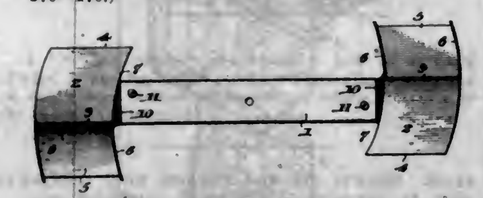


1. In an air filter, a movably mounted filter screen, a motor for moving said screen, a fan mounted in the path of the air passing through said screen and driven thereby, and a switch for said motor controlled by the fan.

1,638,068. MAGAZINE SAFETY DEVICE FOR AUTOMATIC PISTOLS. GEORGE H. TANSLEY, Hartford, Conn., assignor to Colt's Patent Fire Arms Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 5, 1926. Serial No. 127,429. 2 Claims. (Cl. 42—3.)

1. In an automatic pistol having a frame provided with a magazine chamber in the grip portion thereof, a removable magazine in the chamber, a breech block longitudinally movable on the frame, a pivoted hammer, a sear, a trigger, and a trigger bar located at one side of the frame and provided at the rear end with a transverse inward extending projection adapted to engage the sear, the rear end of the said trigger bar with the projection being normally held in an upper operative position in which the projection is adapted to engage the sear and being movable by the slide to a lower inoperative position in which the projection cannot engage the sear, the combination with the aforesaid parts of a longitudinally movable actuating slide located in a recess in the top of the frame and adjacent the rear of the magazine chamber and normally held in a rearward position by reason of engagement with the magazine, a spring for moving the said slide forward so as to project into the magazine chamber when the magazine is removed, and a cam surface on the actuating slide for engaging the rear end of the said bar to move it to the said inoperative position when the slide is moved forward by the spring.

1,638,069. CURTAIN STRETCHER. FLORENCE JENIS THAYER, Eddyville, Iowa. Filed June 17, 1926. Serial No. 116,553. 1 Claim. (Cl. 45—24.)



A curtain stretcher comprising a rectangular shaped frame having side bars, upwardly extending apertured rod receiving members carried by one end of said bars, upwardly extending recessed rod receiving blocks carried by the other ends of the bars, spaced U-shaped members carried by the blocks and arching the under sides of the bars, pins carried by the inner lower ends of the blocks and cooperating with a plurality of apertures in the upper sides of the bars, said U-shaped members forming means for limiting rockable movement of the blocks in vertical longitudinal plane whereby the pins may be removed from the apertures in the bars and the adjustable blocks limited in their movement in one direction under the influence of the contractible force of a curtain.

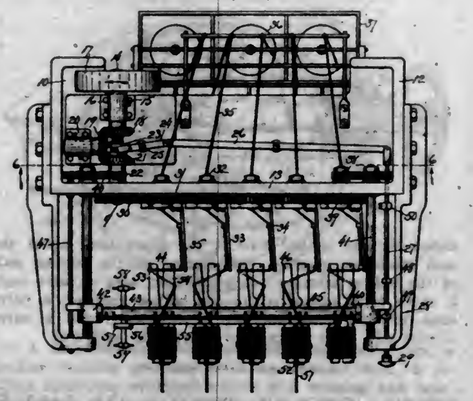
1,638,070. PROCESS FOR THE PREVENTION OF ADHESION OF THE CHARGE DURING THE ACTIVATION OF CARBON. HEINZ THIENEMANN, Leverkusen, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Nov. 7, 1925. Serial No. 67,699, and in Germany Jan. 13, 1925. 3 Claims. (Cl. 252—3.)

1. In a carbonization process wherein the carbonaceous material is continuously moved through the carbonizing furnace throughout the period of carbonization, the method of preventing carbonaceous material of adhesive or pasty characteristics from adhering to the furnace walls which comprises feeding such carbonaceous material to the furnace in the form of compressed, molded charges.

1,638,071. VACUUM PROPELLER. FRANK TRAVNICEK, also known as Frank Grinese, East St. Louis, Ill. Filed July 21, 1924. Serial No. 727,192. 2 Claims. (Cl. 170—170.)

1. A lifting propeller having blades and an intermediate shank, each blade being hollow and open at its rear and of general wedge-shape, said blades being disposed angularly in relation to each other and each being adapted, by its construction, to create a partial vacuum.

1,638,072. EGG-TURNING DEVICE. GEORGE M. TURPIN, Murray City, Utah. Filed Jan. 6, 1926. Serial No. 79,537. 3 Claims. (Cl. 119—44.)



1. In an egg tray for use in incubators the combination of a base, having a screen bottom thereto; transversely disposed semi-cylindrical strips secured thereon; a turning rack superimposed over said base, having transversely disposed cross wire thereon, adapted to carry eggs between them and to force the eggs over the said semicylindrical strips on said base when said turning rack is moved longitudinally on said base, to turn the eggs over.

1,638,073. FASTENER. JOHN MANNING VAN HEUSEN, New York, N. Y. Filed Apr. 21, 1926. Serial No. 103,596. 4 Claims. (Cl. 24—201.)

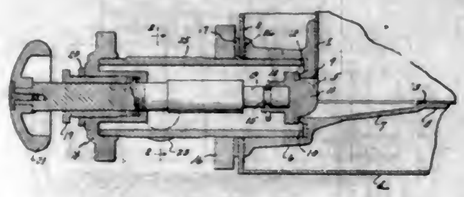
1. In a fastening device, a projecting element having thereon a relatively rough porous contact surface adapted to engage extending filaments, a receiving element on the interior of which is a contact surface containing extending filaments, the projecting element being adapted to enter the receiving element and thereby bring the contact surfaces into engagement.

1,638,074. WINDING MACHINE. ANTON VAN VEEN, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Nov. 13, 1923. Serial No. 674,486. 13 Claims. (Cl. 242—50.)

1. A winding machine including a thread-form supporting bar pivotally mounted to locate thread-forms in winding positions, thread-forms projecting radially in opposite directions from said bar, each of said forms including a member projecting through and in opposite directions from said bar and comprising a portion of two thread-forms, and means for effecting the winding of thread upon said forms upon both sides of said bar.

1,638,075. EXTENSION FEEDER. HALBERT C. WALLACE, Kansas City, Mo. Filed Jan. 2, 1925. Serial No. 283. 3 Claims. (Cl. 198—208.)

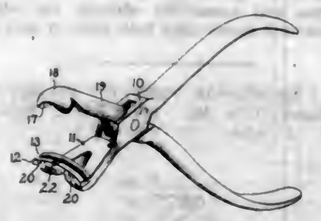
1. An extension feeder for threshing machines comprising an elongated hollow member having a conveyor therein, a bracket at one end of the body member having notches, a shaft for driving the conveyor mounted in a slot in the bracket and a dog loosely mounted upon the shaft for engaging the notches, the dog being adapted to successively engage lower notches upon the accumulation of slack in the driving connection between the shaft and its source of power.



1,638,076. PROCESS OF HARDENING COPPER. WILLIAM H. WEISER, Dallas, Oreg. Filed Oct. 11, 1923. Serial No. 668,018. 4 Claims. (Cl. 75—62.)

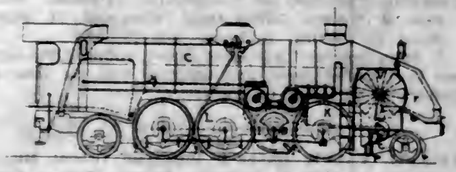
1. In a process of hardening copper, reducing the copper to a molten mass, and injecting into the same a quantity of pulverised magnesia.

1,638,077. VALVE. HENRY B. WILLIAMS, Detroit, Mich., assignor to John W. Ladd Co., Detroit, Mich., a Corporation of Michigan. Filed July 26, 1926. Serial No. 124,848. 5 Claims. (Cl. 137—21.)



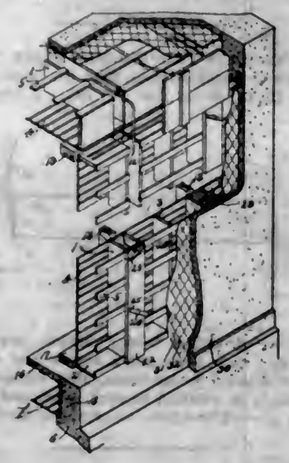
5. The combination with an inner and an outer tank in spaced relation, the inner tank having a drainage opening therein, of a valve member for controlling flow

through the said drainage opening consisting of a hollow member in the space between the two walls and having a bottom wall adjacent the said drainage opening and provided with an opening through which fluid from the drainage opening may discharge, said body having a



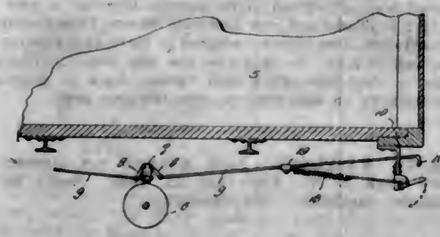
flange secured to the wall of the inner tank about the said discharge opening, the opening in the bottom wall of the hollow member being provided with a valve seat, a valve body supported by the hollow member, a valve stem movable longitudinally in the body, and a valve on the said stem adapted to engage the said seat.

1,638,078. TOOL FOR WIDENING AND NARROWING BRIDGES OF OPHTHALMIC MOUNTINGS. EUGENE EDWARD BELL, Dayton, Ohio, assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed May 20, 1926. Serial No. 110,400. 2 Claims. (Cl. 81—36.)



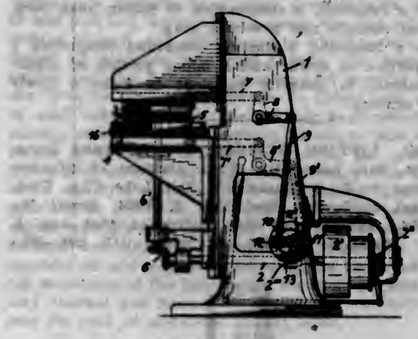
1. A tool for widening and narrowing the nose bridge of an ophthalmic mounting comprising an arcuate clamp head having a longitudinal groove adapted to hold the nose bridge therein, a second clamp head having a concave pressing face aligned with the arcuate head and adapted to engage the nose bridge, and means to force the clamp heads together to compress the nose bridge to change the distance between its ends.

1,638,079. STEAM-TURBINE LOCOMOTIVE. GIUSEPPE BELLUZZO, Milan, Italy, assignor to Società Italiana Ernesto Bredo, Milan, Italy. Original application filed Feb. 28, 1923, Serial No. 621,933, and in Italy Mar. 8, 1922. Divided and this application filed Sept. 4, 1925. Serial No. 54,566. 2 Claims. (Cl. 105—38.)



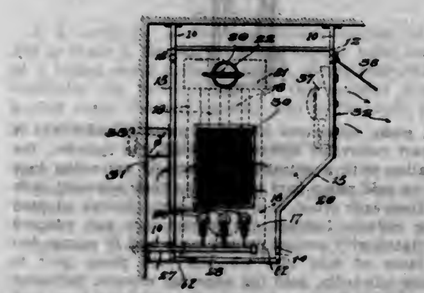
1. A steam turbine locomotive including a boiler, side beams, an intermediate shaft, groups of coupled drive wheel axles, a plurality of turbines, reduction gears arranged under the boiler and between the side beams, and adapted to drive said intermediate shaft, the latter being located between the groups of coupled wheel axles, and means for transmitting movement from the intermediate shaft to the wheel axles.

1,638,080. CONCRETE BUILDING CONSTRUCTION. ALBERT F. BEMIS, Newton, and HORATIO W. BROWN, Concord, Mass., assignors, by mesne assignments, to Bemis Industries Inc., Boston, Mass., a Corporation of Delaware. Filed Feb. 17, 1922. Serial No. 537,178. 8 Claims. (Cl. 72—15.)



1. A concrete structure comprising monolithic outer walls having integral studs, and permanent unitary forms embedded in said walls and each providing plaster supporting elements lying in a plane spaced from the plane of the inner surface of said studs and terminating adjacent said studs, said elements being aligned with similar elements upon adjoining forms.

1,638,081. AUXILIARY BLEED-VALVE ACTUATOR FOR AIR-BRAKE EQUIPMENT. CLYDE E. BLOSE, Springfield, Ohio. Filed Dec. 1, 1926. Serial No. 151,932. 4 Claims. (Cl. 137—159.)

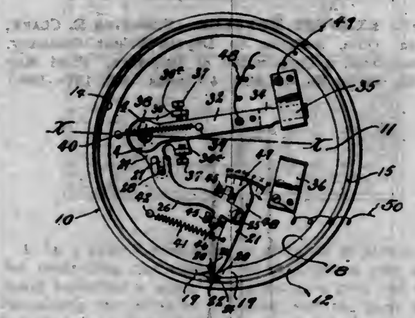


1. In an auxiliary bleed valve actuator for air brake equipment wherein a pull rod is connected at one end to the bleed valve, a lever pivoted to the equipment carrying car adjacent to the operating end of the pull rod, a spring connection between the lever and the pull rod whereby the pull rod will be actuated when the lever is swung in one direction and be released when the lever is swung in a reverse direction, and means cooperating with the spring connection for maintaining the lever in rod pulled position.

1,638,082. GRINDING MACHINE. PAUL BRÜHL, Duesseldorf, Germany. Filed Jan. 12, 1926, Serial No. 80,750, and in Germany Jan. 14, 1925. 3 Claims. (Cl. 51—67.)

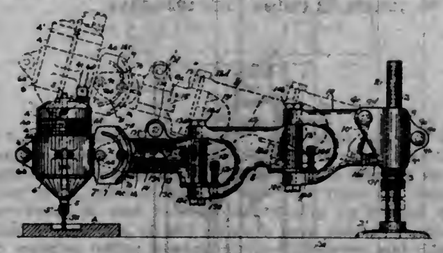
1. Grinding machine comprising a pair of grinding plates, means for reciprocating said grinding plates, and a rotary cage between said plates in which the parts to be ground are inserted.

1,638,083. UNIT HEATER FOR AIR SPACES. ALLEN AXEL BLOMFELDT, Newport, Ky. Filed Oct. 27, 1925. Serial No. 65,107. 6 Claims. (Cl. 126—116.)



1. A heater comprising a casing having an air inlet port, an air heater member mounted within said casing to heat the air entering said casing tthrough said air inlet port, a casing door having an air exit port therein, and a power driven air circulating element mounted upon said door to drive the heated air from said casing through said air exit port when the door is closed, said door when open affording a low pressure exit for the heated air and affording access to said air circulating element.

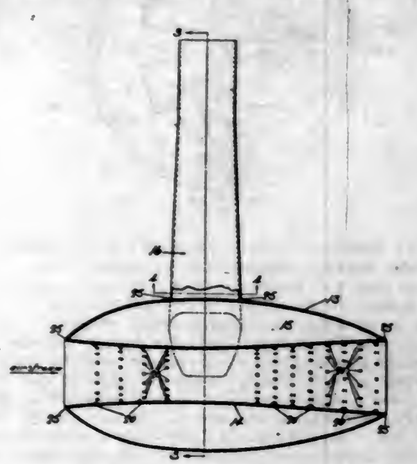
1,638,084. SPEED-ACCELERATING MECHANISM. THOMAS J. BUTLER, Harrison, N. J. Filed Aug. 14, 1925. Serial No. 50,285. 15 Claims. (Cl. 244—2.)



2. A speed-accelerating means comprising a longitudinal series of pairs of transversely opposed rotatable spindles, a propelling disc mounted upon each spindle, and means cooperating with said spindles for progressively accelerating the rotary speed of successive pairs of spindles and the propelling discs carried thereby.

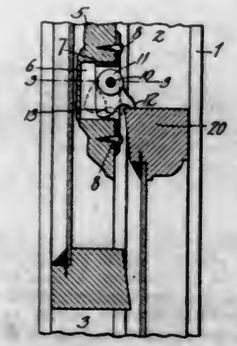
1,638,085. THERMOSTAT. JOHN O. CARNEY, St. Louis, Mo., assignor to Carney-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed May 1, 1925. Serial No. 27,261. 6 Claims. (Cl. 200—139.)

1. A thermostatic device comprising in combination, a circular housing provided with an annular wall, a resilient split ring arranged within said housing and bearing against the inner face of said wall, the ends of said ring being offset in radial direction relative to each other, said housing and said ring having different coefficients of contraction and expansion whereby the contraction of said housing causes the ends of said ring to move toward each other, a lever arranged in said housing and having one end in fulcrum relation with said ends, being operable by said ends in one direction by the contraction of said housing, a tension member for moving the lever in the opposite direction, a stationary contact member, a switch blade pivotally mounted in said housing and movable into engagement with said contact member, an element connected to said lever, means for adjusting the relative positions of said lever and said element to render said lever operable at different temperatures, and a member having lost motion connection with said switch blade and in operative engagement with said element.



1,638,086. ADJUSTABLE SUPPORT FOR ROUTING MACHINES. RAY L. CARTER, Syracuse, N. Y. Filed Feb. 7, 1925. Serial No. 7,727. 3 Claims. (Cl. 90—12.)

1. In combination with a pedestal, a bracket member mounted on the pedestal, means for adjustably supporting the member on the pedestal, a boss carried by the member, a second bracket member pivoted to the first member, an adjustable element carried by the second member and engageable with the boss so as to hold the second member in different pivoted positions relative to the first member, a motor having a peripherally threaded casing and having a router on its armature shaft, a cylindrical internally threaded member threadedly receiving the motor therein, and having a radial wing, a member having an axial socket, means to connect said last named member to the second bracket member, a member having a circular stem received in said socket and having

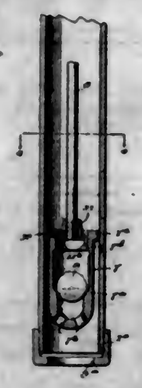


a flat part, means to pivotally connect the wing of the cylindrical member to said flat part, and means connected to the wing and to said flat part for enabling the motor to be adjusted about said last named pivot.

1,638,087. EXHAUST MUFFLER. VIRGINIUS E. CLARK, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed May 9, 1923. Serial No. 637,827. 4 Claims. (Cl. 137—160.)

1. In a silencer for an internal-combustion engine, an oval shaped elongated expansion chamber, a single exhaust pipe leading substantially tangentially into said chamber at approximately the longitudinal center of said oval, an air passage extending longitudinally through the central portion of said oval chamber, and a plurality of relatively small exhaust outlets leading from the expansion chamber into said air passage and distributed over a substantial area on both sides of said central exhaust inlet pipe.

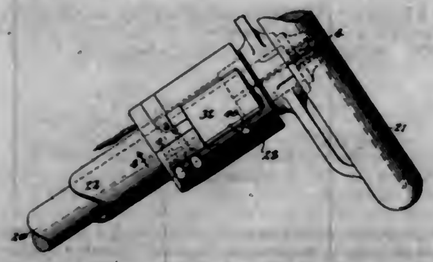
1,638,088. WINDOW-SASH FASTENER. WILLIAM J. COLLINS, Brooklyn, N. Y. Filed July 26, 1926. Serial No. 124,969. 3 Claims. (Cl. 292—194.)



1. A sash fastener comprising a body member adapted to be secured adjacent to the sash path, and a fastening dog mounted upon a pivot in said body member, said dog being formed with a sash-engaged lug and a sash-gripping cam surface extending eccentrically to said pivot.

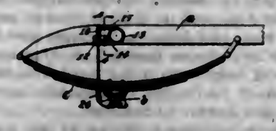
1,638,089. FUNGICIDE. RALPH B. DEER, Flushing, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 15,596. 6 Claims. (Cl. 167—6.)

5. As a fungicide, a composition of sulfur, soap bark, aluminum resinate and powdered soap.



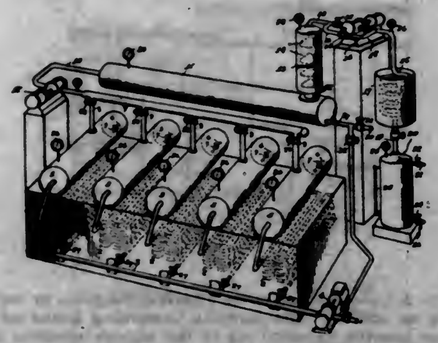
6. As a fungicide, a dusting compound comprising a major portion of sulfur and a minor portion of aluminum resinate in quantity sufficient to make a freely flowing mixture.

1,638,090. LIFTING DEVICE. JOSEPH JAMES DUCKWORTH, Salt Lake City, Utah, assignor of fifty-two per cent to T. O. Duckworth, Salt Lake City, Utah. Original application filed Feb. 2, 1924, Serial No. 690,254. Divided and this application filed Aug. 5, 1926. Serial No. 127,395. 5 Claims. (Cl. 294—86.)



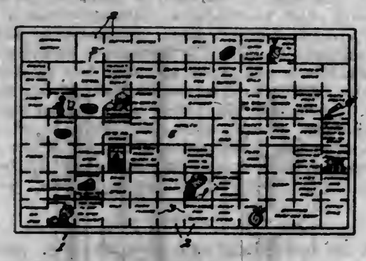
1. In pump apparatus having a pump cylinder and a pump part removable upwardly through the cylinder, the combination with a plurality of centrally extending lugs carried on said pump part and having their adjacent ends spaced from each other, of a lug engaging element adapted to enter endwise between the spaced ends and adapted to be rotated with respect to said ends and to engage the under faces of said lugs whereby said pump part is removable upwardly, said lug engaging element including a body block and means for coacting with said lugs, said body block having its upper portion tapered toward the upper end whereby from a location below the lugs the block may be guided upwardly into position between the spaced ends of said lugs.

1,638,091. SIGNAL-CONTROLLING MECHANISM FOR AUTOMOBILES. WILLIAM A. ECKERT, Buffalo, N. Y. Filed Aug. 22, 1923. Serial No. 658,812. 4 Claims. (Cl. 200—59.)



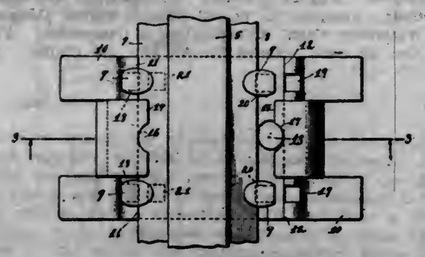
1. A signaling mechanism for an automobile having its steering gear provided with a rotary steering post and a stationary column surrounding said post, comprising a rotary carrier mounted on said post and provided on its periphery with a circumferential locking channel one wall of which is provided with a lateral passage, an electric switch mounted on said column and having a controlling pin movable in a plane parallel with the axis of said post and through said passage into and out of said locking channel, and shifting means which permit the entrance of said pin into said channel for closing said switch and also permit of turning said steering post in one direction and which operate to deflect said pin out of said locking channel for opening said switch upon turning said post in the opposite direction, said shifting means consisting of a latch pivoted on the carrier opposite said passage and adapted to swing into and out of an operative position across said locking channel, and provided on its front side with a cam face adapted to engage said pin and deflect the same out of said locking channel and adapted to engage its rear side with a shoulder on said carrier for arresting the backward swinging movement of the latch when the same projects across said channel and means for moving the controlling pin into the path of movement of said latch.

1,638,092. SHOCK ABSORBER. GEORGE M. EDGARTON, Boston, Mass. Filed Oct. 13, 1924. Serial No. 743,234. Renewed Feb. 2, 1927. 3 Claims. (Cl. 267—58.)



2. A combined snubber and shock-absorber as specified by claim 1, the said clamping bracket being composed of a folded metal plate forming a socket embracing substantially the entire length of the confined arm, and having edges clamped together and to the body member by clamping bolts.

1,638,093. PROCESS FOR CRACKING OIL. GUSTAV EGLOFF, Independence, Kans., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 20, 1920, Serial No. 432,071. Renewed Jan. 3, 1927. 6 Claims. (Cl. 196—47.)

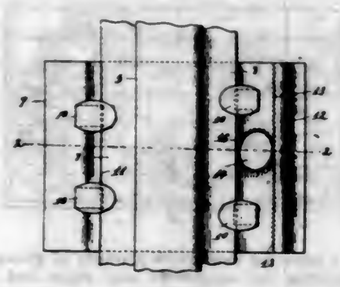


2. A process of cracking oil, consisting in passing oil in a stream of restricted cross section through a furnace to be subjected to cracking conditions of temperature and pressure, in introducing the oil from the stream to an expansion chamber and in maintaining a pressure thereon substantially equal to the pressure maintained in the stream, in discharging the vapors from the expansion chamber to a second enlarged chamber communicating with a dephlegmator, and in maintaining said vapors in said second chamber and in said dephlegmator under an increased superatmospheric pressure.

1,638,094. GAME. BENJAMIN R. GILMOUR, Yonkers, N. Y. Filed Apr. 12, 1924. Serial No. 706,182. 3 Claims. (Cl. 273—134.)

1. In a game for children, a plurality of pieces, means for controlling the advance of said pieces and a game board including a point of beginning, a goal and a path connecting the point of beginning and the goal, divided into spaces, a fixed point of entrance and exit in each space, said points of entrance and exit being variously located in the spaces forming a path sufficiently tortuous and comprising a sufficient number of spaces to form an uncharted maze or labyrinth, the arrangement being such that a player cannot readily determine by inspection of the board the direction in which his piece should be moved in order to progress toward the goal, so that a child playing the game is required to fix in his mind the way by which a given point was reached in order to avoid retracing his course.

1,638,095. ANTICREEPING DEVICE FOR RAILWAY RAILS. EMIL F. HOLINGER, New York, N. Y., assignor to E. Chase Crowley, New York, N. Y. Filed Nov. 17, 1926. Serial No. 148,832. 3 Claims. (Cl. 238—304.)

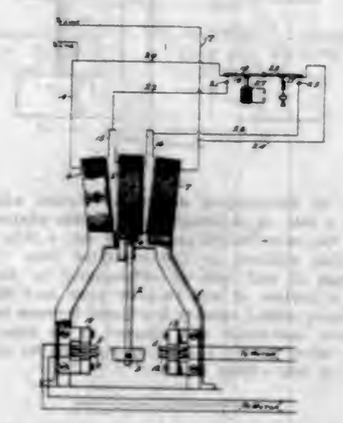


1. In an anticreeping device, a tie-plate adapted to support a rail, an abutment on said plate adapted to lie against the outer base-flange of said rail, a ridge on said plate lying adjacent to and separated from the inner base-flange of said rail, an overhanging lip formed by folding a portion of said tie-plate upon said ridge, and an engaging rolling member interposed between said ridge and inner base-flange and adapted to lie beneath said lip, the latter having a notch in its edge for the introduction of said rolling member.

1,638,096. ANTICREEPING DEVICE FOR RAILWAY RAILS. EMIL F. HOLINGER, New York, N. Y., assignor to E. Chase Crowley, New York, N. Y. Filed Dec. 11, 1926. Serial No. 154,123. 3 Claims. (Cl. 238—304.)

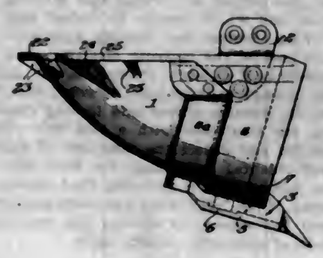
1. In an anticreeping device a tie-plate adapted to support a rail, an abutment on said plate adapted to be against the outer base-flange of said rail, a serrated ridge on said plate adjacent to and separated from the

inner base-flange of said rail, and a toothed rolling member located in the space between said inner base-flange and said ridge, in mesh with such serrations and adapted to



engage frictionally with said inner base-flange and to increase such frictional gripping action by the movement of said rail longitudinally.

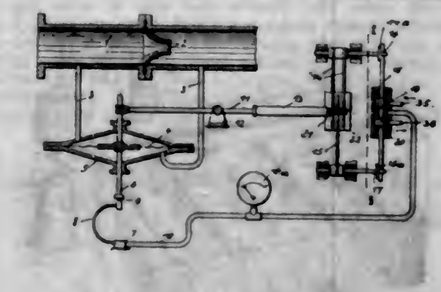
1,638,097. METHOD OF POLISHING SHOES. FRANCIS KINGSLEY, Pelham Manor, N. Y. Filed Apr. 19, 1922. Serial No. 555,560. 2 Claims. (Cl. 15—269.)



1. The herein described method of rapidly polishing shoes which consists in applying polish to a shoe, brushing it with a high speed power driven brush, rubbing the surface with a hard loosely woven cloth having a greater abrading action than said brush, and then removing the powder resulting from the abrading action of said cloth with a smooth soft cloth.

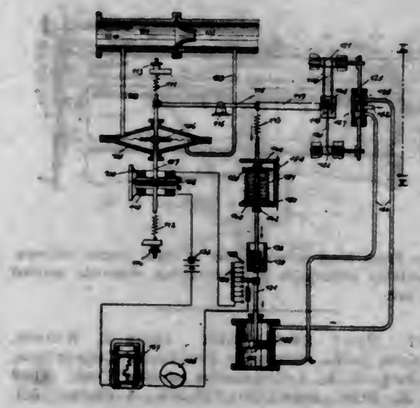
1,638,098. RELAY. HENRY C. ROCHETTE, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Nov. 22, 1921. Serial No. 516,911. 10 Claims. (Cl. 175—337.)

1. In a relay, a polarized movable circuit controller, actuator fields located on opposite sides of the controller, said actuator fields normally opposing the controller field and thus normally maintaining the controller in inoperative position, and means for varying the strength of the fields to cause movement of the controller.



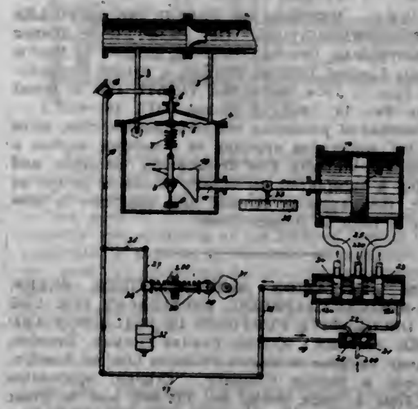
1,638,099. ENDLESS-CHAIN EXCAVATOR BUCKET WITH DIGGING TEETH. CLAUDE ROBARDEY, Chicago Heights, Ill., assignor to American Manganese Steel Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 27, 1924. Serial No. 745,988. 4 Claims. (Cl. 37—191.)

1. In a link chain bucket conveyor, the combination of a link, a hanger having a two-point suspension on said link which fixes the hanger against angular motion relatively to the link, and a digging bucket suspended by said hanger from said link; said hanger and bucket having a tongue and groove interlock in a plane transverse to the plane of suspension and extended in the direction of the length of the bucket horisontally beyond the attachment of the hanger to the link.



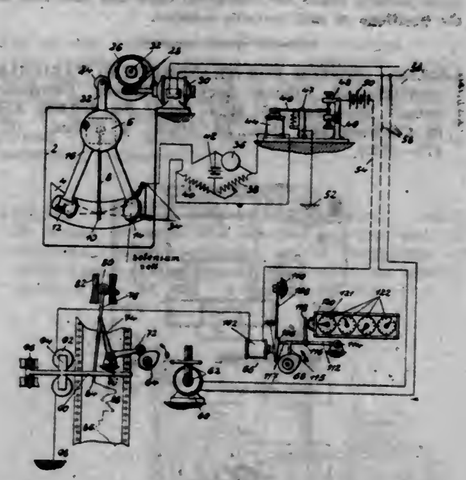
3. An excavating bucket having at its forward margin a strengthening belt extending to the upper forward corners thereof and having a horizontal strengthening flange extending around its upper margin and merging with said belt.

1,638,100. MEASURING SYSTEM. ERICH ROUČKA, Blansko, Czechoslovakia. Filed July 17, 1922, Serial No. 575,746, and in Austria Feb. 16, 1918. 9 Claims. (Cl. 73—167.)



1. A system for measuring a variable condition by varying an auxiliary fluid condition, comprising means movably sensitive to variations in the variable condition to be measured, means movably sensitive to an auxiliary fluid condition, said two means being connected so as to have a balanced relation, means responsive to departure from said balanced relation of said devices as a function of the variation in said condition to be measured, means for varying said auxiliary fluid condition, means adapted to be actuated by auxiliary power to periodically cooperate with said means responsive to departures from balance for actuating said last-mentioned means to vary said auxiliary fluid condition as a function of said condition to be measured and restore said balance, and means for measuring said auxiliary fluid condition.

1,638,101. SYSTEM OF MEASURING BY AUXILIARY ENERGY. ERICH ROUČKA, Blansko, Czechoslovakia. Filed July 17, 1922, Serial No. 575,748, and in Czechoslovakia Aug. 16, 1921. 8 Claims. (Cl. 73—167.)

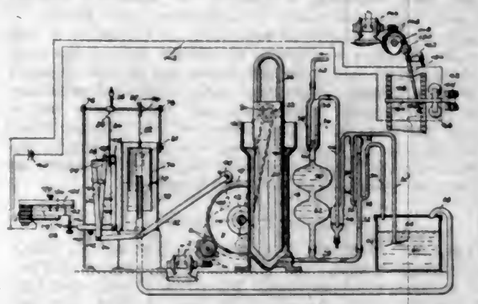


1. A measuring system of the class described for varying an auxiliary condition in accordance with variations in a value to be measured, comprising means sensitive to variations in said value, means sensitive to variations in said condition to balance the first mentioned sensitive means, means responsive to departures from balance of said two sensitive means, means controlled by said means responsive to departures from balance for varying said condition, means for measuring said condition, and means cooperating with said means for varying said condition and said means responsive to departures from balance during the operation of said means for varying said condition to prevent overthrowing or hunting of said means responsive to departures from balance.

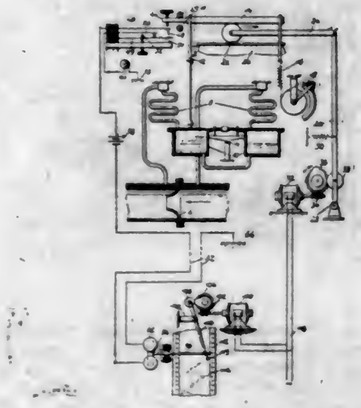
1,638,102. MEASURING SYSTEM. ERICH ROUČKA, Blansko, Czechoslovakia. Filed July 17, 1922, Serial No. 575,755, and in Czechoslovakia Aug. 30, 1921. 4 Claims. (Cl. 73—167.)

1. A measuring system of the character described in which the position of a movable member is varied as a measure in accordance with a variable value, said system comprising movable means sensitive to variations in the magnitude of said value, including a plurality of relatively movable slidably cooperating parts, means including a plurality of relatively slidable parts and actuated by auxiliary energy for exerting a mechanical force upon said first-mentioned means to balance the latter, governing means for controlling the application of said auxiliary energy to said second-mentioned means to vary said force including a plurality of relatively slidable parts, means responsive to departures from balance of said first two-mentioned means due to variations in said value including a plurality of slidable cooperating parts for actuating said governing means, one of said relatively movable slidably cooperating parts of each of said four-mentioned means being operatively connected to one of said parts of one of the others of said four-mentioned means, and means for vibrating one of said parts to produce relative vibration of all of said slidably cooperating parts to reduce friction therebetween.

1,638,103. SYSTEM FOR TRANSMITTING OR MEASURING VARIABLE CONDITIONS. ERICH ROUČKA, Blansko, Czechoslovakia. Filed Feb. 6, 1923, Serial No. 617,343, and in Czechoslovakia Feb. 14, 1922. 3 Claims. (Cl. 177—351.)



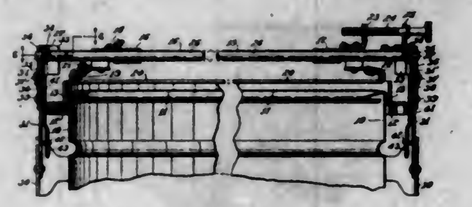
3. In a system for transmitting variable conditions, means regularly movable in a fixed path in cycles of regular intervals of time including a source of ray energy and a ray responsive device, means movable in a fixed path by and in accordance with variations in the condition to be transmitted and cooperating with the source of ray energy and the ray responsive device of said regularly movable means to control the influence of the ray energy on the ray energy responsive device in accordance with variations in said condition, a source of auxiliary energy, and means including said ray responsive device for producing an impulse of said auxiliary energy at a point in each cycle of the movement of the regularly variable means corresponding to the then magnitude of the variable condition.



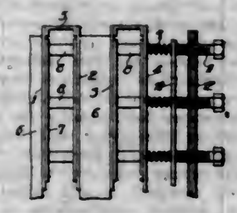
1,638,104. MEASURING SYSTEM. ERICH ROUČKA, Blansko, Czechoslovakia. Filed Aug. 9, 1923, Serial No. 656,512, and in Czechoslovakia Aug. 14, 1922. 11 Claims. (Cl. 177—351.)

1. A transmitting system of the character described comprising a member variably movable between two extremes in accordance with the variations of the magnitude of a condition to be transmitted in cycles of regular intervals of time, means for temporarily holding said movable member in the position assumed at the end of each cycle, means actuated by auxiliary power in cycles of regular intervals of time, a source of auxiliary energy, and means to cooperate with the last-mentioned means

and said movable member while the latter is in the position assumed at the end of the cycle to produce an impulse of said auxiliary energy so that the time positions of said impulses in the intervals of time of the corresponding cycles are dependent upon and functions of the positions of said movable member.



1,638,105. SYSTEM FOR TRANSMITTING VARIABLE CONDITIONS. ERICH ROUČKA, Blansko, Czechoslovakia. Filed Jan. 15, 1924, Serial No. 686,330, and in Czechoslovakia Jan. 16, 1923. 4 Claims. (Cl. 177—351.)



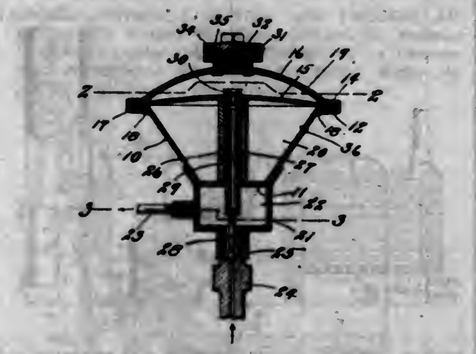
1. In a system for transmitting variable conditions, the combination of means movably sensitive to a condition which exerts a force corresponding and in quadratic relation to the magnitude of the condition, a lever, means mounting said sensitive means to exert its force on one end of said lever, a movable fulcrum for said lever intermediate its ends, means for exerting a constant auxiliary force upon the other end of said lever opposing the first force, a cam revoluble in regular cycles of equal intervals of time and operatively connected to said fulcrum to regularly vary the position of the latter to balance said forces, and means for producing an impulse of auxiliary energy actuated by said lever when said forces are balanced, whereby the time position of said impulse in the cycle is proportional or in other predetermined relation to the magnitude of said condition.

1,638,106. SNARE DRUM. CECIL H. STRUPS, Indianapolis, Ind., assignor to Leedy Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed Oct. 15, 1923. Serial No. 668,455. 18 Claims. (Cl. 84—415.)

1. The combination with a drum, of a pair of supports carried by the drum shell, an external bar extending across the drum head between said supports, a single means carried by the drum shell by which said bar may be readily shifted bodily on the supports toward and from the drum head substantially at right angles thereto, and relatively adjustable snare-carrying elements carried by said bar.

1,638,107. HEAT EXCHANGER. LOUIS C. WHITON, New York, N. Y., assignor to Prat-Daniel Corporations, New York, N. Y., a Corporation of New York. Filed July 25, 1924. Serial No. 728,103. 1 Claim. (Cl. 257—245.)

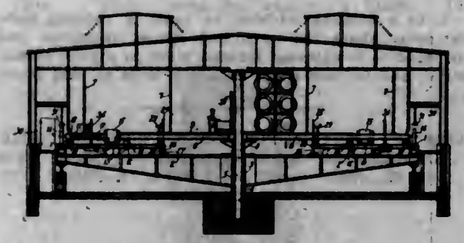
A heat exchanger for fluids formed of plates with spacers between the open edges of said plates and with springs bearing against at least one of the end plates of the assemblage to press the parts together, said spacers comprising struts connected together in proper relative positions.



1,638,108. METHOD OF PRODUCING ARTICLES FROM COMPOSITIONS OF MATTER. ALBERT BARNES-THOMAS, Dresden, Germany, assignor to Marvle Products Limited, London, England, a British Company. Filed June 3, 1924, Serial No. 717,547, and in Great Britain Feb. 14, 1924. 5 Claims. (Cl. 18—47.5.)

1. A method of producing imitation marble, tiles, slabs or the like, comprising applying to a molding surface a substance substantially free from gritty materials and containing a substantial percentage of casein to act as a glazer, then applying to said first substance a base material to form an integral mass.

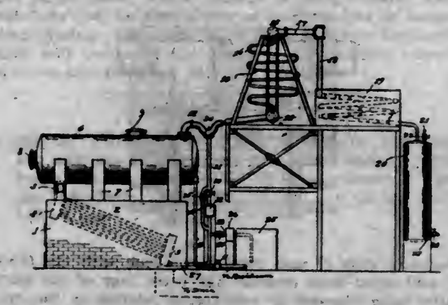
1,638,109. IMITATION MARBLE, TILES, SLABS, AND SIMILAR MATERIAL ESPECIALLY FOR USE FOR DECORATIVE PURPOSES IN BUILDINGS AND OTHER PLACES. ALBERT BARNES-THOMAS, Dresden, Germany, assignor to Marvle Products-Limited, London, England, a British Company. Original application filed June 3, 1924, Serial No. 717,547, and in Great Britain Feb. 14, 1924. Divided and this application filed Aug. 6, 1925. Serial No. 48,660. 14 Claims. (Cl. 18—48.8.)



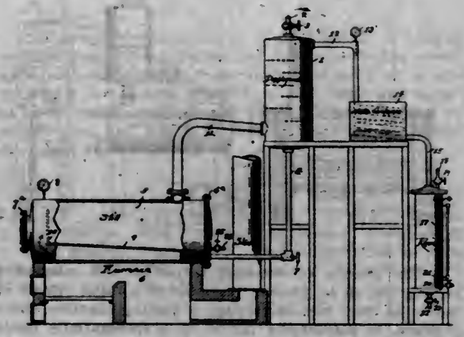
1. An article of manufacture such as imitation marble, a tile, slab or the like comprising a facing or surface containing cement and casein and constituted by an initial film like surfacing layer and a thicker layer, to which latter is united a concrete-like backing.

1,638,110. PRESSURE-REDUCING DEVICE. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed May 22, 1923. Serial No. 640,633. 5 Claims. (Cl. 50—21.)

4. A pressure reducing device comprising a casing provided with a pressure chamber and a receiving chamber of unequal diameters, each of said chambers being provided with an inner yielding wall or diaphragm, a tubular section secured at its ends to said walls, an adjustable stem in said section and provided with a duct for conveying the fluid from the receiving chamber to said pressure chamber, an inlet connection for said receiving chamber and a valve for closing said inlet connection and operable by said stem when the diaphragm in said pressure chamber is actuated.



1,638,111. TIRE-TESTING APPARATUS. JOSEPH G. COFFIN, Hempstead, N. Y., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed Nov. 24, 1923. Serial No. 676,718. 17 Claims. (Cl. 73—51.)

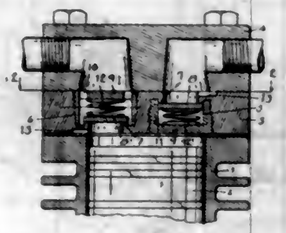


1. Tire testing apparatus including in combination, a multiplicity of tire-supporting devices permitting independent rotation of tires thereon, a member having a surface adapted to engage and wear out tires on said supports and extending at the point of contact therewith substantially parallel to the axis of revolution of each tire, said tire supporting devices being substantially fixed against displacement in the direction of travel of said member, and means for relatively moving the supporting devices and member.

1,638,112. PROCESS OF TREATING HYDROCARBONS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Sept. 29, 1919, Serial No. 327,815. Renewed Mar. 24, 1927. 1 Claim. (Cl. 196—58.)

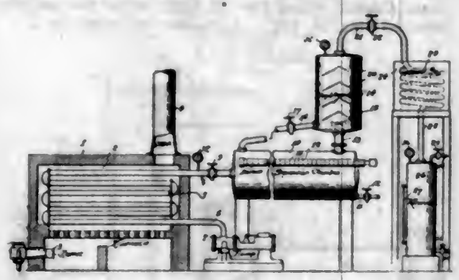
A process of converting heavy into lighter hydrocarbon, consisting in continuously passing oil through a heating zone where it is subjected to a cracking temperature, in introducing the heated oil to an enlarged vapor chamber, in discharging unvaporized residue from said vapor chamber and preventing it from again coming in contact with the incoming charging stock fed to said heating zone, in taking off vapors from said vapor chamber and passing them through a vapor line to a reflux condenser, in trapping all the condensate produced in said line to prevent any of said condensate from directly returning to the vapor chamber, in returning said condensate, together with condensate produced in the reflux condenser to the heating zone for retreatment, in condensing and collecting the vapors from said reflux condenser, and in maintaining a vapor pressure above atmospheric on the oil undergoing conversion.

1,638,113. PROCESS FOR CRACKING OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 17, 1921, Serial No. 445,671. Renewed Mar. 24, 1927. 5 Claims. (Cl. 196—48.)



1. A process for cracking hydrocarbon oil, consisting in converting the oil at a cracking temperature in a reacting chamber, dephlegmating and condensing the generated oil vapors, returning the reflux and causing it to be introduced and flow through the zone of highest temperature in said reacting chamber, circulating the oil to promote conversion in the upper part of said chamber and collecting the precipitated carbon in the interior of the chamber and out of contact with the lower heated portion thereof.

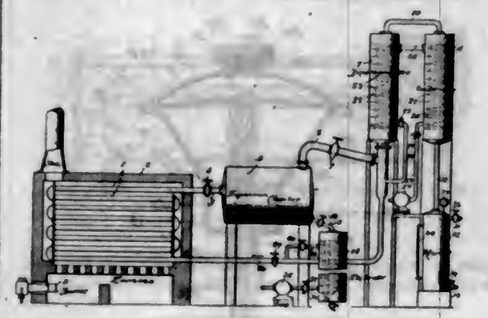
1,638,114. AIR COMPRESSOR. HARLEY M. DUNLAP and DELMER M. PUTNAM, Battle Creek, Mich.; Rhoda S. Dunlap executrix of said Harley M. Dunlap, deceased. Filed Jan. 14, 1925. Serial No. 2,269. 5 Claims. (Cl. 230—84.)



1. In a compressor, the combination of a cylinder, a head therefor comprising superimposed head members, the inner head member having inlet and discharge valve chambers therein provided with annular raised valve

seats, the outer head member having passages therein communicating with said valve chambers, disk valves coacting with said seats, the valve chambers being of a diameter substantially exceeding that of the valve seats, valve cages having ports in the outer ends thereof threaded into said valve chambers with their said guiding ribs projecting inwardly beyond the faces of said valve seats,

the outer ends of said cages being flush with the faces of said inner head member, the valve cage of the inlet valve being disposed in overlapping relation to the cylinder wall, the valve cage of the discharge valve being arranged in overlapping relation to the outer head member providing locking means for the cages, and springs arranged within said cages to coact with said valves.

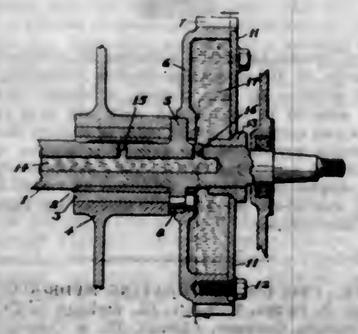


1,638,115. PROCESS OF AND APPARATUS FOR CRACKING OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 13, 1920, Serial No. 430,125. Renewed Mar. 24, 1927. 3 Claims. (Cl. 196—48.)

1. The process of cracking petroleum oil, comprising heating the oil by passing the same in a small stream of restricted cross section through a heating chamber under pressure, in discharging the oil in a substantially liquid phase into an enlarged expansion chamber where vaporization takes place, in locally and positively heating the upper portion of said expansion chamber to impart heat to the vapors therein by applying heat to the chamber substantially along its entire length, in discharging the vapors to a reflux condenser, in retreating the reflux condensate separated from the vapor, and in maintaining the vapor pressure on the oil in said dephlegmator and expansion chamber.

1,638,116. APPARATUS FOR CRACKING HYDROCARBONS. GUSTAV EGLOFF and JOSEPH C. ALTHER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 23, 1920, Serial No. 432,847. Renewed Mar. 24, 1927. 2 Claims. (Cl. 196—99.)

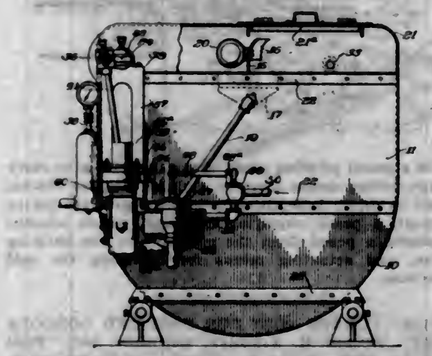
1. In an apparatus for cracking hydrocarbon oils, the combination with a furnace, of a cracking coil therein, an expansion chamber adjacent said coil into which oil is delivered, a reflux condenser, means for passing generated vapors to said reflux condenser, means for feeding charging stock to the reflux condenser to condense the heavier insufficiently cracked vapors, means for discharging residual oil from said expansion chamber, a preheater receiving said oil, means for feeding an inde-



pendent supply of charging stock to said preheater, and means for introducing the heated charging stock from the preheater and the reflux condensate and charging stock from the reflux condenser to said cracking coil.

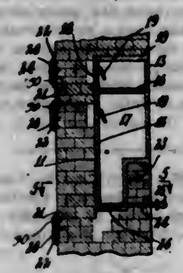
1,638,117. STAPLING MACHINE. WILLIAM FOLEY, St. Louis, Mo., assignor to International Shoe Company, St. Louis, Mo., a Corporation of Delaware. Filed Aug. 14, 1926. Serial No. 129,112. 8 Claims. (Cl. 1—2.)

1. In a stapling machine, an anvil, a resilient plate extending above the anvil and spaced therefrom and arranged to be extended through a slit in a piece of material, and inclined staple clamping walls on said plate.



1,638,118. MEANS FOR SOUNDPROOFING GEAR MECHANISMS. HENRY FORD, Dearborn, Mich. Filed Apr. 22, 1926. Serial No. 103,954. 2 Claims. (Cl. 74—28.)

1. In a device of the class described, a shaft having a flange spaced from one end thereof, a gear ring mounted on said flange, a plate secured to one side of said gear ring and adapted to form a liquid compartment therewith, and a nut threaded to said shaft to form a combined

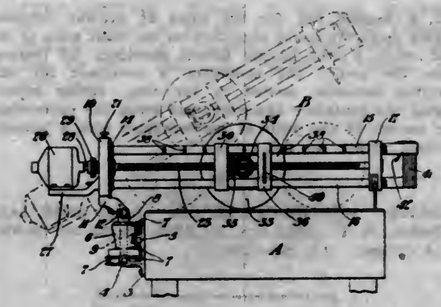


closure and locking member whereby the gear assembly may form a fluid tight compartment for a sound deadening liquid and will be held from movement axially of the shaft.

1,638,119. CHEMICAL MIXING AND FEEDING APPARATUS. WALTER H. GREEN, Chicago, Ill., assignor to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1923. Serial No. 670,431. 8 Claims. (Cl. 210—29.)

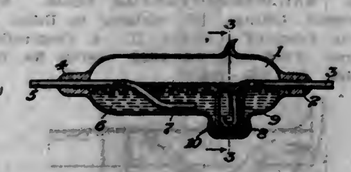
1. Feeding apparatus, comprising, in combination, a container for liquid, measuring apparatus for apportioning liquid contained therein for discharge therefrom, and a closure co-operating with the container to completely house the measuring apparatus therein.

1,638,120. VENTILATED WALL RECEPTACLE FOR FOOD. CLARA L. HAYWOOD, Brooklyn, N. Y. Filed Mar. 2, 1925. Serial No. 12,618. 1 Claim. (Cl. 20—1.11.)



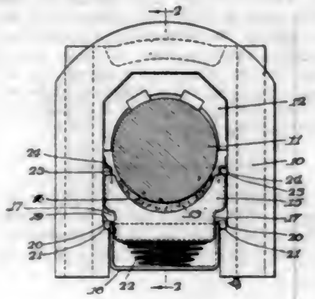
In a ventilated wall receptacle for food, a box interiorly divided by a shelf into upper and lower storage chambers, the lower portion of said box being somewhat restricted in area said box having the rear wall of each chamber, and the bottom wall of the bottom chamber perforated by a plurality of vent openings, obliquely disposed bricks separately in close adjacence to each of the plurality of vent openings in each of said chambers, horizontally disposed bricks separating said groups of obliquely disposed bricks form each other, house wall cover plates having vent openings secured over the rear of each group of obliquely disposed bricks, and slidable plates carried by said cover plates and having similar vent openings to said cover plates, allowing an exposure of the openings to any desired degree, or a perfect closure of the same, whereby each chamber may be separately ventilated, or closed and be dust-proof.

1,638,121. PROCESS OF PRODUCING ICE COLORS ON COTTON. KARL JELLINCK and WILHELM CHRIST, Offenbach-on-the-Main, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Jan. 15, 1925, Serial No. 2,603, and in Germany Feb. 25, 1924. 2 Claims. (Cl. 8—5.)



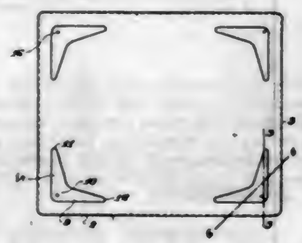
1. In the process of producing ice colors on cotton, the improvement which consists in using nonacid diazo solutions and, for the purpose of avoiding lean or nonuniform dyeings, adding to these diazo solutions substances that will neutralize the alkali of the padding solution without acidifying the bath.

1,638,122. POWER SAW. CHARLES H. JULL, Ben Avon, Pa., assignor to Pittsburgh-Erie Saw Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 16, 1926. Serial No. 102,447. 6 Claims. (Cl. 143—6.)



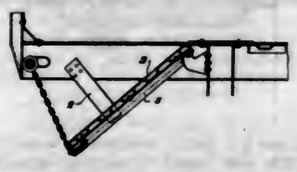
1. A power saw comprising in combination, a housing member mounted for lateral and vertical swinging movement, an elongated saw frame revolvably mounted in said housing, a saw carrier mounted on said frame and adapted to be moved longitudinally thereof, a saw mounted on said carrier, and means for locking said carrier against movement on said frame.

1,638,123. CIRCUIT CONNECTER. ROY D. MAILEY, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 1, 1924. Serial No. 689,984. 7 Claims. (Cl. 200—152.)



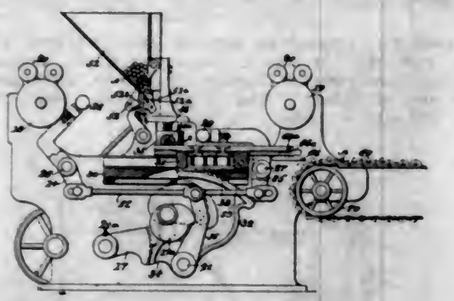
1. In an electric device comprising a container, electrodes therein and liquid conducting material therein adapted to open and close a circuit to the container and means in said device for insuring making and breaking a current flow therethrough between liquid surfaces comprising a cup positioned about the end of one of said electrodes, said cup being of a more highly refractory material than that of said container, and being held in place in the container by the electrode terminating herein and the envelope wall.

1,638,124. JOURNAL BOX. GEORGE E. McCOY and ERNEST HAWKER, Moncton, New Brunswick, Canada. Filed Jan. 27, 1927. Serial No. 164,113. 3 Claims. (Cl. 308—88.)



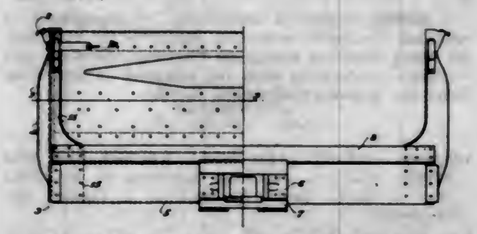
1. A journal box for the axles of railway vehicles having upwardly facing shoulders on the inner sides of its side walls, a tray having lateral shoulders for resting upon the named box shoulders, a container for oil-carrying material carried by the tray, spring means urging the container upwardly, and stops for preventing the contact of the walls of the container with a journal inclosed within the box.

1,638,125. HOPPER-CAR DOOR. JOHN McMULLEN, Buffalo, N. Y. Filed Sept. 29, 1925. Serial No. 59,408. 14 Claims. (Cl. 105—280.)



1. A metallic door for a railway dump car formed of a metallic plate having flanges on its adjacent sides, and an embossment in the corner adjacent to said flanges, the opposite ends of said portions merging into the plate of the plate.

1,638,126. RAILWAY-HOPPER-CAR DOOR. WALTER P. MURPHY, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 14, 1925. Serial No. 50,232. 2 Claims. (Cl. 105—280.)

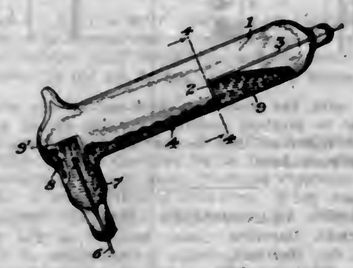


1. In a railway car having a door opening, a door hinged adjacent one edge thereof and supported at the opposite edge thereof, said door made of a metallic plate formed with integral reinforcements comprising spaced apart webs and flat connecting portions parallel to the original plane of the plate of greater width than said webs.

1,638,127. PENCIL-PRINTING PRESS. GEORGE FREDERICK RABUS, Cedar Rapids, Iowa. Filed Nov. 27, 1925. Serial No. 71,543. 15 Claims. (Cl. 101—38.)

1. In a pencil printing press, a movable platen to carry the type, inking means therefor, endwise movable chucks, adapted to rotate intermittently in time with the platen movement, a pencil supplying magazine, means adapted to transfer a pencil from the magazine to the printing position, and actuating means for operating the said mechanisms.

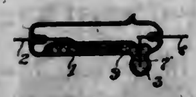
1,638,128. CORNER POST FOR DROP-END GONDOLA CARS. AUGUST G. SANDMAN, Baltimore, Md. Filed July 30, 1925. Serial No. 47,032. 14 Claims. (Cl. 105—406.)



1. In combination with the other elements of a railway drop end gondola car; a corner post formed of plate steel comprising a side portion and an end portion substantially perpendicular to each other, said end portion being of constant width at its upper part with its outer rim curved to form a wider lower part for connection to the underframe of the car.

1,638,129. FAN BLADE. KING L. PARKER, St. Louis, Mo., assignor to The Emerson Electric Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 21, 1925. Serial No. 57,575. 2 Claims. (Cl. 170—159.)

1. A fan blade comprising an area downwardly deflected from a plane of a median line, said area terminating in the advanced edge of the fan blade, an area adjacent to the inner edge of the blade having a relatively sharp upward curvature at its marginal edge, and an area lying adjacent to said first named areas having a curvature gradually reduced in degree proportionally to the distance from the axis of rotation.



1,638,130. LIQUID-FLOW TIME SWITCH.. WARREN R. WALKER, New Dorp, N. Y., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed June 26, 1924. Serial No. 722,427. 9 Claims. (Cl. 200—33.)

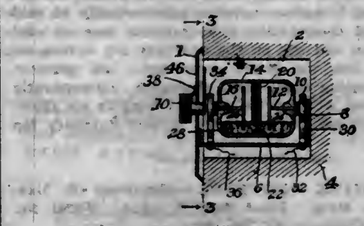
1. In a liquid flow time switch comprising a sealed envelope, a main chamber and a sub-chamber divided by a member terminating above the lower limits of said main chamber, mercury in said envelope sufficient to extend in said main-chamber and sub-chamber over said dividing member in a closed circuit position of the switch, electrodes sealed into said main chamber and said sub-chamber, and a flow restricting baffle across said main chamber in the path of mercury flow therein from an open circuit position to said closed position of the switch.

5. In a liquid flow time switch comprising a sealed envelope, a main-chamber and a sub-chamber divided by a member terminating above the lower limits of said main-chamber, mercury in said envelope sufficient to extend in said main-chamber and sub-chamber over said dividing member in a closed circuit position of the switch, an electrode sealed into said sub-chamber, a flow restricting baffle across said main chamber in the path of mercury flow therein from an open circuit position to said closed position of the switch, a conducting support mounted on said baffle and sealed through said envelope, and a member of conductive material carried by said support and extending into the mercury in said closed circuit position of the switch.

1,638,131. ELECTRIC SWITCH. WARREN R. WALKER, Great Kills, N. Y., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Mar. 5, 1925. Serial No. 13,077. 11 Claims. (Cl. 200—152.)

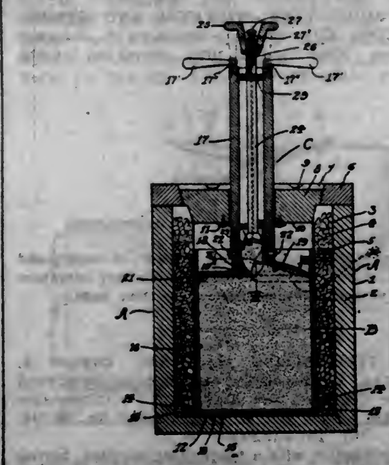
1. A mercury switch comprising an envelope of glass, mercury therein, and electrodes, one of which comprises a lead-in sealed into said envelope and a terminal portion of metal of the iron group welded to said lead-in and extending into said mercury.

10. A mercury switch comprising a sealed envelope of glass, mercury therein, and electrodes one of which comprises a lead of tungsten sealed into the envelope and a terminal thereon of oxygen free nickel.



11. The method of making an electrode for a mercury device into which it is sealed which comprises welding a nickel terminal portion to a tungsten lead-in portion.

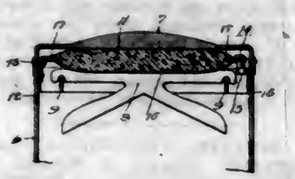
1,638,132. ELECTRIC SWITCH. WARREN R. WALKER, Bloomfield, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 15, 1926. Serial No. 88,392. 7 Claims. (Cl. 200—152.)



1. In an electric switch of the mercury flow type, a sealed envelope of glass, electrodes sealed into the envelope, mercury in the envelope, and a septum of arc resisting material positioned across the envelope in the line of flow of mercury therein for opening and closing a circuit therethrough, the wall of said envelope being fused down against said septum, and said septum being formed with a passageway for the mercury.

1,638,133. ROTATING CYLINDRICAL GLASS MERCURY SWITCH. WARREN R. WALKER, Bloomfield, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Jan. 20, 1927. Serial No. 162,267. 5 Claims. (Cl. 200—152.)

1. In combination with a liquid flow switch having a sealed body, axially aligned electrode leads terminating in electrodes in said envelope, and a body of mercury in said envelope for breaking and making the circuit between said electrodes, a wall plate, a bracket extending from said plate, said switch being mounted between said plate and said bracket for rotation about said electrode leads as axes.



1,638,134. ICE-CREAM-HANDLING APPARATUS. SIDNEY B. WHITESIDE, New York, N. Y. Filed July 6, 1925. Serial No. 41,730. 2 Claims. (Cl. 107—8.)

1. An ice cream dispensing device comprising a tubular shank adapted to move axially through a radiation re-

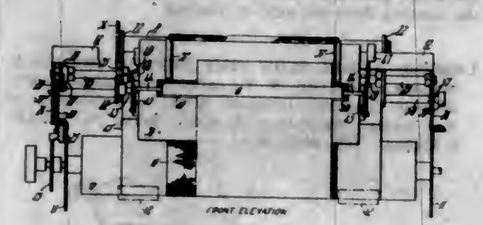
sisting cover of a cabinet or like container for ice cream cans, a head on said tubular shank adapted to engage and raise progressively portions of the ice cream from a mass, a dipper adapted to pass through the bore of said tubular shank, and means for manipulating said dipper to extract ice cream portions from the mass without exposing the mass of ice cream to radiation or contamination.

1,638,135. WARDROBE TRUNK. IRVING R. ALLEN, Chicago, Ill. Filed May 15, 1926. Serial No. 109,253. 5 Claims. (Cl. 190—13.)

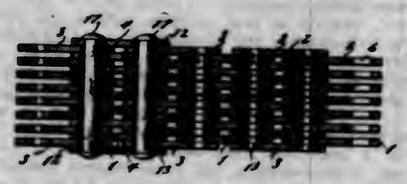
1. The combination with the garment section of an open top wardrobe trunk, its top, hanger rails and garment hangers, of a padded auxiliary top device for the open top of said section movable independently of said trunk top, and co-operating lock members, one on said garment section and one on the auxiliary top device, co-operating to lock the latter down upon the garment hangers in pressing engagement therewith, independently of the trunk top, whereby the garment hangers are thereby held against movement relative to said auxiliary top device.

1,638,136. SHANK STIFFENER. REINHARD E. BARTELS, Lynn, Mass. Filed Sept. 8, 1920. Serial No. 408,800. 5 Claims. (Cl. 36—76.)

1. A shank stiffener comprising a blank of thin sheet metal having a hole formed by the striking of material therefrom adjacent to one end, the material so struck being transversely divided to form a pair of oppositely positioned prongs projecting from one face thereof and inclined toward each other.



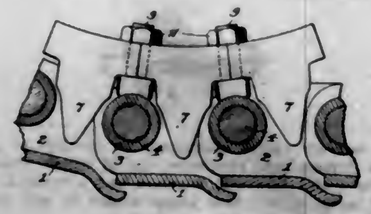
1,638,137. SHOE-SHANK STIFFENER AND METHOD OF MAKING THE SAME. REINHARD E. BARTELS, Lynn, Mass. Filed June 12, 1924. Serial No. 719,679. 12 Claims. (Cl. 36—76.)



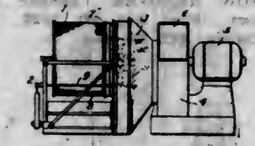
7. A shoe stiffener comprising a pair of superposed metal strips of inherently different longitudinal curvature sprung and welded together adjacent to their ends.

1,638,138. TYPEWRITING MACHINE. EDWARD A. BASKERVILLE, Omaha, Nebr., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 6, 1925. Serial No. 60,744. 7 Claims. (Cl. 197—132.)

1. The combination with a typewriting machine, having a revoluble platen and line-spacing mechanism therefor, of a pair of feed-rolls permanently held against said platen to hold and feed a work-sheet therearound by its side margins only, means operable by the line-spacing mechanism for feeding a length of carbon around the platen between and free of said feed-rolls, means for collating with the first work-sheet an outside work-sheet brought to printing position over the carbon and free of said feed-rolls, and means for holding the collated outside work-sheet.

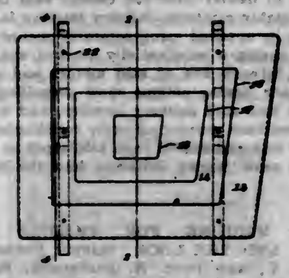


1,638,139. TRANSMISSION CHAIN. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Aug. 13, 1924. Serial No. 731,716. 7 Claims. (Cl. 74—32.)



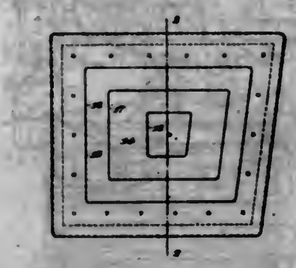
3. A chain of the silent link type comprising a plurality of sets of links, said links having openings in their ends, means passing through said openings including a bushing having a slot, a pin passing through the bushing, certain of the links being fastened to the pin, certain of the links being fastened to the bushing and certain of the links being free to rotate on the outside of the bushing.

1,638,140. TRACKLAYING TRACTOR. CLARENCE LEO BEST, San Leandro, Calif., assignor, by mesne assignments, to Caterpillar Tractor Co., San Leandro, Calif., a Corporation of California. Filed Dec. 9, 1922. Serial No. 605,915. 5 Claims. (Cl. 74—31.)



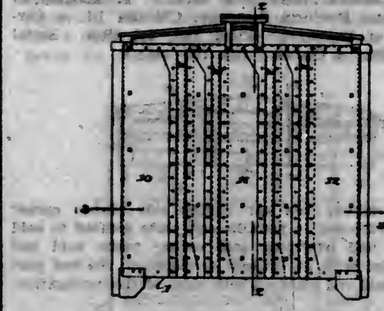
1. In a track laying tractor, the combination with a link tread, of a sprocket wheel over which the link tread runs, the sprockets of the wheel having radially adjustable intermediate bottom parts, said intermediate bottom parts having end portions sloping outwardly toward opposite sides of the wheel.

1,638,141. AIR-FILTER DRIVE. JOHN R. BOLLING, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 25, 1926. Serial No. 137,729. 4 Claims. (Cl. 183—9.)



1. In an air filter, a filter screen, an oil dispenser related with said screen, and means for causing relative movement between said screen and said dispenser, said means driven by the air flowing through the screen.

1,638,142. PANELING FOR HOPPER DOORS FOR RAILWAY CARS. CHARLES DAVID BONSALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 17, 1925. Serial No. 50,871. 8 Claims. (Cl. 105—280.)

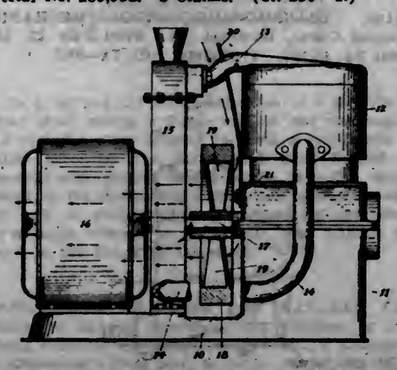


1. A plate metal door for a railway car having an embossed panel pressed from the plane of the plate with flat margins surrounding said panel, and an embossed panel pressed from the first mentioned panel with flat margins surrounding the last mentioned panel, the margins at the sides of the panels being narrower than the margins at the ends of the panels.

1,638,143. PANEL BRACING IN HOPPER DOORS FOR RAILWAY CARS. CHARLES DAVID BONSALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 17, 1925. Serial No. 50,872. 15 Claims. (Cl. 105—280.)

1. A plate metal door for a railway car having an embossed panel pressed from the plane of the plate with flat margins surrounding said panel, an embossed panel pressed from the first mentioned panel with flat margins surrounding the last mentioned panel, a similarly embossed metallic sheet secured to said plate with the embossments projecting in the opposite direction to those of the plate, and a strut between said plate and said sheet.

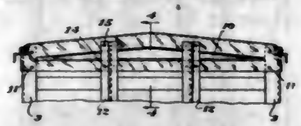
1,638,144. CAR-WALL STRUCTURE. CHARLES DAVID BONSALL, Parnassus, Pa., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Sept. 26, 1925, Serial No. 58,845. Divided and this application filed Dec. 3, 1926. Serial No. 152,494. 5 Claims. (Cl. 105—410.)



1. In a railway car, the combination of a metallic wall plate and a wooden lining spaced therefrom, said metallic plate provided with different depth corrugations, some of which are flush with the inside of said lining, and others of which are flush with the outside of said lining.

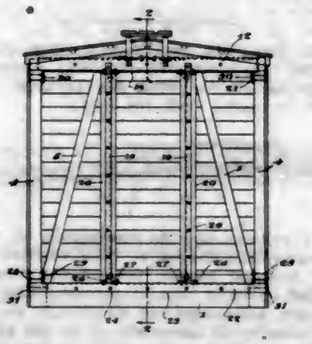
1,638,145. CARLINE REENFORCEMENT AND LOAD-LIFTING ATTACHMENT. CHARLES DAVID BONSALL, New Kensington, Pa. Filed Jan. 14, 1927. Serial No. 161,093. 9 Claims. (Cl. 105—355.)

1. In a railway car, the combination of roof sheets having upstanding flanges at their adjacent edges, an inverted U-shaped carline covering the flanges of adjacent roof sheets, a pair of vertical plates positioned between the roof flanges and attached to the carline on opposite sides of the center line of the car which extend below the roof sheets, and a splice member securing the vertical plates together provided with an aperture for the attachment of a load lifting device.



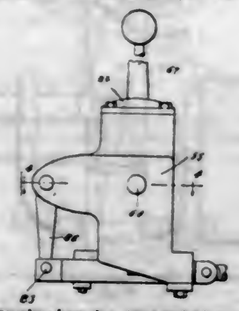
1,638,146. ENGINE AND GENERATOR COOLING SYSTEM. ALVIN E. BUCHENBERG, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 14, 1919. Serial No. 289,952. 3 Claims. (Cl. 290—1.)

1. In an electric generating unit, a water cooled gas engine, a radiator therefor, a generator, a fan, a common shaft for said engine, generator and fan, said generator



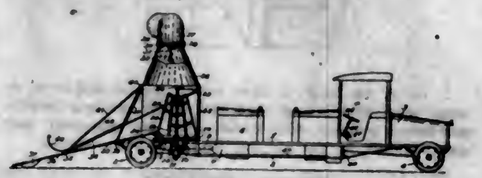
and radiator being located on the positive side of said fan and one beyond the other respectively in the path of the air moved by the fan.

1,638,147. END PLATE FOR RAILWAY BOX CARS. GEORGE THOMAS COOKE, New York, N. Y., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 11, 1924. Serial No. 685,594. 4 Claims. (Cl. 105—411.)



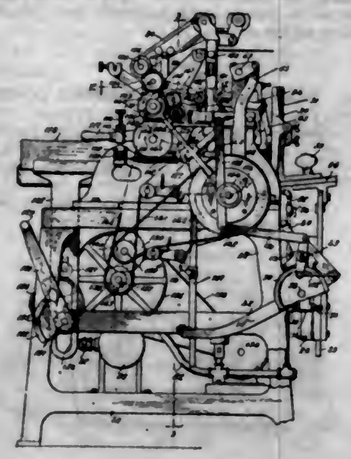
1. In a railway box car having side plates, corner posts and end posts; a metallic end plate secured to said side plates and overlying said corner posts, said end plate provided with an integral corrugation, the end post secured to said end plate on both sides of the corrugation.

1,638,148. END REENFORCEMENT FOR RAILWAY CARS. GEORGE THOMAS COOKE, New York, N. Y. Filed June 6, 1924. Serial No. 718,285. 3 Claims. (Cl. 105—411.)



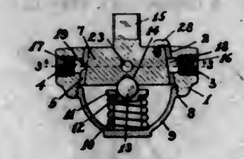
1. In a railway car, the combination of end posts, corner posts, side sills, an end sill, and a Z-shaped reenforcing member having a horizontal web secured to said end sill and said end posts, a rear vertical flange secured to said end posts, a front vertical flange secured to said end sill and provided with flanges secured to said side sills.

1,638,149. TRANSMISSION-CONTROL MECHANISM. CHARLES COTTA, Rockford, Ill. Filed July 22, 1925. Serial No. 45,157. 17 Claims. (Cl. 74—58.)



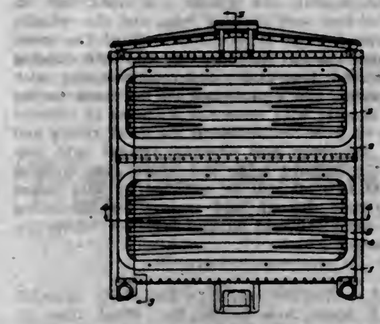
1. Control mechanism for transmissions comprising, in combination, three shift bars, a single control lever, and means operated by said control lever for simultaneously moving plural shift bars back and forth in the same direction or for simultaneously moving them in opposite directions.

1,638,150. SNOW REMOVER. ERNEST EBERHARDT, Waterloo, Iowa. Filed Aug. 20, 1926. Serial No. 130,524. 4 Claims. (Cl. 37—43.)



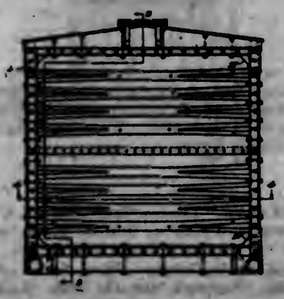
1. A snow remover, comprising in combination, means for transportation having independent motors mounted thereon, an open front casing mounted on said means for transportation, an inclined plane rigidly mounted upon said casing to deliver into the casing, said casing having an adjustably rotatable delivery member in communication with it, a vaned rotor rotatably mounted in said casing and having a substantially vertical shaft, driving connections between one of said motors and said shaft, and said rotor having oblique snow propelling vanes to propel snow into said delivery member, and having connecting cutter bars connecting outer terminations of said vanes along side and spaced from said shaft to shave and disintegrate snow masses delivered into the casing over said plane.

1,638,151. MACHINE FOR FEEDING SHEETS, LABELS, AND THE LIKE. MARTIN FEYBUSCH, New York, N. Y., and PAUL W. FLEISCHER, Weehawken, N. J., assignors to New Jersey Machine Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed Jan. 15, 1923. Serial No. 612,618. 14 Claims. (Cl. 271—28.)



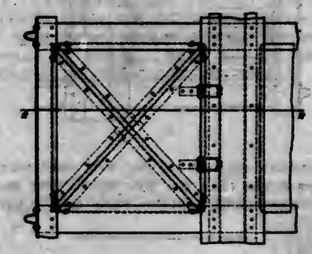
1. In a machine for removing sheets from a stack, a support for the stack of sheets, a suction arm, a rock shaft on which said suction arm is mounted, and means for operating said rock shaft to first move said suction arm toward and from said support and then swing said suction arm away from said support.

1,638,152. REGULATING VALVE FOR LIQUIDS AND GASES. JOSEPH A. GABRIEL, Cleveland, Ohio. Filed Aug. 6, 1921. Serial No. 490,373. 5 Claims. (Cl. 251—92.)



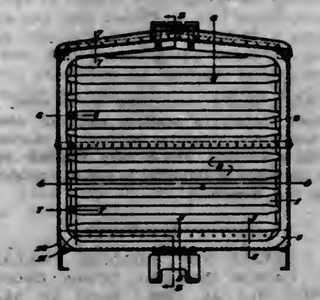
1. In a regulating valve, the combination of a body, the body having inlet and outlet openings, the body being provided with transversely extending recesses leading from said openings, a sleeve fixed in the body, the sleeve being provided with transversely extending slots opposite said recess, the slots having edges tapering from the outside to the inside of the sleeve, a plug rotatably mounted in the sleeve, the plug having grooves in the sides thereof and a conduit connecting the grooves, and said grooves being adapted to establish communication between said slots, substantially as described.

1,638,153. CORRUGATED METALLIC PLATE FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed May 16, 1925. Serial No. 30,777. 11 Claims. (Cl. 105—410.)



1. A metallic plate pressed to form a continuous corrugation surrounding a panel, said panel formed with transverse corrugations which merge into the opposite portions of the continuous corrugation.

1,638,154. CORRUGATED STRUCTURE FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed May 16, 1925. Serial No. 30,778. 27 Claims. (Cl. 105—410.)

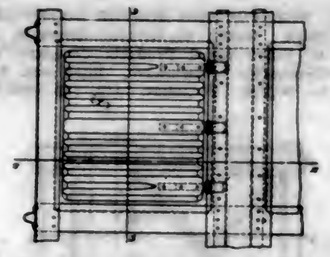


1. In combination with a railway car having corner posts, a metallic plate having a continuous web surrounding a panel provided with integral corrugations which merge into the opposite portions of said web but are of less depth than the web where they merge into it, said web being secured to the corner posts.

1,638,155. REENFORCING HOPPER DOOR FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 14, 1925. Serial No. 50,224. 2 Claims. (Cl. 105—280.)

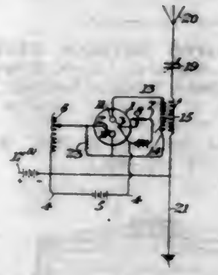
1. A metallic plate door comprising a panel with a flange at each side thereof, and a pair of reenforcements which cross each other and extend continuously between the diagonally opposite corners of the door and are secured to said panel, said reenforcements provided with a flange at each of their opposite ends secured to the adjacent flanges of the door.

1,638,156. CORRUGATED METALLIC PLATE FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed May 16, 1925, Serial No. 30,777. Divided and this application filed Nov. 2, 1925. Serial No. 66,269. 8 Claims. (Cl. 105—410.)



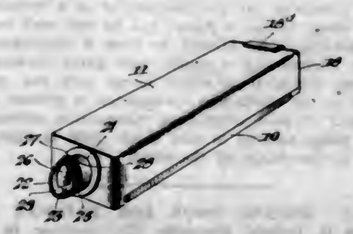
1. In a railway car the combination of a metallic side or floor sheet having a flange and an end wall comprising a metallic plate pressed to form a continuous corrugation surrounding a panel, said panel formed with transverse corrugations which merge into the opposite portions of the continuous corrugation, a portion of the outer wall of said continuous corrugation extended to form a flange secured to said sheet; said metallic plate secured to the flange of the sheet.

1,638,157. HOPPER DOOR FOR RAILWAY CARS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 5, 1925. Serial No. 67,080. 4 Claims. (Cl. 105—280.)



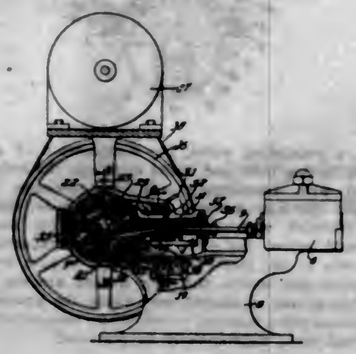
1. In combination with the other elements of a railway dump car; a door made of a metallic plate formed

with a marginal portion surrounding a continuous web which surrounds a panel, said panel provided with integral corrugations which traverse the panel and merge



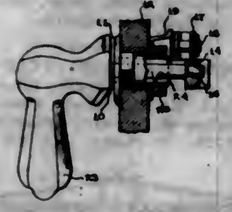
into the opposite portions of the web, said corrugations being of less depth than the web where they merge into it but of greater depth adjacent their middle portion.

1,638,158. ELECTRIC APPARATUS. PETER COOPER HEWITT, Ringwood Manor, N. J.; The Farmers' Loan and Trust Company, executor of said Peter Cooper Hewitt, deceased, assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed July 30, 1920. Serial No. 400,292. 11 Claims. (Cl. 250—27.)



1. An electric device comprising a container, a negative electrode therein, a positive electrode cooperating with said negative, a potential terminal in operative relation to said electrodes, and a fifty megohm resistance connecting the positive terminal to the potential terminal peculiar to said terminals.

1,638,159. DEVICE FOR HOLDING COLLAPSIBLE TUBES. CHARLES HOPEWELL, Ottawa, Ontario, Canada. Filed Mar. 24, 1925. Serial No. 18,033. 7 Claims. (Cl. 221—60.)

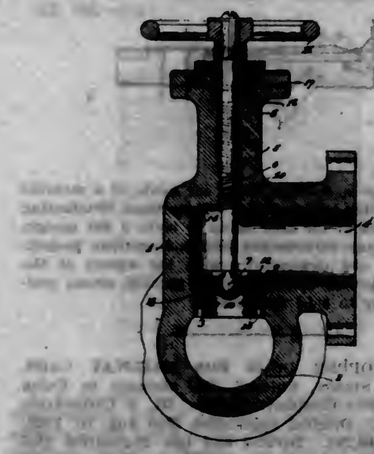


1. In a container or the like for collapsible tubes, a combined cap carrying and clamping member rotatably mounted in the container and operable from without the container.

1,638,160. LUBRICATION MEANS FOR PUMPS AND THE LIKE. OSCAR W. JOHNSON, Rockford, Ill., assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Aug. 9, 1922. Serial No. 580,651. 5 Claims. (Cl. 184—13.)

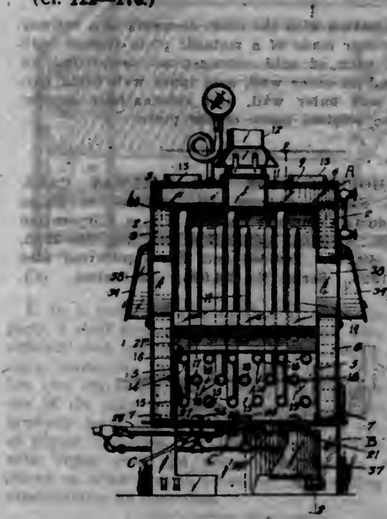
1. In combination, a crank casing and a horizontal cylinder casing, a cross-head or the like reciprocable in the cylinder, a crank in the crank casing connected to the cross-head, a bearing for the crank, a dividing ledge above and intermediate the cylinder and crank case, an oil passage between said dividing ledge and the cylinder wall, an inclined ledge on one side wall of the crank casing communicating at its upper end with said dividing ledge and inclined downwardly and communicating with the crank bearing, and a projection on the crank having an oil-scoop angular with respect to its plane of rotation for scooping oil from the bottom of the crank casing and throwing it upwardly and laterally against said side wall above the inclined ledge and above said dividing ledge, so that this oil will be collected by said ledges and will gravitate through said passage for lubricating the cylinder and along said inclined ledge for lubricating the crank bearing.

1,638,161. FLUSH-VALVE-OPERATING MEANS. CHARLES J. KIRK, New Castle, Pa. Filed June 12, 1926. Serial No. 115,456. 14 Claims. (Cl. 4—67.)



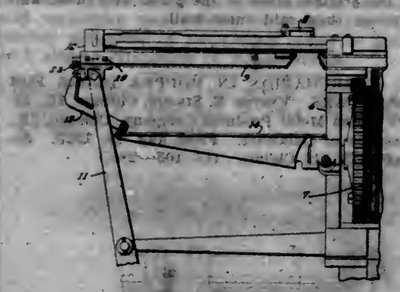
1. Flush valve operating means comprising a pivotally mounted valve lever, and an actuating element operatively connected with the valve lever and mounted for rocking movement in the direction of its length and for turning movement on its own axis.

1,638,162. VALVE. LESTER KIRSCHBRAUN, Chicago, Ill., and ROBERT T. POLLOCK, Boston, Mass., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 1, 1920. Serial No. 421,205. Renewed Mar. 11, 1926. 5 Claims. (Cl. 251—32.)



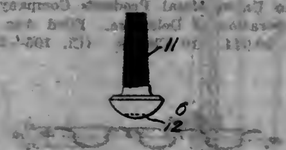
4. In a pressure valve, the combination with a valve chamber, of a valve pivotally mounted upon a valve

stem in said valve chamber, said valve having bifurcated protruding wedge shaped annular ridges on its upper and lower surfaces, upper and lower annular wedge-shaped



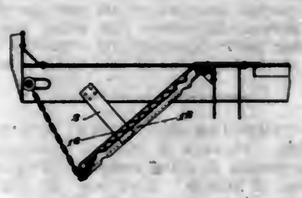
recesses in the valve chamber adapted to receive said ridges, the wall of the lower recess constituting the valve seat, and an annular duct communicating with said lower recess and adapted to flush the valve seat.

1,638,163. BOILER. HARRY G. KRAUS, Orange, N. J. Filed Mar. 5, 1924. Serial No. 696,976. 6 Claims. (Cl. 122—176.)



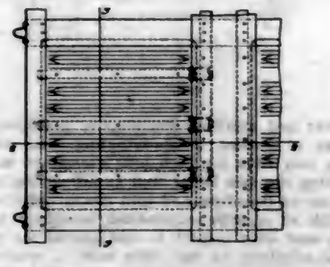
1. A boiler comprising a main casing having spaced outer and inner walls forming a water chamber between them and a water tube chamber within said inner wall open at the lower end, a plurality of spaced and substantially parallel water tubes each having one end communicating with the lower end of said water chamber at one side of said casing and its other end communicating with the upper end of said water chamber at the opposite side of said casing, each of said tubes having the lower portion intermediate its ends extending substantially horizontally across said water tube chamber and the other portion substantially vertically, and heating means at the lower end of said water tube chamber.

1,638,164. CAM-SLIDE ADJUSTMENT FOR KNITTING MACHINES. WILLIAM S. PARKER, Rockford, Ill., assignor to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Nov. 11, 1922. Serial No. 600,247. 1 Claim. (Cl. 66—64.)



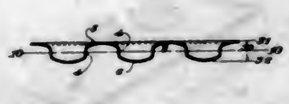
In a flat bed knitting machine, in combination, opposed beds of needles, needle-actuating cams and a reciprocable cam slide for each bed, a common means for reciprocating the cam slides, and an adjustable connector between one of the slides and said means, relatively fixed to the slide as regards longitudinal movement and movable upon and with respect to said means for adjusting said slide relatively to the other slide, a screw connection between said connector and means for making said adjustment, and means for clamping said adjustable slide and connector to said slide-reciprocating means.

1,638,165. RIVET. HENRY V. RAU, Brooklyn, N. Y., assignor to Edward B. Stimpson Company, Brooklyn, N. Y. Filed July 16, 1924. Serial No. 726,256. 3 Claims. (Cl. 85—32.)



1. A rivet having a bifurcated shank, the prongs of which are of progressively increasing cross-section in the direction away from their ends and separated by a diametrical slot of decreasing width in the direction away from the prong ends, the external surface of said rivet substantially maintaining its original cylindrical shape and the prongs having external surface interruptions.

1,638,166. HOPPER DOOR FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 10, 1925. Serial No. 49,295. 10 Claims. (Cl. 105—280.)

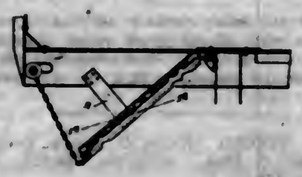


1. A door for a railway car made of a metallic plate formed with corrugations, each of said corrugations comprising an inner wall and an outer wall positioned obliquely to the original plane of the plate, said inner wall being narrower than said outer wall.

1,638,167. CORRUGATION IN HOPPER DOORS FOR RAILROAD CARS. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 13, 1925. Serial No. 50,043. 17 Claims. (Cl. 105—280.)

1. In combination with the other elements of a railway dump car, a door supported by hinges adjacent one side made of a metallic plate formed with integral corrugations having main walls connected by outwardly projecting members comprising portions angularly positioned to each other.

1,638,168. CORRUGATION IN HOPPER DOORS FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 13, 1925. Serial No. 50,044. 10 Claims. (Cl. 105—280.)

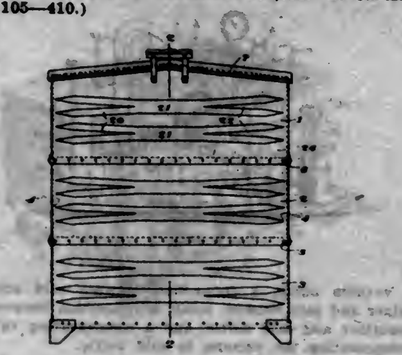


1. In combination with the other elements of a railway dump car, a door supported by hinges adjacent one side made of a metallic plate formed with integral corrugations, main walls and curved arched portions connecting said main walls, the width of each corrugation being greater than the distance between parallel planes drawn through the outermost parts of the corrugated plate.

1,638,169. CORRUGATION IN HOPPER DOORS FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 17, 1925. Serial No. 50,726. 12 Claims. (Cl. 105—280.)

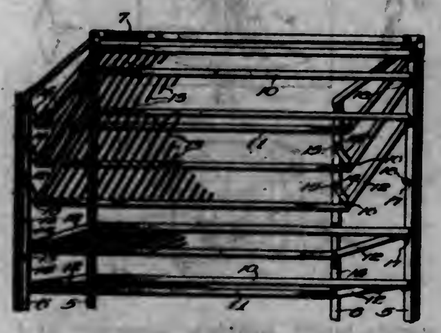
1. A door for a railway dump car made of a metallic plate formed with a plurality of corrugations terminating within the sides of the door so as to leave a flat margin in a single plane surrounding said corrugations projecting upwardly and downwardly with the apexes of the oppositely projecting corrugations in parallel planes positioned obliquely to said flat margin.

1,638,170. HOPPER DOOR FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Aug. 10, 1925, Serial No. 49,295. Divided and this application filed Mar. 8, 1926. Serial No. 93,588. 7 Claims. (Cl. 105—280.)



1. In combination with the other elements of a railway dump car; a door made of a metallic plate formed with corrugations, each of said corrugations comprising an inner wall and an outer wall, said inner wall being narrower than said outer wall, and substantially perpendicular to the original plane of the plate.

1,638,171. HOPPER DOOR FOR RAILWAY CARS. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Aug. 10, 1925. Serial No. 49,295. Divided and this application filed Mar. 15, 1926. Serial No. 94,995. 13 Claims. (Cl. 105—280.)



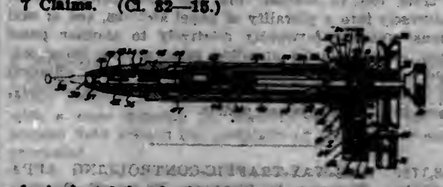
1. In combination with the other elements of a railway dump car; a door made of a metallic plate formed with corrugations, each of said corrugations comprising an inner wall and an outer wall and a connecting portion, said inner wall being narrower than said outer wall, said connecting portion being substantially parallel to the original plane of the plate.

1,638,172. METAL END STRUCTURE FOR RAILWAY CARS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Oct. 19, 1922, Serial No. 595,634. Divided and this application filed Jan. 3, 1927. Serial No. 158,595. 26 Claims. (Cl. 105—410.)

1. A metallic wall panel for railway cars having a reinforcement formed therein, comprising a plurality of stiffening ribs which merge into each other to form a relatively wider stiffening rib adjacent the center of said reinforcement, the height of said reinforcement being greatest adjacent its center and almost parallel to the first mentioned ribs.

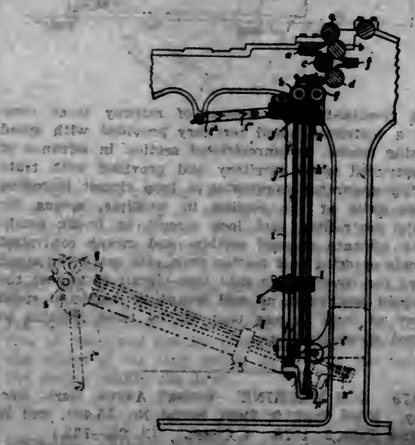
1,638,173. BREAD RACK. JOHN D. SPAULDING and BOHUMIL BOUDA, Clinton, Iowa, assignors to The Collis Company, Clinton, Iowa, a Corporation of Iowa. Filed July 20, 1925. Serial No. 44,661. 4 Claims. (Cl. 211—14.)

1. In a rack, the combination of front and rear supports, a shelf having a rectangular frame with one corner adjacent each support, a pair of links pivotally and swingingly connecting the rear corners of the shelf frame to the two rear supports, a rest projecting inwardly from one of the front supports, a second rest also projecting inwardly from one of the front supports but at a point of higher elevation, the shelf being movable to engage with either rest and means whereby the shelf when placed on either rest is prevented from sliding thereupon, substantially as described.



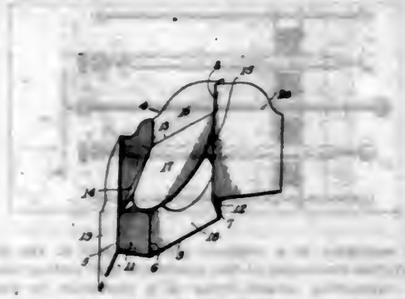
1,638,174. APPARATUS FOR TESTING MAGNETIZABLE OBJECTS. BRADLEY STOUGHTON, Bethlehem, Pa., assignor to Burrows Magnetic Equipment Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Jan. 19, 1924. Serial No. 687,354. 5 Claims. (Cl. 175—183.)

1. In apparatus of the class described, a pair of magnetic testing means connected for comparative testing of a pair of specimens, means for supporting a pair of specimens to be tested, means for producing relative movement of the testing means and specimens, said supporting means being constructed to position an end of



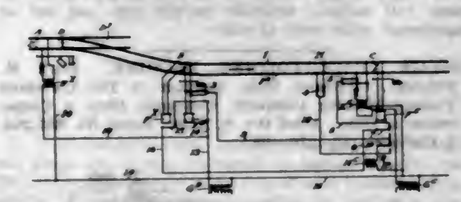
each specimen in a common plane normal to the plane of relative movement of the specimens and testing means, said supporting means being of a character to permit relative movement of the testing means to and beyond such aligned extremities of the specimens.

1,638,175. DENTAL HAND PIECE. GEORGE A. TRAY, Buffalo, N. Y. Filed Feb. 10, 1926. Serial No. 87,305. 7 Claims. (Cl. 32—15.)



1. A dental hand piece comprising a frame provided with a bearing and a pocket concentric with said bearing, a shaft journaled in said bearing, a tubular sheath surrounding said shaft and having its rear end arranged in said pocket and provided with an annular groove forming a forwardly facing shoulder, and a catch guided on the frame and movable laterally thereon into and out of engagement with said shoulder.

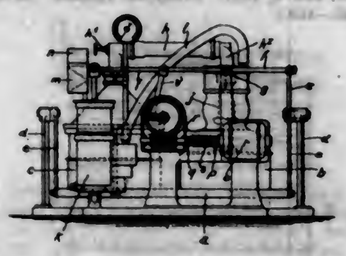
1,638,176. PAPER-FOLDING MACHINE. JOHN H. SHIPLEY, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 8, 1923. Serial No. 667,204. 2 Claims. (Cl. 270—68.)



1. The combination with a paper-folding machine, of a transfer appliance having relatively movable members, and resilient means associated with said movable members for normally checking their relative movement, substantially as set forth.

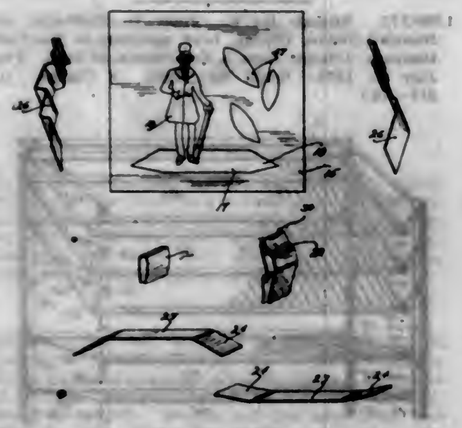
1,638,177. DISPLAY DEVICE. JOSEPH L. VISCOUNT, New York, N. Y., assignor to Snyder & Black, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1926. Serial No. 151,033. 3 Claims. (Cl. 40—149.)

1. A display device formed from one piece of sheet material comprising five panels articulated on lines extending from top to bottom, the mid-panel being divided transversely into a plurality of panel sections, one of said sections standing forwardly relatively to another panel section, said forwardly standing panel section being connected at its lateral edges to those panels next adjacent said mid-panel by means of sub-panels respectively, formed from said adjacent panels.



1,638,178. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 4, 1924. Serial No. 747,705. 11 Claims. (Cl. 246—34.)

7. In combination, a stretch of railway track comprising a restricted speed territory provided with speed restricting means, an unrestricted section in advance of said restricted speed territory and provided with train governing apparatus comprising a loop circuit including the two rails of the section in multiple, means for normally controlling said loop circuit by traffic conditions in advance of said section, and means controlled by a train entering said section from said restricted speed territory for conditioning said loop circuit to impose the same speed restriction as said means in restricted speed territory as long as any part of the train remains in restricted speed territory.

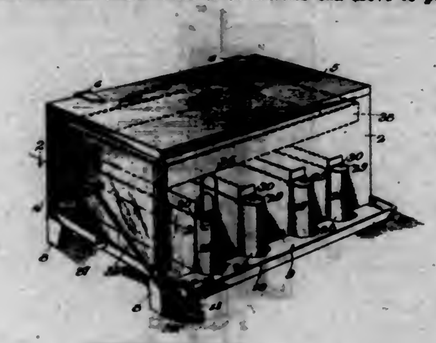


1,638,179. ICE MACHINE. ROBERT ARTUS, Gera, Germany. Filed Sept. 9, 1925, Serial No. 55,401, and in Austria June 2, 1925. 1 Claim. (Cl. 62—153.)

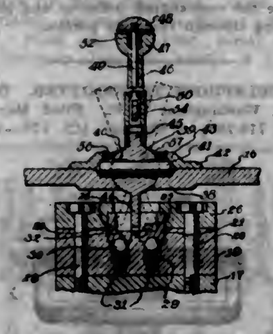
In an ice-machine of the class described comprising a plurality of standards, an oscillating frame suspended between said standards, a motor on said standards having a shaft, a worm, a shaft for said worm, and a spring coupling motor shaft and worm shaft, a worm wheel in mesh with said worm, a crank arm on the shaft for said worm wheel, a rod attached to said crank arm and to the frame for oscillating the same, a water bottle and an acid container removably suspended from said frame,

a vacuum pump, a connection between said acid container and said vacuum pump, a connection between said container and said bottle, and a compensating valve for compensating the vacuum in said bottle.

1,638,180. ASSEMBLY PLATE AND DIE-HOLDING CLAMP. EDWIN G. BATES and RAYMOND C. BATES, Minneapolis, Minn.; said Raymond C. Bates assignor to said Edwin G. Bates, Minneapolis, Minn. Filed Oct. 19, 1925. Serial No. 63,356. 8 Claims. (Cl. 113—99.)



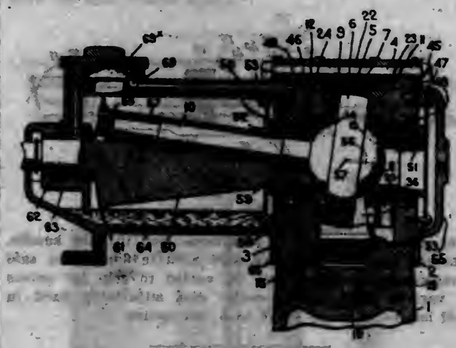
1. The combination with an assembly plate having a multiplicity of vertically and horisontally spaced rows of holes, of a rigid clamping finger having an intermediate longitudinal slot, an adjustable anchoring member extending through said slot and adapted to be secured in any one of said holes, said clamping finger having at one end a supporting foot and at its other end a notched gooseneck for engagement with a piece of work.



1,638,181. REFRIGERATOR AND DISPENSER. GILBERT C. BELL, Augusta, Ga. Filed May 5, 1925. Serial No. 28,207. 3 Claims. (Cl. 211—8.)

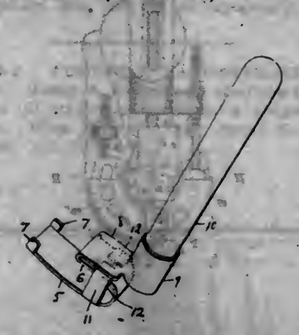
1. A device of the character described comprising a case having a lateral outlet opening, a delivery chamber at the outer end of the outlet opening in open communication with the latter, said delivery chamber extending above the level of the upper end of the outlet opening and said delivery chamber and said case being adapted to hold a liquid refrigerant to a level above that of the

upper end of said outlet opening, a supporting and guiding frame extending within the case from the inner end of the outlet opening, said frame comprising a bottom member and a pair of spaced apart upstanding side members between which a series of articles can move to position to pass one at a time through said outlet opening, said side members being apertured, a drainage shelf at the lower end of said delivery chamber, said drainage shelf having an upstanding marginal flange and a drain opening.



1,638,182. SHIFT LEVER. ADOLPHUS SHADE BUTELL, Durango, Colo. Original application filed Dec. 31, 1925, Serial No. 78,661. Divided and this application filed June 29, 1926. Serial No. 119,404. 3 Claims. (Cl. 74—89.)

1. In transmission mechanism, pivoted elements, a fixed guide block, shifter bars pivotally connected with said elements and movable on said block for swinging said elements, said bars being provided with recesses, a pivoted control lever having an arm, means mounting the lever for universal movement, the lever being adapted to be rocked laterally to engage the arm in the recess of either shifter bar and being movable forwardly or rearwardly for shifting either bar, a pivoted segment extending through the lever for movement laterally therewith, and a spring pressed latch rod carried by the lever to coact with said segment for locking the lever in set position when swung forwardly or rearwardly.

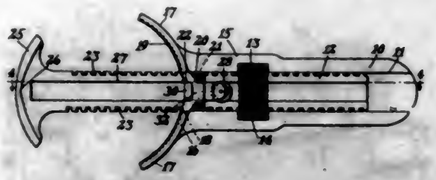


1,638,183. GYRATORY PUMP OR COMPRESSOR. FRANS IVAR L. BYLOMS, South Portland, Me. Filed Oct. 26, 1926. Serial No. 144,227. 19 Claims. (Cl. 230—30.)

1. In a machine of the class described comprising a gyratory impeller disk having a spheroidal periphery, means for actuating the same, a chambered casing having a partition radial to and intersecting said impeller and having a head complementary to one of the faces of said impeller to provide a progressively moving line of contact therewith during the gyratory movement thereof and provided with inlet and outlet ports in close proximity to and upon opposite sides of said partition;

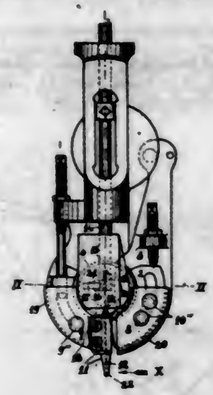
a peripheral annular shell within said casing presenting a spherically concave surface complementary to the spheroidal surface of said impeller and engaging the same with a close running fit, whereby leakage of the compressed fluid around the periphery of the impeller will be prevented.

1,638,184. TRAP-PLACING TOOL. CLAUDE C. CURTIS, Silver Lake, N. Y. Filed Mar. 11, 1927. Serial No. 174,565. 6 Claims. (Cl. 294—19.)



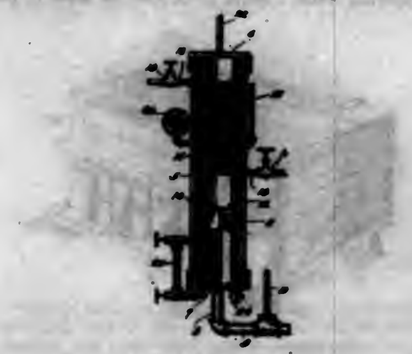
6. In a trap placing tool of the class described formed from a single strip of spring metal, as to form a pair of spaced jaws between which is received the bight portion of a jaw trap spring, the lower jaw being of greater length than the upper jaw, the free end portion of the upper jaw being sent back upon itself and so constructed as to provide a handle receiving socket, and lugs extending upwardly from the side edges of the outer end portion of the lower jaw for engagement with the respective side edges of the trap spring to prevent the turning of the spring within the jaws.

1,638,185. COVER WRENCH AND CAN OPENER. ANDREW CRAIG, Los Angeles, Calif. Filed Dec. 18, 1926. Serial No. 154,609. 3 Claims. (Cl. 7—1.)



3. A combined can-opener and cover-wrench for use on cans and screw-top preserve jars, comprising a handle with an arcuate flange on one end thereof; a slide-bar

loosely mounted in a longitudinal groove in said handle, said slide-bar having notched edges to engage the threads of a nut; a complementary flange on the free end of said slide-bar, adapted to grip a jar cover cooperatively with the arcuate flange of said handle; a nut, turnable on



said slide-bar and in a transverse slot in said handle, whereby the space between said arcuate flange and said complementary flange may be varied to grip jar covers of various sizes, and a cutter disk adjustably fixed in said handle so as to serve as a can-opener.

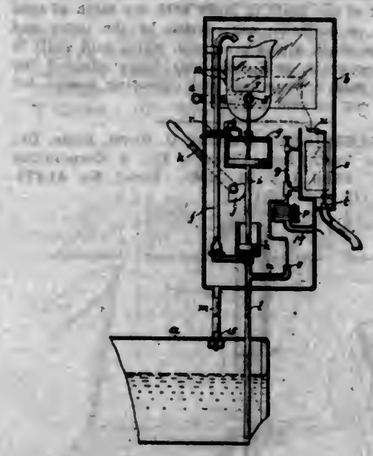
1,638,186. MACHINE FOR THE MANUFACTURE OF FOOTWEAR. GUSTAVE DE VOOGHT, Herenthals, Belgium. Filed Mar. 6, 1925, Serial No. 13,562, and in Belgium Aug. 22, 1924. 1 Claim. (Cl. 1—22.)

In a machine of the type set forth for securing the soles of footwear to wooden Louis XV heels, the combination with a stationary and a movable knife for cutting conical tacks out of a steel band, a tack-cutting lever for operating the said movable knife, and a vertical reciprocatory plunger traversing diametrically the front face of a circular portion of said lever and fitted at its lower end with a driver, of a collar for fixing said driver to said plunger, having a threaded boss with set screw extending laterally of the plunger with their common axis in a plane parallel to the front face of the aforesaid lever, said tack cutting lever having a recessed portion to receive said boss and set-screw formed in the front face of the circular portion adjacent the stationary knife, cover-plates for the stationary and movable knives secured in position by means of bolts with countersunk heads flush with said coverplates, a protector-plate for the driver and the lower end of the plunger, fixed to the front face of the circular portion of the aforesaid lever, and a stationary nose for the driver-pin having its lower end bevelled upwardly from the front towards the rear, substantially as described.

1,638,187. AIR HEATER. JAMES R. DICKENS, ERNEST O. HARRIS, and THOMAS A. WARNER, Thomasville, N. C. Filed Jan. 22, 1926. Serial No. 82,157. 1 Claim. (Cl. 257—229.)

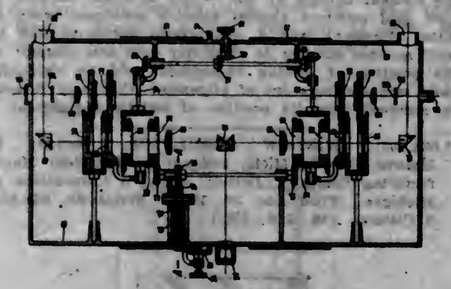
In a device of the character described, an elongated body portion, a feed pipe extending into the lower end of the body portion and having openings formed adjacent to the discharge end thereof, a cap fitted over the discharge end of the pipe and having its lower edge terminating in spaced relation with the openings, a cone-shaped deflector positioned over the cap, a plate contacting with the cone-shaped deflector, means for securing the cap, cone-shaped deflector and plate together, said cone-shaped deflector and plate having their edges spaced from the inner surface of the elongated body portion to permit air to pass upwardly through the body portion, and a heating coil positioned within the elongated body portion above the cone-shaped deflector and plate to heat the air passing through the body portion.

1,638,188. TELEPHONE TRANSMITTER. HENRY H. C. DUNWOODY, Washington, D. C. Filed May 29, 1924. Serial No. 716,766. 3 Claims. (Cl. 179—131.)



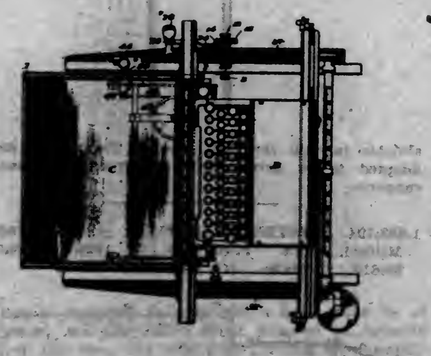
1. A telephone transmitter comprising in combination a pair of electrically conductive plates, means for conveying speech vibrations directly against one of said plates, a microphonic contact member, an insulating plate positioned between said conductive plates and apertured to provide a guide for said microphonic contact member within the apertured portion of said insulating plate and between said electrically conductive plates.

1,638,189. LIQUID-VENDING DEVICE. FRANCIS I. DU PONT, Wilmington, Del., assignor to Delaware Chemical Engineering Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 5, 1922. Serial No. 579,792. 9 Claims. (Cl. 221—98.)



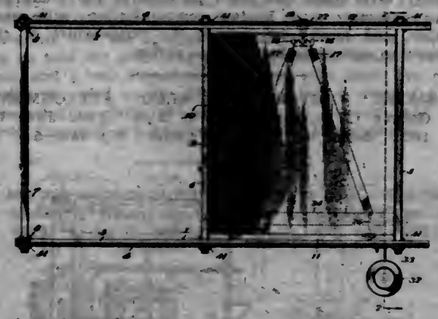
1. A fluid vending machine having means for elevating fluid from a supply reservoir to a measuring device,

means controlled by the elevating device for preventing discharge from the measuring device when the elevating device is delivering, means for discharging the fluid from



the measuring device, a locking device for the discharging mechanism, and coin-controlled means for the locking device.

1,638,190. DEVICE FOR THE MECHANICAL MULTIPLICATION OF TWO FACTORS. OTTO EPPENSTEIN, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed Aug. 14, 1926, Serial No. 129,259, and in Germany June 12, 1925. 3 Claims. (Cl. 88—2.7.)



1. Telemeter comprising a casing, means for supporting the said casing and admitting of rotating the casing about a horizontal axis, in the casing being disposed two entrance prisms, two objectives located behind the entrance prisms and adapted to receive the rays having passed through the entrance prisms, an ocular, a prism system disposed between the objectives and the ocular and adapted to transmit to the ocular the rays having passed through the objectives, optical means interposed within the path of rays and adapted to displace relatively to each other the two images produced by the two objectives, two differential gears, each of which contains two members displaceably supported, and a third member displaceably supported, the third member coacting with the first and the second member and undergoing by these two members a displacement proportional to the algebraic sum of the displacements of these two members, two actuating devices, means for coupling the one actuating device to the first two members of the two differential gears so as to impart to these members like displacements in the same direction, means for coupling the other actuating device to the second two members of the two differential gears so as to impart to these members like displacements in the opposite direction, and means for coupling the one of the said actuating devices with the said optical means.

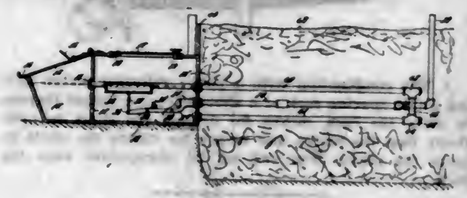
1,638,191. LINE-SPACING MECHANISM. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed May 8, 1924. Serial No. 710,806. 14 Claims. (Cl. 197—124.)

1. The combination with a power returned platen having a line spacing rack of a shaft having a pinion thereon to drive the rack, means for driving the shaft to positively feed the platen and means for tilting the shaft to move the pinion into and out of engagement with the rack.

1,638,192. PORTABLE HAND-OPERATED FLAT PLATEN. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed May 8, 1924. Serial No. 710,808. 14 Claims. (Cl. 197—148.)

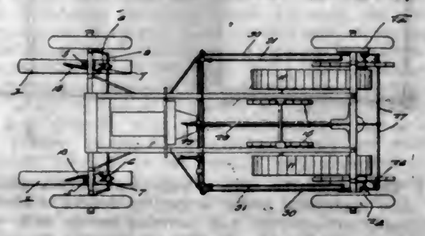
1. The combination with a frame and movable platen, of three depressible platen supporting devices located in triangular arrangement, and operating springs each common to a plurality of said platen supporting devices to elevate the platen.

1,638,193. GRAVE MARKER. DAVID F. FOSWOOD, Taylor, Tex. Filed July 21, 1926. Serial No. 124,054. 1 Claim. (Cl. 40—125.)



A grave marker, consisting of a tubular member having a longitudinal slot extending through its length, said

tube bent into substantially a U-shape, with its slot on the inner side of the legs and intermediate part, a plate

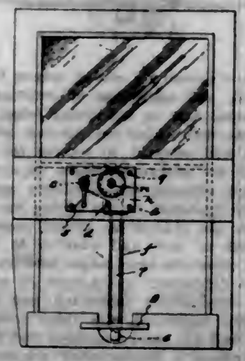


slidable in said slot, the legs of the tubular member adapted to be driven into the ground to constitute supports.

1,638,194. **WATERING DEVICE.** GEORGE FROENDT, Milford, Iowa. Filed Apr. 3, 1926. Serial No. 99,618. 1 Claim. (Cl. 119—73.)

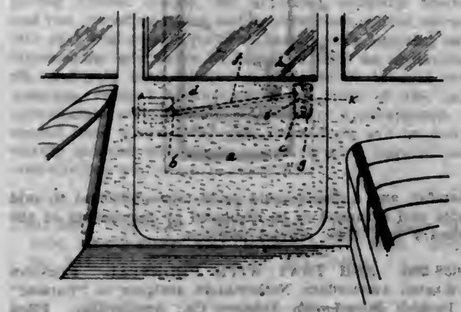
In a device of the class described, a float chamber, a drinking fount in communication therewith, a water-inlet pipe extending into the float chamber, a valve casing connected with the end of the pipe, a valve movable angularly and outwardly beyond the end of the casing to permit the discharge of water from said pipe, a float controlling the valve, circulation pipes connected respectively with upper and lower portions of the fount and float chamber and having communication with each other, and means for raising the temperature of the water in said pipes by chemical action.

1,638,195. **AUTOMOBILE SLED ATTACHMENT.** GEORGE C. GRAVES, Rockford, Mich. Filed June 11, 1925. Serial No. 36,473. 1 Claim. (Cl. 180—5.)



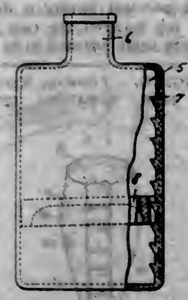
An auxiliary and booster drive means for use in connection with an ordinary drive wheel of an automobile, said means comprising an attachment adapted to propel a sled attachment and including a pair of spaced parallel arms provided at their rear ends with clamps adapted to be mounted upon the rear wheel axle housing, front and rear sprockets mounted for rotation between said arms, said rear sprockets being hollow and open at its outer end and provided at said outer end with an internal gear, an endless traction belt trained over said sprockets, a bearing adapted to be supported on said rear axle housing adjacent said internal gear, a shaft journaled for rotation in the bearing, a pinion on the inner end of the shaft in mesh with the teeth of said internal gear, a shiftable cog carried by the outer end portion of this shaft, a ring gear with which said shaft is adapted to cooperate, said ring gear being adapted for mounting on said drive wheel and operating means for shifting said cog on said shaft.

1,638,196. **EXERCISER.** HERBERT Q. GUTH, Elgin, Ill., assignor to Postl, Inc., Chicago, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,779. 5 Claims. (Cl. 272—68.)



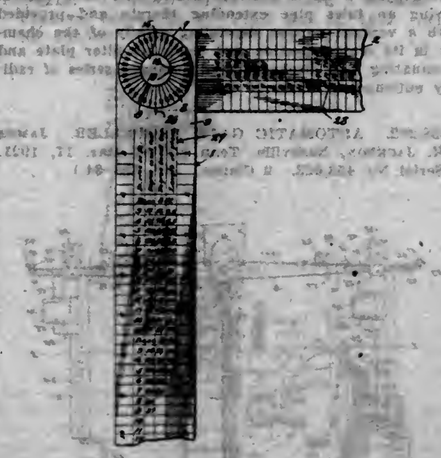
1. A device of the class described comprising a pair of pivotally connected normally aligned handle members, an element carried by one of the members adapted to lock said members against relative movement when in axial alignment, and a compression spring carried by said member adapted to yieldingly hold said element in its position of locking engagement and to yieldingly hold said members out of alignment when said element is removed from its position of locking engagement.

1,638,197. **WINDOW REGULATOR.** ERNEST E. HEINTZ, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 27, 1923. Serial No. 659,449. 8 Claims. (Cl. 268—128.)



1. In a window regulator, the combination of a frame, three rotatable members supported on the frame, a cable running over the three rotatable members positively anchored to two of the same, a window lifting connection carried by the cable and arranged to run part way over one of the rotatable members, and means by which the other rotatable member may be turned to drive the parts.

1,638,198. **REMOTE CONTROL LATCH.** ERNEST E. HEINTZ, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 10, 1925. Serial No. 22,016. 8 Claims. (Cl. 292—138.)



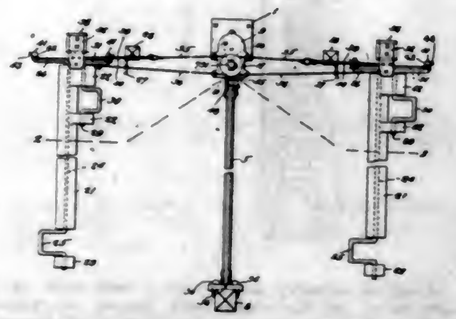
1. In a remote control latch for automobile bodies, the combination of a latching unit on the inside of the door and provided with a bolt retractable upon closing the door, and an actuator unit positioned on the inside of the door, remote from said latching unit, and provided with a vertical rotary spindle and connections between said two units including motion translating and reversing units.

1,638,199. **NONREFILLABLE BOTTLE.** MARYANNE HERMES, Fairmont, N. Dak. Filed Nov. 12, 1926. Serial No. 148,010. 2 Claims. (Cl. 215—8.)

1. In combination with a bottle, a plate-like member arranged horizontally within the bottle and being of a shape similar to the cross sectional shape of the bottle, said plate adapted for slidable and slightly tiltable movement, the plate being adapted to move toward the neck of the bottle when the contents thereof is being emptied, and cooperating means between the plate and the inner wall of the bottle to prevent the movement of the plate in a reverse direction.

1,638,200. **ADJUSTABLE FRAMING, DRAFTING, AND BEVEL SQUARE.** STEPHEN J. HASTIE, Raymond, Miss., assignor of one-half to James L. Carter, Mayfield, Ky. Filed Mar. 1, 1926. Serial No. 91,577. 1 Claim. (Cl. 33—117.)

A square including an arm, and a body made up of side plates, the side plates being disposed on opposite sides of the arm, one side plate having an inwardly tapered opening, a protractor disk tapered to fit in the opening, the arm and the protractor disk having registered tapered apertures, the other side plate and the arm being provided upon their inner contacting surfaces with positively interengaging socket and projection elements by which the body and the arm may be held at adjusted angles to each other when the arm is clamped between the side plates, a securing element connecting the arm with the protractor disk, whereby the tapered protractor disk will hold the first-specified side plate and the arm together, the securing element being extended laterally into the aperture in the protractor disk, a pivot and clamping member having a tapered head received in the aforesaid registering tapered openings and extended through the said other side plate, the periphery of the tapered head being provided with a notch receiving the part of the securing element that projects laterally into the aperture of the protractor disk, thereby to hold the pivot and clamping member against turning, and a nut engaging said other side plate, the nut being threaded on the pivot and clamping member and operating to clamp the side plates on the arm, and to hold the said interengaging elements interengaged.



1,638,201. **CONTINUOUS BATTERY OIL FILTER.** HENRY A. HILLS, Grand Rapids, Mich. Filed Apr. 26, 1922. Serial No. 556,581. 1 Claim. (Cl. 210—125.)

A continuous oil filter, comprising a receiver for dirty oil, a plurality of filtering chambers connected to said receiver in series and having therein filtering means coo-

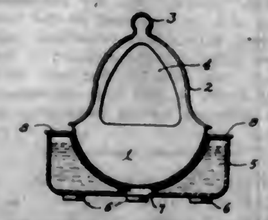
sisting of filter plates only for the purposes of catching heavy particles of dirt, and a battery of filtering chambers connected in parallel to the last of said first-mentioned chambers and having therein filter plates and filtering material above the plates, each of said chambers having a lower conical portion and each thereof having an inlet pipe extending therein and provided with a vertical portion depending axially of the chamber in its conical portion and below its filter plate and terminating in a discharge head having a series of radially outstanding discharge arms.

1,638,202. AUTOMATIC GATE PROPELLER. JAMES R. JACKSON, Nashville, Tenn. Filed Mar. 17, 1921. Serial No. 453,023. 2 Claims. (Cl. 39—34.)

1. In an apparatus of the class described, a rotatably mounted shaft, a gate; means for connecting the gate with the shaft, another shaft supported for rocking movement and having a vehicle engaging crank and an arm, a spool adjustably journaled on said arm and a flexible element connected operatively with the shaft and wound about the spool and secured thereto.

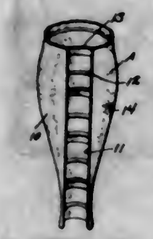
1,638,203. LAUNDRY-BAG HOLDER. OTTO JETKL, Chicago, Ill. Filed Mar. 24, 1926. Serial No. 97,029. 3 Claims. (Cl. 83—26.)

1. A bag holder comprising a skeleton framework in two parts, a hinge connecting one side, a latch on the other side, a clamping member adapted to be forced down over the top of said framework when closed, a cover for the top of said framework and a hinge attached to said framework and common to both said clamping member and said cover.



1,638,204. AUTOMATIC EMERGENCY LOCK FOR SAFES. EARLE M. JONES, Minneapolis, Minn., assignor to O. B. McClintock Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 17, 1922. Serial No. 575,493. 4 Claims. (Cl. 109—3.)

1. A safe having a door, a door-locking bolt and a primary lock mechanism, a secondary bolt lock, releasable means normally holding said secondary lock inoperative, means for causing said secondary lock when released to lock said bolt in a door-locking position, means operative from the exterior of the safe for manipulating said secondary lock to release said bolt, said releasable means including an anchored cable and guides

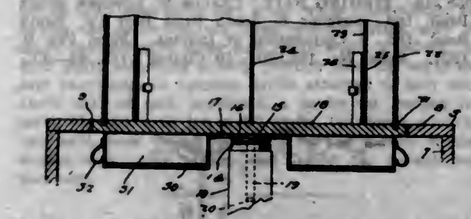


therefor, and a displaceable guide trip additional to said cable and arranged to be displaced by movements of the primary lock from normal position.

1,638,205. ASH TRAY WITH PEDESTAL. FERNAND KABUS, Amsterdam, Netherlands, assignor to "Turmac" Turkish Macedonian Tobacco Co., Amsterdam. Filed Apr. 23, 1925, Serial No. 25,419, and in the Netherlands May 7, 1924. 2 Claims. (Cl. 131—51.)

1. The combination of an ash bowl and pedestal, in which the ash bowl has a semispherical shape, and the pedestal has a similar shaped cavity in which the ash bowl fits, and an opening in said cavity extending through the bottom, said pedestal having a double jacket with arcuate slots on top between the two jackets, the space between the jackets being adapted to be filled with water.

1,638,206. LEGGING. THOMAS KELLY, Butte, Mont. Filed Aug. 4, 1926. Serial No. 127,127. 3 Claims. (Cl. 2—267.)

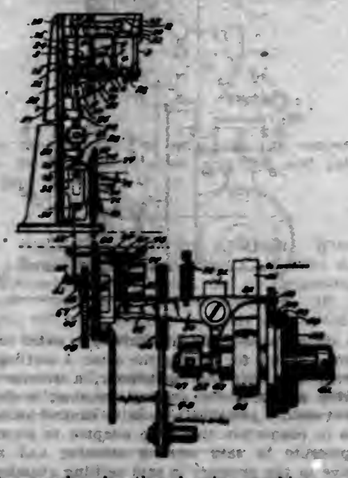


1. A legging form adapted to be worn under a stocking and comprising a shell shaped to conform to a full formed leg, the shell being slit longitudinally and adapted to engage the leg adjacent to the ankle, a plurality of resilient split rings secured to the inner face of the shell, and a plurality of split annular pads of sponge rubber secured to the inner face of the shell and of greater cross sectional dimension than the resilient rings.

1,638,207. BOTTLE STOPPER. VITALIS M. KLOSS, Minneapolis, Minn., assignor of one-half to Edward W. Tersh, Minneapolis, Minn. Filed Nov. 30, 1925. Serial No. 72,190. 1 Claim. (Cl. 215—51.)

A milk bottle stopper formed from a single piece of stiff material and comprising two semi-circular portions and an intermediate rib-forming portion, said portion having folding creases, one extending centrally thereof and two extending where said intermediate portion merges into said semicircular portions, said creases adapting said intermediate portion to be folded to form an upstanding rib, and said semi-circular portions to be brought into complete circular arrangement, the ends of the said intermediate portion being on reentrant approximately V shaped lines whereby the ends of said rib will be downwardly inclined and joined to the terminal lines of said semi-circular portions.

1,638,208. DISPLAY CONTAINER. RALPH EARL MYRICK, Montgomery, Ala. Filed Oct. 28, 1926. Serial No. 144,795. 2 Claims. (Cl. 221—145.)

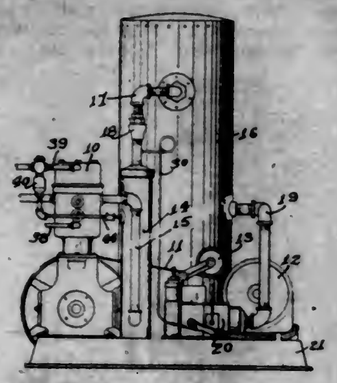


1. A device of the class described including a box-like stand having its rear open and its top provided with a circular opening, a standard rising in the box-like stand, a disk in the opening, a bearing between the disk and the top of the standard for rotatably mounting the disk and a transparent cylinder rising from the disk.

1,638,209. SEPARABLE RING. WILLIAM CHARLES NIEBUHR, St. James, Minn. Filed Oct. 1, 1925. Serial No. 59,852. 4 Claims. (Cl. 85—51.)

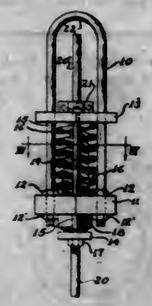
1. A ring comprising two separable members having spliced end portions in the peripheries of which are notch-like seats with reversely beveled sides, and block-like keys mounted in said seats by radial movement and having in their radial edges V-shaped grooves into which the reversely beveled sides of said seats extend.

1,638,210. THREAD-USING MACHINE. CHARLES M. PERKINS, Cohoes, N. Y. Filed May 22, 1922. Serial No. 562,799. 21 Claims. (Cl. 112—219.)



1. A stop member for thread using machines, a separate continuously operated power element, manually operable starting means, a connector between said starting means and stop element to actuate the stop element to release position in the movement of the starting means, a lever for operating the connector, and means carried by said lever and actuated by a defect in the thread of the machine to cause said lever to be operated by the separate continuously operated power element to move the connector to release the stop means.

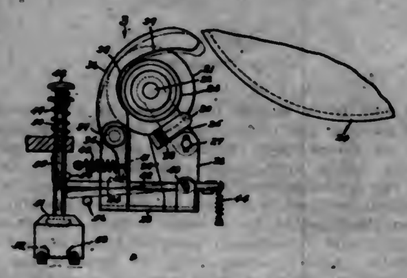
1,638,211. TRANSMISSION OR BRAKE BAND. WILLIAM F. POLSON, Buffalo, N. Y. Filed Mar. 11, 1925. Serial No. 14,631. 2 Claims. (Cl. 188—249.)



2. A transmission or brake band, comprising an open ring band having a lining riveted thereto, and a connector, said band having a transverse external bead and an opening through said bead, said connector having a longitudinal depression extending inwardly from its outer end to provide clearance space for one of the rivets of said lining and a pair of grooves arranged transversely, one at each side of said longitudinal depression, the under side of said ears serving as part of the walls of said grooves, and co-acting means on said band and connector spaced from the outer ends thereof for connecting said connector to said band and preventing movement away from said band, the outer end portion of said band serving as a spring and being flexed during the action of attaching the connector to said band to cause said transverse bead to enter said grooves, said bead and groove serving to prevent movement lengthwise relatively of said connector and band.

1,638,212. AUTOMATIC AIR-COMPRESSOR UNIT. FRED J. RAYFIELD, Chicago, Ill., assignor to Champion Pneumatic Machinery Co., a Corporation of Illinois. Filed Apr. 30, 1925. Serial No. 26,856. 1 Claim. (Cl. 230—24.)

An air compressor unit comprising a water cooled compressor, a motor for driving the same, a settling chamber receiving air from the compressor, a storage reservoir receiving air from the settling chamber, a check valve therebetween, a pressure responsive control for said motor, means in connection therewith adapted to slowly release the pressure in said settling chamber and means responsive to the pressure in said settling chamber adapted to shut off the cooling water circulation for said compressor after the release of the pressure in said settling chamber.



1,638,213. SHOCK ABSORBER FOR OIL-WELL PUMP RODS. WILLIAM F. RASCHKE, Wichita, Kans. Filed June 15, 1925. Serial No. 37,193. 4 Claims. (Cl. 267—70.)

1. In an oil well pump shock absorber, a block and U-shaped member adapted to be connected to a walking beam, a plate connected to a pump rod, springs between said plate and block, said pump rod slidably engaging through a centrally positioned aperture in said block and being carried by said plate, a bar connected to said pump rod, rods connecting said bar to said plate, a spring engaging between said bar and said block functioning as a rebound cushion.

1,638,214. ENGINE-STARTING APPARATUS. WALTER W. RINGER, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 24, 1925. Serial No. 71,242. 8 Claims. (Cl. 74—7.)

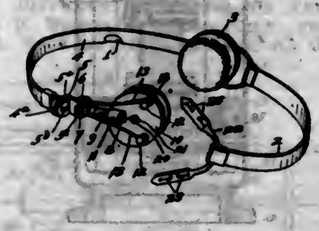
1. A starting device for an internal-combustion engine including a flywheel comprising, in combination, a pivotally-mounted motor having a power-transmitting member; a track adapted to engage with the said member, but normally locked out of engagement therewith; and a manually-operable means for unlocking the track so as

to permit it to engage the power-transmitting member and for causing the motor to rotate, whereby the motor will be moved radially about its pivot toward the engine, causing the power-transmitting member to engage the flywheel for cranking purposes.

1,638,215. FISHING BAIT. CLAUDE M. RODGERS, South Bend, Ind., assignor to South Bend Bait Co., South Bend, Ind., a Corporation of Indiana. Filed Feb. 9, 1927. Serial No. 166,969. 10 Claims. (Cl. 43—42.)

1. The combination with a bait body, a weight carried by said body, a hook receiving loop, of a single securing means for said loop and weight to the body, said weight forming a closure for the hook receiving loop.

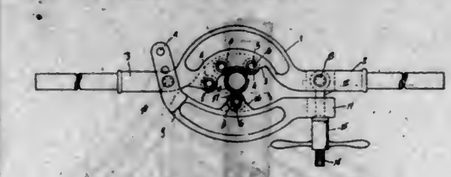
1,638,216. MEANS FOR SECURING CASES TO CARRYING BOARDS. DAVID B. ROSS and KEELING G. PULLIAM, Jr., Los Angeles, and HARRY E. HOSSFELD, Lynwood, Calif., assignors to D. E. Rose Trunk Co. Inc., Los Angeles, Calif., a Corporation of California. Filed Jan. 4, 1927. Serial No. 158,988. 11 Claims. (Cl. 224—29.)



1. In combination with a case, a securing device mounted within the case to fold up therein when not in use and to unfold from the case and including means for engaging a carrying board when unfolded for securing the case on the carrying board.

1,638,217. RETORT FOR TREATING OIL SHALE. EDWARD B. ROTH, St. Louis, Mo. Filed Dec. 19, 1924. Serial No. 756,892. 5 Claims. (Cl. 202—14.)

1. A device of the character described comprising an outer casing wall, an inner casing wall within and spaced from the outer wall and having openings to the space between said walls, a number of horizontal partitions within said inner wall provided with openings therethrough respectively and forming compartments each communicating through said first named openings with the space between said walls, a pair of spaced top walls connected with said outer and inner walls respectively, and having the space between them communicating with the space between said outer and inner walls, a rotary vertical shaft extending axially through said top walls and said partitions, an agitator device attached to said shaft above each of said partitions, a device for feeding material through said top walls above the upper partition into said inner casing wall, and heating means enclosed within said inner casing wall below the lowest compartment.

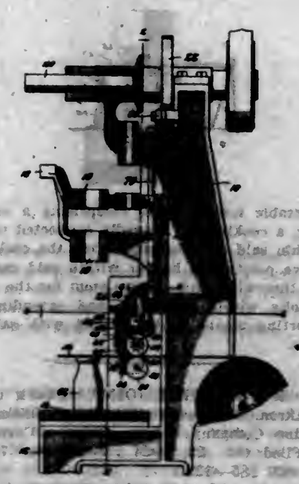


1,638,218. TRUSS. RUDOLPH SCHMIDT, Rosedale, Kans. Filed Mar. 15, 1926. Serial No. 94,769. 2 Claims. (Cl. 128—111.)

1. In a truss, a pad and a disk having a ball and socket relation, the disk at its outer or opposite side from the pad having a radially disposed lug and a pair of pins, the latter at opposite sides of and equal distances from the radial plane of the lug and at the opposite side from the lug of a plane intersecting the first-named plane at the axial center of the disk, a suitably-supported plate, a bolt carried thereby and extending through the said lug and forming a journal therefor, and a spring secured to the said plate and having diverging arms respectively attached at their free ends to said pins.

1,638,219. COUPLING LOOSENER. FLOYD L. SCOTT, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed May 25, 1922. Serial No. 563,471. 5 Claims. (Cl. 29—88.2.)

1. In a device of the character described, a segmental yoke having operating handles extending laterally therefrom, a curved jaw pivoted at one of its ends to one end of said yoke, the opposite end of said jaw being adjustably

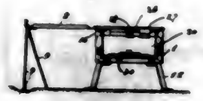


secured to the other end of said yoke and cooperating rollers on the concave faces of said jaw and yoke to engage a pipe coupling.

1,638,220. VULCANIZATION OF RUBBER. WINFIELD SCOTT, Akron, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Original application filed Dec. 19, 1922, Serial No. 607,883. Divided and this application filed Apr. 28, 1924. Serial No. 708,336. 11 Claims. (Cl. 18—53.)

19. The process of producing vulcanized rubber, which comprises heating a mixture of rubber, sulfur, with the polyaldehyde derivative of an aldehyde amine reaction product.

1,638,221. SHEET FEEDING AND CUTTING MECHANISM. RUSSELL J. SMITH, Menasha, Wis. Original application filed Apr. 15, 1925, Serial No. 23,227. Divided and this application filed Dec. 19, 1925. Serial No. 76,419. 4 Claims. (Cl. 164—49.)



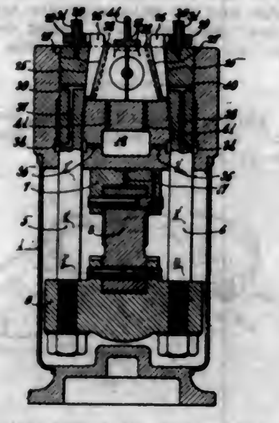
4. In a feeding and cutting mechanism, a shear member, a hammer normally spaced from and adapted to be moved into striking engagement with said shear member to operate it, a continuously rotatable drive shaft, and a geared connection including a ratchet mechanism between said drive shaft and said hammer effective to cause intermittent movement of said hammer with respect to said shaft during continuous rotation of said shaft.

1,638,222. MATCH RECEPTACLE. MARCUS T. SPRING, Pepperell, Mass. Filed Sept. 24, 1925. Serial No. 58,240. 9 Claims. (Cl. 206—21.)

1. In combination a tubular container for holding a plurality of matches end to end in a row, and a clutch adapted to be manipulated to grip and remove the match at one end of said container and to serve as a holder for said match while it is being used.

1,638,223. PORTABLE STOVE. THEODORE A. TAYLOR and ANTON J. YEAGER, Wisconsin Rapids, Wis., assignors to Prentiss-Wabers Stove Company, Wisconsin Rapids, Wis., a Corporation of Wisconsin. Filed Dec. 27, 1921. Serial No. 525,072. 6 Claims. (Cl. 126—38.)

1. A portable folding stove comprising a case having an opening, a cooking top hingedly connected to the case, means within said case for supporting the cooking top in an operative position, a burner within said case, a valve associated therewith, and a valve stem for the valve positioned wholly within said case and extending through said supporting means to be aligned with said opening in the case.



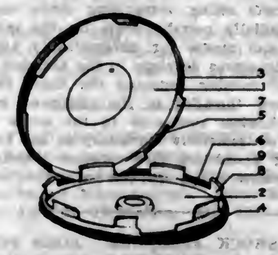
1,638,224. ROTARY PIPE JOINT. FRANK C. VANDERGRIFT, Akron, Ohio, assignor to The Williams Foundry & Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 23, 1924. Serial No. 745,314. 1 Claim. (Cl. 285—122.)

A rotary pipe joint comprising a receiving member which terminates at its receiving end in radially spaced apart and concentrically related cylindrical outer and inner imperforate flanges the former being externally threaded, an entering member having a cylindrical end fitting between the inner and outer flanges of the receiving member and being reduced in diameter outwardly of said cylindrical end thereby to provide an external annular abutment portion facing the same direction as the end of the receiving member, a clamping nut surrounding the interengaging ends of said members, the nut being internally threaded at one end for cooperation with the aforesaid threads of the receiving member and being reduced at the other end for cooperation with the shoulder of the entering member and serving as the sole means of securing said members together, the nut having a shoulder opposed to the end of the outer flange of the receiving member, and packing washers, one occupying

the channel between the inner and outer flanges of the receiving member and adapted to be compressed between the bottom wall thereof and the end of the entering member, and the other surrounding the entering member and adapted to be compressed between the end of the outer flange of the receiving member and the aforesaid shoulder of the nut.

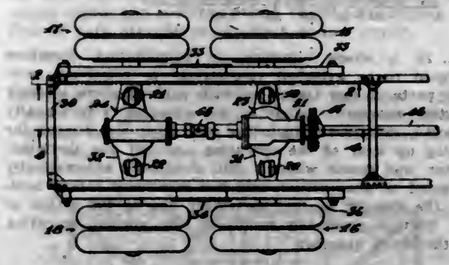
1,638,225. FORGING MACHINE. WADE H. WINEMAN, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 15, 1921, Serial No. 437,544. Renewed Feb. 20, 1924. 35 Claims. (Cl. 76—8.)

15. The combination with a clamping member and a wedge for operating said member and a reciprocatory operating device for said wedge, of means whereby the reciprocatory device by its initial movement will move said wedge to operate said clamping member to yieldingly engage an object and by a subsequent movement will move said wedge to operate said member to unyieldingly engage said object.



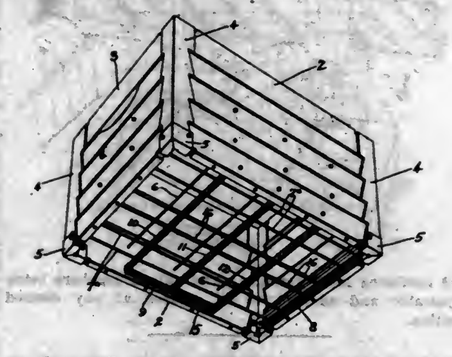
1,638,226. TAPE REEL. EUGENE J. WITCHGER, Saginaw, Mich., assignor to Lufkin Rule Co., Saginaw, Mich., a Corporation of Michigan. Filed Mar. 18, 1925. Serial No. 16,817. 4 Claims. (Cl. 242—84.8.)

4. In a double-bearing tape measure including a bottom wall and a drum provided with a top flange and a drum post having a flange thereon engaging an outer face of said bottom wall, a spring drum-frictioning member operatively interposed between the bottom wall and the drum and adapted to urge the drum away from the



bottom wall and to yieldingly hold said drum post flange in contact with the outer face of said bottom wall, whereby to prevent wear of the top flange of the drum.

1,638,227. CASE FOR TAPE MEASURES. EUGENE J. WITCHGER, Saginaw, Mich., assignor to Lufkin Rule Co., Saginaw, Mich., a Corporation of Michigan. Filed Nov. 8, 1926. Serial No. 147,034. 2 Claims. (Cl. 220—1.)



2. A case for tape measures comprising flanged top and bottom members, fabric covers for said members, said flanges formed with tongues spaced apart and in alternate interlocking relation, said tongues formed with peripheral grooves, the edges of said tongues flanged outwardly, and a clamping band received in said groove and engaging the meeting edges of said fabric cover, to lock said top and bottom members together.

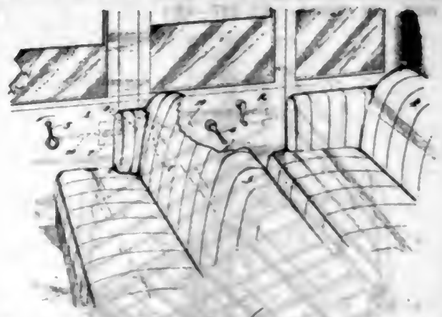
1,638,228. DIFFERENTIAL DRIVE FOR VEHICLES. MAHLON H. WOLFF, Los Angeles, Calif. Filed Nov. 23, 1925. Serial No. 70,915. 2 Claims. (Cl. 180—22.)

1. In a vehicle drive, at least two pairs of driving wheels, a differential gear for each pair of said wheels, axles carrying said wheels connected to said differential gears, housings for said gears and axles, substantially aligned shafts, gears connecting each of said shafts to said differential gears, a universal joint connecting said shafts intermediate said differential gears, sleeves fixed on said housing encompassing said shafts terminating at the opposite sides of the universal joint, a hanger fixed on one of said sleeves, a hanger turnable on the other of said sleeves, said hangers having overlapping extensions projecting to one side of the universal joint, and a pivot pin connecting said extensions.

1,638,229. CRATE. CHARLES A. WOOLSEY, Minneapolis, Minn., assignor to Northwestern Collapsible Carrier Co., St. Paul, Minn., a Corporation of Minnesota. Filed Dec. 7, 1923, Serial No. 679,122. Renewed June 15, 1925. 10 Claims. (Cl. 217—19.)

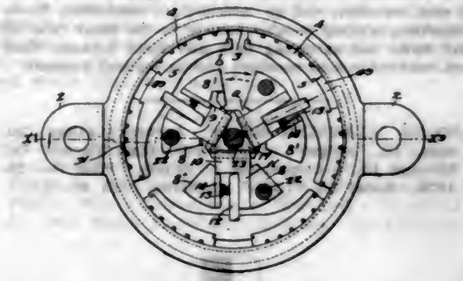
6. A container comprising side and end walls, members extending horizontally between opposite lower walls of said container, and an intermediate reinforcing frame comprising a strap member secured to the inner faces of said walls and extending back and forth between them and reinforcing said members against vertical pressure.

1,638,230. CLAMPING MEANS. ALFRED ALSAKER, Chicago, Ill., assignor to The Delta-Star Electric Co., Chicago, Ill., a Corporation of Illinois. Filed Dec. 28, 1925. Serial No. 77,965. 20 Claims. (Cl. 85—1.)



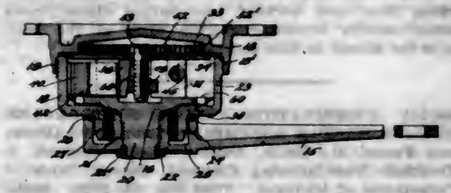
1. A set screw for forcing its way through the wall of a pipe comprising a head, a threaded shank, and a working face, said working face having discontinuous circumferentially extending cutting edges at the junction of the lateral surface and the end surface.

1,638,231. COMBINATION REMOTE CONTROL AND PULL-TO HANDLE ASSEMBLY. THOMAS P. ARCHER and FRANK M. EDGAR, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 11, 1926. Serial No. 87,571. 7 Claims. (Cl. 296—44.)



5. In combination with an automobile body construction of the closed type having front and rear doors each hinged to a post and closing by a latch against another post, and seats positioned adjacent to said door or doors, a control fixture secured to the inside of each respective door at a point remote from the latch fixture, means for operatively connecting said fixtures and latch units, combined latch actuating and pull-to levers secured to such control fixtures, one of said levers being normally positioned to be readily accessible as a latch operating and

pull-to handle to the occupant of one seat and another being secured to its control fixture in a position to permit easy accessibility to the occupant of the adjacent seat,

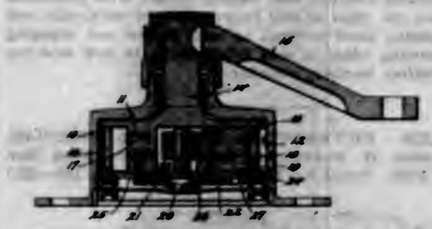


said combined latch actuating and pull-to members being adjustable and adapted to be secured at any desired position.

1,638,232. SHOCK ABSORBER. JAMES PIERCE BALDWIN, Los Angeles, Calif. Filed Dec. 27, 1921. Serial No. 525,082. 26 Claims. (Cl. 188—130.)

1. In a shock absorber having adjustable friction producing mechanism; a screw adapted and arranged to adjust such mechanism to produce a predetermined friction; and resilient means for automatically turning said screw to maintain such adjustment.

1,638,233. SHOCK ABSORBER. JAMES PIERCE BALDWIN and RICHARD A. KEESE, Los Angeles, Calif.; said Keese assignor to said Baldwin. Filed Mar. 24, 1925. Serial No. 18,043. 23 Claims. (Cl. 188—130.)

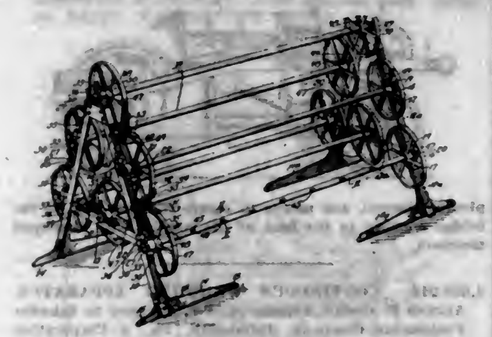


1. A device for adjusting the strut seats of a shock absorber of the moving strut friction shoe type and having relatively movable base and frame members, including in combination, a rotatable threaded member having an inner end rotatably engaging and supported by the frame, and an outer end by which it may be rotated, and a nut on said member engaging the strut seats, rotation of the threaded member in one direction resulting in adjustment of the strut seats to compensate for wear of the mechanism and said seats being rigidly held in such adjusted position by said member and nut.

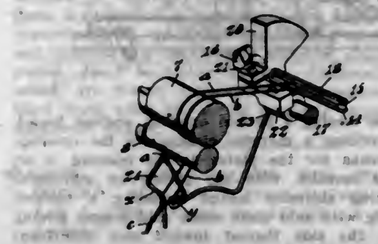
1,638,234. SHOCK ABSORBER. JAMES PIERCE BALDWIN, Los Angeles, Calif. Filed July 28, 1925. Serial No. 46,669. 17 Claims. (Cl. 188—130.)

1. A shock absorber of the kind described comprising, in combination, a cylindrical casing and a core rotatable therein, brake shoes in the casing engaging the cylindrical walls thereof, means mounted on the core for causing frictional engagement of the shoes with the casing in one swing of the core and for relieving such engagement in the opposite swing, comprising struts engaging the shoes and radially movable seats for the inner ends of the struts, and means for automatically adjusting the seats when looseness develope in the absorber comprising an abutment member engaging the inner faces of the seats, a screw threaded in the abutment member and friction mechanism connected to the screw tending to hold the screw relatively stationary in one swing of the absorber but permitting free rotation thereof with the abutment member in the opposite swing.

1,638,235. SHOCK ABSORBER. JAMES PIERCE BALDWIN, Los Angeles, Calif. Original application filed Dec. 27, 1921, Serial No. 525,082. Divided and this application filed May 6, 1926. Serial No. 107,253. 6 Claims. (Cl. 188—130.)



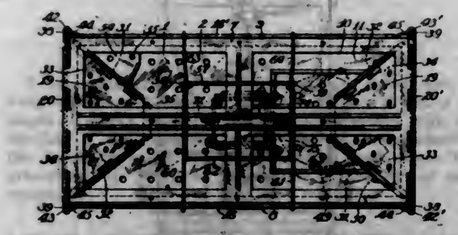
1. In a shock absorber, in combination, members adapted to be attached respectively to relatively movable parts, means associated with said members whereby relative movement thereof in one direction is frictionally opposed, said means including an adjustable element for taking up wear of the operating parts of the shock absorber, and means whereby said element is automatically adjusted as wear occurs, said last mentioned means holding the element against movement due to the action of the friction producing means in the normal operation of the shock absorber.



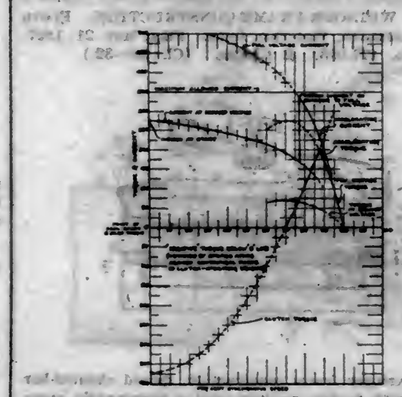
1,638,236. DISPLAY RACK. HARRY SUMNER BEST, Galva, Ill., assignor to Charlotte S. Best, Galva, Ill., executrix of the estate of John H. Best, deceased; said Charlotte S. Best assignor to John H. Best & Sons, a Firm composed of Charlotte S. Best, Don J. Best, Leon H. Best, and Harry S. Best, Galva, Ill. Filed Apr. 20, 1923. Serial No. 633,465. 6 Claims. (Cl. 211—18.)

1. In a device for displaying carpets and goods of a like character comprising a frame, a revoluble member thereon and upon which the goods may be wound, a ratchet associated with said member, the combination with such ratchet member, of selective means comprising

a single shouldered pawl with tapered end and a co-operating member with rectangular aperture, shoulder and slot for locking the revoluble member against rotation in one direction only, the opposite direction only or in both directions, and means formed independent of said member for clamping one end of the goods to such member.

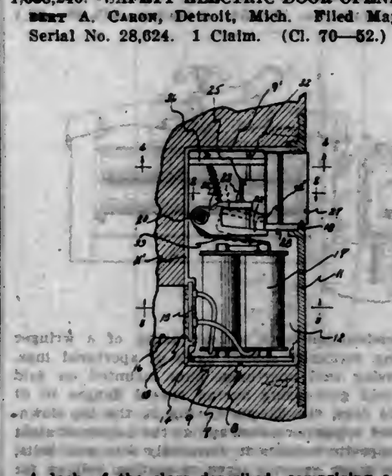


1,638,237. TRAP MOTION FOR TEXTILE MACHINES. SAMUEL BONOVOY and WINTHROP L. PERRY, Lowell, Mass., assignors to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1925. Serial No. 13,102. 13 Claims. (Cl. 117—33.)



1. In a machine for twisting together two strands of thread, the combination of a feeler for engaging the separate strands and holding them spaced apart, and means under the control of said feeler for stopping the feed of both strands when either strand breaks.

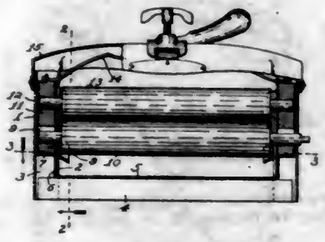
1,638,238. SECTIONAL FOLDING MINNOW TRAP. JOHN M. BEAUTIGAM and MARTIN C. BRIGHT, Indianapolis, Ind. Filed July 24, 1925. Serial No. 45,832. 11 Claims. (Cl. 43—105.)



2. A sectional folding minnow trap including a bottom, a top having a clasp member centrally on the inner side thereof, two sectional folding sides and also sectional folding ends hingedly connected to the bottom and the top, and a folding bait holder removably connected with the top and the clasp member.

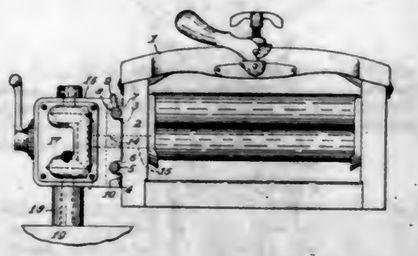
1,638,239. DRIVING MECHANISM AND METHOD. TANDY A. BERSON, Troy, N. Y., assignor to Tolhurst Machine Works, a Corporation of New York. Filed Feb. 12, 1921. Serial No. 444,444. 10 Claims. (Cl. 172—274.)

1. The combination of an induction motor, an alternating current supply of constant frequency arranged to supply the motor at various voltages, and a speed responsive clutch for connecting the motor to its load, the torque transmitting power of the clutch being less than the torque producing power of the motor until the motor has at least attained a speed corresponding to its maximum torque for a given voltage.



1,638,240. SAFETY ELECTRIC DOOR OPENER. PHILBERT A. CARON, Detroit, Mich. Filed May 7, 1925. Serial No. 28,624. 1 Claim. (Cl. 70—52.)

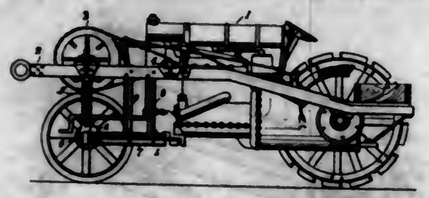
A lock of the class described, comprising a swingably mounted latch member; a heel projecting from the rearward portion substantially centrally thereof; resilient means for normally retaining said latch forming member in operative position; a swingably mounted abutment member adapted to swing in a plane parallel to the axis of said latch member, having a pair of spaced legs projecting therefrom, one leg being shorter than the other, the shorter of said legs being provided with a cut-away portion adapted to engage the heel of the latch member, to prevent said latch member from moving into inoperative position; means engageable by the longer of said legs to limit the movement of the abutment member in moving from inoperative to operative position; resilient means for normally retaining said abutment mem-



ber in operative engagement with said latch member and means electrically operated, for moving the abutment member to inoperative position, in order to release said latch member.

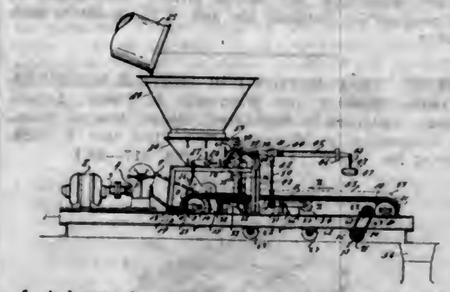
1,638,241. WRINGER-FRAME CONSTRUCTION. FLOYD L. CHAMBERLAIN, Waterloo, Iowa. Filed Mar. 21, 1927. Serial No. 177,053. 2 Claims. (Cl. 68—32.)

1. In a wringer frame construction, spaced channel-bar standards with facing openings, and a downwardly opening channel-bar base connection therefor and rigidly connected thereto having its ends split longitudinally to provide web parts bent upwardly then outwardly terminally, said web parts and the separated portions of the flanges of the base connection being inserted into the openings of said standards, the horizontal terminations of the base connection serving as supports for bearings positioned within the hollows of the standards.



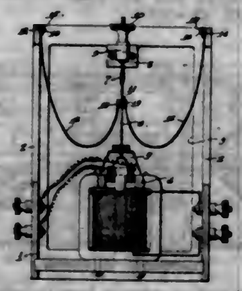
1,638,242. SUPPORTING DEVICE FOR WRINGERS. FLOYD L. CHAMBERLAIN, Waterloo, Iowa. Filed Mar. 21, 1927. Serial No. 177,054. 2 Claims. (Cl. 68—32.)

1. The combination with a gear-casing, of a wringer frame having vertically spaced pairs of apertured lugs, bolts traversing said apertures, nuts mounted on said bolts, and said gear-casing having spaced flanges to fit between said lugs, the flanges having at the top downwardly curved opposite recesses and at the bottom straight horizontal opposite recesses to removably seat said bolts, whereby the upper recesses serve as seating hollows for the upper bolt as a pintle, and the lower bolt is retained in the lower recesses by the weight of the overhanging wringer.



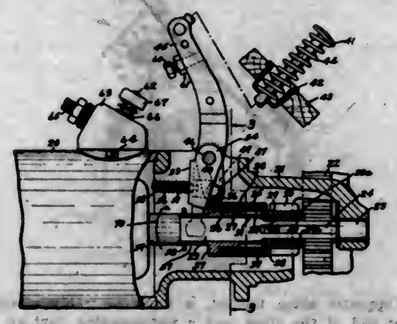
1,638,243. FRAME CONSTRUCTION FOR TRACTOR-DRIVEN WINCHES. HARRY A. CLARK, Wichita Falls, Tex. Filed July 6, 1925. Serial No. 41,583. 1 Claim. (Cl. 180—1.)

In a tractor, a frame having a pair of winch supporting side beams, a pair of spaced U-shaped members having their upper ends secured to the side beams, means to pivotally connect the front one of said members to the front axle of the tractor, the rear of said members embracing the tractor radiator so as to support same, a rearwardly projecting tongue on the base of said front member, a horizontal bridge member having a front part which engages on opposite sides of the tongue and is



pivoted thereto, and means to secure the rear end of the bridge member to the base of the rear of said U-shaped members.

1,638,244. CONTINUOUS WEIGHING APPARATUS. ALFRED F. COOKE, Pittsburgh, Pa., assignor to Schaffer Poidometer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 5, 1926. Serial No. 92,410. 3 Claims. (Cl. 83—44.)



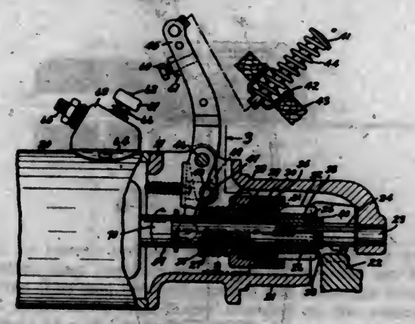
1. A hopper having a bottom opening, endless traveling plate providing a movable closure for the opening, sustaining means for the plates at the opening, a series of seats movable with the plates, an additional plate sustaining shiftable means including a toothed wheel coacting with said plate seats, said hopper having clearance on the side thereof toward said additional sustaining means, a gate for varying said clearance and connected to said additional sustaining means to be adjusted thereby, and a toothed wheel drive positively interlocked with the plate seats for driving the series of plates from the hopper toward said additional sustaining means.

1,638,245. LOUD SPEAKER. CHARLES CRAWFORD DAVIS, Fenton, Mich. Filed July 17, 1925. Serial No. 44,207. 1 Claim. (Cl. 181—31.)

In a sound reproducing device, a diaphragm support, a vibratory member, means resiliently supporting said vibratory member, means for effecting the vibration of said member, and a diaphragm suspended from opposite ends from said support and said vibratory rod.

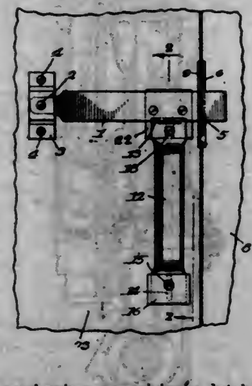
1,638,246. ENGINE-STARTING APPARATUS. LEWIS H. DAVIS, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 12, 1926. Serial No. 80,757. 4 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a motor; a pinion driven by the motor and movable into mesh with a gear of the engine to be started; and a one-way clutch for connecting the pinion and motor and comprising aligned clutch drums connected respectively with the motor and pinion, a helical coil spring normally in light frictional engagement with said drums and adapted to drivingly connect the drums when either drum is rotated in a certain direction, and a third drum connected with the motor and located concentrically to and substantially coextensive with the pinion drum, the pinion drum including radially displacable segments which are forced into driving engagement with the third drum when the spring drivingly connects the first mentioned drums.



1,638,247. PAPER HOLDER FOR TOILET-SEAT COVERS. ELIZABETH J. DOUGLAS, Crete, Nebr. Filed Aug. 5, 1926. Serial No. 127,325. 4 Claims. (Cl. 4—246)

1. In combination, a cover hinged to a toilet seat, a receptacle in said cover for the storage of a plurality of sheets of paper, said receptacle being provided with an opening at the hinged extremity of said cover whereby the sheets of paper may be withdrawn, and means for preventing the sheets of paper from falling out of said receptacle.

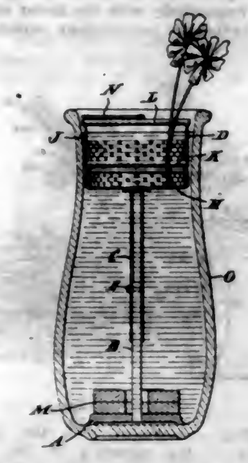


1,638,248. ENGINE-STARTING APPARATUS. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 12, 1926. Serial No. 80,761. 6 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a motor; a pinion movable endwise into mesh with a gear of an engine to be started; a clutch for automatically connecting the motor with the pinion when the motor is the driving member and including aligned clutch drums connected respectively with the motor and pinion, a helical spring having its convolutions normally out of

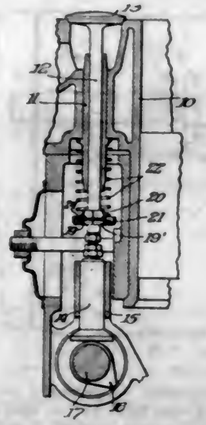
power transmitting engagement with the drums, and means responsive to the operation of the motor for causing the spring to be stressed axially so that its convolutions will engage the clutch drums; and means for moving the pinion endwise.

1,638,249. DOOR LATCH. WILLIAM D. FERRIS, Sterling, Ill., assignor to Frantz Manufacturing Co., Sterling, Ill., a Corporation of Illinois. Filed Mar. 26, 1926. Serial No. 97,570. 5 Claims. (Cl. 292—237.)



1. A latch mechanism comprising a latch bar, a strike piece for engaging said latch bar, to hold a swinging door in closed position, a handle movably mounted on the door, the handle being supported by means permitting up and down sliding movement of the handle relative to the door, said handle adapted for use in opening and closing the door, and means operated by said upward movement of the handle to automatically lift the latch when the door is opened, said bar being freely movable up and down independently of said handle, when the bar engages said strike piece.

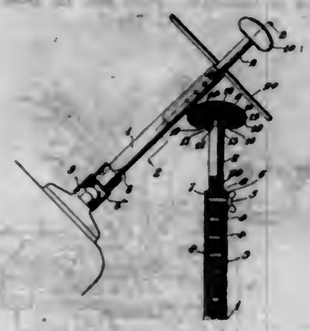
1,638,250. FLOWER RECEPTACLE. MIMA K. FINLAYSON, Los Angeles, Calif. Filed Oct. 6, 1925. Serial No. 60,753. 1 Claim. (Cl. 47—41.)



The combination with a receptacle of a shell adapted to be disposed in said receptacle, means for supporting said shell in spaced relation to the bottom of said

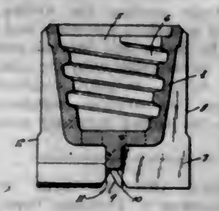
receptacle adapted to be adjusted to vary the spacing of said shell in relation to the bottom of the receptacle,

means carried by said shell for engaging and supporting the stems of flowers, and a variable weight stabilizing means for the supporting means for the shell.



1,638,251. WASHER. James B. Fisher, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Mar. 30, 1925. Serial No. 19,306. 2 Claims. (Cl. 251—144.)

2. In combination, a valve stem having a peripheral groove, a washer structure composed of two halves for engaging in said groove, said halves having registering peripheral grooves, and a split hoop engaging in said grooves, said hoop being of readily flexible but inelastic metal to be readily positioned to hold said halves together in said stem groove or to permit separation of said halves and removal thereof from the stem.

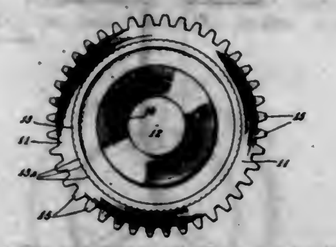


1,638,252. SOCKET WRENCH. Joseph N. Fitzgerald, Jr., Ridley Park, Pa. Filed Aug. 14, 1924. Serial No. 731,936. 5 Claims. (Cl. 81—177.)

1. A wrench including a stem comprising sections telescoping with one another, means for holding the stem sections in adjusted longitudinal positions relatively to one another, a hand-bar fixed to the stem and extending

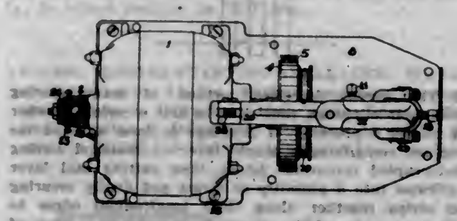
from opposite sides thereof, a knob rotatably mounted on one end of the stem, and a nut-engaging part on the other end.

1,638,253. SOFT-FORMATION WELL DRILL. Harold W. Fletcher, Houston, Tex., assignor to Hughes Tool Company, Houston, Tex., a Corporation of Texas. Filed Apr. 10, 1924. Serial No. 705,482. 1 Claim. (Cl. 255—61.)



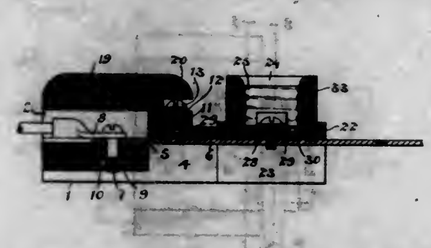
A cutter head for well drills comprising a comparatively thin shell of steel shaped like an inverted frustum of a cone, a coarsely threaded socket in said head, and radial scraping blades projecting in advance of said head, said head having openings in the flattened lower end thereof to direct the flushing fluid downwardly against the bottom of the hole.

1,638,254. BINDING STRIP. Aaron Freydberg and Jacob Marcus, New York, N. Y. Filed Jan. 15, 1926. Serial No. 81,409. 4 Claims. (Cl. 91—68.)



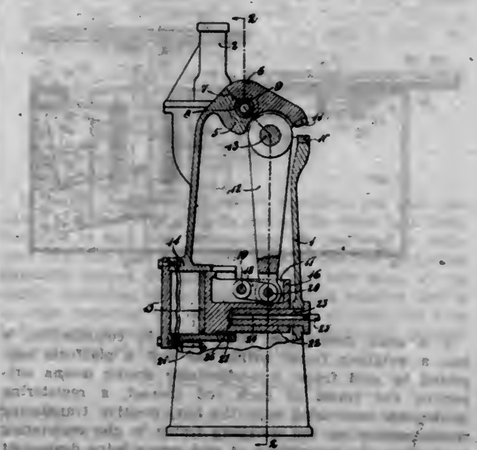
1. A bias cut binding strip having the fibers at the edges thereof cemented together, by a substance having incorporated therein an alimentary poison for moths and moth larvæ, and including a pigment to distinctively color the cemented edges.

1,638,255. SILENT GEAR AND METHOD OF MAKING THE SAME. John R. Gammeter, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Nov. 8, 1924. Serial No. 748,577. 3 Claims. (Cl. 74—28.)



1. The method of making a gear which comprises weaving in helical form a unitary strip of thread-comprising sheet material with the strip radially disposed in the helix, forming an annulus of the strip by securing successive turns thereof together with a bonding material, and forming gear teeth on the annulus.

1,638,256. MOTOR ATTACHMENT FOR SEWING MACHINES. Barnet Grossbard, San Francisco, Calif. Filed Mar. 15, 1926. Serial No. 94,903. 6 Claims. (Cl. 192—17.)

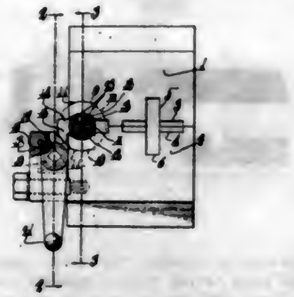


6. A motor attachment of the class described comprising, in combination with a motor having a driving shaft, a base, a wheel secured to the driving shaft having means thereon for adjustably securing it to the base, a fly wheel revolvably mounted on the support and rotatable therewith, a support located adjacent the first mentioned wheel, a shaft integrally secured to the fly wheel and revolvably mounted on a base, a disc having friction pads on its sides located between the first mentioned wheel and the fly wheel and attached on the fly wheel, a thrust bearing located at the end of the driving shaft of the motor, means for adjustably positioning the lever either closer to or farther from the base, a ball secured on the end of the fly wheel shaft, a lever mounted on the base and adapted to be operated against the ball on the fly wheel shaft, whereby the fly wheel shaft, the fly wheel and the disc may be moved inwardly to cause the friction pads of the disc to contact with the first mentioned wheel and the fly wheel, and a member secured to the lever for withdrawing the fly wheel and the disc, whereby the friction pads are released from contact with the first mentioned wheel, and means secured to the lever for preventing the fly wheel from revolving.

1,638,257. ELECTRIC TERMINAL FUSE BLOCK. John McClary Gunn, London, Ontario, Canada, assignor to The McClary Manufacturing Co., London, Canada. Filed July 14, 1925, Serial No. 43,652, and in Canada June 5, 1925. 4 Claims. (Cl. 175—371.)

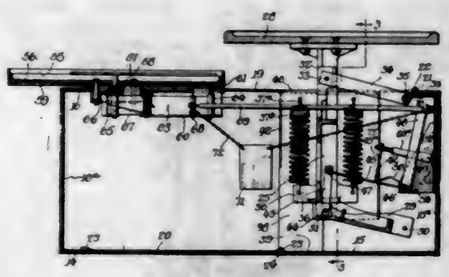
1. An electric terminal fuse block, comprising a main terminal block having covered terminal recesses, bus bars leading from said terminal recesses and extending beyond said main block, fuse blocks mounted on the extended portions of said bus bars, and branch wire terminals arranged in said fuse blocks.

1,638,258. FORGING MACHINE. Frank A. Halleck, Oak Park, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 2, 1919. Serial No. 294,269. 43 Claims. (Cl. 76—5.)



1. A drill sharpener comprising clamping means including an inclined stationary jaw and a cooperating pivoted jaw whereby a work piece may be received by lateral movement thereof, and work performing means adapted to perform work on a member held by said clamping means in a direction parallel to the engaging surfaces thereof, said clamping means being adapted to support said member in position independently of any clamping effect.

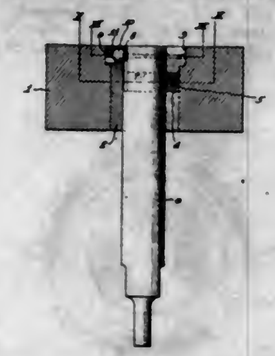
1,638,259. FORGING MECHANISM. Frank A. Halleck, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 5, 1922. Serial No. 549,897. 19 Claims. (Cl. 76—5.)



1. Gaging mechanism comprising cooperating oppositely disposed dies each having a gaging groove therein of curved section and of flatter transverse curvature at one end than at the other, stationary supporting means for

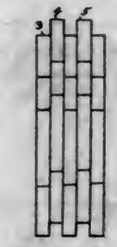
one of said dies, means for reciprocating the other of said dies, a stop member movable between said dies, and a

support for said stop member including a block secured thereto and a guide for said block secured to the side of one of said dies.



1,638,260. PLATFORM SCALE. MARIUS H. HANSEN, Chicago, Ill. Filed July 14, 1924. Serial No. 725,791. 15 Claims. (Cl. 265—68.)

1. A scale mechanism comprising, in combination, a box, a weighing frame within the box, a platform supported by said frame non-adjustable spring means supporting the frame at each end thereof, a registering mechanism associated with the box, positive translating means connecting the weighing frame to the registering mechanism, the translation of said means being dependent upon the weight on the platform and the tension of the springs, and means to vary the lever arm of application of the translating means to the registering mechanism.

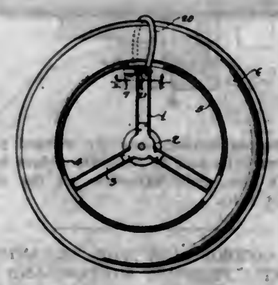


1,638,261. HOLDER FOR PUNCHES OR OTHER TOOLS. EDWIN HENRICSON, Detroit, Mich. Filed Aug. 8, 1925. Serial No. 49,145. 2 Claims. (Cl. 279—76.)

1. A device of the character described, comprising a tool carrying member provided with a bore, a bushing adapted to fit within a bore of said tool carrying member, said bushing being formed with a transverse bore opening at its inner end into the axial bore of the bushing and with an annular peripheral groove, a key carried by the bushing with one side of said key projecting into the axial bore of the bushing, a ball within the transverse bore of the bushing, a spring within the annular groove in the bushing to engage the ball and yieldingly hold the same projected from the end of its bore into the axial bore of the bushing, and a tool having a shank to fit within the axial bore of the bushing and formed with

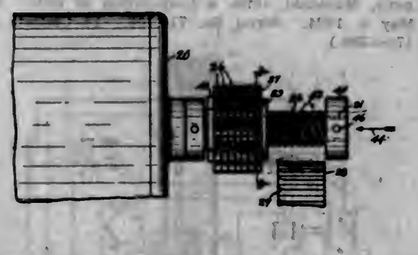
an annular groove to receive the key and with a flattened side to pass the key in the removal of the shank from the bushing.

1,638,262. METHOD FOR THE RAPID PRODUCTION OF WOODEN PANELS FROM MILL CLIPPINGS AND THE LIKE. JOHN L. HERZOG, Saginaw, Mich. Filed Apr. 18, 1925. Serial No. 24,142. 3 Claims. (Cl. 144—309.)



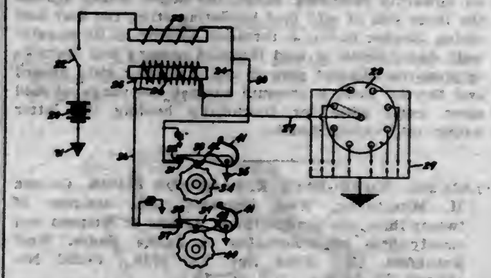
1. The herein described method of manufacturing panels from clippings, consisting in first securing together end to end a plurality of clippings to form a board-like structure comprising a single layer of material having uninterrupted transverse joints, then cutting said layer lengthwise into a plurality of strips and finally securing said strips together along their longitudinal edges to again form a board-like structure comprising a layer of material having interrupted transverse joints.

1,638,263. SHOE-TIP STIFFENER. JACOB F. JONAS, Bellevue, Ky. Filed July 1, 1925. Serial No. 40,889. 2 Claims. (Cl. 36—77.)



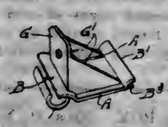
1. In a shoe, a tip stiffener of composite structure adapted to be interposed between the linings of a shoe vamp comprising, a plurality of superposed stiffener layers of flexible sheet material of appropriate tip pattern outline, a first layer thereof having a lateral end of convex outline and a second layer having a corresponding end of concave outline causing the first to over-lap the second, and a fibrous layer interposed between said stiffener layers corresponding in pattern outline to said first stiffener layer.

1,638,264. TIRE LOCK. JOHN JUNKUNC, Chicago, Ill. Filed Oct. 31, 1925. Serial No. 65,903. 2 Claims. (Cl. 70—90.)



1. A lock for use with a chain for locking spare tires to a tire carrier of the type having a channel frame, comprising an elongated hasp having legs spaced apart by the depth of said channel frame, said legs having successive notches along their inner faces, the ends of said chain being adapted to be secured to one of the legs between the flanges of said channel frame, a member adapted to receive the ends of said legs and to be moved therealong into abutment with said channel frame and a revoluble bolt mounted in said member and adapted to be positively engaged with certain of said notches to hold said member in locked position on said hasp.

1,638,265. ENGINE-STARTING APPARATUS. WILLIAM O. KENNINGTON, London, England, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 14, 1925. Serial No. 69,032. 6 Claims. (Cl. 74—7.)



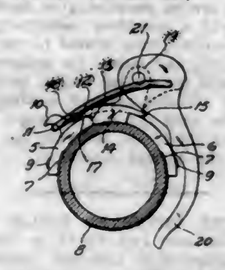
1. Engine starting apparatus comprising in combination, an electric motor, a screw-threaded shaft driven by the motor, a nut movable endwise along the shaft and rotated by the shaft, a motor driven gear comprising a plurality of gear elements of relatively small mass movable into mesh with the gear of an engine to be started, means connecting the gear elements with the nut to cause the gear elements to move endwise by endwise motion of the nut, and means connecting the gear elements with the nut for rotation of the gear elements by rotation of the nut, the last-mentioned connections providing for limited rotation of each gear element with respect to the other.

1,638,266. IGNITION SYSTEM. CARL H. KINDL, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 7, 1925. Serial No. 73,716. 2 Claims. (Cl. 123—148.)

1. An ignition system comprising an ignition coil having a primary and a secondary inductively related, an auxiliary coil non-inductively related to the ignition coil, a source of current, and means for connecting the auxiliary coil only with the current source, then for connecting the auxiliary coil and primary winding of the ignition coil in series with the current source without disconnecting the auxiliary coil, and then for disconnecting both coils from the current source.

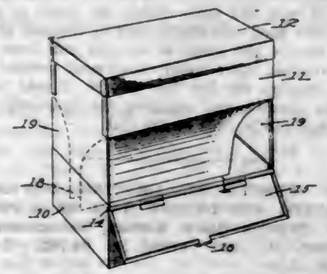
1,638,267. STEEL CONVEYER CHAIN AND LINK. GEORGE L. MOREHEAD and FRANK S. O'NEIL, Indianapolis, Ind., assignors to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed May 8, 1925. Serial No. 28,778. 3 Claims. (Cl. 198—189.)

3. A link comprising a pair of relatively flat side bars joined at one end by a pintle and at the other by a hook, the hook of each link surrounding the pintle of an adjacent link, the hook and pintle ends of the link projecting upwardly beyond the plane of the flat side bars, an upwardly extending sheet metal attachment member having an edge engaging the flat face of one of said side bars and welded thereto, and engaging the upwardly projecting hook and pintle ends of the link.



1,638,268. ELECTRICAL HEATING DEVICE FOR SMOOTHING AND DRYING HAIR ON A PERSON'S HEAD. CLIFTON ORICE MORGAN, Youngstown, Ohio. Filed Mar. 15, 1926. Serial No. 94,762. 2 Claims. (Cl. 132—31.)

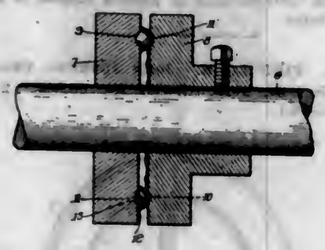
1. In an electrical heating device for smoothing, drying and pressing hair on a person's head, the combination of a circular hollow casing member including an annular wall and having a plate closing its upper end, a heat insulating plate in said upper end, a heat insulating strip extending around the inner surface of said casing member and against the said heat insulating plate and under the margin of the latter, a second heat insulating plate under and against the first said heat insulating plate and having its periphery against the upper edge of said heat insulating strip, an electrical heating coil provided with



means securing it under the second said heat insulating plate, a heat insulating plate secured on the top of said casing member, a hand receiving loop extending over the last said heat insulating plate, a sheet metal plate provided with a downwardly facing concave surface and with an upwardly extending flange, the latter fitting against the inner side of said heat insulating strip, the first said casing member having a threaded opening in its annular wall, and a screw in said threaded opening and operable to press the adjacent part of said insulating strip inward and thereby exert a pressure against the flange of said sheet metal plate for frictionally holding the latter within said casing member.

1,638,269. EMERGENCY REPAIR FOR PIPES. GEORGE H. MULLINACK, West Frankfort, Ill., assignor of twenty-three one-hundredths to Arthur E. Simpson and twenty-three one-hundredths to James Isaacs, West Frankfort, Ill. Filed Apr. 28, 1926. Serial No. 105,088. 3 Claims. (Cl. 24—19.)

1. A device of the class described comprising a pair of members having recessed edges, a flexible non-elastic strip secured in the recessed edges of said members for uniting the same, and means carried by one member and engaging with the opposing member for drawing said members together.



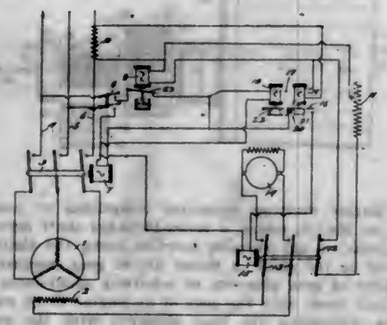
1,638,270. FEED BOX. NILS O. NILSSON, Worcester, Mass. Filed Mar. 16, 1926. Serial No. 95,053. 1 Claim. (Cl. 119—52.)

A feeder of the class described comprising a base, a hopper having a chamber for the grain, a chute having two end walls extending downward and engaging the ends of the base to support the hopper firmly, and a cover for the open top of said chamber, said cover having vertical end and side walls fitting both the bottom and the top of the hopper so as to be capable of being inverted and replacing the base as a support for the hopper for the purpose described.

1,638,271. ANTIFRICTION BEARING. GEORGE W. NORDSTRUM, Chicago, Ill. Filed Jan. 5, 1924. Serial No. 684,469. 1 Claim. (Cl. 308—235.)

In an anti-friction thrust bearing, the combination with a group of balls, of a retaining and spacing ring therefor comprising a flat annulus formed with spaced holes of smaller diameter than said balls and seating the latter, and flanges of flat transverse section continuous at their bases with the outer and inner edges of said annulus and extending inwardly toward each other at acute angles to the plane of said annulus and overhanging said

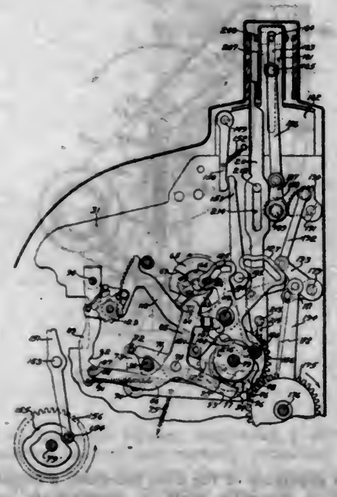
balls, said flanges having inwardly swaged portions between adjacent balls and at their free edges forming line contacts with the latter extending in the direction of travel of said balls.



1,638,272. COMPOSITION FOR CLEANING GLASS WHICH WILL PREVENT MISTING AND THE COLLECTION OF GLOBULES OF MOISTURE THEREON. CLARENCE H. OHLWILER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 14, 1924. Serial No. 692,895. 2 Claims. (Cl. 134—27.)

1. A detergent and anti-dimming composition consisting of water, cocoanut oil, potash soap, Turkey red oil, alcohol and glycerine.

1,638,273. METHOD AND COMPOSITION OF MATTER FOR SURFACE-TREATING ALUMINUM. ALADAR PACZ, East Cleveland, Ohio. Filed Feb. 10, 1926. Serial No. 87,463. 5 Claims. (Cl. 148—7.)

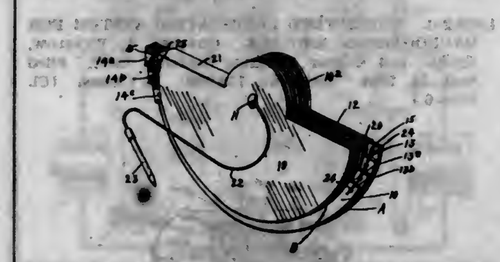


1. The process of surface treating metallic articles consisting at least superficially of aluminum which contains the step of immersing the article in a solution containing a soluble fino-silicate, a salt of a non-ferrous iron-group metal, and an alkali salt.

1,638,274. STARTING APPARATUS FOR SYNCHRONOUS MOTORS. HENRY V. PUTMAN, Mansfield, Ohio, assignor to The Ideal Electric & Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed May 3, 1924. Serial No. 710,705. 14 Claims. (Cl. 172—289.)

1. The combination with a motor, of a switch for controlling the supply of current thereto, an overload relay for controlling said switch, a bypass shunt for said relay, and means for disconnecting said bypass shunt when said motor approaches normal operating speed.

1,638,275. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 7, 1923. Serial No. 643,920. 8 Claims. (Cl. 235—23.)



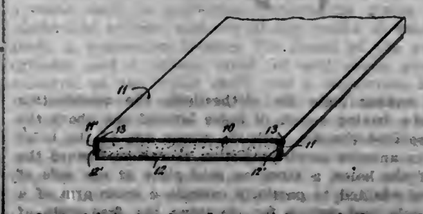
1. The combination of a movable tablet indicator supporting carriage, differentially movable means for controlling the movement of said carriage, manipulative means for controlling said differentially movable means, an operating means, means for normally locking said operating means, means for moving said locking means for releasing said operating means after the adjustment of said differentially movabl means has been effected, and means operated by said operating means for moving said carriage under control of said differentially movable means.

1,638,276. THERMOMETER. CHARLES H. SCHULTZ, Chicago, Ill. Filed Mar. 9, 1922. Serial No. 542,208. 2 Claims. (Cl. 73—119.)

1. A thermometer comprising an apertured disk having a scale concentric with said aperture, a centrally apertured container, an eyelet co-operating with the apertures in said disk and container for securing the same pivotally with relation to each other, a coiled thermo sensitive element within said container and secured at its outer end to the peripheral wall of said container, a pin secured to the inner end of said thermo sensitive element and extending through the aperture in said container, and a pointer secured to the outer end of said pin in co-operative relation with the scale on said disk.

1,638,277. RADIORECORD. EDWARD C. SMITH, Des Moines, Iowa. Filed Apr. 7, 1926. Serial No. 100,863. 5 Claims. (Cl. 281—1.)

1. In a device of the class described, a series of superposed substantially semi-circular sheets having successively longer circumferential notches terminating at one straight edge, index matter on the portions of the lower sheets exposed through said notches, indicating matter on each sheet arranged in radial lines, a second series of similarly arranged sheets of less radius than the first sheets overlying the first series having successively longer circumferential tongues, terminating at the other straight edge, overlying the corresponding outer portions of the first sheets, and a common central pivot for the sheets.

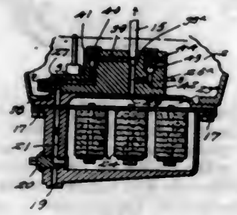


1,638,278. CONTACT-RECTIFYING DEVICE. WALTER O. SNELLING, Allentown, Pa. Filed Feb. 8, 1923. Serial No. 617,841. 4 Claims. (Cl. 250—31.)

1. The process which comprises applying pressure to a finely divided reaction product of a metal with an element of the sulfur group until a coherent mass results, and thereafter sintering the resulting coherent product.

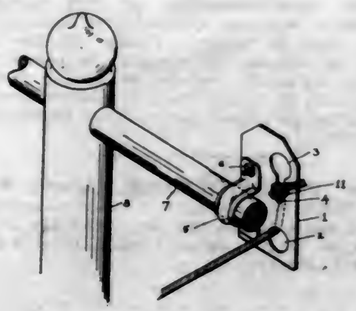
1,638,279. CONCENTRATION OF TIN MINERALS. WALTER O. SNELLING, Allentown, Pa. Filed Oct. 31, 1925. Serial No. 66,105. 4 Claims. (Cl. 209—9.)

1. In the treatment of minerals, the process which comprises superficially reducing particles of cassiterite electrolytically to metallic tin, and thereafter separating such superficially reduced particles from associated mineral particles.



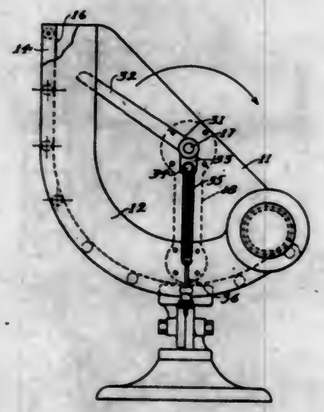
1,638,280. FABRICATED BOARD. CLARENCE W. UTZMAN, Buffalo, N. Y., assignor, by mesne assignments, to United States Gypsum Company. Filed Apr. 19, 1920, Serial No. 374,838. Renewed Jan. 5, 1923. 6 Claims. (Cl. 154—45.9.)

2. A fabricated board comprising a body portion containing hardened plaster, a covering sheet adhering to each of the flat surfaces of said body portion and of



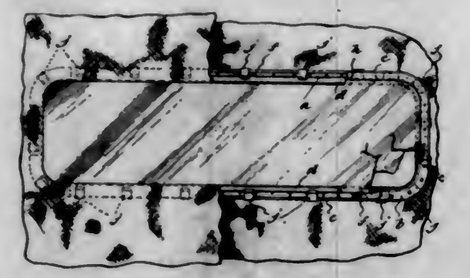
greater width than said surfaces, one of said covering sheets having each of its sides folded over a longitudinal edge of the surface to which it adheres so as to substantially cover the adjacent longitudinal edge surface of the body portion, the other of said covering sheets also having each of its sides folded over a longitudinal edge of the surface to which it adheres so as to overlap but not completely cover the folded over sides of the other covering sheet, and a waterproof adhesive cementing together the overlapping sides of said covering sheets.

1,638,281. FORCE-FEED LUBRICATING SYSTEM FOR HYDROCARBON ENGINES. CHARLES A. WINSLOW, Vallejo, and ELBERT J. HALL, Berkeley, Calif. Filed Sept. 25, 1924. Serial No. 739,963. 18 Claims. (Cl. 184—6.)



14. In an internal combustion engine, the combination with the engine bearings and the oil pump, of means for filtering the oil passing from the pump to the bearings, and means for reversing the flow of oil through the filtering means.

1,638,282. CLOTHESLINE LOCK. STANLEY WOOD, Rochester, N. Y. Filed Jan. 26, 1927. Serial No. 163,663. 1 Claim. (Cl. 24—130.)

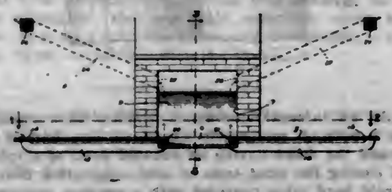


In a locking plate for clotheslines, the combination of a plate, having a pair of holes located one above the other provided therein, with the upper one of the holes having an angular notch projecting therefrom toward the lower of the holes, a strap on said plate at one side of the holes adapted to partially encircle a cross arm of a clothes pole and means for clamping the free ends of said strap against said plate to clamp said plate in place on the cross arm.

1,638,283. TARGET-THROWING APPARATUS. ERWIN F. BAHLMANN, Milwaukee, Wis. Filed Oct. 24, 1921. Serial No. 509,986. 16 Claims. (Cl. 124—4.)

5. In an apparatus of the class described, a target holding means, a throwing shaft, a continuously rotating drive shaft, a drive connection between said shafts, a target throwing arm carried by said throwing shaft and independent of the holding means, said arm being arranged to sweep the holding means and throw a target held thereby, and means operable upon rotation of the throwing shaft a part of a cycle by said drive shaft to accentuate the speed of rotation of the throwing shaft the remainder of the cycle whereby the target held by said holding means will be thrown into the air.

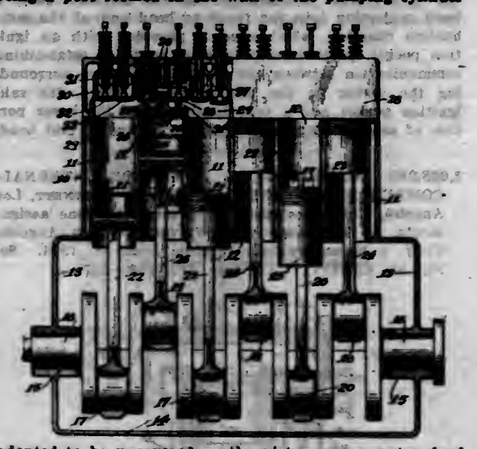
1,638,284. WINDOW-LIGHT FRAME. WILLIAM J. BOSSEMEYER, Detroit, Mich. Filed Oct. 24, 1923. Serial No. 670,430. 8 Claims. (Cl. 296—145.)



1. In a window light for automobile tops, a pair of frames provided each with means for impaling a separate piece of fabric thereto, and spring means for clamping the two frames together, the fabric being turned over the two frames for concealing the frames and the securing means.

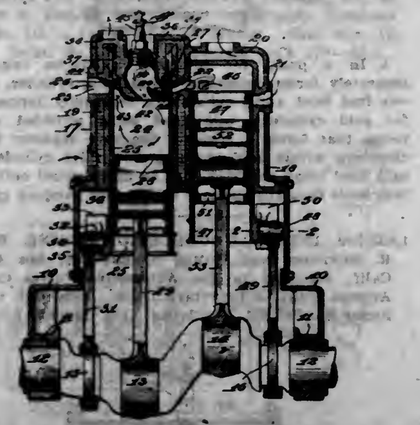
1,638,285. LEG AND ANKLE SUPPORT. AUBREY AUGUSTUS BROOKS, Toronto, Ontario, Canada. Filed Oct. 27, 1923. Serial No. 671,235. 4 Claims. (Cl. 128—81.)

1. A leg and ankle support, comprising, a stirrup member extending beneath and securely embracing the foot, and telescopic brace members pivotally connected to said stirrup and extending upwardly past the sides thereof and secured to the leg.



1,638,286. FIREPLACE. THOMAS BURLEY, Seattle, Wash. Filed Dec. 4, 1926. Serial No. 152,600. 1 Claim. (Cl. 126—121.)

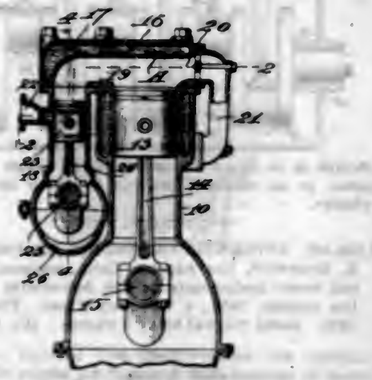
A fireplace comprising a radiator plate that is arranged to form a back chamber, upwardly slanting deflector plates disposed in the chimney flue having associated draft openings, a fire well in the bottom of the fireplace, conduits for the entry of cool air connected with the bottom portion of the back chamber, auxiliary pipes connecting said conduits and fire well, conduits leading from the upper portion of said back chamber, and registers for the discharge of warm air at the ends of the last named conduits disposed above their connection with the chamber.



1,638,287. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Jan. 4, 1923. Serial No. 610,697. 3 Claims. (Cl. 123—80.)

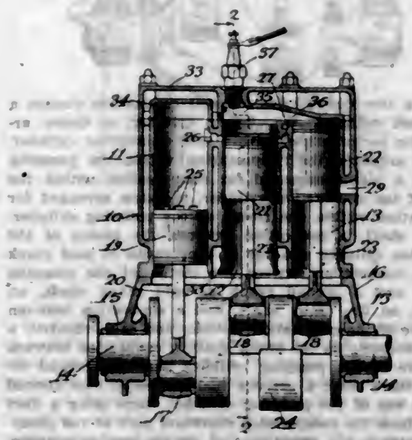
1. An internal combustion engine having a combustion cylinder and a pumping cylinder, an exhaust valve adapted to open during the exhaust stroke of the engine, an inert volume inlet valve adapted to open during the suction stroke of the engine, a supercharge gaseous fuel transfer valve adapted to open during the first part of the compression stroke of the engine, all of said valves being arranged in the head of the combustion cylinder and disposed parallel with the crank shaft of the engine, there being a port formed in the wall of the pumping cylinder

adapted to be uncovered as the piston passes outer dead center, so as to admit gaseous fuel into said pumping cylinder.



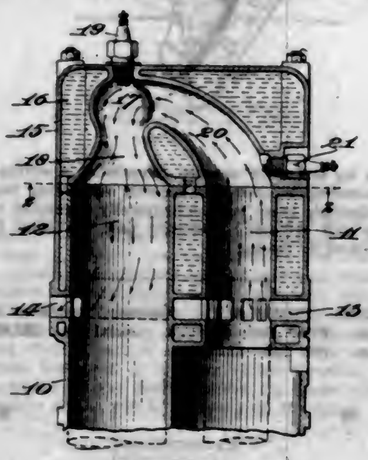
1,638,288. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed May 31, 1923. Serial No. 642,509. 3 Claims. (Cl. 123—70.)

1. In a two stroke cycle internal combustion engine, a combustion cylinder, a pumping cylinder, a sleeve arranged for reciprocation within said combustion cylinder, a sleeve arranged for reciprocation within the pumping cylinder, a piston arranged for reciprocation within the sleeve of the combustion cylinder, a piston arranged for reciprocation within the sleeve of the pumping cylinder, a crank shaft, a connection between the piston of the combustion cylinder and one of the cranks of said crank shaft, a connection between the piston of the pumping cylinder and a second crank of said crank shaft, an eccentric on the crank shaft, and a connection between the sleeve of the combustion cylinder and said eccentric, a second eccentric on the crank shaft, a connection between the sleeve of the pumping cylinder and said second eccentric, there being a gaseous fuel admission port formed near the top of the pumping cylinder, there being a duct leading from the compression clearance part of the pumping cylinder to the upper part of the combustion cylinder, there being a port in the sleeve of the combustion cylinder for registration with said duct, there being an



exhaust port formed in the wall of the combustion chamber at a point substantially opposite to said duct, a head projecting into the inner or head end of the combustion chamber, which head is provided with an ignition pocket, ports formed in said head for establishing communication between the port in the sleeve surrounding the piston in the combustion chamber with said ignition pocket and a port leading from the lower portion of said ignition pocket to the bottom of said head.

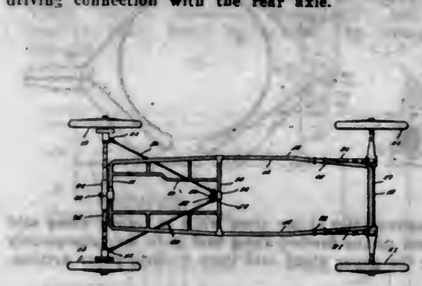
1,638,289. GASEOUS-FUEL PUMP FOR INTERNAL-COMBUSTION ENGINES. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Sept. 18, 1924. Serial No. 738,418. 6 Claims. (Cl. 103—227.)



1. In a pump for internal combustion engines, a separately formed gaseous fuel pumping cylinder, a gaseous fuel inlet valve cylinder, a separately formed head for said cylinders, said head being provided with a recess that forms a common clearance chamber for the chambers within said pumping and valve cylinders and said head being provided with an unrestricted outlet duct that leads from the chamber within said pumping cylinder.

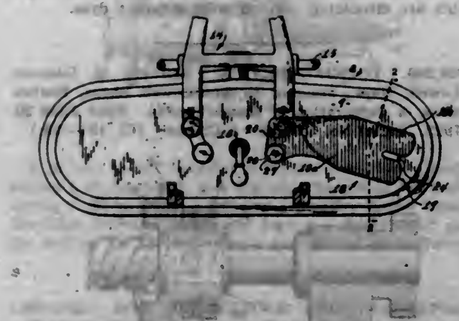
1,638,290. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT and HOMER A. BRUNELL, Los Angeles, Calif., assignors to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Oct. 8, 1924. Serial No. 742,891. 4 Claims. (Cl. 123—53.)

2. In a two stroke cycle internal combustion engine, a power unit comprising a pumping cylinder and a pair of combustion cylinders, the head ends of the latter being connected by a common clearance chamber, the pumping chamber being provided with a gaseous fuel inlet port, a gaseous fuel transfer port leading from the chamber in the pumping cylinder into the chamber of the adjacent combustion cylinder, the other combustion cylinder having an exhaust port, pistons arranged for operation within all of the cylinders, a sleeve arranged for operation within the combustion cylinder having the gaseous fuel transfer ports for controlling the passage of gaseous fuel therethrough, and means for reciprocating said sleeve so that the same is at the top center to close said transfer ports while the pistons within the combustion cylinders are at the upper or inner ends of their stroke.



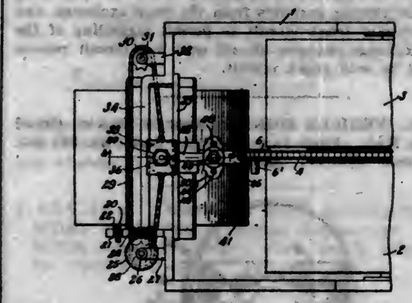
1,638,291. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed May 21, 1925. Serial No. 31,805. 3 Claims. (Cl. 123—53.)

3. In an internal combustion engine, the combination with a pair of combustion chambers, one having inlet port and the other having an exhaust port, of a cylinder head closing the head ends of said combustion chambers and said head being provided with a common compression and combustion clearance chamber that connects the head ends of said combustion chambers and which common clearance chamber comprises a substantially spherical chamber that is aligned with the axis of the combustion chamber having the exhaust port, a tapered throat leading from said spherical chamber to the head end of the combustion chamber having the exhaust port, a laterally disposed curved throat that connects the side of said spherical chamber with the head end of the combustion chamber having the inlet port, an ignition device seated in the head and projecting into the laterally disposed throat adjacent to the point where the same joins the combustion chamber having the inlet port and an ignition device seated in said head and projecting into said spherical chamber.



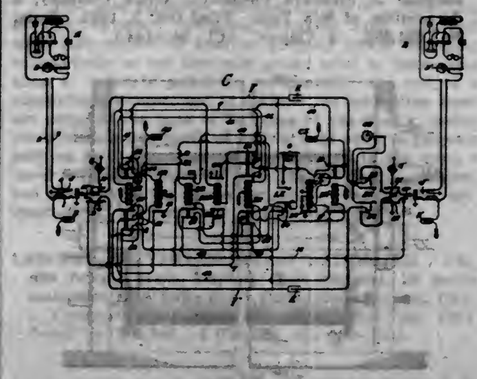
1,638,292. AUTOMOBILE CHASSIS. HARRY E. CROSS, Indianapolis, Ind., assignor to Cross Motor Corporation, Indianapolis, Ind., a Corporation of Delaware. Filed Oct. 27, 1923. Serial No. 671,093. 18 Claims. (Cl. 280—106.5.)

1. An automobile comprising, in combination, a frame, a front axle and its guiding wheels, an elliptic type leaf-spring connected to each side member of the frame and to the front axle, a rear axle assembly and its driving wheels, two quarter-elliptic leaf-springs arranged transversely of the frame at the rear thereof and attached at their outer ends to the rear axle assembly, a pivotal connection between the rear springs and the rear cross-member of the frame on a horisontal axis centrally on said rear member, said front and rear springs providing a three-point support for the frame, and an engine mounted in the rear portion of the frame and having a driving connection with the rear axle.



6. In an automobile, in combination, a frame, a rear axle assembly axle housing and differential, means pivotally supporting the rear end of the frame on the axle housing from a single point centrally between the sides of the frame whereby the rear axle assembly may tilt on said pivotal point, an engine mounted in the rear portion of the frame, a driving connection between the engine and differential permitting the rear axle assembly to move vertically with respect to the frame and to tilt about said point of support, and a thrust-rod between the rear axle assembly and the frame, the thrust-rod having a universal connection at its forward end with the frame and a pivotal connection at its rear end with the rear axle assembly, said pivotal connection being on a normally vertical axis perpendicular to the thrust-rod so as to permit tilting of the rear axle assembly about said pivotal connection with the frame and to establish a propelling thrust connection with the frame.

1,638,293. ATTACHMENT FOR STEAM PRESSING MACHINES. JOHN W. DE FORD, Los Angeles, Calif. Filed Sept. 14, 1926. Serial No. 135,315. 5 Claims. (Cl. 68—9.)



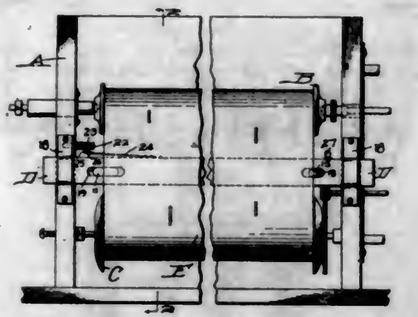
1. In a clothes press, an inclined head provided with a wall enclosing a steam space, a housing above said wall providing a pressing iron receiving space of which such wall forms a boundary; said housing so disposed that the longitudinal axis of said iron receiving space is disposed at an appreciable angle with regard to the longitudinal line of said head.

1,638,294. PAVING ROLLER AND STEERING MECHANISM. PHILIP W. DIETLY, Erie, Pa. Filed Aug. 23, 1924. Serial No. 733,709. 13 Claims. (Cl. 94—50.)

1. In a device of the class described, a frame, a driving roll supporting said frame, a steering roll, and means to move said steering roll transversely of said frame.

1,638,295. TELEPHONE SYSTEM. GEORGE R. EATON, Oak Park, and MICHAEL B. STAZAK, Chicago, Ill., assignors to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 13, 1922. Serial No. 600,554. 8 Claims. (Cl. 179—42.)

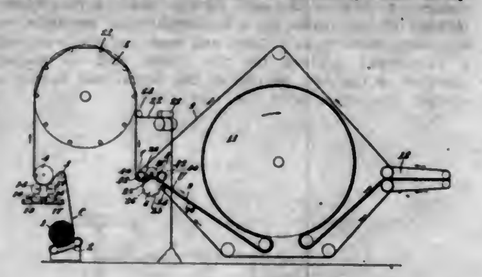
1. In a telephone system including a private branch exchange, subscribers' telephone lines terminating therein, a link circuit for interconnecting said telephone lines in conversational circuit, a main exchange, a trunk circuit between said private branch exchange and said main exchange, said link circuit adapted to be connected to said trunk circuit to connect a subscriber's line at the branch exchange with the main exchange, individual supervisory means at the main exchange and at the private branch exchange controlled over the said subscriber's telephone line on either incoming or outgoing calls, to notify the operators at the private branch exchange and main exchange respectively when conversation has terminated, means whereby the subscriber on said telephone line may communicate his wants to the operator at the main exchange, or whereby the operator at said branch exchange may communicate said subscriber's wants to the main



exchange operator, means operative when said branch exchange operator communicates the subscriber's wants to the main exchange operator to prevent the said supervisory means operating to signal a false disconnection signal upon the replacement of the calling subscriber's receiver upon its switchhook while said subscriber is waiting for his call to be completed, means for providing battery for talking purposes from the main exchange, and means for said trunk circuit to permit signalling of the branch exchange operator should said link circuit remain connected to said trunk circuit.

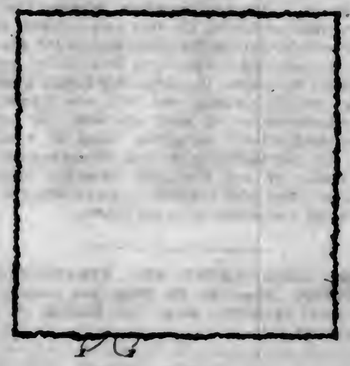
1,638,296. VEHICLE SIGNAL. ANDREW EKMAN, Grand Rapids, Mich. Filed Aug. 14, 1922. Serial No. 581,637. 15 Claims. (Cl. 177—327.)

2. In a device of the character described, a disk having the major portion thereof opaque and provided with transparent portions in the shape of arrows crossing each other at an acute angle to each other at the center of the disk, and with other transparent portions consisting of the letters S and T between one end of the arrows, and the letters O and P between the opposite ends of the arrows.



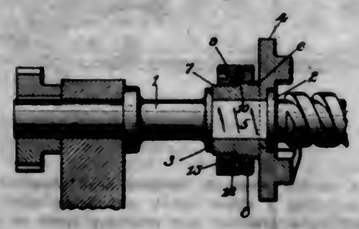
1,638,297. TRANSPOSING DEVICE FOR MUSICAL INSTRUMENTS. JOSEPH B. FIALA, New York, N. Y., assignor to Standard Pneumatic Action Company, a Corporation of New York. Filed Oct. 2, 1922. Serial No. 591,692. 3 Claims. (Cl. 84—144.)

1. A transposing device for musical instruments consisting of a spool box, a laterally movable tracker bar and means for adjusting and locking the tracker bar in different positions, consisting of a spring arm and a grooved screw adjustably threaded into the spool box with which the spring arm engages.



1,638,298. PAPER ARTICLE METHOD AND APPARATUS. CARL A. FLOOD and JOHN H. GIBBS, Framingham, Mass., assignors to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed Aug. 9, 1926. Serial No. 128,078. 8 Claims. (Cl. 93—1.)

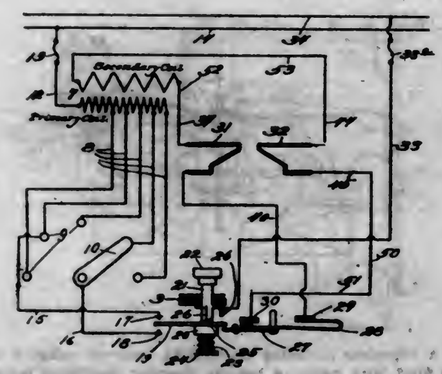
1. Apparatus for forming articles from sheet paper comprising means for feeding an elongate sheet of paper lengthwise along a predetermined path, means for wetting the paper along lines respectively extending transversely



and longitudinally of the sheet while in transit along said path, and means farther along said path for subsequently tearing the paper along said lines to form paper articles.

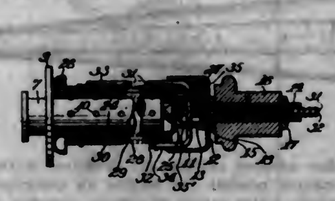
1,638,299. CREPE-PAPER ARTICLES. CARL A. FLOOD and JOHN H. GIBBS, Framingham, Mass., assignors to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Original application filed Aug. 9, 1926, Serial No. 128,078. Divided and this application filed Nov. 8, 1926. Serial No. 147,152. 3 Claims. (Cl. 41—26.)

2. A crepe paper article having irregular torn edges which are alternately colored with different dyes.



1,638,300. LOCKING DEVICE. SAMUELL M. GAGNON, Lowell, Mass., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed June 20, 1922. Serial No. 569,765. 8 Claims. (Cl. 151—19.)

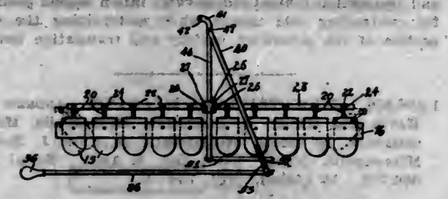
1. A locking device of the character described comprising a nut, a collar positioned beside said nut, the bore of the collar beyond the end of the nut being tapered,



and means at the adjacent ends of the nut and collar connecting said nut and collar together and holding them against substantial relative axial displacement but permitting a relative rotative movement between them.

1,638,301. ELECTRIC WELDING OR SOLDERING DEVICE. ROY E. GRANHART, Kansas City, Mo. Filed Jan. 17, 1923. Serial No. 613,302. 12 Claims. (Cl. 219—12.)

1. In apparatus of the character described, a transformer and means for circulating electric current to energize the primary and induce current in the secondary of said transformer, a pair of spaced conducting terminals having opposed intermediate attenuated points, and connections establishing a circuit in series from the said secondary through said terminals to preheat the attenuated points thereof.

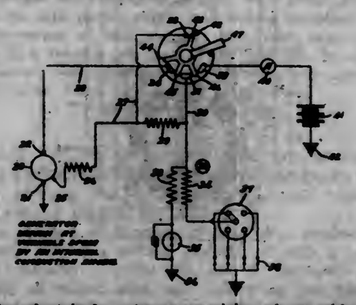


1,638,302. ELECTRICAL HAIR CURLER. ALBERT BARON GORDON, Indianapolis, Ind., assignor to August Henry Opperman and Theodore Allebrandi, Indianapolis, Ind. Filed Sept. 29, 1924. Serial No. 740,549. 11 Claims. (Cl. 132—36.)

1. A hair curler including a tubular imperforate casing having a flared mouth end, the opposite end of the casing having a closure, and a tubular protecting holder loosely insertible into the casing and having a flared outer end, the wall of the holder having a plurality of ducts therein.

1,638,303. EGG RECEPTACLE FOR INCUBATORS. HOLLAND C. GAROO, Ithaca, N. Y., assignor, by mesne assignments, to Annie S. Eveleth, Little Falls, N. Y. Filed Oct. 26, 1921. Serial No. 510,584. 3 Claims. (Cl. 199—44.)

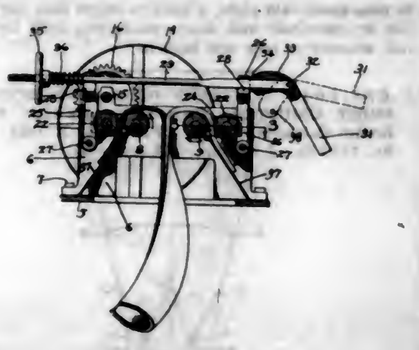
1. In an egg receptacle for incubators, a plurality of vertically movable tray frames, rocking baskets carried by said tray-frames, means for actuating said tray frames, connecting bars attached to said baskets, a plate having means for connecting said bars, a rod adapted



to pass under said plate, a lever to which said last named rod is connected, and means connecting said lever and rod, whereby to rock said baskets.

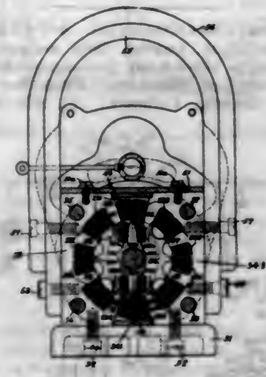
1,638,304. COMBINED HOSE SUPPORTER AND SHIRT ADJUSTER. CHARLES GEORGE GUY, Victoria, British Columbia, Canada. Filed June 5, 1924. Serial No. 718,133. 4 Claims. (Cl. 241—1.)

1. In a hose supporter, the combination of a connecting member, upwardly extending divergent arms connected with said connecting member, gripping means connected substantially at the free ends of the arms to fasten said arms at separate points to substantially the end of a supporting garment, and to suspend the connecting member adjacent the bend of the knee of the wearer, means for adjusting the length of each of said arms to properly position said connecting member relative to the knee, a lower extension suspended from said connecting member, and hose connecting means for said lower extension substantially at the lower end thereof.



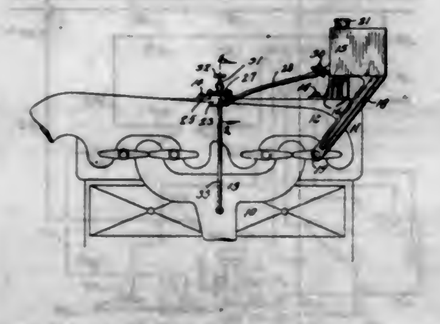
1,638,305. BATTERY-CHARGING APPARATUS. NELSON ROBERT HAAS, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 29, 1924. Serial No. 752,868. 4 Claims. (Cl. 290—41.)

4. An electrical system comprising, in combination, a generator, a battery charged thereby, an electrical translation device, means for regulating the generator, and



a switch having a manually operable member movable into one position for connecting the generator and battery and translation device, and movable into a second position for controlling said means while maintaining the connection of the generator, battery and translation device.

1,638,306. TIRE-STRIPPING MACHINE. ANDREW H. HAVIR and HENRY V. FLETCHER, Minneapolis, Minn., assignors, by mesne assignments, to Even J. Rohne, Minneapolis, Minn. Filed Oct. 5, 1923. Serial No. 666,772. 10 Claims. (Cl. 154—9.)

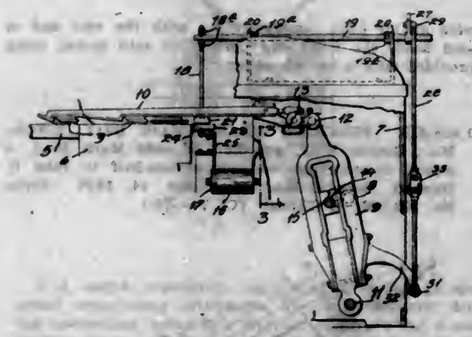


1. A device of the class described comprising a frame, feed and pressure rolls mounted thereon in parallel relation, the pressure rolls adapted for translation toward the feed rolls, pivoted levers engaging the pressure rolls, one at each end of each roll, link connections between each end pair of levers, holding the levers yieldably against the pressure rolls, each link connection having a lever controlled cam pivoted thereto engageable with a lever, to simultaneously hold each end pair in operative position, both cams being on the same side of the machine, and accessible for single or simultaneous operation.

1,638,307. LIGHTING AND IGNITION MAGNETO. JOHN H. HUNT, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 21, 1922. Serial No. 576,493. 3 Claims. (Cl. 171—252.)

1. In a magneto, the combination with a permanent magnet field including toothed poles, and pole face windings surrounding the pole teeth; of a toothed armature core carrying armature windings, the core being notched to provide equally spaced core teeth of equal width at the periphery, certain diametrically opposite groups of notches being relatively deep to provide winding space for groups of armature windings.

1,638,308. VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. PERRY D. INHOFF, Des Moines, Iowa, assignor to C. B. Hess, Des Moines, Iowa. Filed July 6, 1925. Serial No. 41,472. 1 Claim. (Cl. 123—25.)

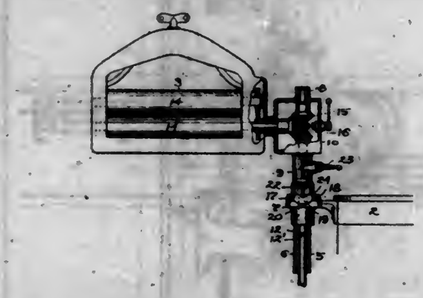


A vaporizer including an airtight reservoir adapted to be filled with water, a heating chamber positioned below the reservoir and adapted to rest upon an exhaust manifold of an engine, said heating chamber having a small opening in its top for admitting air, a means of communication between the heating chamber and the reservoir, said means entering the chamber near its bottom whereby the water will be maintained at a predetermined level, and a passage way for drawing steam from the heating chamber into an intake manifold of an engine.

1,638,309. MUFFLER CONSTRUCTION. THOMAS S. KEMBLE, Lakewood, Ohio. Filed Apr. 3, 1922. Serial No. 549,010. 1 Claim. (Cl. 137—160.)

A muffler adapted to form the discharge section of an engine exhaust conduit and having an elongated imperforate tubular outer casing of greater diameter than the exhaust conduit and having a conical end with an opening adapted to receive the exhaust conduit, the opposite end of said casing being conical and having an opening through which the gases are discharged, a tubular member within said casing in alignment with the exhaust conduit and extending from one conical end portion of the casing to the other, said tubular member being of substantially the same size at its inlet end as the exhaust conduit and forming a direct and unobstructed passageway for gases discharged from the exhaust conduit, the space between said tubular member and outer casing being in communication with the direct passageway adjacent the inlet and outlet ends of the muffler and forming an elongated unobstructed auxiliary passageway from the inlet to the outlet end of the muffler, the said passageways being of such length and relative cross-sectional areas that substantial portions of each discharge of exhaust gases may escape laterally to the auxiliary passageway to the inlet end, flow through the same toward the discharge end of the muffler and return into the direct passageway at the discharge end of the muffler.

1,638,310. BOARD KICKER FOR END-MATCHING MACHINES. CHARLIE A. KILLEBREW, Eastport, Fla., assignor to Willis S. Sherman, Minneapolis, Minn. Filed June 22, 1926. Serial No. 647,030. 15 Claims. (Cl. 198—24.)



1. The combination with means for feeding boards laterally to a point of discharge, of an automatic board kicker operated by the machine itself and timed in respect to said board feeding means and operative to project the boards endwise as they are discharged from said feeding means.

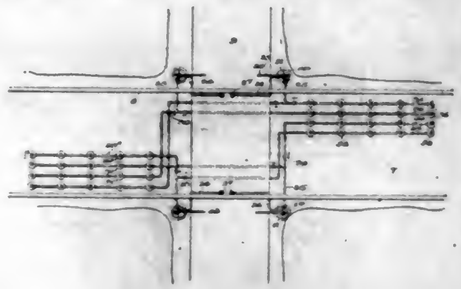
1,638,311. METHOD FOR ORNAMENTATIONS. CHRISSY ANDREWS, New York, N. Y. Filed Mar. 11, 1926. Serial No. 94,007. 5 Claims. (Cl. 41—34.)

1. As a new article of manufacture, an ornamented fabric consisting of a fabric base having a design imprinted on its surface, a corrugated covering secured over a part of the design, a coating of cementitious size applied over the said covering and the balance of the design and flock applied over said cementitious size substantially as described.

1,638,312. WRINGER. PERCY E. BARKER, Cleveland, Ohio, assignor of one-half to Arthur B. Betz, Cleveland, Ohio. Filed Nov. 24, 1924. Serial No. 751,828. 3 Claims. (Cl. 68—32.)

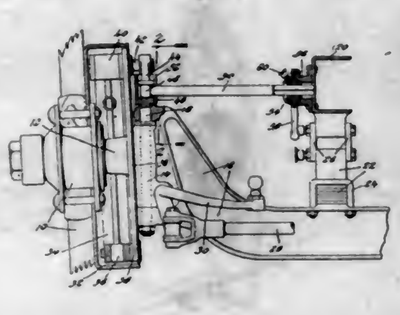
1. A wringer having a rotatable supporting standard and a power-transmitting clutch, a device adapted to throw out said clutch, when the wringer and standard are jointly rotated, said standard being freely rotatable independently of said device, and means adapted to lock said device to rotate with said standard.

1,638,313. WRINGER. PERCY E. BARKER, Cleveland, Ohio, assignor of one-half to Arthur B. Betz, Cleveland, Ohio. Filed Oct. 14, 1925. Serial No. 62,421. 10 Claims. (Cl. 68—32.)



1. A wringer, comprising a power roller and a second roller yieldably engaged therewith, a movable support for said second roller adapted to shift said roller across the crown of said power roller, and means adapted to limit the movement of said support and place said yieldable roller in a feeding position at one side of the crown of said power roller but free to ride reversely across said crown at all times to separate said rollers.

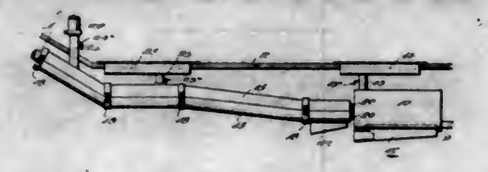
1,638,314. FLUID FUEL AND METHOD OF PRODUCING THE SAME. EDWIN J. BARTH and FRANK HOVELL, San Antonio, Tex. Filed Mar. 25, 1927. Serial No. 178,496. 7 Claims. (Cl. 44—9.)



2. A method of forming a fluid fuel product which comprises mixing a cracked residual oil with a relatively larger quantity of fuel oil, and a relatively smaller quantity of rubber gum, and subjecting the mixture to heat and mechanical agitation to obtain a thorough blending of the gum rubber with the carbonaceous matter in the mixture.

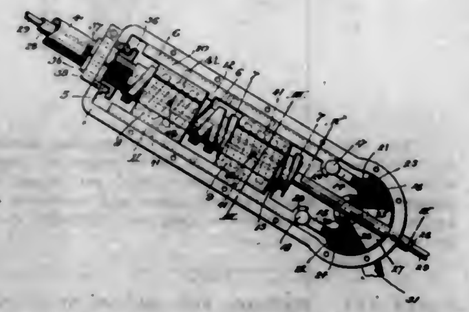
1,638,315. PNEUMATICALLY-OPERATED RAILWAY GATE. FITZHUGH L. BECK, Barksdale, Tex. Filed Sept. 9, 1926. Serial No. 134,435. 5 Claims. (Cl. 246—261.)

1. A railway gate operating mechanism including gates mounted on both sides of the railroad, a series of air conduits and pumps carried thereby, arranged near each track on opposite sides of the highway, a locomotive carried means cooperable with said pumps to close the gates, said means being adjustable for coaction with the pumps of either series of conduits.



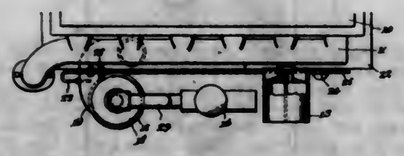
1,638,316. VEHICLE HAVING BRAKES. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 31, 1923. Serial No. 616,055. 4 Claims. (Cl. 188—194.)

2. A vehicle having an axle and a chassis frame, a spring connecting the axle and frame, a wheel having a brake drum, and a knuckle with a stub axle for the wheel and a brake band carried thereby, and which has, in combination, a cam arranged to operate said band, a shaft directly carrying the cam and mounted on the frame by sliding and oscillatable connection to compensate for the action of the spring, and a king pin connecting the axle and knuckle and formed to provide a bearing supporting said cam.



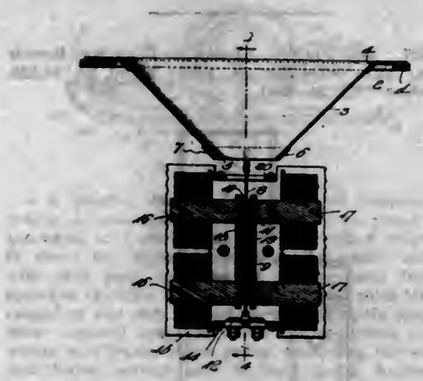
1,638,317. AUTOMOBILE HEATER. CHARLIE M. BOWERS, Bloomington, Ind. Filed June 12, 1924. Serial No. 719,623. 1 Claim. (Cl. 257—241.)

An automobile heating attachment adapted to surround an exhaust pipe, said attachment comprising an elongated cylindrical jacket formed of two abutting longitudinal jacket sections having sectional closures at their ends to surround the exhaust pipe, clamping collars surrounding the jacket sections at intervals to secure them together around the exhaust pipe, and a forwardly opening hood carried by the exterior of said jacket at its rear end, said hood being declined forwardly and having an open front end and the jacket being formed



with an air inlet communicating with the rear end of said hood, the front end portion of said jacket being provided with a hot air outlet.

1,638,318. STEERING GEAR. MARK BRAY, Nevada, Mo.; Glessie Bray, guardian of said Mark Bray, a mental incompetent, assignor of one-half to John C. Howard, Nevada, Mo. Filed Apr. 14, 1926. Serial No. 102,006. 8 Claims. (Cl. 74—79.)



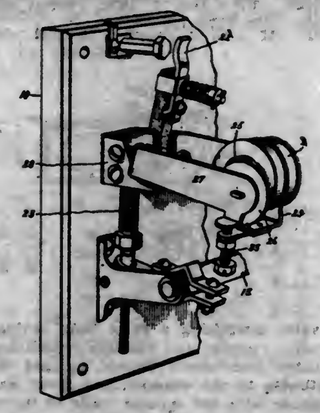
1. A steering gear mechanism comprising a steering shaft with oppositely threaded portions; a nut mounted on each of said portions; a pair of slides; a lug on each of said slides adapted to engage one of said nuts; a rocker actuator; means for transmitting the thrust of the slides to the actuator; and a steering arm connected to said actuator.

1,638,319. OIL-DILUENT SEPARATOR. SOUTHWICK W. BRIGGS, Glenmont, Md. Filed Nov. 4, 1926. Serial No. 146,222. 4 Claims. (Cl. 123—196.)

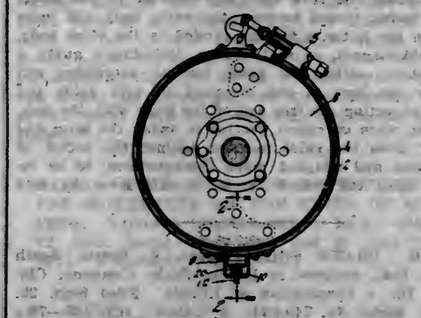
1. A diluent separator for removing lighter substances from oil comprising a cylindrical body portion having an inlet near its upper end and at a tangent to one side thereof for delivering a volume of air in a spiral stream to the upper end of the body portion, an outlet pipe arranged centrally in the body portion and opening into the same near the lower end of the body portion for carrying off the air, means for heating the air prior to delivering the same to the body portion, means for delivering a relatively small stream of oil to said inlet for admixture with the air as it enters the body portion, and means for carrying off the oil accumulating in the lower end of said body portion.

1,638,320. SOUND-REPRODUCING APPARATUS. CYRIL A. BRIGHAM, East Orange, N. J., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Nov. 2, 1926. Serial No. 145,808. 4 Claims. (Cl. 179—115.)

1. A sound reproducer comprising a conical shaped sound reproducing diaphragm, an electromagnetic driving mechanism including a flat coil structure and a connection between said conical shaped sound reproducing diaphragm and said flat coil structure comprising a bridle encircling said conical shaped sound reproducing diaphragm and secured at diametrically opposite points to said flat coil structure.



1,638,321. SEPARABLE FASTENER. DONALD M. BURMISTER, New York, N. Y. Filed Oct. 5, 1926. Serial No. 139,659. 3 Claims. (Cl. 24—211.)

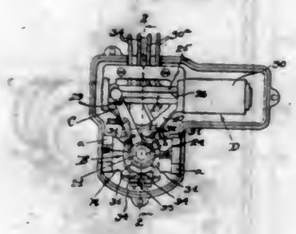


1. As a new article of manufacture, a stud retainer comprising a pair of interconnected spaced members, a tube disposed between said members and provided with diametrically opposite slots, a spring retaining device arranged between said members and including spaced parallel arms extending through said slots and terminating in flared extremities, and a manually manipulated release device carried by the peripheral portions of said members and including a wedge for disposition between said flared ends for spreading said arms apart.

1,638,322. ELECTROMAGNETIC TIME-ELEMENT DEVICE. CHARLES H. CHAPMAN, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 2, 1926. Serial No. 126,468. 4 Claims. (Cl. 200—97.)

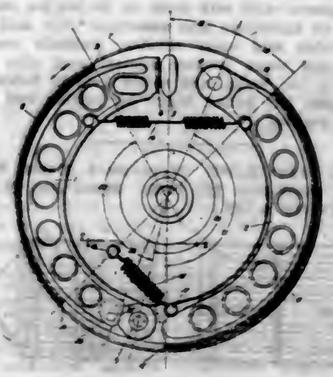
2. In combination in a time element device, an electromagnet having a core of laminated magnetic material, a magnetic movable element associated with said core and arranged to be magnetically attracted and released when the winding of the electromagnet is energized by a periodically varying current, the said element being arranged to move step by step with reference to a position of minimum reluctance between said core and element as the element is released, and a member of magnetic material cooperating with said core and element to provide a low reluctance path for the magnetic flux set up by the winding, the said member having a part arranged to be adjusted to provide an adjustable air gap between said member and element to adjust the time interval of operation of the device.

1,638,323. ANCHORING DEVICE FOR BRAKES. HAROLD D. CHURCH, Cleveland, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 13, 1925. Serial No. 50,000. 6 Claims. (Cl. 188—77.)



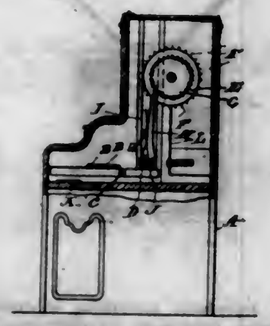
1. The combination of a brake drum, a brake member for engagement with said drum, an anchor for said brake member, an adjustable stop associated with said anchor and engaging said brake member, yieldable means for holding said brake member against said stop in one position of the brake, and means held in locking position by said last named means for locking said stop in adjusted position.

1,638,324. LOG RAFT. MATTHEW J. DAVIS, Portland, Oreg. Filed Dec. 22, 1925. Serial No. 77,110. 4 Claims. (Cl. 9—15.)



1. A log raft comprising a plurality of rows of longitudinally disposed logs, swifters disposed transversely thereon, means for securing the longitudinally disposed logs to the swifters, and lines connecting the swifters together.

1,638,325. ELECTRICALLY-ACTUATED VALVE. REX EARLE DAVIS, Minneapolis, Minn., assignor to Brenco Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 7, 1922. Serial No. 593,135. 3 Claims. (Cl. 137—139.)



1. A valve comprising a valve body having an elongated central chamber and passages communicating with said chamber transversely thereof, opposed webs reaching lengthwise of the chamber, the inner walls of the webs together with the opposed walls of the valve body forming a seat within said chamber having four, equally spaced ports therein, one port of each pair communicating through said chamber with one of said passages, a movable, hollow valve member engaging said seat and formed with four, equally spaced, elongated ports adapted to be alternately registered with the valve seat ports and sealed by the valve seat walls, a ratchet wheel fixed to the valve member, a lever pivoted thereon, a spring pressed pawl on the lever arranged to engage the ratchet wheel and turn the valve member in one direction, a spring tensed between the valve body and lever to return the latter, a bracket carried by the valve body, a solenoid magnet, on said bracket, including a guide, a core slidable within the guide and an energizing coil to draw the core in one direction in said guide and means connecting the free end of the lever with the core, said core, when energized, serving to swing the lever and open or close the valve member against the action of said spring and adapted, when demagnetized, to be retracted upon the return throw of said lever by said spring.

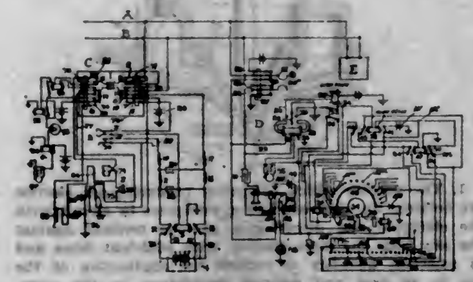
1,638,326. BRAKE SHOE. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1924. Serial No. 740,534. 8 Claims. (Cl. 188—78.)

4. A brake comprising, in combination, a drum, a first shoe anchored at one end within the drum and extending less than 180°, a stop arranged at the opposite end of the shoe, a spring urging the shoe toward a position determined by the stop, a second shoe pivotally connected to the unanchored end of the first shoe, and means for swinging the second shoe against the drum while the anchored shoe is held by the spring in the position determined by the stop.

1,638,327. TOY PIANO. GEORGE H. ECKSTEIN, Beverly Hills, Calif. Filed Jan. 28, 1926. Serial No. 84,525. 5 Claims. (Cl. 84—95.)

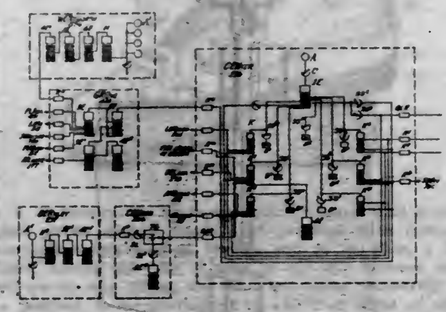
2. In a toy piano, the combination with a multiple number of piano keys of a bar extending transverse thereof and engaged with all of said keys so that depression of any one will move said bar, a pawl operated by movement of said bar, a ratchet for advancement by said pawl, a rotatable member connected to said ratchet so as to be advanced thereby, projections on said rotatable member and tonal members arranged to be sounded by said projections.

1,638,328. CARD HOLDER. GEORGE BENJIMAN EDGAR and LAIGHTON R. MELVIN, Lawrence, Kans., assignors of fifty-eight per cent to said George B. Edgar, six per cent to Frank E. Melvin, and six per cent to Robert A. Melvin, Lawrence, Kans. Filed Dec. 1, 1925. Serial No. 72,521. 1 Claim. (Cl. 40—10.)



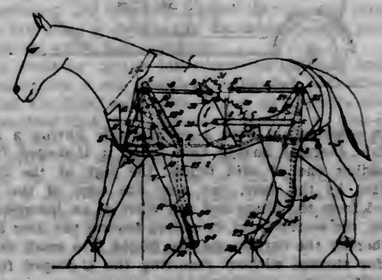
In a device of the character described, a supporting member, pins arranged in vertical spaced relation with each other, and disposed in the supporting member, a retaining bar having elongated openings disposed adjacent to the ends thereof, said openings accommodating the pins to permit the bar to be moved vertically, a portion of the bar adjacent to the lower end of one of the openings being cut away to provide a lateral passageway establishing communication with one of the openings to permit the bar to be swung laterally, and one end of the bar being turned upwardly to provide a finger piece.

1,638,329. TRACTION ATTACHMENT FOR AUTOMOBILES. FRIEDRICH FENNEL, Jersey City, N. J. Filed July 30, 1926. Serial No. 125,871. 4 Claims. (Cl. 305—3.)



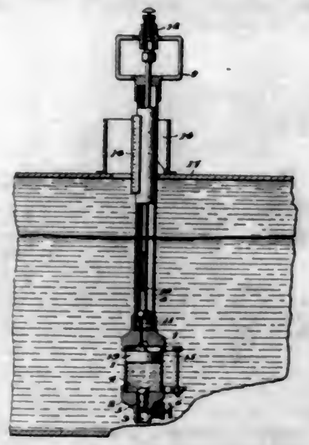
4. A traction attachment for wheeled vehicles, comprising a collapsible frame adapted to be placed about the wheel of a vheicle and provided with a hinge joint at about its center, an adjustable spreader connected with said joint and adapted to keep said frame in spread or operative position, a pair of fixed guide idlers arranged at the ends of said frame, resiliently suspended idlers disposed near the wheel, spring holders provided within said frame, roller guides connecting the walls of said frame, springs held by said spring holders and passing between said roller guides and supporting at their free ends said resiliently suspended idlers, an endless traction belt disposed within said frame and passing over the major portion of said wheel, below said resiliently suspended idlers over said fixed idlers and under said wheel, said resiliently suspended idlers disposed below the axis of said wheel adapted to keep said belt under constant tension.

1,638,330. SELECTIVE SIGNALING SYSTEM. GEORGE WILLIAM FLYNN, Blundellsands, near Liverpool, England. Filed Mar. 2, 1921, Serial No. 449,103, and in Great Britain July 4, 1919. 9 Claims. Cl. 177—343.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L. 1313.)



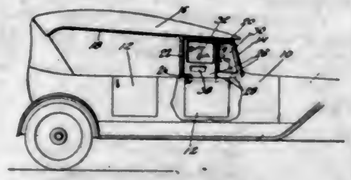
1. In a selective signaling system the combination of a central station, a plurality of outlying stations each having a designation number, a common line connecting said stations, means at said central station to transmit over said line a plurality of series of impulses, an indicating device at each of said outlying stations, a rotary selective switch at each of said outlying stations having a single rotary arm and a plurality of contacts, means to drive said arm in response to the first series of impulses received from said central station, an electrical circuit at each outlying station connected to a contact of said rotary switch corresponding to the first digit of said designation number, means controlled by current in said circuit to cause said driving means of said rotary arm to be re-actuated on the transmission of a subsequent series of impulses and a second electrical circuit connecting a contact of each of said rotary switches corresponding to the sum of the digits of said designation number to said indicating device.

1,638,331. MULTIOFFICE TELEPHONE SYSTEM. JOHN E. GARDNER, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 23, 1922, Serial No. 608,741. Renewed Dec. 15, 1926. 45 Claims. (Cl. 179—18.)



1. In a telephone system, a group of trunk lines, a plurality of registering devices common to said group, a plurality of other groups of trunk lines, means for seizing an idle trunk line in the first mentioned group and for associating one of said registering devices therewith, register switches in said registering device for setting up the digits of a called number, means controlled by said register switches for selecting a particular group of trunk lines of said plurality and for selecting an idle trunk in the selecetd group, a sender switch included in said registering device for sending out over the selected trunk line all the digits set up on said register switches, and means for preventing the initial starting of said sender switch until after said selecting means have operated.

1,638,332. MECHANISM FOR REPRODUCING ALL THE MOVEMENTS OF THE STEPS OF QUADRUPEDS. VITTORIO GOMBATO, Milan, Italy. Filed Mar. 12, 1925, Serial No. 15,014, and in Italy Mar. 22, 1924. 6 Claims. (Cl. 46—40.)

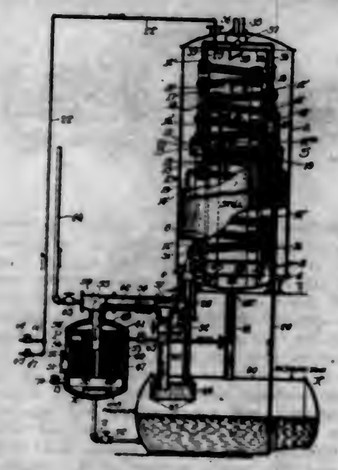


1. Mechanism for reproducing the step movements of quadrupeds, the combination with a body portion and articulated front and hind legs jointed thereto, of a rod connecting each hind leg to a front leg, a main rotary shaft having oppositely arranged cranks, rods connecting the cranks to the hind legs for imparting opposite oscillating movement thereto, two secondary rotary shafts, means on the main and secondary shafts for successively and intermittently rotating the secondary shafts, controlling mechanisms for the articulated members of the legs, and means operated by the secondary shafts for actuating the controlling mechanisms.

1,638,333. FLUID-TESTING DEVICE. JOSEPH J. GROETKEN, Aurora, Ill. Filed Mar. 27, 1925. Serial No. 18,837. 4 Claims. (Cl. 137—18.)

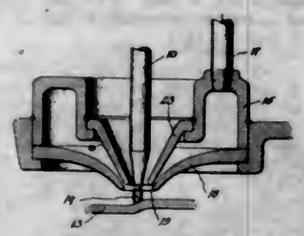
1. A fluid testing device including a receptacle having openings in substantially the opposite ends thereof, a normally closed valve in position to close one of said openings, a tube of constricted diameter extending upwardly from the other opening, and an enlarged tube extending upwardly from substantially the top of said receptacle about the first-mentioned tube.

1,638,334. VEHICLE SIDE CURTAIN. MARK B. HARRIS, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Jan. 14, 1924. Serial No. 686,083. 2 Claims. (Cl. 298—139.)



1. In combination with a vehicle body having a door, a curtain therefor having two lights, a U-shaped frame surrounding one of said lights, the legs of the frame supported by the door, one near the edge of the door removed from the hinge and the other at an intermediate position, the second light extending beyond the door hinge line whereby the curtain may be folded into small dimensions for storage without removing the U-shaped frame.

1,638,335. METHOD OF AND APPARATUS FOR CRACKING OIL. FRANCIS M. HUSE, Whiting, Ind. Filed Jan. 24, 1923. Serial No. 614,555. 22 Claims. (Cl. 196—62.)

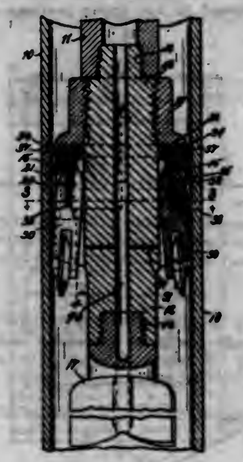


1. A process of cracking oil, which consists in distilling the oil in the form of a thin moving film under pressure in a still, simultaneously generating from the residual products of the distillation in a separate chamber a gas rich in hydrogen, and introducing said gas into the presence of the vapors of distillation.

9. In an apparatus for cracking oil, the combination of a pressure still, inclined heating plates in said still over which the oil flows progressively in a thin film a gas producer, means for supplying oil from said still to said producer for combustion in the latter, and means for

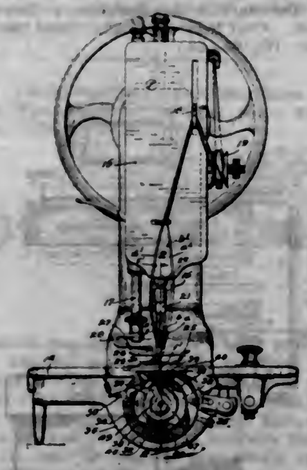
conducting the gas generated in said producer into said still and discharging it into the vapors of distillation in the latter.

1,638,336. ELECTRIC-ARC WELDING. HOWARD P. HIMES, Detroit, Mich., assignor of one-half to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 14, 1921. Serial No. 461,325. 9 Claims. (Cl. 219—8.)



1. The process which comprises producing an electric arc between an electrode and a workpiece in circuit with the electrode and directing a gaseous medium against the arc from the sides thereof with sufficient force and in sufficient quantity to confine the application of the arc to an area and position determined by the movement of said medium.

1,638,337. ROTARY WELL DRILL. EDWARD S. HUTTON, Muskogee, Okla. Filed May 25, 1925. Serial No. 32,691. 3 Claims. (Cl. 255—74.)

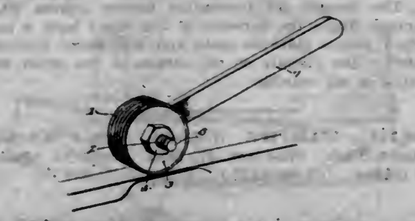


3. Rotary well drilling apparatus having a rotary body portion adapted to be introduced through a well pipe and having diametrically opposite vertical recesses with the upper portion of each recess enlarged at its sides so as to leave shoulders at the lower part thereof and a pair of vertical ribs at the outer portion thereof, a cutter holder in each recess with the uper end thereof provided with lateral extensions for fitting in the enlarged upper end of the recess and providing shoulders for engaging the shoulders and ribs in the walls of the recess to prevent the escape of the cutter holder and yet permit it to rock so that the lower end may move outwardly, a cutter on the lower end of the cutter holder, a contractile spring secured to the upper end of each cutter

holder and also secured in said body portion tending to withdraw the outer holder upward, the upper ends of the cutter holder and the adjacent wall of the body being

beveled so that they will cause the lower end of the cutter holder to move outward as the cutter holder is drawn upward, substantially as set forth.

1,638,338. MULTIPLE-NEEDLE HEMSTITCHING MECHANISM. HUGH A. JACOBS and CHARLES E. JACOBS, Minneapolis, Minn. Filed Jan. 27, 1923. Serial No. 615,229. 2 Claims. (Cl. 112—81.)

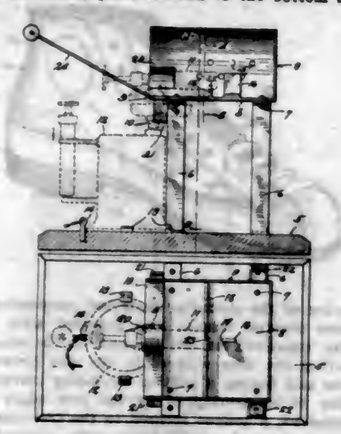


1. In a stitching mechanism, the combination with a multiple needle and means for reciprocating the same, said multiple needle including a piercer-acting member operative to produce openings for hemstitching, and needle-acting members operating to carry four threads and to throw two pairs of overlapping thread loops, of a pair of co-axial laterally spaced shuttles having hooks movable through the overlapped thread loops, lower thread-carrying bobbins associated with said shuttles and carrying lower threads around which the looped upper threads are arranged to be carried by the hooks of said shuttles.

1,638,339. SHOE. GEORGE F. JOHNSON, Endicott, N. Y. Filed Feb. 8, 1924. Serial No. 691,415. 3 Claims. (Cl. 36—30.)

1. A shoe of the character described comprising a sole, side pieces secured thereto and provided with forward extensions separated at the toe end of the shoe, a toe piece having one edge secured to the sole between said extensions and having a portion extending rearwardly in a position to be overlapped by the free edges of said side extensions, a tongue secured to the free end of said toe piece, and reenforcing leather strips secured to the lower edges of the side pieces and to the sole, and having their forward ends secured to said toe piece.

1,638,340. INKING ROLLER FOR TYPEWRITER RIBBONS. ALBERT H. KENNEDY, Rockport, Ind. Filed Feb. 21, 1924. Serial No. 694,361. 5 Claims. (Cl. 91—67.8.)

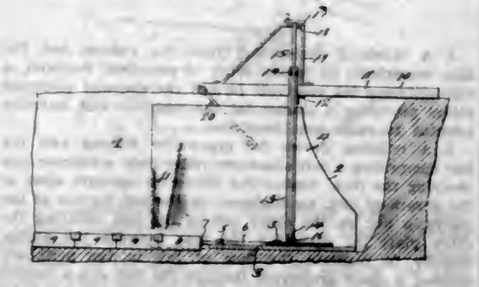


1. A re-inking device for typewriter ribbons and the like, comprising an inking roller of absorbent material, a self-contained ink reservoir formed therein, and clamping plates providing a closure for the reservoir and laterally adapted to expel ink therefrom.

5. A reinking device for typewriter ribbons and the like comprising a soft absorbent roller disk, a tubular hub carrying the disk, washer-like plates on opposite sides of the absorbent disk, an abutment on the hub for one of the plates, a nut on the other end of the hub abutting the other plate for squeezing the disk between the plates, thereby to regulate the flow of ink to the periphery thereof, a shaft projecting through the hub and a handle to which the shaft is secured substantially at right angles.

1,638,341. PORTABLE BLOWTORCH ATTACHMENT. CLELL S. KEPLER, Blairstown, Iowa, assignor of one-half to Rudolph D. Kimm, Blairstown, Iowa. Filed Aug. 2, 1926. Serial No. 126,781. 1 Claim. (Cl. 126—239.)

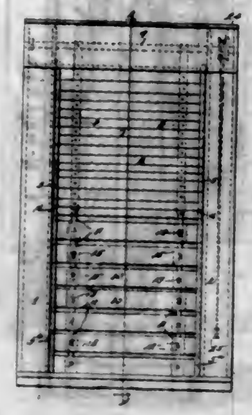
A heater including a base, supporting legs on the base, a burner housing secured to the supporting legs, said burner housing having a forward open end and having a plurality of openings formed therein to allow heat to pass therefrom, a transverse bar extending across the burner housing adjacent to the forward end thereof and in spaced relation with the bottom of the housing, said bar having a central offset portion curved to receive the burner of a blow torch, a rib within the housing and hav-



ing a cut out portion disposed centrally thereof and in alignment with the offset portion of the bar to receive the burner and hold the burner against lateral movement, a vertical dividing plate secured to the bottom and having one edge thereof arranged opposite to the cut out portion to divide the flame from the burner positioned in the housing, and means for securing a blow torch to the base.

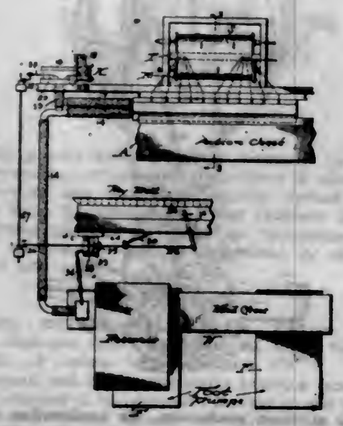
1,638,342. PROCESS FOR INDURATING POROUS OBJECTS. JOHN J. KESSLER, St. Louis, Mo. Filed Aug. 28, 1925. Serial No. 53,212. 2 Claims. (Cl. 91—68.)

1. The process for indurating porous objects which comprises filling the porosity of the object with a polymerized phenol aldehyde resin and afterwards providing a surface film directly on the outside of the object with a spirit or oil varnish.



1,638,343. TILE-PIPE HOLDER. NIELS KNUDSEN, Ogden, Utah. Filed Apr. 27, 1926. Serial No. 104,940. 3 Claims. (Cl. 72—128.)

2. A pipe holding machine comprising a casing U-shaped in vertical transverse cross section and disposed within a ditch, a rack bar horizontally disposed and slidably mounted in the bottom of said casing, a pipe engaging member carried by one end of the rack bar, a horizontally disposed frame above the casing and connected thereto, an operating shaft extending downwardly into the casing and a pinion carried by the operating shaft and meshing with the rack bar.

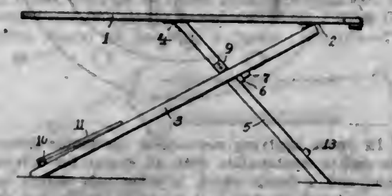


1,638,344. WINDOW SHUTTER. LOUIS KOCHER, Omaha, Nebr. Filed Apr. 23, 1923. Serial No. 633,999. 1 Claim. (Cl. 20—59.)

A slat window shutter comprising an upper section, a lower section, said upper section and lower section being slidably mounted in guides formed from channel members, said lower section having its slats linked together and maintained in the same plane, said guides having their lower ends hingedly mounted and movable to angular positions with the guides, said upper sections being normally disposed in the upper portions of the guides,

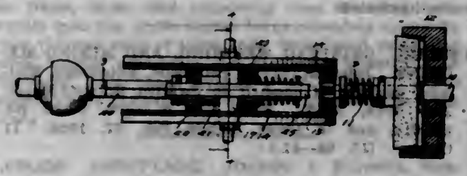
flexible connections between the slats of the upper section and the upper end of the lower section, a roller above the guides, said upper section being rollable onto the roller and limited in its upward movement by the upper end of the lower section.

1,638,345. PNEUMATIC ACTION FOR MUSICAL INSTRUMENTS. HUBERT J. LA JOIE, East Orange, N. J., and UBERT URQUHART, New York, N. Y., assignors to Auto Pneumatic Action Company, a Corporation of New York. Filed Sept. 14, 1922. Serial No. 588,254. 3 Claims. (Cl. 84—43.)



1. In a pneumatic action for musical instruments, the combination of the action operating pneumatics, tracker bar controlled valves for the pneumatics divided into sections, a high tension passage, an automatic governor consisting of a pneumatic, spring and valve, a governed tension passage, tracker bar controlled valves for connecting either the high tension or the governed tension to any section, a valve co-operating with the governor valve, and means operable by the player for adjusting this valve.

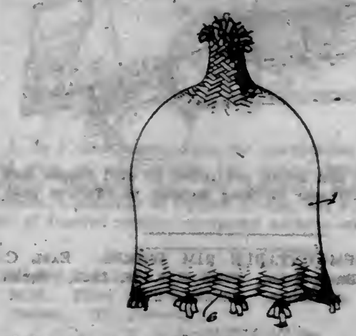
1,638,346. BATHTUB COVER. HARRY LEVY, Chicago, Ill. Filed May 4, 1927. Serial No. 188,784. 9 Claims. (Cl. 4—173.)



1. A cover for bathtubs comprising housings mounted on opposed sections of the bathtub rim, and sheets extensible from the respective housings to meet and cover the bathtub.

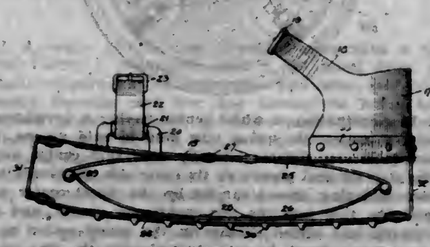
1,638,347. IRONING TABLE. GEORGE W. LEWIS, Berlin, Mass., assignor to George H. Blood, Marlboro, Mass. Filed May 28, 1924, Serial No. 716,374. Renewed Mar. 24, 1927. 3 Claims. (Cl. 68—10.)

1. An ironing table comprising a board, two pairs of legs hinged to said board, each pair having a cross bar disposed for engagement with the other when in operative position, one pair of legs being exterior to the other pair and a block attached to the outer surface of each of the inner legs and adapted to engage with an outer leg when the said cross bars are in engagement.



1,638,348. TRANSMISSION GEARING. LEON I. LEWIS, Midwest, Wyo. Filed Nov. 18, 1924. Serial No. 750,622. 1 Claim. (Cl. 74—58.)

Transmission gearing comprising a block provided with oppositely disposed bearings, disks journaled upon the bearings and provided upon their inner faces with concentric gear teeth, means for rotating the disks in reverse directions, a shaft, gear wheels mounted upon the shaft on opposite sides of the block and rotatable therewith, a sleeve on the shaft between the gear wheels, said sleeve being slidably mounted in said block, a spring normally holding one of the gear wheels in predetermined position and engaging one end of said sleeve, and means for positively moving the other gear wheel on the shaft in either direction.

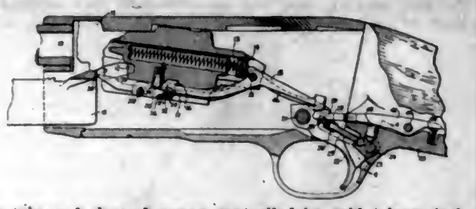


1,638,349. HAT. CLARENCE LIPPER, Philadelphia, Pa. Filed Sept. 3, 1925. Serial No. 54,359. 2 Claims. (Cl. 2—193.)

1. The process of making a lady's hat which comprises applying an adhesive coating on a stiffening hat frame while the latter fits a hat form, interlacing or braiding narrow fabric over the adhesive coating, applying pressure and heat simultaneously causing a binding of the fabric to the stiffening hat frame, tying the ends of the narrow fabric at circumferential spaced intervals about the rim, tucking said tied ends inwardly and securing them to the inner face of the rim, knotting together all

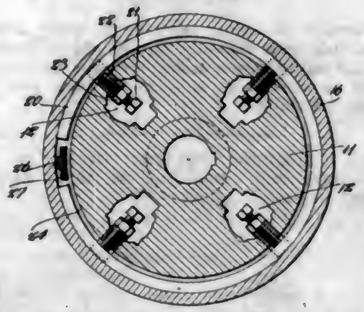
of the ends of the narrow fabric at the crown of the hat and drawing them inwardly through the stiffening hat frame and mashing them against its inner face, and then applying an inner lining adjacent the inner face of the stiffening hat frame.

1,638,350. JUMPING DEVICE. GEORGE H. LONG, Lankershim, Calif. Filed Aug. 23, 1926. Serial No. 130,999. 1 Claim. (Cl. 272—70.)



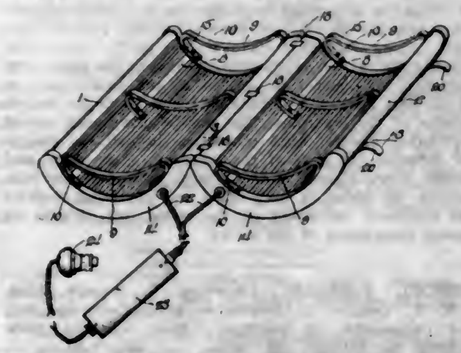
A jumping device comprising a foot receiving member constructed to provide a plate having the general outline of the foot and ribbed longitudinally to reinforce the plate against bending, an upstanding flange at the heel end of the plate, a heel saddle secured to the flange provided with forwardly extending straps adapted to embrace the instep of the foot, said straps provided with a buckle for securing the straps together, U shaped upstanding yokes at the sides of the plate adjacent its forward end, sleeves mounted on the yokes, straps secured to the sleeve, one of which is provided with a buckle by which the straps can be secured to each other in overlying relation to the toe portion of the foot, a base plate having depending protuberances on its under side, a full elliptical spring interposed between the plates and including an upper leaf secured to the medial portion of the first plate and a lower leaf secured to the medial portion of the lower leaf, the ends of the leaves having registering sleeves, bolts extending through the sleeves for securing the ends of the leaves to each other, and flexible straps secured to the ends of both plates for connecting the plates to each other and operating to limit the expansive movement of the spring yet yielding to permit contraction of the spring.

1,638,351. FIREARM. CRAWFORD C. LOOMIS, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed Aug. 24, 1926. Serial No. 131,192. 18 Claims. (Cl. 42—70.)



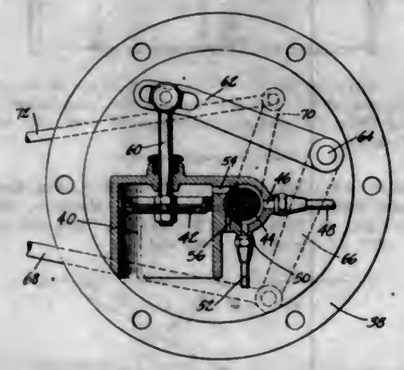
18. In a firearm comprising a firing mechanism, and a firing mechanism holding sear; a sear blocking member

adapted to prevent firing mechanism releasing movement of said sear, means tending to move said sear blocking member to ineffective position, a sear controlling trigger,



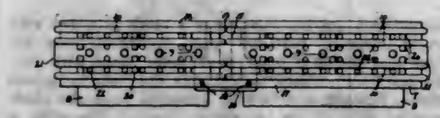
a trigger lock, and means controlled by said trigger lock for moving said sear blocking member to effective position.

1,638,352. DEMOUNTABLE-RIM WHEEL. EARL C. MALLETTE, Baskin, La. Filed Mar. 28, 1925. Serial No. 19,108. 3 Claims. (Cl. 301—27.)



1. In combination, a wheel center having a peripheral groove, a contractile spring ring held in said groove, a demountable rim slidable laterally over said center and having a peripheral groove on its inner side positioned to receive said ring, means carried by the wheel center to expand the ring into the last mentioned groove, and a key fitting into alined notches in the wheel center and rim and into a break in said ring whereby the ring, the rim, and center are held against peripheral movement with respect to each other, said expansion ring and the peripheral groove in the rim co-acting throughout their extent to force the rim on the wheel center.

1,638,353. THERAPEUTIC APPLIANCE. ROLLAND H. MAXSON, Milton, Wis., assignor, by mesne assignments, to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed Jan. 19, 1923. Serial No. 613,608. 5 Claims. (Cl. 174—177.)

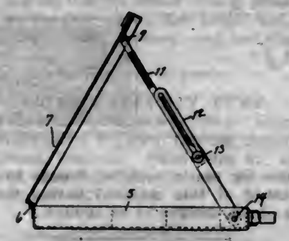


1. A therapeutic appliance comprising a pair of opaque reflecting surfaces arranged to form an acute angle between them, and means for heating the surfaces to cause them to emit and reflect radiant energy below the range of visibility.

1,638,354. MOTOR VEHICLE. MONTGOMERY W. MCCONERY, Ferndale, and FRED E. JONES, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 7, 1924. Serial No. 697,618. 4 Claims. (Cl. 188—152.)

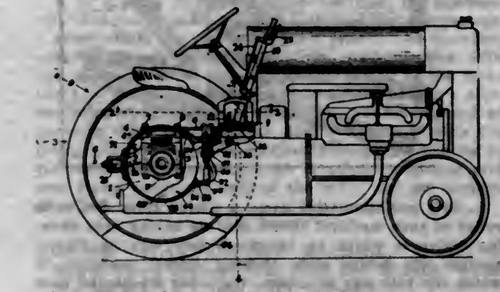
2. In brake applying mechanism for motor driven vehicles and in combination with an engine for driving the vehicle, and a pump which is constantly driven by the engine and acts to force oil from the crank case thereof to various parts of the engine to be lubricated; a cylinder; a piston operating within said cylinder and which piston is operatively connected with brakes to be applied; a conduit leading from said pump to said cylinder; a passage leading from said cylinder to the crank case of the engine; and a manually operable valve adapted when in one position to place said conduit in communication with said cylinder and to interrupt flow through the passage aforesaid and to the parts of the engine to be lubricated, and when in another position to open said passage and to establish a communication between the conduit aforesaid and a second conduit leading to parts of the engine to be lubricated.

1,638,355. GRINDING, REFINING, AND MIXING MACHINE. JOHN MCINTYRE, Portobello, Edinburgh, Scotland, assignor of one-half to Swinfen Bramley-Moore, New York, N. Y. Filed Dec. 6, 1926, Serial No. 153,011, and in Great Britain Feb. 27, 1926. 11 Claims. (Cl. 83—11.)



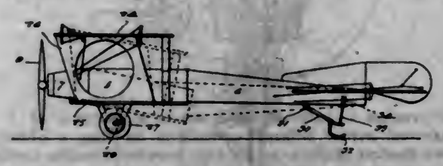
1. A grinding element comprising a blade, and spaced rods secured on the face thereof to contact with a grinding surface, said blade having apertures between said rods of the flow of material through said apertures.

1,638,356. ACTOR'S MAKE-UP KIT. CHARLES MCKASH, Hoquiam, Wash. Filed Oct. 21, 1925. Serial No. 63,953. 1 Claim. (Cl. 132—79.)



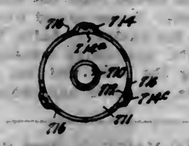
In a device of the character described, a box-like structure comprising a tray, a cover hingedly connected thereto, a mirror hinged to said cover, a brace pivotally secured at one end to said mirror and having its opposite

end pivotally mounted within said tray so that said mirror lies within said tray when the hinged cover is moved into contact with said tray, and a plurality of



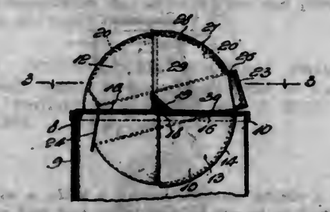
cosmetic holding compartments so positioned in said tray as to permit said mirror to lie within said tray without contacting the cosmetic holding compartments.

1,638,357. TRACTOR BRAKE. EMILE MEHLINE, Hollywood, Calif., assignor to Evans Brake & Supply Co., Los Angeles, Calif., a Corporation of California. Filed Oct. 20, 1924. Serial No. 744,760. 5 Claims. (Cl. 188—77.)



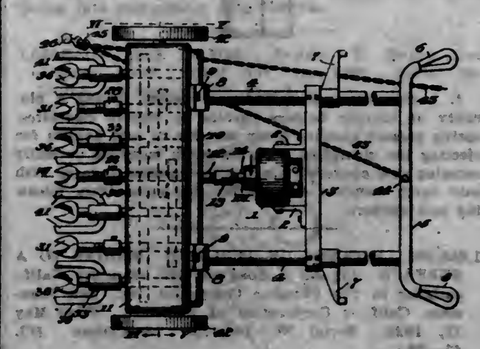
1. A tractor brake comprising blocks adapted to encircle and be clamped upon a rear axle housing having upper blocks connected to one of said blocks, extension arms extending forwardly from the tops of the upper blocks, means for rigidly connecting the arms to the tractor frame, brake band supporting arms extending backwardly from one of the blocks, horns extending outwardly from the rear ends of these arms, brake band supporting boxes loosely, adjustably and yieldingly mounted upon the horns, brake bands secured to the boxes, and means mounted upon the extension arms for operating the brake bands.

1,638,358. AEROPLANE. HERBERT J. MUNDELL, Summerville, Oreg. Filed Aug. 18, 1926. Serial No. 130,029. 3 Claims. (Cl. 244—30.)



1. As a new article of manufacture for an aeroplane, a fuselage comprising an intermediate portion, a tail portion hingedly mounted at the lower rear portion of the intermediate portion, a nose portion hingedly mounted at the forward bottom portion of the intermediate portion, a link plate hingedly connected with the upper portions of the nose portion and tail portion, and means for swinging the tail portion in relation to the intermediate portion so that the nose portion simultaneously swings therewith.

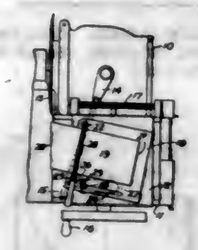
1,638,359. FURNITURE LEG SLIDE. WILLIAM H. NOBLITING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Aug. 15, 1925. Serial No. 50,429. 5 Claims. (Cl. 16—42.)



1. In a sheet metal slide, the combination of a marginal zone, a substantially flat central bearing zone of greater thickness than the marginal zone connected thereto, a plurality of tapered prongs, and a similar number of tapered wedges interposed between said prongs.

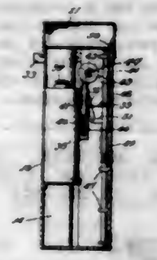
1,638,360. ASH-CAN COVER. CARL OLSON, Manistee, Mich. Filed Dec. 30, 1926. Serial No. 158,002. 2 Claims. (Cl. 220—32.)

1. A device of the class described comprising a can cover having a rectangular slot, a cylindrical drum rotatably supported at its center upon said cover, said drum passing through said slot and having its lower half disposed below the cover, an upper quadrant-shaped stationary hood secured to the cover over one end of the aforesaid slot, a lower quadrant-shaped stationary hood secured to the cover under the other end of said slot, each of said hoods comprising side walls contacting with the ends of the drum and a peripheral wall contacting with the periphery of said drum, a chute extending diametrically through said drum and declining from the upper to the lower side of the cover, and self-closing downwardly opening doors for the ends of said chute, said doors being carried by the chute.



1,638,361. MINING MACHINE. NICOLA PEDULLA, Meyersdale, Pa. Filed July 18, 1923. Serial No. 652,342. 2 Claims. (Cl. 262—22.)

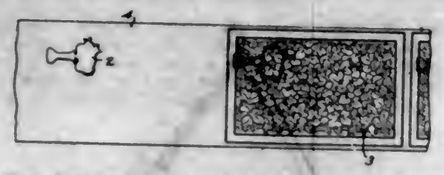
1. In a mining machine, the combination with a casing, of a main shaft journaled therein, auxiliary shafts arranged at opposite sides of said main shaft, gears on said shafts arranged in the casing and intermeshing with



one another, whereby the rotation of the main shaft will cause the rotation of the auxiliary shafts alternately in opposite directions, a pair of sprockets on the main shaft within the casing, sprockets on the auxiliary shafts which are arranged second from the main shaft at each side thereof, sprocket chains passed over said sprockets to aid in driving the auxiliary shafts, boring tools carried by said shafts, and means connected to the main shaft for rotating the same and the auxiliary shafts through said gears, sprockets and chains.

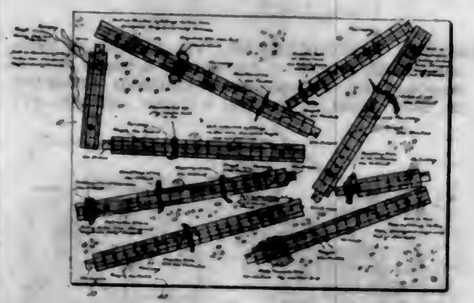
1,638,362. SLICING MACHINE. IVOR GWYNNE PERRETT, Osterley, and FIENNES THOMAS LAMBERT, Clapham, London, England; said Perrett assignor to said Lambert. Filed Dec. 3, 1926, Serial No. 152,403, and in Great Britain Dec. 5, 1925. 12 Claims. (Cl. 146—102.)

1. In a slicing machine having a knife, a support for the product to be cut by said knife, and feed mechanism for advancing said support in relation to said knife, automatic means for varying periodically the angular position of the product in relation to said knife.



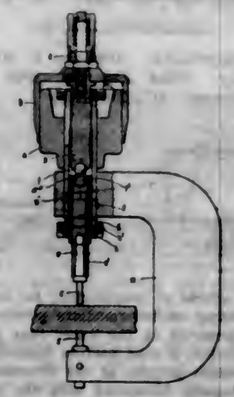
1,638,363. CIGARETTE CASE. THOMAS B. RISE and FRED W. WILLIAMS, Santa Maria, Calif. Filed Sept. 5, 1925. Serial No. 54,752. 9 Claims. (Cl. 211—8.)

1. A cigarette case including a casing having a plurality of tubular holders therein to receive cigarettes, spring pressed ejectors freely movable in said holders for ejecting the cigarettes, separate catch members normally securing said ejectors retracted, and means to coact with said catch members successively for successively releasing said ejectors.



1,638,364. PROCESS OF APPLYING DESIGNS TO A SURFACE. LELAND S. ROSENBS, San Francisco, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed May 12, 1926. Serial No. 108,479. 13 Claims. (Cl. 41—29.)

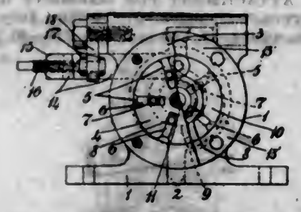
1. The process of applying a design to the surface of a sheet, which comprises supporting the sheet in a continuous plane, placing a shield over an area on said surface, applying one portion of the design upon the surface and the shield, stripping the shield from the area, and applying another portion of the design to the area thus uncovered.



7. A device for use in applying designs to a rug comprising a shield of thin material having the configuration of one of the designs to be applied.

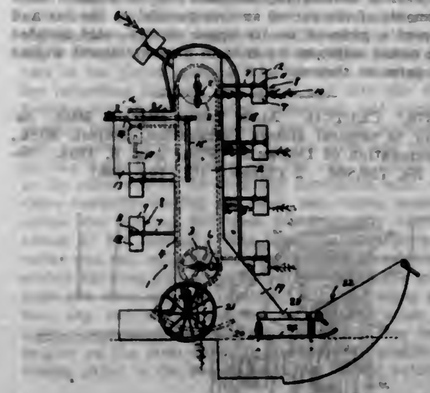
1,638,365. GOLF-SIMULATING GAME. THOMAS C. RYAN, Wilmington, Del. Filed Nov. 11, 1926. Serial No. 147,746. 3 Claims. (Cl. 273—87.)

1. In a golf simulating game, a course, three dice to be rolled at each mythical stroke, one die having data showing distances which an imaginary ball may be driven, another die having data showing lateral positions to which the ball may be driven, the other die having data showing premiums and penalties which may be given or exacted when the stroke has been made, said one die being one of a plurality of similar dice to be selected according to the point on the course from which the mythical stroke is to be made.



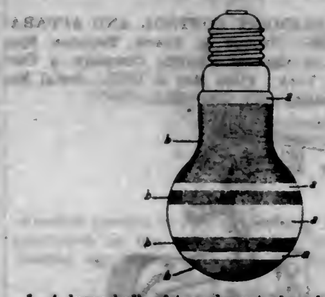
1,638,366. MICROMETER. HENRY SANDOZ, Tavannes, Switzerland. Filed Mar. 19, 1924, Serial No. 700,350, and in Switzerland Feb. 11, 1924. 1 Claim. (Cl. 33—164.)

In a micrometer gauge having a stationary and a movable jaw, in combination, a bracket, an internally threaded sleeve held fast thereby, a micrometer screw



threaded in said sleeve, a graduated drum fixed to said screw, a jaw holder carrying said movable jaw and provided with a shoulder, said holder being fitted slidably into said sleeve, a ball interposed between the jaw holder and the micrometer screw and a pressure spring bearing on the shoulder of the jaw holder and capable of maintaining the contact between said ball and the jaw holder.

1,638,367. VARIABLE-CAPACITY PUMP. FRIEDRICH WILHELM SCHUBERT, Apperley Bridge, near Bradford, England, assignor to Brysilka, Limited, Apperley Bridge, near Bradford, England. Filed June 21, 1926, Serial No. 117,534, and in Great Britain July 2, 1925. 3 Claims. (Cl. 103—38.)

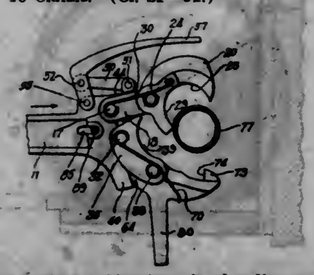


1. In a pump of the character described, the combination of a casing provided with inlet and outlet openings, a rotor within the casing having a plurality of chambers adapted to successively come into communication with the inlet and outlet openings of the casing as the rotor turns, a piston in each of said chambers having a stem extending radially of the rotor, cam plates arranged at opposite sides of the rotor and cooperating with the piston plungers to effect reciprocation of the pistons as the rotor turns, and means for rotatively adjusting said cam plates about the axis of the rotor, for the purpose described.

1,638,368. PLANT-SETTING MACHINE. GEORGE A. SHAW, Siloam Springs, Ark. Filed Aug. 3, 1926. Serial No. 126,870. 2 Claims. (Cl. 111—3.)

1. In a structure of the class described, a support including a pair of upstanding parallel plates, sprocket wheels mounted between said plates, a chain trained over said sprocket wheels, arms carried by and extending at right angles from said chain, plant-carrying devices mounted on the outer ends of the arms and including spring-closed jaws, wings extending outwardly from the side of said plates, spreaders between the wings cooperable with said spring closed jaws, additional spreaders between the lower portions of the plates, dirt packing wheels mounted on said lower portions, and a plow formed integral with said plates and located in advance of said wheels.

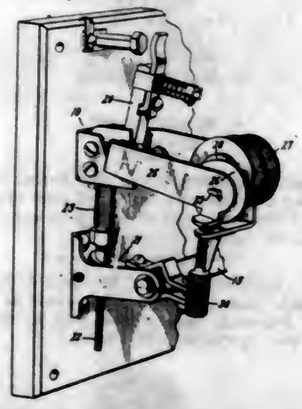
1,638,369. COLORED INCANDESCENT-LAMP BULB. FRANZ SKAUPY, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Apr. 7, 1925, Serial No. 21,329, and in Germany May 17, 1924. 3 Claims. (Cl. 176—16.)



1. A lamp bulb of translucent glass having on a part of its surface a thin adherent coating of glass having a melting point lower than that of said glass and differing in color from the bulb.

1,638,370. CUSHION TIRE. WILLIAM J. SMALL, Port Townsend, Wash., assignor of one-half to Lucien E. Becker, Portland, Oreg. Filed June 1, 1925. Serial No. 34,090. 1 Claim. (Cl. 152—5.)

In a resilient tire, the combination with a tire casing, of an elastic core therefor, a rim receiving the extremities of said tire casing, means for mechanically applying pressure to the core to vary the resiliency thereof, said means comprising a transversely split circumferentially expanding ring of substantially W-shaped formation with its extremities fitting between the core material and said casing, the central portion of said ring being of tapering formation, a wedge-shaped ring element fitting within the confines of said central portion of the expanding ring, adjustable screws extending through said fully for engaging the wedge-shaped element and causing an outward deflection of the core expanding member, a tire engaging ring mounted on said adjusting devices and adapted to simultaneously urge the extremities of the tire casing into engagement with the rim.

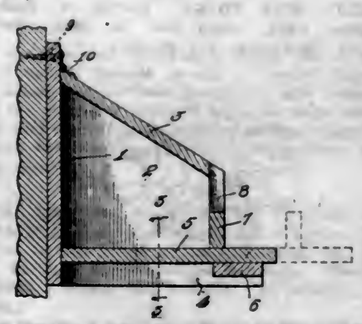


1,638,371. PIPE TONGS. SAMUEL T. SMITH, Los Angeles, Calif. Filed Nov. 19, 1925. Serial No. 70,011. 16 Claims. (Cl. 81—91.)

1. In tongs, the combination of a handle, a main jaw rigidly provided upon an end of said handle, a free jaw, link means connecting said free jaw to said main

jaw, a latch jaw, a latch-jaw support for connecting said latch jaw to said main jaw, and latching means whereby said latch jaw is latched to said free jaw when said jaws are in closed position.

1,638,372. TIME-ELEMENT CONTROL AND APPARATUS THEREFOR. GEORGE E. STACK, Ballston Spa, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 3, 1923. Serial No. 636,456. 11 Claims. (Cl. 200—97.)

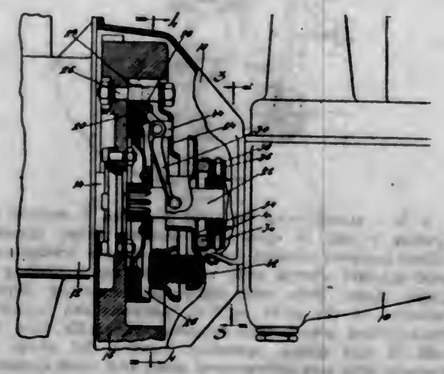


5. A time element device comprising a pivotally mounted control member which is urged to move in one direction about its pivot from one position to a second position, an electromagnet having an armature which is alternately attracted and released, and connection between the said armature and the said controlled member whereby the member and the armature move in a succession of step by step forward movements about the pivot of the member in accordance with the attraction and release of the armature to thereby introduce a substantial interval of time in the movement of the member to the said second position.

1,638,373. COMPOSITION FOR REMOVING SCALES FROM STEAM BOILERS. WILLIAM FRANKLIN STAFFORD, Hornersville, Mo. Filed July 20, 1926. Serial No. 123,804. 1 Claim. (Cl. 87—27.)

A composition for removing scales within a steam boiler consisting of lime, 1 qt., pulverized bluestone, ½ lb., cornstarch, ½ lb., and graphite, ½ lb.

1,638,374. NEST. OSCAR W. STRAWN, Forest, Ind. Filed May 5, 1926. Serial No. 106,936. 1 Claim. (Cl. 119—45.)



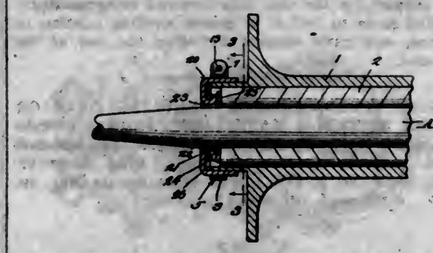
A nest of the class described comprising a back, a pair of side pieces connected with the back, said side pieces being of less length than the back and having their upper edges sloping downwardly and outwardly from the back, guiding pieces fastened to the inner faces of the side pieces at the lower edges thereof, a bottom piece resting upon the guiding pieces, a cross piece having its ends connected with the front ends of the guiding pieces and upon which the front of the bottom piece rests, said guiding pieces and the bottom piece being of greater length than the width of the side pieces so that the front end of the bottom piece forms a shelf, a front piece fastened to the bottom piece a distance from the front edge thereof, said front piece having an opening in its upper portion and a cover hinged to the projecting portion of the back and resting upon the sloping edges of the side pieces.

1,638,375. ATTACHMENT FOR GARMENT HANGERS. FRANK STUTZ, Washington, D. C. Filed July 27, 1925. Serial No. 46,434. 5 Claims. (Cl. 223—61.)

1. An attachment for garment hangers comprising an elongated member of sheet material having a weakened central area extending from end to end so that it may be bent about a line intermediate its longitudinal edges to provide a gently curved surface the elements of which are straight lines, said member being adapted to be positioned over a horizontally disposed bar or support with the elements of the curved surface parallel to the bar and to support a garment on its upper surface, said member having means adjacent its ends to prevent lateral sliding of the garment thereon.

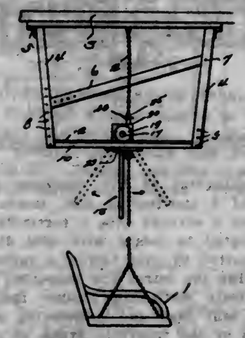
1,638,376. CLUTCH. ALEX TAUB, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 8, 1924. Serial No. 730,866. 2 Claims. (Cl. 192—68.)

1. A clutch comprising, in combination, a flywheel, a support fixedly secured to the flywheel and axially spaced therefrom, a driven shaft coaxial with the flywheel, a clutch plate driving said shaft and arranged between the flywheel and support, a clutch ring between the plate and support which rotates with the flywheel but is axially movable, levers engaging the support and clutch ring to force the ring and clutch plate toward the flywheel to throw in the clutch, an axially-movable member operatively engaging the ends of the levers, a pedal-operated clutch release bearing engaging said member to force it in a direction to throw the clutch out when the pedal is depressed, and a plurality of symmetrically-arranged springs confined between the support and axially-movable member and urging them apart to throw the clutch in, said springs forming the driving connection between the support and said member.



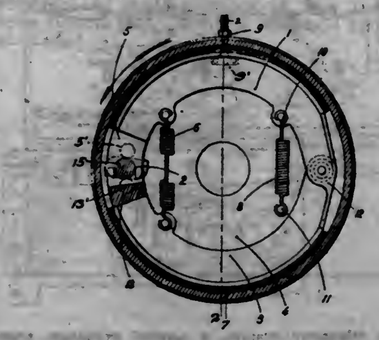
1,638,377. GREASE CUP. JOE JEWEL THORP, Breckwalker, Tex. Filed Jan. 18, 1926. Serial No. 82,100. 1 Claim. (Cl. 184—45.)

The combination with a grease cup having a valved outlet, and a cap detachably engaging the cup, of a tubular stem slidably and rotatably mounted within the cap, said stem having a longitudinal groove and superposed notches in its outer surface, the notches and groove being spaced, a piston mounted to slide within the cup having a recess for one end of the stem, there being an aperture in the piston opening into the stem, a tubular member extending through the piston and into the stem for holding the piston and stem assembled and providing a passage between the stem and the bottom portion of the cup, a coiled spring mounted on the stem and constantly bearing against the piston and the cap, a collar secured to the outer end of the stem and having an inlet, a check valve normally closing the inlet, said collar constituting means for shifting the stem longitudinally against the action of the spring, a ring upon the stem between the collar and cap, and a spring pressed key movable radially within the ring and normally seated within the groove to hold the stem against rotation, said key being movable into any one of the notches to hold the stem against sliding movement in either direction, the ring being rotatable on the stem to bring the key into position to be seated either in the groove or in one of the notches.



1,638,378. GREASE RETAINER. WILLIAM L. TRAUTNER, Milwaukee, Wis. Filed Apr. 16, 1925. Serial No. 23,597. 1 Claim. (Cl. 286—7.)

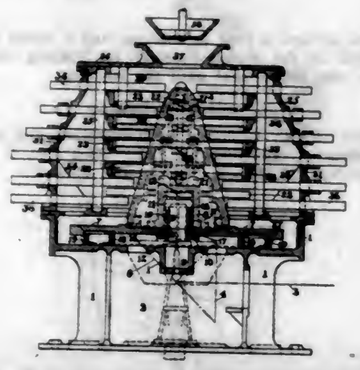
In combination with a vehicle axle, its housing and bearings supported within the housing, a bushing positioned on the axle and having a groove formed in its periphery, a cup member formed of flexible material fitted over one end of the housing and secured thereto, said cup member having an opening through which the axle and bushing extend, the portion of the cup member about the opening extending inwardly and radially outwardly defining a spring retainer, resting in the groove of the bushing, a washer positioned on the axle and engaging the bearings, said radially extended portion of the cup member contacting with the washer whereby the radially



extended portion is held in position, and a coiled spring positioned in the spring retainer for holding the cup member into engagement with the bushing.

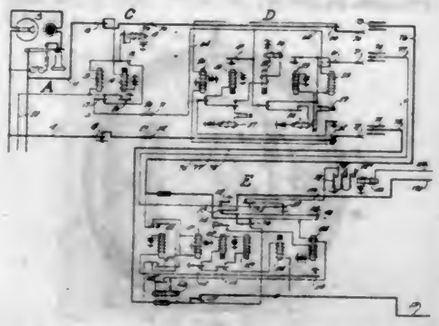
1,638,379. FAN. FREDRICK R. VORDERMARK and GEORGE VORDERMARK, Indianapolis, Ind. Filed Dec. 7, 1926. Serial No. 153,164. 9 Claims. (Cl. 230—1.)

1. A fan comprising a supporting frame, a shaft carrying the fan mounted for reciprocating movement in the frame, and means for translating the reciprocating movement of the shaft into rotating movement thereof to operate said fan.



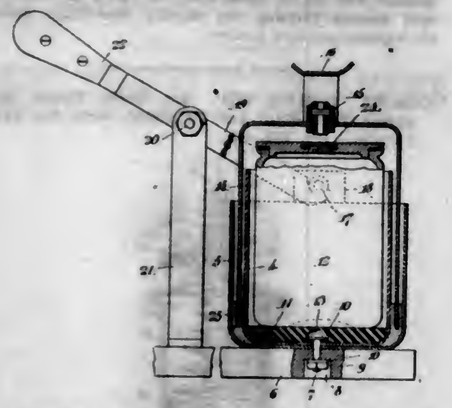
1,638,380. SHOE BRAKE. CHARLES WARNIER, Billancourt, France, assignor to Société des Aeroplanes Henri & Maurice Farman, Billancourt, France, a Corporation of France. Filed Feb. 9, 1921, Serial No. 443,556, and in France Feb. 19, 1920. 30 Claims. (Cl. 188—78.)

12. In a brake mechanism, including a rotatable member and a brake therefor, means for obtaining a self energizing action of the brake on said rotatable member,



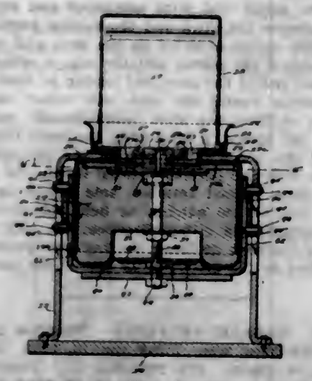
comprising at least two articulated brake shoes having at least one free end, a cam for acting on said free end to move the brake into engagement with said rotatable member, a support for the cam, said free end being guidingly supported so as to hold it in proper working relation to said cam, said guide support including the end of the other shoe.

1,638,381. APPARATUS FOR REDUCING ORES OR OTHER SUITABLE MATERIALS. FREDRIC EDWARD WHITHAM, deceased, Halifax, England, by Abraham Reed, executor, Halifax, England. Filed Mar. 17, 1926. Serial No. 95,481, and in Great Britain Mar. 19, 1925. 6 Claims. (Cl. 83—11.)



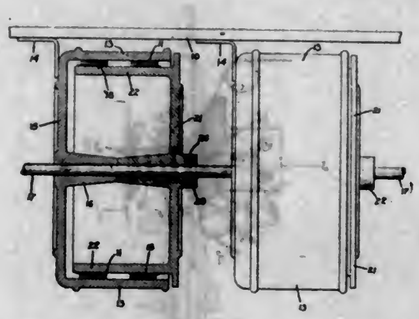
1. In an apparatus of the character described, the combination of a distributing disc, means for rotating said disc about a vertical axis, a turret-like body rising from and adapted to rotate with said disc, percussive members supported by said turret, a radially apertured cage surrounding the turret and supported independently thereof, relatively stationary breaker means extending radially into said cage and cooperating with the percussive means of the turret to break up pieces of material passing downward between the turret and cage onto the distributing disc, and means for delivering material to be treated into the upper end of the space between the turret and cage.

1,638,382. MULTIOFFICE TELEPHONE SYSTEM. BERNARD D. WILLIS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 10, 1922. Serial No. 559,689. 21 Claims. (Cl. 179—27.)



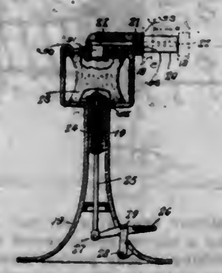
1. In a telephone system, a manual exchange, trunk lines terminating in cord circuits in said exchange, automatic subetations having access to said trunk lines for calling the subscribers in the manual exchange, a plurality of relay register sets for registering the telephone numbers of called manual stations, and an automatic switch for each of said cord circuits for connecting its associated cord circuit with an idle register set when the cord circuit is taken for use, and means for preselecting idle register sets ahead of the calls.

1,638,383. VACUUM-CREATING INSTRUMENT. FREDERICK V. WINTERS, New York, N. Y. Filed Feb. 9, 1925. Serial No. 8,073. 2 Claims. (Cl. 226—82.)



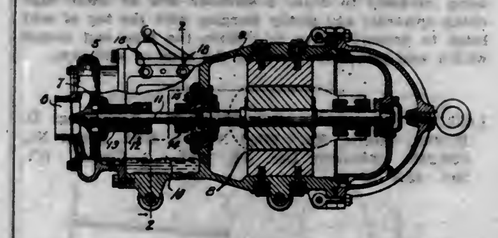
1. A vacuum creating device comprising an inner shell for enclosing a preserving jar, an outer shell surrounding said inner shell, defining a space therebetween adapted to be partly filled with a sealing fluid, and a dome inclosing said inner shell and adapted to be reciprocated in said space and normally having its lower edge submerged in said sealing fluid, the elevation of said dome operating to break the liquid seal when the bottom edge thereof is raised above the level of the fluid in the space between said dome and said outer shell.

1,638,384. VACUUM-CREATING DEVICE. FREDERICK V. WINTERS, New York, N. Y. Filed May 4, 1926. Serial No. 106,778. 6 Claims. (Cl. 226—82.)



1. In a vacuum creating instrument, a supporting frame, a shell arranged within said frame, a reciprocatory member slidable within said shell, an elastic covering surrounding the sides of said shell, apertured means for clamping the upper portion of said shell and covering to said frame, a yoke embracing the bottom of said reciprocatory member, means for securing said yoke to said member and securing the lower end of said cylinder to said member and means for operating said member.

1,638,385. VARIABLE-INDUCTANCE COIL. STANFORD J. WOOD and HARRY A. GREENE, Jr., Monterey, Calif. Filed Nov. 22, 1924. Serial No. 751,494. 5 Claims. (Cl. 171—242.)

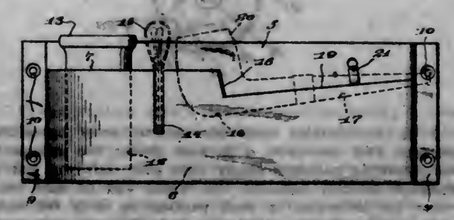


1. In combination, a pair of relatively movable coils, each of said coils being of loop form, two opposite sides of the loop corresponding to the periphery of a surface of revolution, these sides extending over a large angle of said surface, and displaced from each other along the axis of the surface so that the coils extend only a short axial distance as compared with the angular extent of the coil, the coils of the pair being placed on parallel surfaces of revolution so as to affect each other, and means for supporting the coils so that the coil axes form radii of the said surfaces of revolution.

1,638,386. METHOD FOR MAKING AND SETTING ONE-PIECE CAN LINERS. ARTHUR YANCEY, New Orleans, La. Original application filed Mar. 6, 1922, Serial No. 541,476. Divided and this application filed Oct. 13, 1922, Serial No. 594,394. Renewed Dec. 6, 1924. 2 Claims. (Cl. 93—36.)

1. The method of making and setting one-piece liners in cans, comprising winding the liner around a form with the liner extending from the free end of the liner form towards the supported end thereof as far as the sum of the widths of those divisions of the said liner as required to line the top and cylindrical surface, or side, of a corresponding can, and extending from said free end thereof in opposite direction as far as the width of that division required to line the bottom of the said can, turning down a plurality of folds of the said liner upon the end of the liner form, telescoping the liner covered form with a corresponding can, jamming or crushing between the end of the liner form and the bottom of the can the ears or secondary flaps resulting from the curvilinear folds of the liner, thus molding the flaps and folds to the shape of the can, and then withdrawing the can with the liner set.

1,638,387. SUBMERSIBLE PUMP. JAMES EDWARD BALDWIN, Hempstead, N. Y. Filed Jan. 7, 1921, Serial No. 435,620. Renewed July 17, 1926. 3 Claims. (Cl. 103—87.)



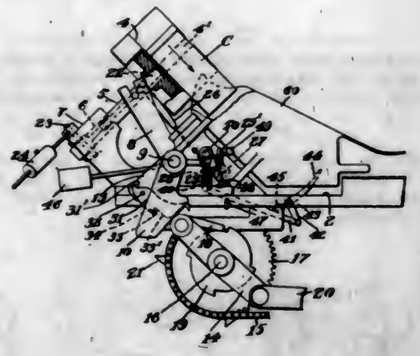
1. A submersible pump of the character described having a motor compartment and a pump casing in longitudinal alinement, a collection chamber located between the compartment and the casing, closed walls separating the chamber from the compartment and the casing, a packing mounted on each wall, a shaft extending through the packings, the collection chamber having a drainage opening leading therefrom, and a manually-operated closure for closing said opening and rendering the chamber completely closed before the pump is submerged.

1,638,388. POWER-TRANSMISSION CHAIN. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Mfg. Company, Hartford, Conn., a Corporation of Connecticut. Original application filed Feb. 15, 1921, Serial No. 445,057. Divided and this application filed Jan. 28, 1924. Serial No. 688,944. 11 Claims. (Cl. 74—32.)

7. A transmission chain comprising link plates having overlapping ends with aligning openings, a single pin member extending through said openings, said pin and plates having cooperating ogee curves to form a joint.

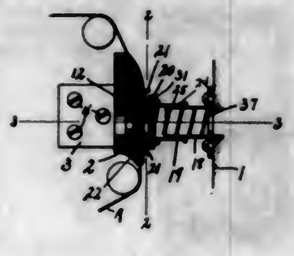
1,638,389. SMOKER'S SET. RUDOLPH L. BLUMENTHAL, Flushing, and WILLIAM DUSCHNES, New York, N. Y. Filed July 25, 1925. Serial No. 46,028. 1 Claim. (Cl. 131—51.)

An article of the class described comprising a body portion having lateral extensions embodying means for securing said article in place, a horizontal ledge extend-



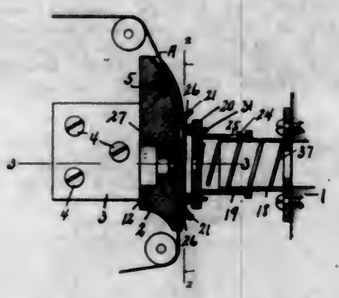
ing laterally from said body portion having its top surface cored to form a tapered rounded groove conforming substantially to the bowl and stem of a pipe, the side of the ledge adjacent the major diameter of said groove being cut-away to define a shoulder and an outer edge rising upwardly and finally merging with the top of said ledge to present access to remove the pipe and means within said groove for clasping the stem of said pipe.

1,638,390. HANDLE ATTACHMENT. FREDERICK D. BOWEN, Monett, Mo. Filed Nov. 1, 1922, Serial No. 598,283. Renewed Dec. 18, 1925. 1 Claim. (Cl. 306—25.)



In a device of the character described, the combination with a shank, of a plate integral therewith and extending at right angles thereto, a plurality of studs projecting from one face of said plate, a lug integral with said shank and extending at right angles thereto and in spaced parallel relation to said plate, a tool element having apertures corresponding with and adapted to receive said studs, said tool element being received between said lug and plate and held in place by the said studs, and a set screw threaded thru said lug and engaging said tool element for holding the latter firmly in engagement with said plate.

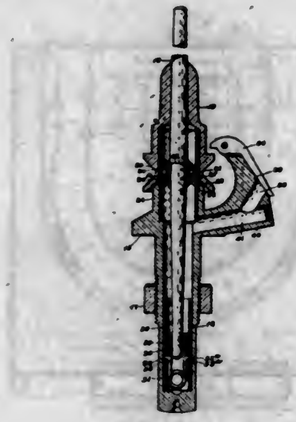
1,638,391. AUTOMATIC PACKAGE-FEED MECHANISM. JAMES A. BUTLER, Needham, Mass., assignor to Pneumatic Scale Corporation, Ltd., Norfolk Downs, Mass., a Corporation of Massachusetts. Filed Apr. 27, 1923. Serial No. 635,166. 20 Claims. (Cl. 198—21.)



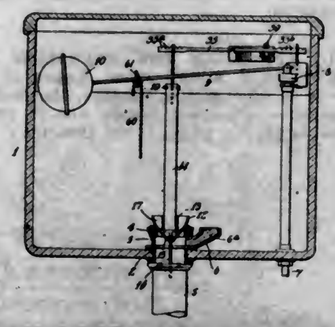
1. In combination with an intermittently operating package feed conveyor, a package feeder for automatically feeding packages singly onto said conveyor and a package detector adjacent the intake end of said conveyor for actuation by each package as it is fed onto said conveyor from said feeder and effective upon such actuation to prevent operation of said feeder until the package which actuated said detector has been advanced by said conveyor to a position of non-interference relative to said detector.

1,638,392. TALKING-MOVING-PICTURE MACHINE. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed Mar. 18, 1926. Serial No. 95,593. 10 Claims. (Cl. 179—100.1.)

1. A removable talking picture unit comprising a body portion, spaced longitudinally extending tracks elevated above the central portion of the body, one of said tracks formed with a recess, and a slit unit inset in said recess and having its contact surface substantially flush with the track.



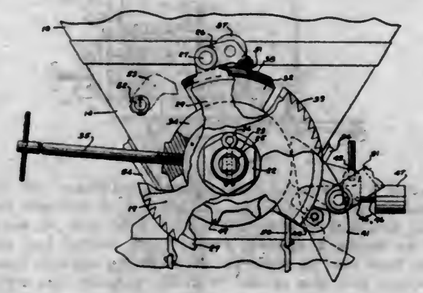
1,638,393. TALKING-PICTURE MACHINE. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed July 24, 1926. Serial No. 124,723. 2 Claims. (Cl. 179—100.1.)



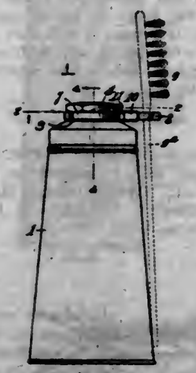
1. A talking picture apparatus for use in connection with a film having a narrow sound record near one edge of the film comprising a body portion having tracks at opposite sides upon which the film is adapted to ride, and a shoe for holding the film in contact with one of said tracks and having an elongated groove adapted to overlie the sound record portion of the film, a slit unit in the last-named track, and said shoe having an opening leading to the groove and registering with said slit unit.

1,638,394. SELF-OILING BALL-BEARING SPINDLE. FRED HILDRETH CHAPMAN, Pepperell, Mass., assignor to Acme Ball Bearing Spindle Company, Franklin, N. H., a Corporation of New Hampshire. Filed Nov. 15, 1924. Serial No. 750,212. 11 Claims. (Cl. 308—169.)

1. A spindle comprising a stationary supporting structure having a socket adapted to contain spindle oil, a rotatable spindle blade extending into said socket and supported therein, and a lateral ball bearing above the oil in the socket comprising a series of balls interposed between the blade and the supporting structure, the rotating and stationary parts above the balls being so close together and so constructed as to retain a sealing film of spindle oil in the space between them, preventing escape of oil from the chamber beneath when the spindle is in operation.

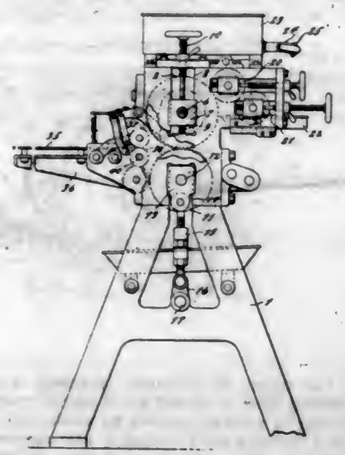


1,638,395. FLUSHING-VALVE MECHANISM. PHILIP HAAS, Dayton, Ohio. Filed Nov. 16, 1926. Serial No. 148,640. 9 Claims. (Cl. 4—67.)



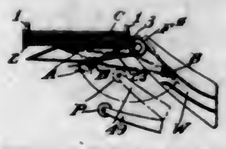
1. Flushing valve mechanism for a flush tank, provided with a flushing aperture and valve seat in its bottom wall, and an aperture in a vertical wall to receive a valve operating device, the combination with a sleeve supporting disc for engaging the outer face of the tank wall, provided with a recess extending into the aperture therein, and having an aperture in the bottom of the recess, a bearing sleeve adapted to extend through said aperture and having a head substantially fitting said recess, and means for securing said sleeve in fixed relation with the tank wall, a rock shaft extending through said sleeve, and provided at its outer end with an operating handle, having a hub portion engaging said disc in close proximity to the tank wall, and provided on its inner end with a lever engaging member, a pivoted lever supported within the tank in operative relation with said member, and a flushing valve suspended from said lever in operative relation with the valve seat.

1,638,396. FUEL-STOKING DEVICE. CORTICE H. HALL, Paterson, N. J., and WILLIAM LLOYD, Hazleton, Pa., assignors to Domestic Stoker Company, New York, N. Y., a Corporation of Delaware. Filed July 11, 1925. Serial No. 42,927. 8 Claims. (Cl. 74—54.)



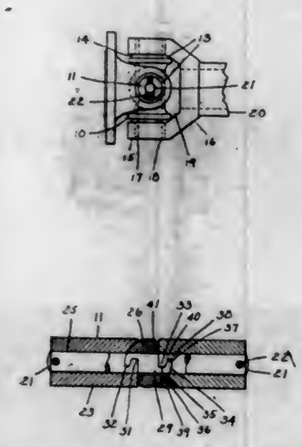
1. A fuel feeder for furnaces comprising, a fuel conveyor driving shaft, a ratchet wheel carried by the shaft, a pawl-carrying member mounted for oscillation about the shaft as a center, a pawl carried by said member for engagement with the teeth of the ratchet, means for oscillating said member to thereby intermittently rotate the ratchet and the shaft, a frangible connection between the ratchet wheel and the shaft and a sprocket wheel connected to the ratchet wheel for rotation therewith.

1,638,397. COMBINED POWDER CONTAINER AND TOOTHBRUSH HOLDER. ALBERT E. HENNEN, Wheeling, W. Va. Filed Mar. 17, 1926. Serial No. 95,503. 1 Claim. (Cl. 132—84.)



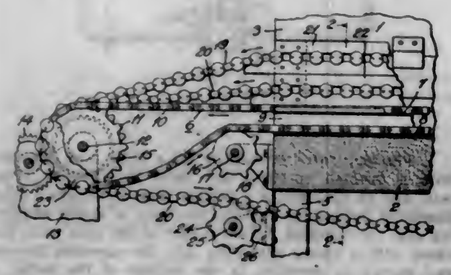
In combination with a powder container having a cover with a reduced neck and having a rotatable cap embracing said cover above said neck, said cover and said cap being provided with openings adapted to be brought into and out of registering relation by rotation of said cap, of a tooth brush support carried in fixed relation to said cap whereby rotation of the latter may be effected, said support projecting outward beyond the plane of a side wall of the container and comprising resilient clamping members between which a tooth brush handle is receivable.

1,638,398. MACHINE FOR FEEDING AND COATING METAL SHEETS. HENRY HERMANI, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed July 24, 1923. Serial No. 653,494. 1 Claim. (Cl. 271—53.)



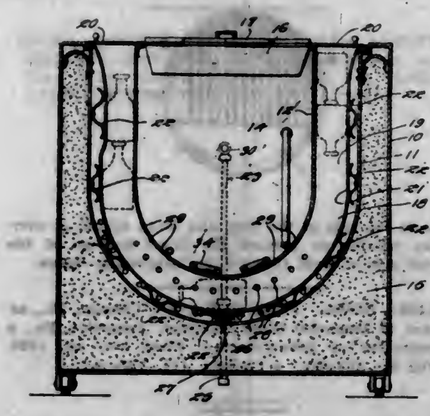
In a machine of the class described, a varnishing roll, an abutment roll, shafts supporting the rolls co-operating gears on the shafts, a feed roll mounted on a fixed axis, a co-operating movable feed roll, a movable frame rotatably supporting the movable feed roll, gears connecting the feed rolls to rotate in unison with the varnishing and abutment rolls, stops carried by arms connected to move simultaneously and arranged to be positioned in front of an advancing sheet at a point posterior to feed roll contact line, a lever, links connecting the lever to the movable feed roll frame and to the stops to simultaneously move the stops to active position when the movable feed roll is retracted and vice versa, and cam mechanism on the varnishing roll shaft arranged to actuate the lever in definite relation to movement of varnishing surfaces of the roll.

1,638,399. CARTON-FEEDING MACHINE. STANLEY R. HOWARD, Milton, Mass., assignor to Pneumatic Scale Corporation, Ltd., Norfolk Downs, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1926. Serial No. 92,384. 19 Claims. (Cl. 93—53.)



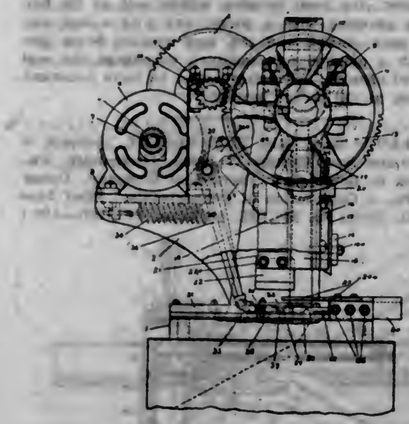
1. In combination, a support for a pack of collapsed cartons, and means constructed and arranged to enter the endmost carton of the pack and swing the front and side panels thereof into a position of opposite collapse, and a transfer member operating independently of said carton entering means and adapted to swing into engagement with said swinging carton to effect complete withdrawal thereof from the carton pack.

1,638,400. UNIVERSAL JOINT. GEORGE B. KIESLER, Hartford, Conn., assignor of one-third to Arthur J. Brodeur, West Hartford, Conn. Filed May 6, 1926. Serial No. 107,091. 8 Claims. (Cl. 64—102.)



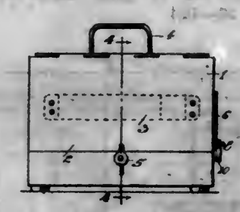
1. In a universal joint structure, a body having intersecting bores, bearing pin structures housed in said bores and projecting by their ends from said body, said pin structures comprising one long pin extending across the intersection of said bores and a pair of short pins that are opposed by their inner ends to said long pin, said inner ends and long pin being provided with interlocking means for preventing disconnection in the form of interengaging teeth, and means for locking said pins in the engaged position.

1,638,401. APPARATUS FOR ANNEALING GLASSWARE. OTTO C. KUHRT, Mount Vernon, N. Y., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Jan. 13, 1926. Serial No. 80,954. 2 Claims. (Cl. 198—162.)



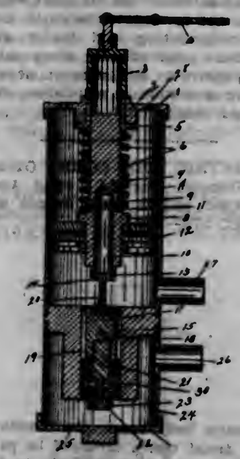
1. Apparatus for annealing glassware comprising a tunnel, a conveyor for transporting articles of glassware through said tunnel, a flexible metallic member extending along each side of said tunnel for preventing frictional engagement between the ware and the walls of the tunnel, guideways for providing lateral and vertical support for said members, and means for driving said conveyor and said members at the same linear speed.

1,638,402. SOFT-DRINK REFRIGERATOR. LANDO LOCKER and OSSIE M. FRAZIER, Hoisington, Kans. Filed Dec. 2, 1926. Serial No. 152,203. 3 Claims. (Cl. 62—34.)



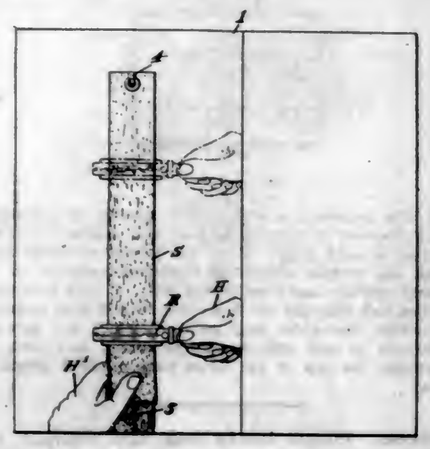
1. In a bottle refrigerator, a conduit through which the bottles may pass and means for refrigerating said conduit, said conduit including a flexible false wall and means yieldably urging said flexible false wall toward the opposite wall thereof.

1,638,403. SHEARING AND FORGING PRESS. JOHN LUCAS, Pittsburgh, Pa., assignor to Lewis Foundry & Machine Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 22, 1925. Serial No. 45,203. 7 Claims. (Cl. 76—8.)



7. In a shearing and forging press the combination of cooperating pairs of shearing knives and forming dies, tongs for feeding blanks sheared by said knives to the forming dies, means arranged to project into the path of movement of the tongs for contacting a blank held thereby and discharging it therefrom; said tongs comprising a slidable jaw, a second pivotally mounted thereon, and yielding means for resisting movement of said pivoted jaw relative to said sliding jaw; movable means carrying the upper forming die and shearing knife of each pair, and means whereby the sliding jaw of said tongs is reciprocated by movement of the die and knife carrying means.

1,638,404. SAVINGS BANK. SAMUEL J. MIROSAV, Dallas, Tex. Filed Nov. 20, 1926. Serial No. 149,778. 4 Claims. (Cl. 232—4.)



1. The combination with a wall member of a savings bank disposed in a recess in said wall member; a loose bottom in said bank; means for jointly retaining said bank and bottom comprising a member arranged to be passed through apertures in the walls of said bank and bottom and engaging the inner side of said wall member, a locking means for said member, and a key pivoted interiorly of said wall member to engage said bank to constrain the top of the latter from outward displacement.

1,638,405. PISTON VALVE FOR THE CONTROL OF FLUIDS. ROBERT E. MITTON, Salt Lake City, Utah. Filed July 3, 1926. Serial No. 120,346. 1 Claim. (Cl. 302—54.)

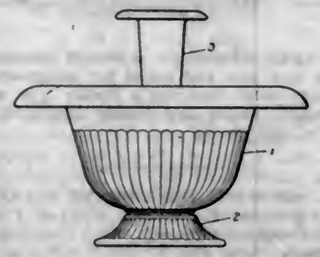
In a valve the combination of a casing, a cap on one end of said casing; a central opening in said cap and having a shoulder formed thereabout; a housing slidably operable in said opening; a shaft carried within said housing and connected with a piston carried in said casing; a spring around said shaft to regulate the movement of said piston; a central bore in said shaft and having ports in the side walls of said bore; a guide member in the other end of said casing; a guide carried in said guide member; a valve carried on one end of said guide and adapted to close the bore in said shaft when said piston is moved; a valve seat in the other end of said guide member; another valve secured to said guide and adapted to close the seat in the said guide member; a spring to hold the last mentioned valve normally seated; an air connection in said casing; another casing similar to the first mentioned casing having an air connection in one wall thereof; and a closure cap for the open end of said second mentioned casing.

1,638,406. DEMONSTRATING MACHINE. PRESTON W. MOWRY, Boston, Mass., assignor to The Nu-Idea Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Feb. 27, 1926. Serial No. 91,276. 6 Claims. (Cl. 35—16.)

1. In demonstrating apparatus, a relatively stationary strop, a razor blade holder spaced apart sufficiently from said strop so as not to contact therewith, and means for automatically reciprocating said holder alternately in opposite directions longitudinally along said strop and for rocking it relative to said strop at either extreme of its receprocating movement in simulation of the manual act of stropping a razor.

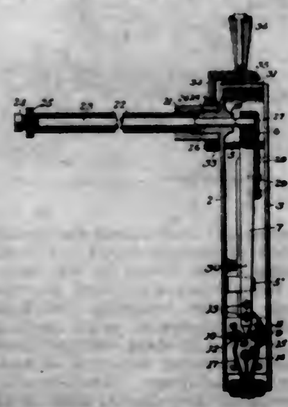
1,638,407. ELECTRIC BODY COMB. OTTO G. C. L. J. OVERBECK, Grimsby, England. Filed Apr. 30, 1925, Serial No. 26,981, and in Great Britain May 17, 1924. 2 Claims. (Cl. 174—173.)

1. In an electric body brush, the combination with a group of sheet metal combs arranged in parallel planes, of a handle projecting perpendicularly to the planes of the combs forming said group, said handle being provided with a longitudinal hole extending therethrough, a current-conducting rod extending through the longitudinal hole in said handle and electrically connected to said sheet metal combs, said current conducting rod being adapted at its outer end to be connected up with a source of electricity, and means carried by said current-conducting rod for binding said sheet metal combs together and uniting them to said handle.



1,638,408. LIGHT-DEFLECTING ATTACHMENT FOR HEADLIGHTS OF MOTOR VEHICLES. WILLIAM H. RATNOUR, Sherrill, N. Y. Filed Mar. 18, 1926. Serial No. 95,592. 1 Claim. (Cl. 240—48.4.)

A light deflecting device for headlights comprising a ring adapted to fit into the open end of a lamp casing, a horizontal cross-member joining the edges of the ring in a plane below the axis of the ring and defining a substantial unobstructed circular segment of the ring, and a series of vertically disposed parallel vanes mounted on said cross member and extending upwardly to the periphery of the ring, said vanes being disposed at equal

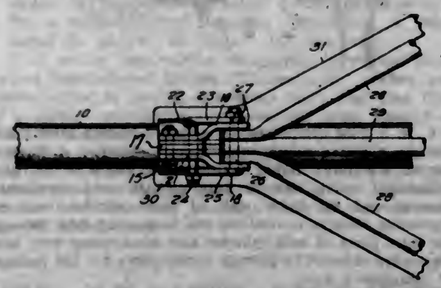


angles to the axis of the ring, and being spaced in overlapping relation to prevent the direct passage of the reflected rays of light through the intervening spaces.

1,638,409. BOWL. PETER G. RINKEN, Chicago, Ill., assignor to Jeannette Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1926. Serial No. 154,935. 4 Claims. (Cl. 119—5.)

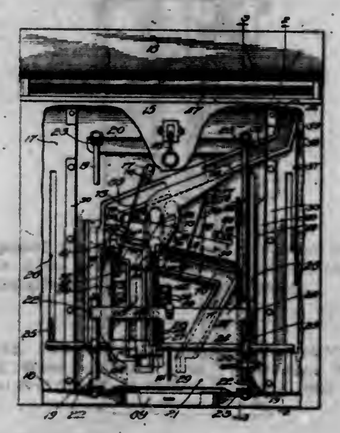
1. A bowl structure including a bowl member and a vase member, the bowl member within and at its bottom being provided with a pocket and with a seat surrounding such pocket, and the vase member being provided with a notched foot, adapted to engage the seat in the bowl member, and being seated to leave communication open to the pocket beneath.

1,638,410. ELECTRIC THERMOSTAT. GEORGE A. ROBERTSHAW and HOMER T. HOOD, Greensburg, Pa., assignors to Robertshaw Thermostat Company, Youngwood, Pa., a Corporation of Pennsylvania. Filed June 27, 1923. Serial No. 648,105. 4 Claims. (Cl. 200—139.)



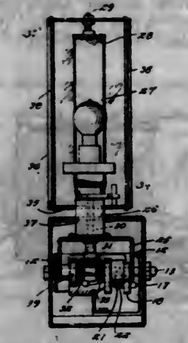
1. A thermostat, comprising electric switch means having a movable operating member, an expansible member, a revolving coupling member connecting one end of said expansible member to said switch means, a correcting device at the opposite end of said member, and a non-expansible member cooperating therewith for operating said movable operating member, substantially as described.

1,638,411. DEVICE FOR VERTICALLY ADJUSTING DRAPERY HANGERS. LULA H. ROBINSON, Dallas, Tex. Filed Nov. 28, 1925. Serial No. 71,903. 2 Claims. (Cl. 156—27.)



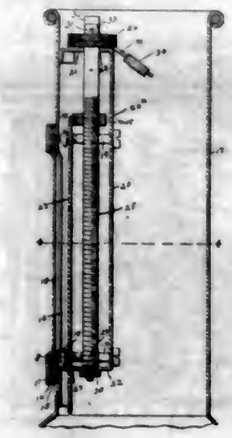
1. In a curtain and drapery hanger, a track having a roughened face, a slide on the track, a dog pivoted at one end to the slide and having a free end engageable with the roughened face of the track, a rod connected to the dog between the ends of the dog to operate same, a slidable hand-engaging catch connected to the rod and carried by the slide, a rigid projection on the slide adjacent to the catch and a coil spring between the projection and catch for tensioning the latter.

1,638,412. FLEXIBLE COUPLING. WILLIAM THOMAS SANDIFER, Jackson, Miss. Filed June 29, 1925. Serial No. 40,470. 4 Claims. (Cl. 280—33.15.)



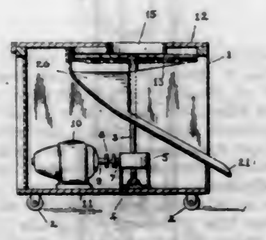
1. A flexible trailer coupling comprising a pair of side plates adapted to be secured on a coupling pole, flanges formed on the edges of said plates, spaced arms arranged on said flanges and extending in parallel relation from said plates, and a pivot member extending between the spaced ends of said arms for pivotal connection with the top brace bounds of a trailer.

1,638,413. COIN-OPERATED VENDING MACHINE. EDWARD SCHULTZ, Chicago, Ill., assignor to (Mrs.) E. A. Laughery, Chicago, Ill. Filed Dec. 6, 1924. Serial No. 754,249. 8 Claims. (Cl. 194—93.)



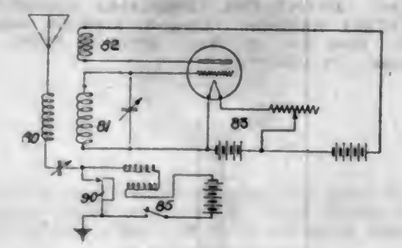
1. In a machine of the kind described, the combination of a downwardly inclined coin chute, means adjustable therein for stopping coins at a selected place within the chute, a swinging member to which the adjustable means is connected, a latch controlled carriage movably related to the coin chute, and spring actuated means extending from the swinging member to engage with the carriage when in its normal position of rest, said spring actuated means operating when the carriage is moved therefrom to shift the swinging member and adjustable means whereby the chute is cleared of coins, substantially as described.

1,638,414. AUTOMOBILE SIGNAL. EDWARD F. SEBESTA, Minneapolis, Minn. Filed June 16, 1926. Serial No. 116,420. 6 Claims. (Cl. 116—46.)



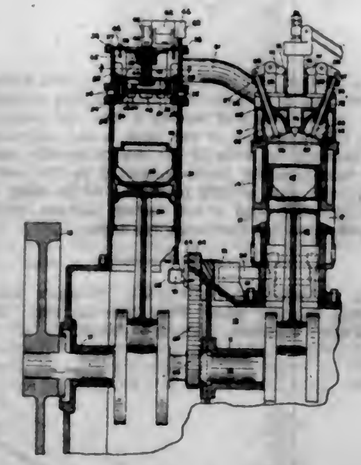
1. A signaling device comprising a signal arm capable of swinging in a vertical plane and axial rotative movements, and an operating means connected with the signal arm and movable in one direction to simultaneously rotate the arm, and to swing the arm from vertical to horizontal position, and movable in the other direction to swing the arm into a vertical position.

1,638,415. TEST MEASURE. GEORGE A. SEXTON, Winchester, Mass. Filed Nov. 26, 1926. Serial No. 150,831. 4 Claims. (Cl. 73—165.)



1. A test measure including a neck having a vertically elongated sight opening through which the surface of a charge of liquid in the measure is visible, a liquid-tight closure for said opening including a transparent pane covering the opening, and sealing means securing a marginal portion of the pane to the neck, and a registering structure within the neck, adapted to register the height of the charge, said structure including a guiding holder fixed to the neck, a gage guided in a vertical path by the holder and spaced by the latter from the sight opening, so that a portion of the surface of a charge of liquid in the measure is visible between the gage and the sight opening, and manually operable means adjustably supporting the gage on the holder and operable at the mouth of the neck to vary the height of the gage, means being provided for preventing unauthorized adjustment of the gage.

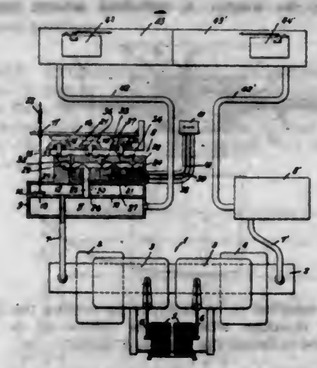
1,638,416. PORTABLE CABBAGE-CUTTING MACHINE. CHARLES E. SMITH, Geneva, and JACOB N. KARP, Farmingdale, N. Y. Filed Nov. 13, 1925. Serial No. 68,909. 9 Claims. (Cl. 146—124.)



1. A kraut cutting machine, the combination of a casing, an upright shaft mounted therein, a top having one or more openings therein, a disc cutter mounted on said shaft and revolving under said openings, said openings being placed eccentric with the center of the disc, an inclined stationary delivery chute extending spirally under said openings and extending down to near the bottom of the casing and adapted to convey the cut cabbage by gravity from the cutter and discharge it outside the machine.

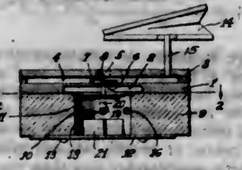
1,638,417. SHIP'S SIGNALING OR BROADCASTING DEVICE. ELMER A. SPERRY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 6, 1923. Serial No. 673,210. 17 Claims. (Cl. 250—17.)

1. In combination, a dirigible craft having a course indicator, and automatic means governed thereby for periodically transmitting a wireless signal corresponding to the position of said indicator.



1,638,418. FLUID COMPRESSOR. FRANK B. STEARNS, Shaker Heights Village, Ohio. Filed May 24, 1924. Serial No. 715,538. 10 Claims. (Cl. 230—34.)

1. In a fluid compressor, a cylinder having inlet ports therein, a piston reciprocable in said cylinder, a stationary valve element within said cylinder, and a reciprocable cylindrical valve element intermediate said stationary element and the inner wall of said cylinder, said reciprocable element controlling the passage of fluid through the inlet ports in said cylinder and cooperating with said stationary element to provide outlet ports for the passage of compressed fluid.



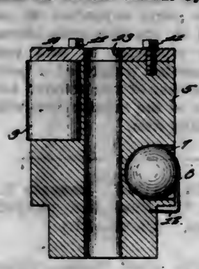
1,638,419. EQUALIZER FOR AUTOMATIC PLAYER PIANOS. CHARLES F. STODDARD, New York, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed June 1, 1923. Serial No. 642,746. 9 Claims. (Cl. 84—42.)

1. In an automatic musical instrument having the usual striker pneumatic and source of power, in combination, an action wind chest; a regulator; and equalizing means controlling the tension in said wind chest,

operative only when the tension therein falls below the lowest tension which the regulator is adjusted to maintain.

1,638,420. DUST-COLLECTING VALVE MECHANISM FOR PLAYER PIANOS. CHARLES F. STODDARD, New York, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed June 1, 1923. Serial No. 642,747. 12 Claims. (Cl. 84—64.)

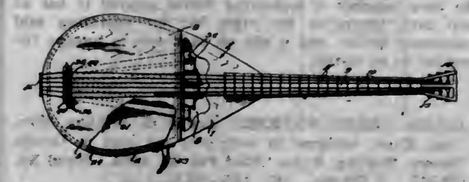
1. In a player piano, the combination with a tracker bar, tracker duct, and valve operated thereby, of a chamber interposed between said tracker bar and valve; means for admitting air thereto and imparting to the air thus admitted a circuitous motion in part of said chamber only.



1,638,421. RUBBER COMPOSITION. ROY H. UHLINGER, Mount Lebanon Township, Allegheny County, Pa., assignor to Thermatomic Carbon Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Aug. 8, 1925. Serial No. 49,144. 19 Claims. (Cl. 106—23.)

5. A rubber composition comprising a rubber stock having incorporated therein "Thermatomic" carbon and characterized by having a stiffness much less than that of a rubber composition containing the same amount of common commercial carbon black.

19. The process of compounding rubber comprising the step of incorporating therein a finely divided carbon having rubber stiffening qualities and an oil absorption number both materially less than those of common commercial carbon black.



1,638,422. TUBE EXPANDER. JAMES WALKER, Elizabeth, N. J., assignor of one-fourth to Peter O. Donnell, Elizabeth, N. J. Filed Aug. 28, 1922. Serial No. 584,779. 1 Claim. (Cl. 153—81.)

In a tube expander, a body portion having elongated openings extending from one end thereof, the openings being circular in formation and having one of their respective walls cut away; rollers within the openings, a securing plate removably secured to one end of the body portion and contacting with the rollers to hold the rollers within the openings, said body portion having lateral openings, the lateral openings having cut away portions, balls positioned in the lateral openings, said balls

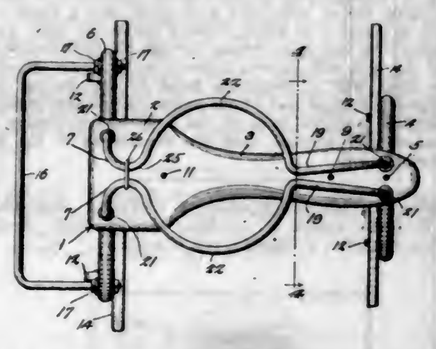
being passed through the cut away portions, the inner surfaces of the lateral openings being curved, and means for holding balls within the lateral openings.

1,638,423. STRINGED MUSICAL INSTRUMENT. JOHN NOAH WARD, Jackson, Tenn. Filed June 24, 1925. Serial No. 39,316. 4 Claims. (Cl. 84—296.)

1. A stringed musical instrument comprising a body including spaced front and back walls and a partition wall, a plurality of horns enclosed within the body and having their bell ends opening through the partition wall and the neck ends curving laterally and opening through the front wall, a diaphragm fitted to and closing the projecting neck of each of the horns, and musical strings stretched over the front of the body and exercising a perpendicular pressure upon the diaphragms of the respective horns.

1,638,424. SOUND-RECORDING DEVICE. HARTWELL W. WEBB, Leonia, N. J. Filed Apr. 11, 1923. Serial No. 631,265. 3 Claims. (Cl. 274—13.)

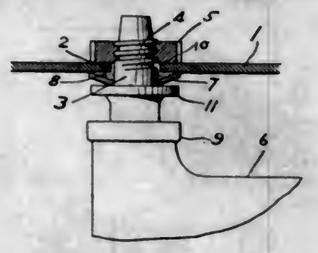
1. In a sound recording device, a base member adapted to be placed in removable position adjacent the turntable of a phonograph, a vertical post carried by said base



member, a tubular sound receiving arm pivotally supported at a point between its ends on said post, a sound box and a recording stylus carried by said tubular arm, the weight of the parts supported by said post being equally distributed on opposite sides thereof and a guiding arm pivotally supported by said post for vertical movement and connected thereto at a point spaced from the point of connection of the tubular arm to the post, whereby vibrations of the tubular arm will not be transmitted to the guiding arm.

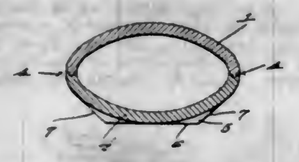
1,638,425. STRAIN GAUGE. HERBERT L. WHITTEMORE, Washington, D. C. Filed Dec. 10, 1925. Serial No. 74,516. 4 Claims. (Cl. 73—51.)

1. A strain gauge comprising a rectangular frame formed of two parallel bars, spring means for securing the bars together, a measuring device secured to one of said bars, means on the other bar for operating said measuring device, and a pin on each bar to engage the member to be tested.



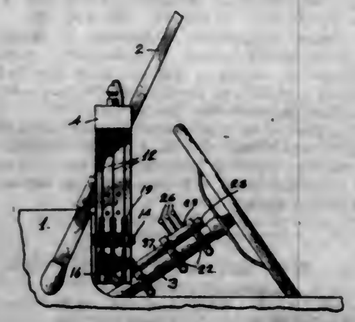
1,638,426. BABY WALKER. JAMES O. WILSON, Sterling, Kans., assignor of forty-nine per cent to George Brown, Sterling, Kans. Filed Feb. 15, 1926. Serial No. 88,377. 2 Claims. (Cl. 155—22.)

2. A vehicle of the class described, comprising a seat, front and rear members carried by the seat, a retaining device comprising oppositely bowed frames disposed above the seat and having depending ends extended downwardly through the seat and through the front and rear members, securing devices on the depending ends of the frames, casters on the front and rear members, and transverse supports secured to the front and rear members, the ends of the supports being located outwardly of the front and rear members, and above the plane defined by the casters, but closely adjacent to that plane, to prevent the vehicle from tipping over.



1,638,427. ELECTRIC STORAGE BATTERY. JOSEPH LESTER WOODBRIDGE, Philadelphia, Pa. Filed Nov. 4, 1926. Serial No. 146,109. 3 Claims. (Cl. 136—168.)

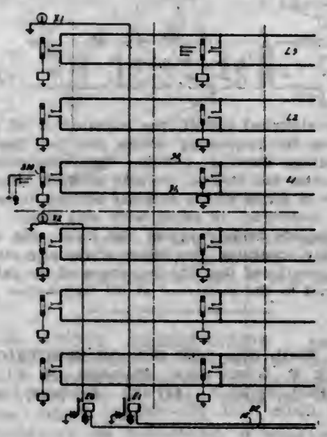
1. In combination a battery terminal post having a shoulder, a closure perforated to receive the terminal post above the shoulder, a cupped washer surrounding the post between the shoulder and the under side of the closure with its concave side towards the closure, and contained in the washer, a semi-fluid sealing material,



said washer adapted to be flattened by forcing the closure against the shoulder whereby the compound is forced into the space between the post and cover.

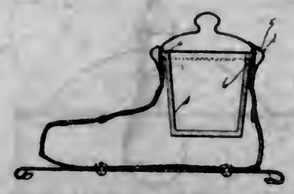
1,638,428. HIGHWAY CULVERT. HENRY LOUIS ZANDER, New Orleans, La. Filed Apr. 25, 1925. Serial No. 25,840. 1 Claim. (Cl. 72—52.)

In a culvert structure of substantially elliptical cross section having a horizontal major axis and formed of top and bottom half-sections, longitudinally spaced reinforcing ribs on the external surface of the bottom section, said ribs functioning additionally as weight elements to lower the center of gravity of said lower section and being of a length considerably less than the width of said lower section, the ends of the ribs being inclined downwardly and inwardly and the bottom edges being flat, and cooperating means between the meeting edges of said top and bottom half-sections to prevent relative transverse shifting of the top section on the bottom section.



1,638,429. MOTOR-VEHICLE DIRECTION INDICATOR. ALFRED J. ALLARD, Eldridge, Calif. Filed July 2, 1924. Serial No. 723,797. 8 Claims. (Cl. 116—53.)

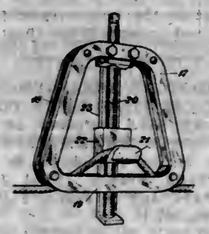
1. In a vehicle direction indicator, a plurality of nested actuating sleeves, each connected to a corresponding signal for actuating the same; a locking sleeve mounted around the actuating sleeves; operating levers connected to each sleeve and extending outwardly through slots formed in the surrounding sleeves for independently



rotating said sleeves to actuate a desired signal; and means formed upon the locking sleeve to engage the operating levers, whereby the signal may be held in signaling position.

1,638,430. STRAIGHTFORWARD TRUNKING SYSTEM. RAND S. BAILEY, Montclair, N. J., and EDGAR P. BROE, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 18, 1924. Serial No. 738,488. 13 Claims. (Cl. 179—41.)

7. In a telephone system, a group of trunks, an operator's position at the incoming ends of said trunks, means responsive to the occupation of said operator's position for rendering said trunks available for use and a signal common to said trunks at the outgoing ends thereof responsive to said means.

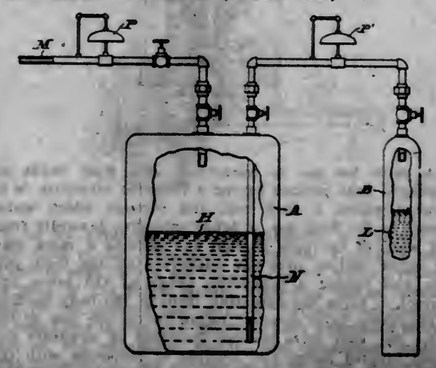


1,638,431. BABY-SHOE KEEPSAKE. FREDERICK T. BROSI, San Francisco, Calif., assignor, by direct and mesne assignments, to A. W. Higgins, trustee. Filed Jan. 20, 1925, Serial No. 3,587. Renewed Apr. 18, 1927. 1 Claim. (Cl. 206—20.)

A metallized baby shoe provided with means for incorporating therewith an element which will convert the shoe into a useful article, which means comprises a member adapted to be joined with and extended over the upper edge of the top of the shoe.

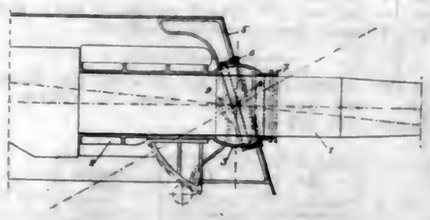
1,638,432. STRAND TIGHTENER. NEILSON D. CONNORS, Highland Park, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 26, 1922. Serial No. 597,185. 2 Claims. (Cl. 254—67.)

1. A tool of the class described, comprising a framework consisting of two side members, fixed in separated relation, each of said side members being of the shape of an inverted V with the bottom closed by a cross-bar; a roller at each of the lower corners of said framework designed to bear downward against a given length of strand; a threaded rod passing through the upper portion of said framework between the two side members and extending between the two cross-bars to a point below said cross-bars; and an internally threaded block designed to travel vertically on the threaded rod and carrying an upwardly pointed hook, said hook being designed to grip and pull upward and out of line a given length of strand upon actuation of said rod.



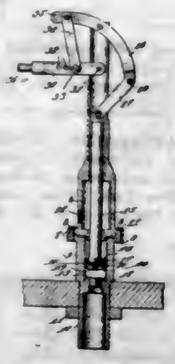
1,638,433. CARD GAME. ASA B. COPELAND, Denver, Colo. Filed Aug. 9, 1926. Serial No. 128,185. 2 Claims. (Cl. 273—152.)

1. A set of playing cards comprising a series of cards, each containing a number and a question, a card containing the answers to the questions and a challenge card.



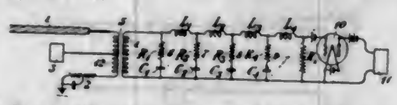
1,638,434. GAS APPARATUS. GEORGE O. CURME, Jr., and HAROLD E. THOMPSON, Clendenin, W. Va., assignors to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed June 15, 1922. Serial No. 568,580. 2 Claims. (Cl. 48—190.)

1. In apparatus for producing fuel gas, in combination, a main; a receptacle; a passage joining the main with the receptacle; a valve arranged to open the pas-



sage when the pressure in the main falls below a predetermined value; a second receptacle; a second passage joining the second receptacle with the first receptacle; and a second valve arranged to open the second passage when the pressure in the first receptacle falls below a second predetermined pressure lower than the first.

1,638,435. FLUID-TIGHT ARRANGEMENT FOR CANNON MOUNTED IN FLUID-TIGHT TURRETS UPON SUBMARINE VESSELS. ROBERT DE COURSKULLES, Paris, France, assignor to Societe Schneider & Cie., and Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Filed July 14, 1926, Serial No. 122,474, and in France July 15, 1925. 2 Claims. (Cl. 89—37.)



1. In an artillery installation for submarine vessels, a cannon tube, a cradle in which said tube is slidable, a turret and a circular socket in the said turret, a ball which is connected with the said cradle, trunnions for the cradle which are disposed externally to the ball according to a diameter of the latter, bearings for these trunnions internally projecting from the wall of the turret.

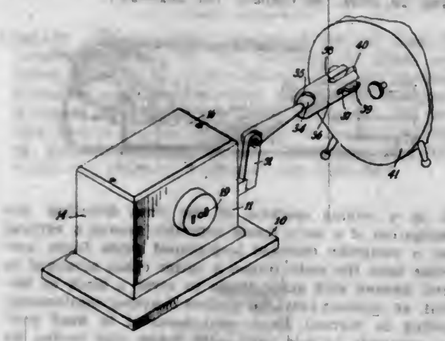
1,638,436. CLOSET VALVE. FRED C. DIEDRICH, Tacoma, Wash. Filed June 6, 1922. Serial No. 566,354. 1 Claim. (Cl. 137—104.)

A valve for use in connection with flush tanks including a body portion having a threaded extremity to be secured within a flush box, and through which water passes to the flush box, a flange extending inwardly from the walls of the body portion and defining a valve seat, an upper section normally supported on the body portion and having a depending flange at the lower end thereof, a valve rod operating through the body portion, a removable valve member supported on one end of the valve rod, said valve member including an upwardly disposed tapered flange and adapted to cooperate with the first mentioned tapered flange to prevent the passage of fluid through the body portion, and a downwardly disposed flange forming a part of the valve member, a cushioning member positioned within the downwardly disposed flange to move into engagement with the valve seat to restrict the passage of fluid through the body portion of the valve, and means for operating the valve.

1,638,437. ELECTRICAL NETWORK. DANFORTH K. GANNETT, Arverne, N. Y., and MACLEAN KIRKWOOD, East Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 27, 1920. Serial No. 376,996. 8 Claims. (Cl. 178—44.)

1. In an electrical circuit, the combination of a network, means for impressing across one end thereof a variable voltage wave, a receiving apparatus connected across the other end thereof, the said network comprising a resistance in series with a capacity bridged across said circuit, an inductance in series with said circuit and a second resistance bridged across the input side of the said receiving apparatus, the values of the said elements being so proportioned that the impedance of the said network is equal to the resistance at all frequencies.

1,638,438. TOOL FOR THE USE OF ELECTRICIANS. FREDERICK P. GOTTSCHALK, Plainfield, N. J. Filed Dec. 1, 1920, Serial No. 427,487. Renewed June 22, 1927. 1 Claim. (Cl. 175—183.)

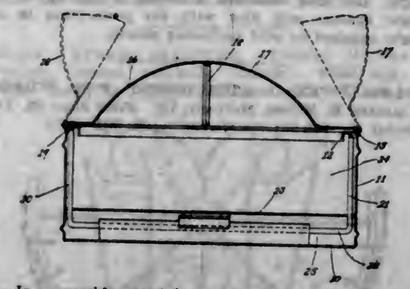


A hand-tool of the character described for the use of electricians, comprising a pair of pivoted together crossed bars affording handles at one end and jaws at the other end, forwardly projecting testing conductors mounted on said jaws and an electric lamp in circuit with said conductors, said conductors having laterally extending pins on their rear portions, and said jaws having sockets to detachably receive said pins.

1,638,439. CIRCUIT CLOSER. ARNO H. HOFFNER, Carlstadt, N. J. Filed June 8, 1926. Serial No. 114,390. 2 Claims. (Cl. 200—41.)

2. In the combination of an alarm clock and a circuit closer having a lever extending from said circuit closer, a balled head at the free end of said lever, means mounted on the alarm mechanism of said clock engageable with said balled head for holding said lever in raised position

comprising a slotted block, a hemispherical socket in said block normally receiving said balled end of said lever, said block when rotated 180 degrees being adapted to

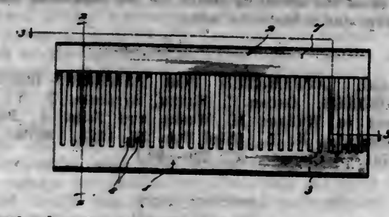


reverse the open portion of said socket and permit falling of said balled end of said lever to close a circuit, and means for adjusting the alignment of said lever.

1,638,440. WOOD PRESERVATION. ARTHUR M. HOWALD, Pittsburgh, Pa., assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 23, 1924. Serial No. 688,099. 9 Claims. (Cl. 99—12.)

1. Process for the preservation of wood which comprises impregnating the same with a super-emulsified liquid containing an oily preservative agent and an aqueous preservative agent.

9. As a new product a super-emulsified liquid containing an oily wood preserving agent dispersed in an aqueous wood preserving agent.

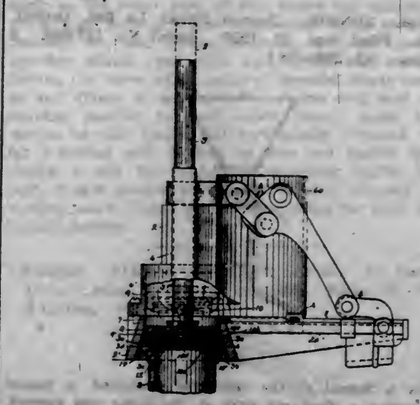


1,638,441. CUSPIDOR CONTAINER. FRANK HUSS, Elizabeth, N. J. Filed Nov. 5, 1926. Serial No. 146,300. 3 Claims. (Cl. 4—273.)

1. In a cuspidor container, a bottom and an encircling wall, a false bottom above the first-named bottom, hinged covers normally closing said container, a U-shaped member having a cross bar and vertical arms, said vertical arms being pivotally connected to said covers, and foot operated means for raising said connecting bar and opening said covers.

1,638,442. HAIR-WAVING DEVICE. IRVING JAYNE and ELLA R. RINKER, Davenport, Wash. Filed Sept. 30, 1926. Serial No. 138,730. 2 Claims. (Cl. 132—33.)

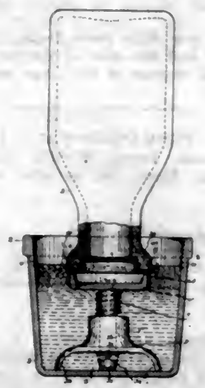
1. A device of the class described comprising a pair of separate companion comb members one including a back having a channel extending across its outer face and open at its bottom, the said comb members being over-



lapped when in use with their teeth extending in opposite directions and the ends of the teeth of one member fitting in the channel of the other member.

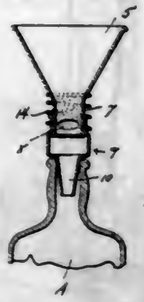
1,638,443. PERMANENT-WAVE DEVICE. CORA KADANE and ADA JOYCE, Wichita Falls, Tex. Filed May 27, 1926. Serial No. 111,976. 6 Claims. (Cl. 132—33.)

1. A hair waving unit including a substantially U shaped member one of the arms of which is smaller and shorter than its companion arm; a shell slidable over said smaller arm so as to be movable laterally with respect to said longer arm; a shaft interposed between said small arm and shell having means for engaging said shell; and means for rotating said shaft to force the shell outward to tighten the hair intwined about said arms.



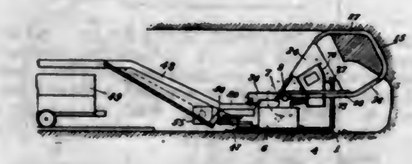
1,638,444. EXPANDER FOR BOTTLE CLOSURES. OSCAR C. KAYLE, Syracuse, N. Y., assignor to Wallace M. Weeks and John A. Pease, Skaneateles, N. Y. Filed Feb. 25, 1926. Serial No. 90,710. 3 Claims. (Cl. 226—86.)

1. In an expander for bottle closures, a plunger, a head fixed to the plunger for movement therewith and formed to seat on the part of the closure which overlies the head of the bottle mouth, expanding means, means fixed to the plunger and movable therewith to operate the expanding means, and means to limit downward movement of the expanding means, said expanding means being mounted on the plunger so as to move lengthwise of the plunger whereby upon operative movement of the plunger the expanding means is engaged with the bottle



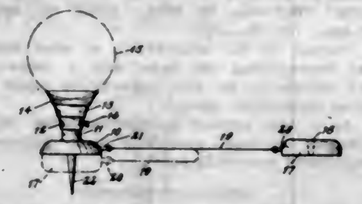
closure and supported thereby while the plunger is permitted to move independent of the expanding means so as to cause the operating means for the expanding means to engage and actuate the latter.

1,638,445. APPARATUS FOR SEALING BOTTLE CLOSURES. OSCAR C. KAVLE, Syracuse, N. Y., assignor to Wallace M. Weeks and John A. Pease, Skaneateles, N. Y. Filed Feb. 25, 1926. Serial No. 90,711. 6 Claims. (Cl. 226—80.)



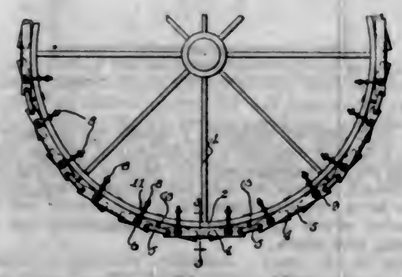
4. In an apparatus for sealing bottle closures, container means for holding liquid adhesive, means in the container means to engage the closure and cover the part of the closure which registers with the mouth of the bottle, and means for mounting one of said two first named means for movement relative to the other whereby to cause the bottle and its closure to engage with the adhesive below the surface of the latter so as to apply adhesive to the bottle and its closure.

1,638,446. FUNNEL. JOSEPH HENRY LE BEL, Detroit, Mich. Filed Sept. 25, 1926. Serial No. 137,680. 3 Claims. (Cl. 226—36.)



1. In a funnel of the character described, a funnel body having a discharge neck at the lower end thereof, said discharge neck being closed at its lower end and being provided with an opening at its side, a nipple for association with the neck of the funnel, said nipple being provided with a nozzle and an enlarged central area, the upper end of which is reduced for providing a neck, the neck of said funnel adapted for relatively tight fitting relation within the neck of the nipple and to close the opening in the neck of the funnel, when the funnel is raised with respect to said nipple, said enlarged area opening the funnel to the nipple, so that the material may discharge through the said nipple nozzle.

1,638,447. COAL-MINING APPARATUS. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Jan. 5, 1917, Serial No. 140,749. Renewed Aug. 29, 1924. 40 Claims. (Cl. 262—28.)



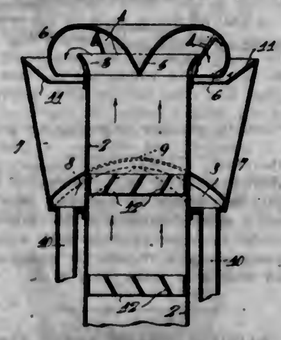
1. In a mining machine of the class described, the combination of a main frame, rotatable around a vertical axis, a vertically disposed loop-shaped guide frame projecting from the main frame, a cutter chain arranged to travel around said guide frame to sever a block of material, an outward extended endless conveyer continuously rotating in vertical planes and mounted in fixed position relatively to said loop guide frame, and having its inner end arranged behind the active part of the loop cutters, and means to rotate the main frame and cause engagement of the cutters with the coal.

1,638,448. GOLF TEE. DONALD L. MANSON, New York, N. Y., assignor to Mary A. Manson, New York, N. Y. Filed July 8, 1926. Serial No. 121,141. 4 Claims. (Cl. 273—33.)

1. Golf tee comprising a metal base-disk, a tee, a means for varying the distance of said tee from the ground, a perforated weight, a means for anchoring said tee in the ground, and a flexible connection between said weight and said base-disk allowing a folding of said weight against said disk with the perforation in said weight engaged by said anchoring means.

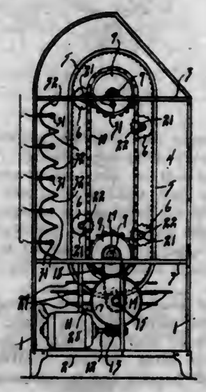
1,638,449. TREAD ATTACHMENT FOR WHEELS. CHARLES B. MOORE, Mattoon, Ill. Filed June 25, 1926. Serial No. 118,531. 3 Claims. (Cl. 301—40.)

2. A tread attachment for wheels comprising parallel series of flat blocks, links pivotally coupling the opposed ends of adjacent blocks in the respective series, the blocks and links being arranged to break joint, pivot members inserted transversely through the blocks near the ends thereof whereby to connect the blocks side by



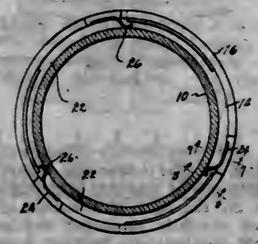
side, spacing elements disposed between the opposed edges of adjacent blocks, carrying devices pivotally engaged at their outer ends with the several blocks, and means for loosely retaining the said elements upon a wheel rim.

1,638,450. HEADLIGHT. SAMUEL MOORE and FRED O. SHEETS, Fairmont, W. Va., assignors, by direct and mesne assignments, of part interest to Daniel Scruggs, Clyde Morgan, Joseph Gorham, and Robert Thompson, Fairmont, W. Va., H. L. Kuhn, Shinnston, W. Va., said Fred O. Sheets, said Samuel Moore, and William M. Keener, Fairmont, W. Va. Filed July 30, 1926. Serial No. 125,993. 3 Claims. (Cl. 240—62.)



1. In a vehicle headlight, a pivotally mounted lamp, a sleeve forming part of the lamp stem and having slots in opposite sides opening downwardly through its lower end, a tubular standard pivotally mounted upon the chassis and having slots in opposite sides opening through its upper end, a rod having balls at opposite ends fitted within the said sleeve and standard and having trunnions entering the slots in the sides thereof, and an open helical spring within the standard yieldably supporting the rod and maintaining it in operative position.

1,638,451. SPARK ARRESTER. THOMAS M. NIXON, Victoria, British Columbia, Canada. Filed Apr. 2, 1926. Serial No. 99,828. 1 Claim. (Cl. 183—69.)



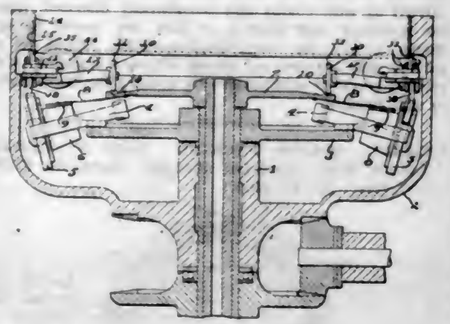
A spark arrester comprising the combination with the upper part of a smokestack having an outwardly flared mouth ring, a spark receiving vessel concentrically surrounding the upper part of the smokestack, the upper end of said vessel being at approximately the same level as the upper edge of the mouth ring and having a flange turned inwardly downwardly toward the smokestack to provide a restricted annular passage surrounding the mouth ring a distance below its upper edge, said receiving vessel having a bottom, spark take-off tubes entering said bottom at diametrically opposite sides thereof, said bottom having high points at diametrically opposite sides and sloping downwardly to each take-off tube, and a cap carried by the mouth ring, the central part of which cap is conical and projects downwardly into the center of the mouth ring and the outer part of which cap curves outwardly and then recurves downwardly and inwardly, the terminating edge being located in the restricted annular passage surrounding the mouth ring, the upper edge of said mouth ring being positioned approximately at the center of recurvature of the cap.

1,638,452. SELF-BASTING ROTARY ROASTER. ATHANASIOS PANAJIOTAROS and MORTIMER JONES, Fort Worth, Tex.; said Panajiotaros now by judicial change of name Tom Peters. Filed Dec. 7, 1925. Serial No. 73,649. 4 Claims. (Cl. 126—41.)

1. A roaster comprising a frame provided with cross-bars, a shaft in the upper part of said frame and a shaft in the lower part of said frame for causing relatively long vertical travel of material to be cooked and bearings for said shafts mounted on said cross-bars, sprocket wheels rigid with said shafts and means for driving the lower shaft, pairs of sprocket chains mounted on and driven by said sprocket wheels with said chains running parallel to each other, rotary meat holders carried by said chains and horizontally disposed, means for revolving said holders as they are moved by said chains, a pan for containing seasoning liquids in the path of said holders, and means disposed adjacent to the vertical travel of said holders for cooking the meat carried by said holders.

1,638,453. PISTON PACKING. JOHN F. PANYARD, Detroit, Mich. Filed Oct. 19, 1925. Serial No. 63,330. 3 Claims. (Cl. 74—109.)

1. In piston packing, a piston having a groove for packing, packing in said groove comprising a pair of ring

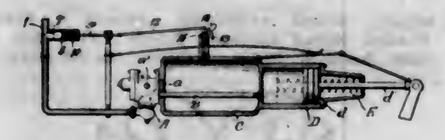


sections having helical meeting faces, one of said sections having a base flange extending underneath the second ring section, said base flange cut away at intervals, and spring members secured to the second ring section extending through the intervals in the base flange of the first ring section to engage the bottom of the groove in the piston.

1,638,454. GRIP. HENRY J. PAPIN, Grand Rapids, Mich. Filed June 28, 1926. Serial No. 118,989. 5 Claims. (Cl. 273—81.)

2. A grip for a hand implement having two series of grooves, one series being for the right hand and the other series being of uniform contour and for the left hand, said grooves being inclined relative to the longitudinal axis of the handle, and in opposite directions.

1,638,455. BRAIDING CARRIER. ANKER PETERSEN, Winthrop, Mass., assignor, by mesne assignments, to Zenith Thread Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 16, 1922. Serial No. 582,160. 10 Claims. (Cl. 96—13.)

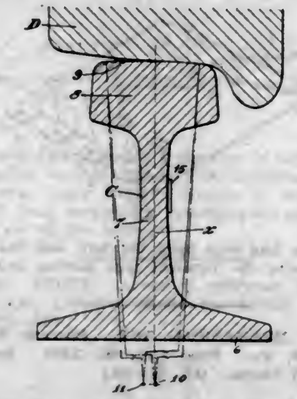


1. A braiding machine comprising a carrier having a frame, said frame being provided with vertically elongate bearing slots for the ends of a bobbin spindle, and a resiliently and pivotally supported member carried by the frame, said member being inclined to the horizontal and having its lower end disposed below the bobbin thereby constituting the sole support for the latter.

1,638,456. DISPENSING DEVICE. NORMAN C. PIKE, Seattle, Wash. Filed Jan. 31, 1927. Serial No. 165,008. 6 Claims. (Cl. 221—51.)

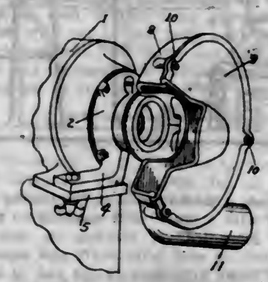
1. In apparatus of the character described, a vessel having an aperture in one end thereof and a tubular neck at its other end, means for closing said aperture, said means including a piston having a screw threaded stem adapted to extend through said aperture, and a nut taking upon said stem and bearing against the vessel, said stem being provided with a screw threaded socket, and a rod engageable within said socket for coupling the rod to the piston for operating the piston in said neck and for conveying the piston into and from its operative relation with respect to the apertured end of the vessel.

1,638,457. AUTOMATIC RELEASING VALVE FOR AIR-BRAKE SYSTEMS. LEONARD S. QUATES, Montgomery, Ala. Filed Sept. 19, 1923. Serial No. 663,605. 4 Claims. (Cl. 303—70.)



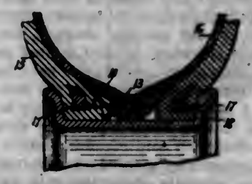
1. An automatic releasing valve for air brake systems comprising a reservoir and cylinder, a cross over pipe connected therewith, a triple valve connected with said pipe, a piston slidable in said cylinder, a brake beam connected with said piston, an extension pipe attached to said reservoir, a valve positioned at the outer end thereof, a relief cylinder in communication with said cross over pipe and means operable therein for opening said valve when desired when said brake beam is set.

1,638,458. RAILWAY-TRACK RAIL. ALBERT REESOR RAYNER, Beaver, Pa. Filed Nov. 21, 1925. Serial No. 70,494. 3 Claims. (Cl. 238—125.)



1. A T-head rail comprising a base flange and web, both of which are symmetrical about the vertical axis of the rail, and a head portion having its top surface curved on a radius struck from a point offset toward the outer

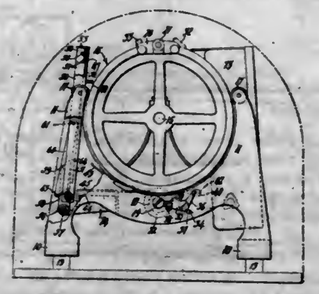
side of the rail from the vertical axis of the rail so as to locate the crown of the top surface of the rail to the outer side of the vertical axis and increase the vertical



thickness of the rail head to the outer side of the vertical axis and also provide a greater bearing area between the car-wheels and the rail head.

1,638,459. GRINDING-WHEEL GUARD. EMIL RITZ, Mount Healthy, Ohio, assignor to The Hisey-Wolf Machine Company, a Partnership consisting of Walter J. Friedlander and Joseph A. Friedlander, Cincinnati, Ohio. Filed Oct. 23, 1924. Serial No. 745,506. 2 Claims. (Cl. 51—268.)

1. A safety guard the combination with a casing, with a shaft projecting therethrough and a grinding wheel mounted thereon, of a safety guard to enclose the wheel, comprising a back plate with a peripheral flange and an outer cover plate, and an attaching plate with means for securing same to the casing around the shaft, with the plate provided with parallel slots and bolts engaging in the slots to secure the guard thereto for adjustment of the guard with relation to the wheel.

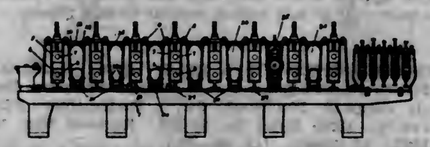


1,638,460. TIRE FLAP. GEORGE J. ROSSWORM and SAMSON HODGE SMITH, Cumberland, Md. Filed July 27, 1926. Serial No. 125,195. 7 Claims. (Cl. 152—20.)

6. A tire flap comprising a strip of relativley non-elastic material, and a strip of elastic contractile material fas-

tened near one end of the strip and to the strip at a point remote from the other end thereof so that the ends of the strip may overlap.

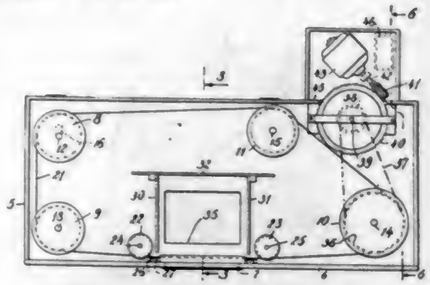
1,638,461. STENCILING MACHINE. EDWARD G. ROWLEY, Belleville, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Original application filed June 24, 1924, Serial No. 721,982. Divided and this application filed Dec. 26, 1925. Serial No. 77,867. 11 Claims. (Cl. 101—116.)



1. In a duplicating machine, the combination with a frame, a stencil cylinder revoluble therein, a pressure roll, and a paper-apron fixed in the frame to deliver sheets between the cylinder and roll, of a paper-table hinged in the frame to swing from the level of the apron to rest on the cylinder, and a toggle bracket to support the table when in its operative position, said bracket operating automatically when the table is raised or lowered.

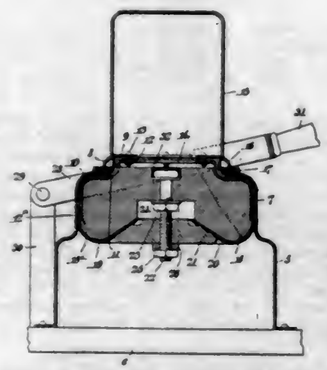
1,638,462. BILL FOLD. FREDERICK E. RYAN, Danbury, Conn. Filed July 17, 1926. Serial No. 123,103. 1 Claim. (Cl. 150—38.)

A bill fold comprising a body member, a division tab secured to one side of said body in a position intermediate the ends thereof and extending transversely of said body whereby the bills may be folded at their mid length over the free edge of the tab, extend downwardly on opposite sides thereof and folded upon themselves at the base of said tab, the opposite portions of said body being foldable toward the opposite sides of said tab and one of said portions being of a length to fold over the free edge of said tab and the other free end of the body and the free ends of the bills, and coacting securing means carried by the opposite ends of the body.



1,638,463. ROLLING MILL. THEODORE A. SCHRAISHUHN, Coraopolis, Pa., assignor to Lewis Foundry & Machine Company, a Corporation of Pennsylvania. Filed July 28, 1926. Serial No. 124,349. 11 Claims. (Cl. 153—54.)

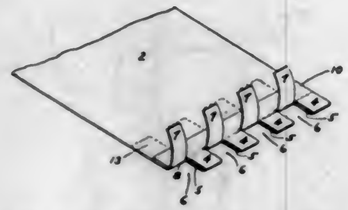
1. In a forming mill the combination of a base, a pair of housings on said base, a pair of spindles, in said



housings, a line shaft, a driving shaft connected with said line shaft, a double helical gear on said driving shaft, a gear on one spindle meshing with one section of the double helical gear, and gear connections for the other spindle comprising a member meshing with the other section of the double helical gear.

1,638,464. EXHIBITOR. HARRY V. VAN NUYS, Chicago, Ill. Filed June 11, 1925. Serial No. 36,434. 4 Claims. (Cl. 40—32.)

2. In an exhibitor, the combination of a cabinet having an aperture, means for advancing a translucent film bearing pictures to be exhibited past the aperture and means for resiliently supporting said film at the aperture, said means comprising a sheet of flexible material placed over said aperture and having an opening in alignment with said aperture, and having its ends turned back upon itself and said ends being secured to the wall of said cabinet whereby the sheet of flexible material is spaced from the wall of said cabinet.

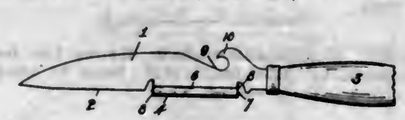


1,638,465. VACUUM-CREATING DEVICE. FREDERICK V. WINTERS, New York, N. Y. Filed Feb. 6, 1925. Serial No. 7,431. 6 Claims. (Cl. 226—82.)

1. In a vacuum creating instrument, a cylinder, a shell arranged within said cylinder, a sealing member having one end clamped between said cylinder and said shell, a piston slidable within said shell, and means for securing the other end of said sealing member to said piston.

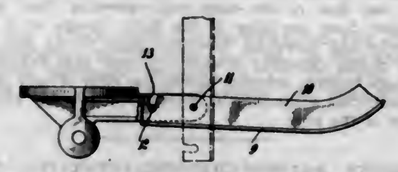
1,638,466. SHEET-METAL BELT. REEVE H. BANKS, Pittsburgh, Pa., assignor to Pittsburgh Producers Supply Company, Pittsburgh, Pa., a Partnership. Filed Jan. 11, 1926. Serial No. 80,599. Renewed Mar. 17, 1927. 11 Claims. (Cl. 24—31.)

1. A sheet metal belt having its end slitted to provide a continuous terminal edge portion and alternating connecting loop members and free holding tongues, with the loop members bent back upon themselves and the terminal



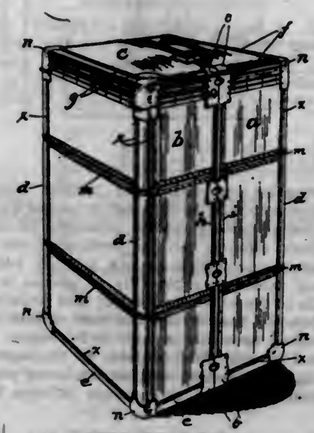
edge portion laid over upon the belt, and the tongues bent back over the terminal edge portion and secured to the belt.

1,638,467. MECHANICAL TOY. PHILLIP P. BARIE, Pittsburgh, Pa. Filed Oct. 30, 1925. Serial No. 65,753. 1 Claim. (Cl. 46—40.)



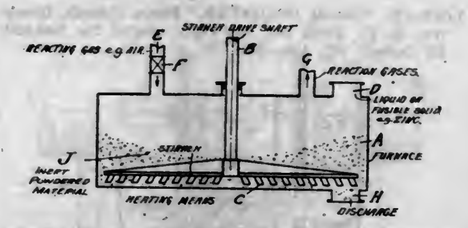
In combination, a mechanical toy comprising a base, a motor provided with a pinion and mounted on said base; a drive shaft journaled for rotation on said base; a driving gear fixed on said drive shaft and meshing with said pinion; a crank arm fixed to one end of said drive shaft; a derrick including a walking beam supported on said base; a connecting rod pivotally connected with said crank arm and with said walking beam for imparting an oscillatory movement to the latter; a small gear journaled for rotation and disposed at the top of the driving gear and meshing with the latter; a pulley fixed to said small gear to rotate therewith; a tower supporting a wind mill and mounted on said base; said windmill provided with a pulley; a belt operating on said first and last mentioned pulleys for imparting rotatory motion to said windmill; a pair of diametrically disposed, laterally extending pins fixed in said driving gear; a manikin chopper, including a jointed portion supported on said base; a pivotally mounted operating rod connecting with said manikin chopper and engaging with said pair of pins for intermittently imparting an upward movement to the jointed portion of said manikin chopper, and permitting of the downward movement of said jointed portion of the said manikin chopper by gravity; a gear suitably journaled for rotation and meshing with the rear end of said driving gear; a manikin sawyer, including a jointed portion, supported on said base; a pivotally mounted operating rod connecting with said manikin sawyer; and a connecting rod eccentrically pivoted to said rearwardly disposed gear and pivotally connected with said last mentioned operating rod for imparting a reciprocating movement to the said jointed portion of said manikin sawyer.

1,638,468. PARING AND SLICING KNIFE. JOSEPH BATTAINI, Toledo, Ohio. Filed Mar. 31, 1926. Serial No. 98,635. 2 Claims. (Cl. 30—20.)



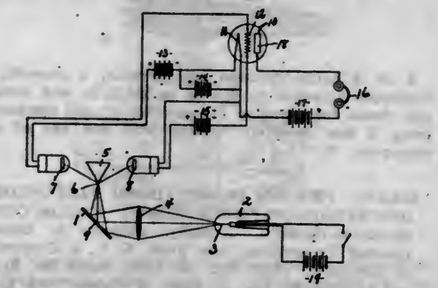
1. A paring knife having a plurality of rollers, one enclosed within another, adjacent to its cutting edge, said rollers being freely rotatable relative to the associated knife and being separable to determine the extent of permissible cut by the knife.

1,638,469. TRUCK. ANSON J. BENTLEY, Niles, Ohio. Filed Apr. 2, 1926. Serial No. 99,222. 4 Claims. (Cl. 280—114.)



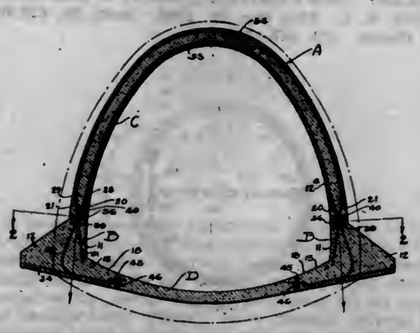
1. In a truck having a bolster and hounds, in combination, a tongue, and means to pivotally secure said tongue to said hounds comprising a pair of bolts passing therethrough, said tongue being provided with a slot cooperating with one of said bolts and a hole cooperating with the other bolt, said bolts and slot and hole being so spaced and arranged that pulling strain on said tongue is transmitted to the truck through both of said bolts.

1,638,470. WARDROBE TRUNK. CHARLES C. CALDWELL, Woodbury, N. J., assignor to The Belber Trunk & Bag Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1925. Serial No. 66,885. 1 Claim. (Cl. 190—37.)



A trunk body having angularly disposed walls, an angular protective strip at the meeting edges of such walls, and a narrow metal reinforcing strip extending over and along each edge of the protective strip.

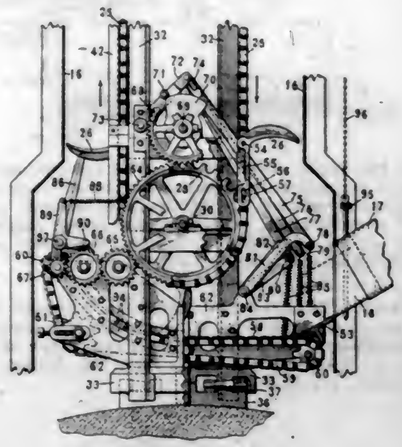
1,638,471. PROCESS OF REACTING METALS WITH GASES. HECTOR RUSSELL CARVETH, Niagara Falls, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1923. Serial No. 623,901. 13 Claims. (Cl. 23—148.)



6. The process of oxidizing a metal which consists in mixing the molten metal with sufficient inert pulverulent material to maintain the mixture in a powdered condition at the reaction temperature and adding oxygen at such rate as to maintain a reaction temperature below the fusion point of said inert material.

1,638,472. TRANSLATING DEVICE. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory, Inc., Auburn, N. Y., a Corporation of New York. Filed July 24, 1924. Serial No. 727,949. 16 Claims. (Cl. 178—88.)

1. In an apparatus of the class described, a source of light, a mirror for reflecting rays from said source, a prism in the path of said reflecting rays, means for receiving and translating rays reflected by the prism into signals including two light reactive cells, a space discharge device, and a translating device.

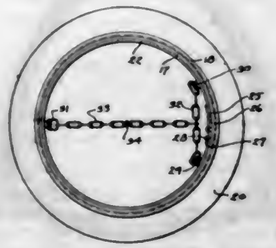


1,638,473. SEWER CONSTRUCTION. VICTOR H. COCHRANE, Tulsa, Okla. Filed June 18, 1925. Serial No. 38,045. 9 Claims. (Cl. 72—51.)

3. In a sewer construction the combination of abutments, an arch, reinforcing members embedded in said abutments and in said arch to hingedly connect the arch

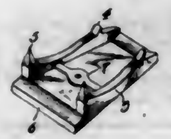
to said abutments, and diaphragm members longitudinally extending along said abutments and arch embedded therein at opposite sides of each of the joint connections provided by said reinforcing members.

1,638,474. CARGO UNLOADER. SIMON COOPER, Brooklyn, N. Y. Filed Oct. 10, 1922. Serial No. 593,522. 21 Claims. (Cl. 198—26.)



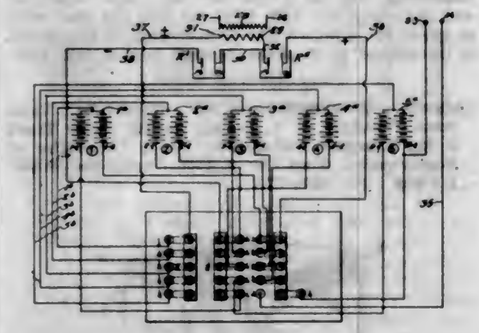
1. In a cargo unloader, an elevator, a plurality of conveyors arranged to deliver material to said elevator and means for changing the position of said elevator to bring it into receptive relation with any one of such conveyors.

1,638,475. PROCESS OF OBTAINING FAST-COLORED DISCHARGES ON FAST DYEINGS. WILLIAM COTTON, Hochst-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 16, 1926, Serial No. 81,831, and in Germany Jan. 19, 1925. 2 Claims. (Cl. 8—5.)



1. Process of obtaining fast colored discharges on fast dyeings by using such vat dyestuffs for the dyeings to be discharged as are destroyed by reducing agents with the addition of the calcium salt of the disulfonic acid obtained by sulfonating dimethylphenyl benzyl ammonium chloride, and by using for the colored discharges such vat dyestuffs as sufficiently withstand the said discharging agents.

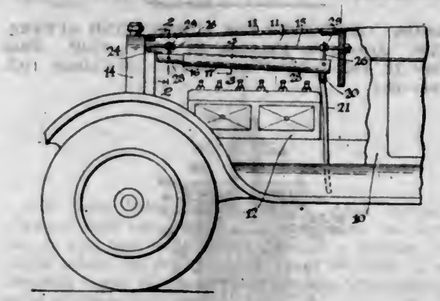
1,638,476. TIRE REMOVER. CHARLES J. DALTON, New York, N. Y. Filed Mar. 29, 1923. Serial No. 628,474. 3 Claims. (Cl. 157—11.)



1. In a device for removing tires from wheels, in combination, two metallic rings of unequal circumference one of said rings being split, said split ring provided with a plurality of brackets, cables attached to said brackets, means for applying a lifting force to one of said cables, whereby said split ring may be simultaneously contracted and lifted.

1,638,477. GANGBOARD CLEAT. GROVER LEE DYER, Richmond, Va. Filed Apr. 7, 1926. Serial No. 100,416. 2 Claims. (Cl. 85—18.)

1. In a gang plank cleat, a flat body, spaced flanges on one face of the body and extending from points spaced from one edge of the body, prongs at a rearwardly and forwardly extending angle to the flat body, the prongs extending downwardly from said flanges, the prongs forming gripping means, the ends of said flanges constituting abutments in conjunction with the adjacent part of the body.

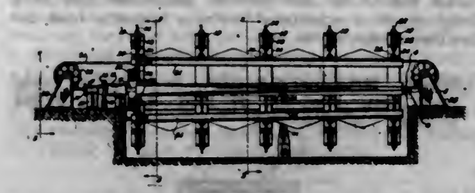


1,638,478. BATTERY-CHARGING APPARATUS. EDGAR W. ENGLE, Lake Forest, Ill., assignor to Fansteel Products Company, Inc., North Chicago, Ill., a Corporation of New York. Filed Oct. 5, 1923. Serial No. 666,701. 1 Claim. (Cl. 171—314.)

In combination, an alternating current transformer having a primary and secondary coil, a pair of electrolytic rectifiers, means joining unlike terminals of said rectifiers to one terminal of the secondary coil of the transformer, and a switch in one position adapted to join the mid points of a plurality of groups of storage battery cells to the other terminal of said secondary coil, and also join the free terminal of one of said rectifiers to the positive terminals of said cell groups, and the free terminal of said other rectifier to the negative terminals of said cell groups, said switch being adapted in another position to join said groups of cells in series relation.

1,638,479. WATER DRAIN FOR AUTOMOBILE HOODS. RALPH C. FARR, Santa Barbara, Calif. Filed Feb. 25, 1926. Serial No. 90,500. 1 Claim. (Cl. 180—69.01.)

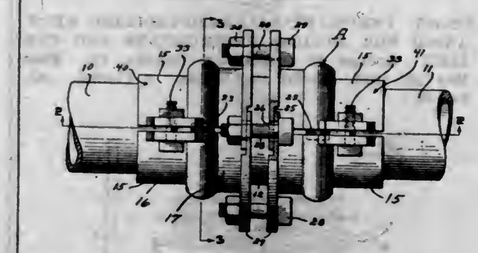
A water drain for automobile hoods comprising a pair of telescopically connected trough shaped members, a hanger pivotally and detachably connected to each trough shaped member, one end of one of the trough shaped members being provided with an outlet opening and an



extension drip plate extending outwardly from the upper portion of the outer end of the other one of said telescopic members.

1,638,480. CONTAINER OR RECEPTACLE FOR THE DISPENSING OF ICE CREAM, ICES, OR THE LIKE. MARTIN PETZUSCH, Brooklyn, N. Y. Filed Feb. 18, 1926. Serial No. 89,084. 8 Claims. (Cl. 206—46.)

1. The combination with an ice cream cone, of a container adapted to contain confections or the like, said cone and container being provided with co-operating interlocking means to hold them in secure engagement.

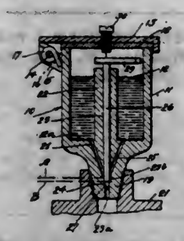


1,638,481. FLUTING MACHINE. CARL A. FRAHM, Canton, Ohio, assignor to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 9, 1926. Serial No. 134,394. 13 Claims. (Cl. 153—70.)

1. A fluting machine including a mandrel, tracks parallel to the mandrel, a movable head, plungers slidably mounted in the head and engaging said tracks, and forming rollers upon the plungers arranged to cooperate with the mandrel.

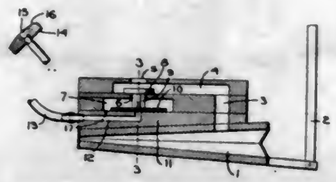
1,638,482. COLLAR LEAK CLAMP. JOHN W. FRENCH and EDWARD D. CHABASOL, Wilson, Okla. Filed Feb. 4, 1926. Serial No. 86,016. 2 Claims. (Cl. 285—152.)

2. In a collar leak clamp, the combination of a pair of cooperating sleeve sections each embodying a semi-circular shaped section having an outer pipe engaging portion and an inner collar engaging portion of greater internal diameter than the pipe engaging portion, an arcuate shaped packing groove provided inwardly of the section at the juncture of the pipe and collar engaging portions, an arcuate shaped recess formed at one end of the packing groove, a segmental shaped lip provided at the opposite end of the packing groove for fitting in the recess of its companion section, means connecting the semi-circular sections for providing sleeve sections, and means for drawing the sleeve sections toward one another when positioned about collar connected pipe sections.



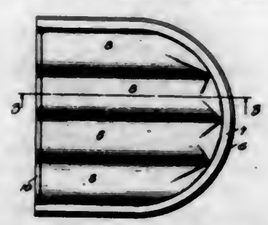
1,638,483. BOLT-CUTTING DEVICE. NICOLA GIANDONATO, Philadelphia, Pa. Filed Jan. 25, 1927. Serial No. 163,383. 2 Claims. (Cl. 164—41.)

1. A shearing attachment comprising positioning means, shearing means, shear operated ejecting means for the cut material, and means for adjusting the ejecting means.



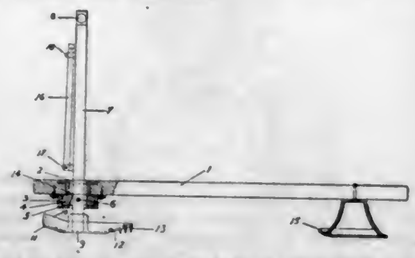
1,638,484. AUTOMATIC OIL CUP. BENJAMIN G. GILBOUGH, Los Angeles, Calif. Continuation in part of application Serial No. 537,700, filed Feb. 20, 1922. This application filed May 24, 1926. Serial No. 111,145. 2 Claims. (Cl. 184—69.)

1. In an oil cup, the combination of a body with an oil chamber and an oil feed passage therein with an oil outlet at its end, a relatively heavy valve pin longitudinally movable in the passage, an oil inlet opening leading to the passage at a distance from the oil outlet, the passage being cylindric for a distance between the inlet and outlet openings and the valve pin fitting the cylindric passage closely so that when the pin moves longitudinally it has plunger action to force oil through



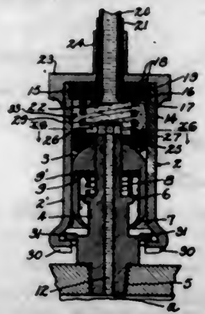
the outlet; the valve pin being free to be moved longitudinally without rotation by agitation of the cup longitudinally and free to rotate without moving longitudinally, and means to cause rotation of the pin by virtue of transverse agitation of the cup.

1,638,485. PNEUMATIC-VALVE-CONTROLLING MECHANISM FOR MUSICAL INSTRUMENTS AND THE LIKE. ADOLPH P. GUSTAFSON, Chicago, Ill. Filed May 29, 1925. Serial No. 33,643. 6 Claims. (Cl. 84—60.)



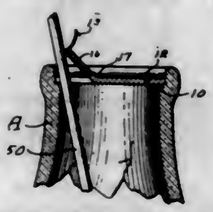
1. An inflatable valve-actuating pouch comprising two juxtaposed substantially flat sheets of flexible rubberized material, peripherally united, a base of relatively small area secured to the central portion of one of said sheets permitting flexure of substantially the full areas of said sheets and a port in said base and sheet for admitting air into said pouch.

1,638,486. CULINARY IMPLEMENT. NORA PHILLIPS HAYES, Porterwood, W. Va. Filed July 2, 1925. Serial No. 41,195. 2 Claims. (Cl. 15—236.)



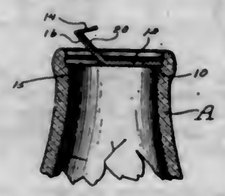
1. A culinary scraper including a flat rigid face plate, and a back plate having its side and outer end marginal portions secured to the corresponding portions of the face plate, said back plate being formed with a plurality of longitudinal corrugations cooperating with the face plate to form finger-receiving sockets open at the inner end of the scraper, said face plate having its outer end beveled to form a sharpened scraping edge.

1,638,487. COASTER VEHICLE. ELWOOD F. HESCH, Newport, Ky. Filed Aug. 27, 1926. Serial No. 132,025. 7 Claims. (Cl. 208—182.)



1. A coaster vehicle, comprising in combination with a body and a rear runner, a steering runner, means for mounting said steering runner so that the same will tilt along its axis, a plate removably mounted on the rear portion of said steering runner, and calks on said plate arranged to engage in the surface over which the runner is operating.

1,638,488. CONNECTER FOR LUBRICATING APPARATUS. ALFRED E. KELLOGG, El Centro, Calif. Filed June 12, 1922. Serial No. 567,591. 10 Claims. (Cl. 284—19.)



1. A connecter for lubricating apparatus, having in combination, an adapter having a shell; a tip adapted to be received in the shell of said adapter and comprising a core provided with a longitudinal bore, said core having transverse holes communicating with said longitudinal bore, and a sleeve slidable on said core and adapted to close said transverse holes when the adapter is removed from the tip, said sleeve and core having their upper ends rounded.

1,638,489. MILK-BOTTLE CAP. BEAT KUHNE, Lewistown, Mont. Filed Mar. 10, 1926. Serial No. 93,729. 5 Claims. (Cl. 215—51.)

1. A bottle cap comprising a closure disc having score lines provided at its under side and extending in diverging relation from the periphery of the disc, and a triangular shaped tab secured by its base portion to the under side of the disc between said score lines at a point spaced a substantial distance inwardly from the peripheral edge of the disc.

1,638,490. MILK-BOTTLE CAP. BEAT KUHNE, Lewistown, Mont. Filed Mar. 27, 1926. Serial No. 97,884. 3 Claims. (Cl. 215—51.)

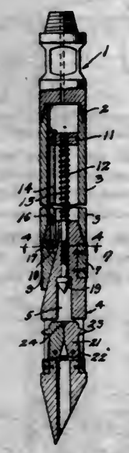
1. A bottle cap comprising a closure disc having slits extending inwardly from the peripheral edge thereof and extending in upwardly converging relation and defining a lip, and a pull tab connected with the outer edge of the lip.

1,638,491. COLLAR BUTTON. WARREN R. LARTER, Newark, N. J., assignor to Larter & Sons, Newark, N. J., a Firm. Filed Feb. 1, 1926. Serial No. 85,341. 2 Claims. (Cl. 24—101.)

1. A collar button comprising a shank having a polygonal base and a head at opposite ends, the bottom face of said base being in the form of a segment of a hollow sphere the length of the chord of which is substantially equal to the distance between diagonally opposite angles of said base.

1,638,492. METHOD FOR THE PRODUCTION OF ANHYDROUS SODIUM BISULPHITE. NAPOLEON ARTHUR LAURY, Rockville Center, N. Y. Filed Aug. 16, 1923. Serial No. 657,801. 5 Claims. (Cl. 23—114.)

1. The method of producing commercial anhydrous sodium bi-sulphite, which consists in subjecting commercial sodium carbonate to the action of substantially pure sulphur dioxide in the presence of a trace of moisture.



1,638,493. CORN POPPER. JOHN G. LE PERE, Decatur, Ill., assignor to U. S. Manufacturing Corporation, Decatur, Ill., a Corporation of Illinois. Filed Jan. 6, 1925. Serial No. 822. 10 Clams. (Cl. 53—21.)

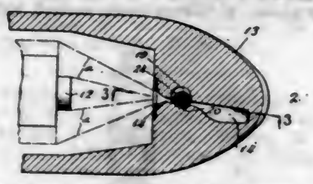
1. A device of the character described, including in combination, a main frame member having one part formed with a loop, and a basket or receptacle secured to and carried by said loop, the latter forming a marginal frame for the basket or receptacle, said main frame member also having a pair of members extending parallel from the loop and arranged close to each other to form a handle and a gripping member at the end of the handle, a frame for a lid or cover and an operating handle formed with an open loop, and material secured thereto to form a lid or cover said last mentioned frame having a portion extending along said handle and provided with means for guiding the same relative to said handle.

1,638,494. CASING PULLER AND CUTTER. RUSH C. LEWIS and FRANK S. HARRIS, Abilene, Tex. Filed Feb. 11, 1925. Serial No. 8,488. 1 Claim. (Cl. 294—86.)

In a casing puller of the class described, a head, a body, a cylinder interposed between and connected at its ends with said head and body respectively, said head and said body being provided with alined longitudinally disposed bores, a piston slidable in said cylinder, a stem connected with said piston and slidable in the bore in said body, a spring surrounding said stem and interposed between the body and piston, said body being provided on one side and adjacent its point of connection to the cylinder in a tapered groove and on its diametrically opposite side is a pocket, a toothed slip slidable in said tapered groove, a toothed block secured rigidly in said

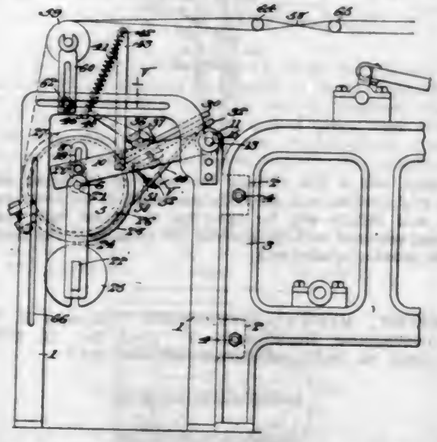
pocket, and a link slidably connected at its upper end to said position and pivotally connected at its lower end to said slidable slip for operating the latter, said body being provided with an opening for passage of the lower end portion of said link.

1,638,495. MUSICAL INSTRUMENT. CHARLES H. R. LONGBOTTOM, Brooklyn, N. Y. Filed Dec. 11, 1925. Serial No. 74,757. 3 Claims. (Cl. 84—285.)



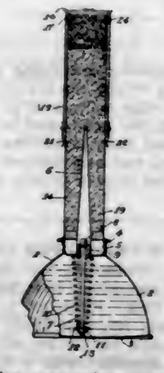
1. A musical instrument comprising a sound box having a base extending beyond the box at one end and provided at each side edge with a grip for enabling the box to be grasped in the hands and to be swung during playing, said box and base supporting a set of strings adjacent to each grip and so positioned and spaced as to be within reach of the player's thumbs when grasping the grips.

1,638,496. TENSION DEVICE FOR LOOM SHUTTLES. JONATHAN LUCAS, Savannah, Ga., assignor to Lucas-Lamborn Loom Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 1, 1926. Serial No. 138,874. 3 Claims. (Cl. 139—212.)



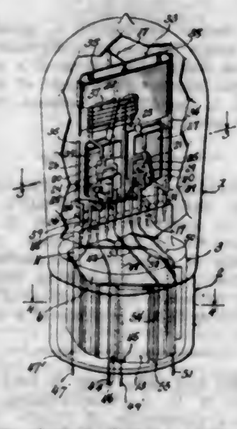
1. In a loom shuttle having an exit channel for the shuttle thread and provided with a transverse chamber intermediate of the ends of said channel, said chamber extending below said channel to form a transverse depression therein, a cylindrical weight freely movable in

said chamber and arranged in rolling contact with said thread and adapted to bear with its circumferential sur-



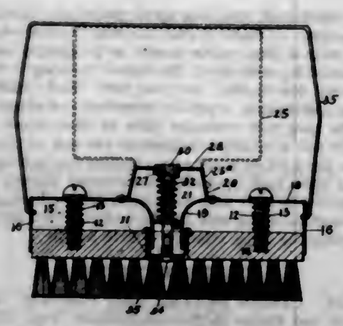
face upon said thread and by its weight thereon to maintain said thread under a tension and to clamp the thread in said depression when pull thereon is released.

1,638,497. LET-OFF MECHANISM FOR LOOMS. WILLIAM J. LUTTON, Paterson, N. J. Filed Mar. 5, 1926. Serial No. 92,571. 10 Claims. (Cl. 139—100.)



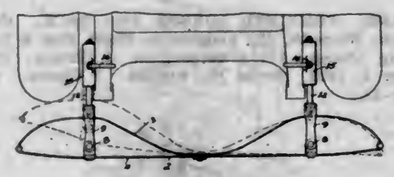
1. In a loom, a frame, a warp beam vertically movable in said frame, mechanism frictionally engaging said beam for arresting the rotary movement thereof, and means for releasing said mechanism, said means normally engaging the mechanism for holding the beam and arranged to be brought into contact with the frame for actuating it by the vertical movement of the beam.

1,638,498. TORCH. WILLIAM H. MCNUTT, New York, N. Y. Filed Oct. 18, 1926. Serial No. 142,243. 3 Claims. (Cl. 158—94.)



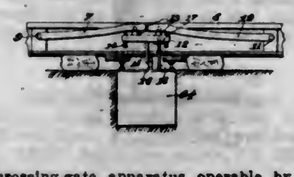
1. A torch device comprising a torch tube perforated for a portion of its length, a mass of refractory porous material in the tube, a sleeve slidable outside of the tube to entirely expose the perforations in one position, and to slide to enclose more or less of the perforated portion, and restrict the flame, said sleeve being slightly larger than the tube to provide a free endwise passage for the air through the sleeve between the tube and sleeve, in all intermediate positions to form a Bunsen burner flame, and means to hold the sleeve in adjusted positions.

1,638,499. ELECTRON-DISCHARGE DEVICE. ARISTOTE MAVROGENIS, Milwaukee, Wis. Filed Jan. 2, 1926. Serial No. 78,876. 11 Claims. (Cl. 250—27.5.)



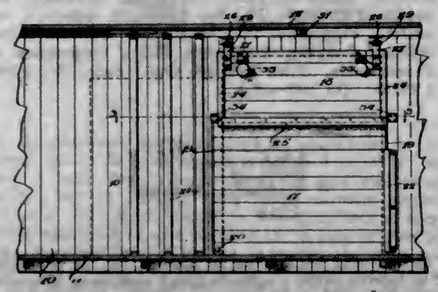
1. A unitary electron discharge device including an evacuated vessel having a relatively large hollow neck, said device including an audion, a thermionic rectifier, and a thermionic current limiting device all mounted within the evacuated portion of said vessel, and a condenser cooperating with said rectifier and current limiting device and mounted within the hollow neck of said vessel.

1,638,500. FLOOR WAXER. JAMES H. MILLHOLLAND, Philadelphia, Pa., assignor to John S. Clement Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1925. Serial No. 48,744. 2 Claims. (Cl. 91—39.)



1. In a floor waxer comprising a brush having an apertured back; a relatively movable casing having a yielding connection to the brush back and said casing being provided with a valved discharge chamber forming a tapered reservoir-attaching upward projection thereon and a depending aperture-communicating funnel slidable in said aperture; and a valve spring-seated in the top closure plate of said reservoir-attaching projection and having a depending stem in said chamber supported by the brush back below said depending funnel.

1,638,501. BUFFER OR BUMPER FOR AUTOMOBILES. FRANK MISCHE and KARL ROSCHITSCH, Cleveland, Ohio. Filed Mar. 26, 1927. Serial No. 178,550. 10 Claims. (Cl. 293—55.)

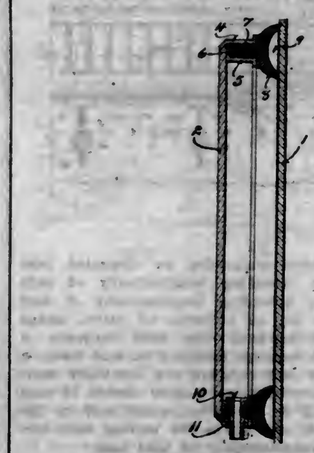


1. A buffer or bumper for automobiles, comprising means for supporting the main bumper elements, including spring controlled rack and gear mechanism adapted to yieldingly resist rearward movement of the bumper.

1,638,502. RAILWAY CROSSING GATE. IRA A. MOORE and THOMAS M. ELY, Cedar Rapids, Iowa. Filed Dec. 3, 1924. Serial No. 753,694. 3 Claims. (Cl. 246—126.)

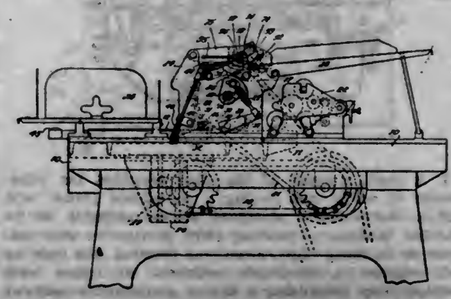
1. In crossing-gate apparatus operable by an electric motor, switches in the motor circuit operable by rails depressed by a wheel-flange, a pair of such rails, a coupling therefor provided with a fixed switch-operating lever, an oscillating switch engaging said lever on one side and a fixed terminal engaged by said switch as moved in one direction only, whereby the tilt of the coupler closes the switch by the depression of one rail, but not the other.

1,638,503. GRAIN DOOR. CHARLES F. MORGAN, Jackson, Tenn. Filed Jan. 19, 1926. Serial No. 82,847. 1 Claim. (Cl. 20—29.)



A car door including in combination with a box car having a side wall provided with a door opening, mating door sections, means swingingly mounting one of said sections for movement to open position in a plane parallel to said side wall, means mounting the other of said sections to swing inwardly and upwardly to open position and including removable hinge pins, the latter section being provided with hand openings through which said hinge pins may be removed for detaching the latter section, and means for securing the sections in closed position overlying said opening.

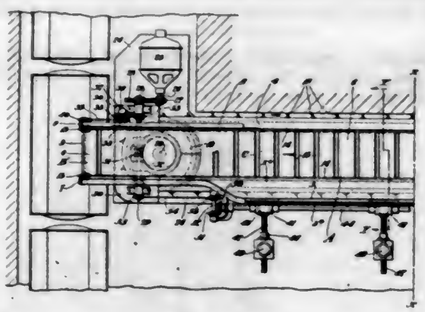
1,638,504. WATERPROOFED INSOLE. CHARLES A. MORIN, Boston, Mass. Filed Aug. 31, 1925. Serial No. 53,511. 4 Claims. (Cl. 36—44.)



1. An insole comprising a base layer and a layer of waterproofing material superimposed thereon, said layers being channeled to provide an out-turned stitch-anchoring lip adapted to be subsequently turned down and cemented back in place after the shoe has been lasted with the waterproofing material sealing the opening formed by the channel cut so as to present a smoothly closed joint.

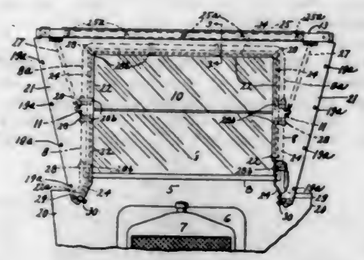
1,638,505. ANTIFROST VISION GLASS. WILLIAM C. NASH, Neenah, Wis. Filed July 13, 1925. Serial No. 43,240. 3 Claims. (Cl. 20—40.5.)

1. A removable attachment for a windshield comprising a glass disc, a ring carrying said disc, a rubber annular member carried by said ring and projecting therefrom, said member having suction means at its outer end adapted to engage the windshield and space said disk from said windshield, and pipes leading into and out of said device through said ring and adapted to conduct a heating fluid to and from the space between said disk and said windshield.



1,638,506. PLATEN RELEASE FOR PRINTING PRESSES. HENRY C. OSBORN, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 5, 1923. Serial No. 616,924. 17 Claims. (Cl. 101—284.)

1. The combination of two cooperating members adapted to act on interposed material, means for drawing such material between the members, a shiftable ro-

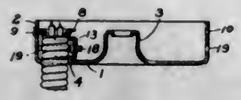


tative testing device, means for shifting it into engagement with the material, and mechanism axially connected with said device and driven by its rotation while in such engagement to control the mutual presentation of said members to each other.

1,638,507. MINING AND LOADING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed Oct. 10, 1925. Serial No. 61,796. 8 Claims. (Cl. 262—9.)

1. A mining machine comprising an elongated base member, a conveyer extending longitudinally of said base, a cutter chain extending longitudinally of said base and adapted to cut on a horizontal plane, means for directing mined material onto said conveyer, a track on said base, a carriage mounted on said track, a platform mounted on said carriage and vertically movable relative thereto, cutting mechanism carried by said platform and adapted to cut a horizontal kerf in the material to be mined, and means for moving said carriage and platform longitudinally of said base.

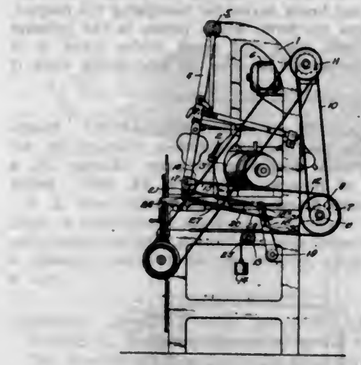
1,638,508. STORM SHIELD FOR AUTOMOBILES. CLARK M. PAULSON, Montevideo, Minn. Filed Sept. 25, 1925. Serial No. 58,526. 2 Claims. (Cl. 296—93.)



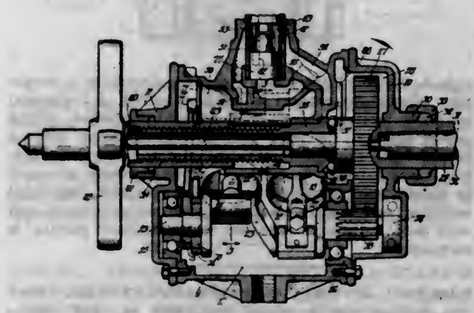
1. A shield curtain of the class described for windshields of motor cars having a windshield frame, said curtain comprising a shield of flexible material cut in inverted U-shape, a padding strip secured to said material at its inner edges, means for pressing said padding strip against a windshield adjacent its frame, said padding strip comprising a fibrous compressible material and said means for pressing the same against the windshield consists of a number of spaced spring clamps each frictionally engaging the windshield frame, a sectional metal bar secured in the shield externally of said strip, each said spring clamp having an arm arranged to engage said bar and press it and the padding strip against the windshield.

1,638,509. COMBINED MIRROR AND RACK. HUGO PICK, Winnetka, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1923. Serial No. 648,989. 3 Claims. (Cl. 45—18.)

1. In a device of the character described, the combination of a mirror, an outer frame composed of sheet metal bars, each bar having a side and a front flange, an inner frame composed of sheet metal strips, each strip comprising a front and side flange, the front flanges of said inner frame being secured to the front flanges of the outer frame, reinforcing tongues between the rear margins of the side flanges of the bars and the rear margins of the side flanges of the strips, and means connected to said last mentioned side flanges for holding the mirror.



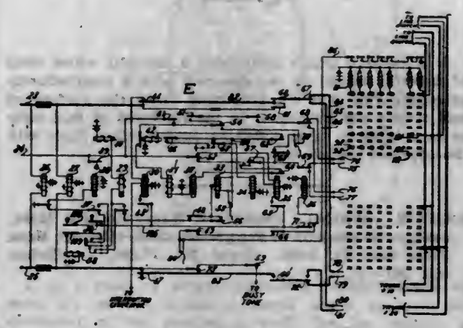
1,638,510. OUTLET BOX. CLARENCE RENSHAW, deceased, Pittsburgh, Pa., by Maidee B. Renshaw, executrix, Pittsburgh, Pa., assignor to National Metal Molding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 16, 1925. Serial No. 9,560. 1 Claim. (Cl. 247—25.)



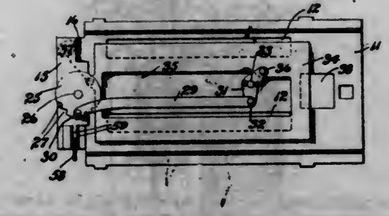
In an outlet box having an opening for the admission of an electric cable, a cable-clamping member of channeled cross-sectional form having a web portion and projecting parallel wing portions being adapted to bear against the surface of the cable, and means projecting through the wall of the box and connected to said web portion for adjusting the clamping-member.

1,638,511. COPYING LATHE. HERMAN A. SCHULTZ, Chicago, Ill., assignor to Charles E. Reed. Filed Nov. 30, 1925. Serial No. 72,220. 4 Claims. (Cl. 142—15.)

1. A copying lathe comprising, in combination, cutting mechanism and a pattern follower, a swing-frame for the pattern and work, a toggle pivotally connected at one arm with the stationary frame of the machine and at its other arm with said swing-frame, and a spring yieldingly resisting movement of the arms of said toggle in one direction about the pivotal connection between said arms.



1,638,512. PNEUMATIC MOTOR. ERNEST H. SHAFF, Grand Haven, Mich., assignor to Wm. H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed July 30, 1925. Serial No. 46,964. 4 Claims. (Cl. 121—33.)

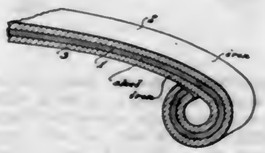


1. A pneumatic motor having, in combination, a V-shaped casing, a plurality of cylinders formed in the sides of said casing, the cylinders in each side being parallel, and in opposite sides being mutually perpendicular, a crank shaft, pistons in said cylinders and operatively connected to said crank shaft, a pair of parallel valve chambers formed in said casing in the angle between said cylinders and extending perpendicularly thereto, two pairs of passages, the passages of each pair opening side by side into one of said chambers and centrally thereof and connecting same respectively with the adjacent parallel cylinders, two sleeves, one in each chamber and each sleeve having ports registering with said passages, a pair of valve members, one rotatable in each sleeve and each member having a longitudinal bore in one end opening into a central longitudinal slot and having a peripheral recess opposite said slot, said slot and said recess being adapted to be moved alternately and successively into communication with said ports, means connecting said valve members to said crank shaft to drive the former in synchronism with said pistons, a central valve chamber in said casing, a forked passage connecting said central chamber with the interior of said sleeves opposite said first mentioned passages for continuous communication with said recesses, a second forked passage connecting said central chamber with the ends of said sleeves, and valve means in said central chamber for selectively controlling the passage of pressure fluid through said forked passages.

1,638,513. AUTOMATIC TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 3, 1925. Serial No. 54,182. 9 Claims. (Cl. 179—18.)

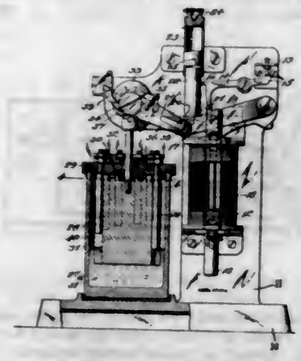
1. In a telephone system, a connector switch having two sets of wipers, a plurality of levels of bank contacts accessible to said wiper sets, means for directively operating said switch to cause each of said wiper sets to be positioned opposite a different level of bank contacts, means for causing said wipers to successivley engage all the contacts in the level opposite which they have been positioned, lines terminating in said bank contacts, means for making said lines busy, means normally causing only one set of wipers to test for an idle line as it successively engages its bank contacts, and means for causing only the other wiper set to test if all lines available to the first wiper are busy.

1,638,514. SHUTTER FOR COMPUTING MACHINES. ANTHONY VANDERVELD, Grand Rapids, Mich. Filed Apr. 3, 1922. Serial No. 549,150. 11 Claims. (Cl. 33—133.)



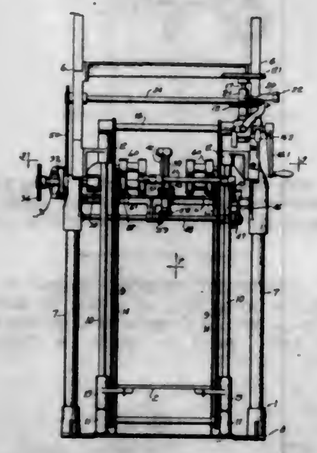
1. In a measuring and computing machine, means for measuring a length of fabric material, means for indicating the cost thereof, a plate having openings through which said cost indications are visible, a shutter for covering said openings, means for manually operating the shutter, and means automatically locking the shutter operating means against movement when the machine is moved away from zero position.

1,638,515. HOLLOW POLE. HENRY KERSHAW WALKER, London, England. Filed Apr. 27, 1925, Serial No. 25,990, and in Australia June 11, 1924. 3 Claims. (Cl. 189—23.)



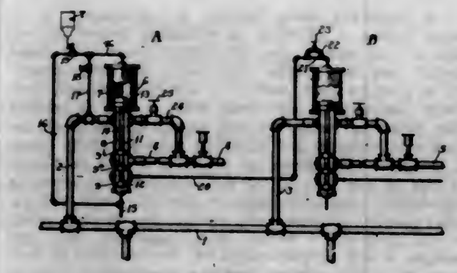
1. A tubular article comprising a helically coiled strip of material formed on one side only with a longitudinally extending rib, said rib projecting from the surface of said strip a distance equal to the thickness of said strip so as to present when coiled an outer surface flush with the adjacent convolution.

1,638,516. SPRING. CHARLES I. WARE, Holyoke, Mass., assignor of one-half to Fred E. Maxfield, Holyoke, Mass. Filed Dec. 26, 1925. Serial No. 77,864. 5 Claims. (Cl. 267—47.)



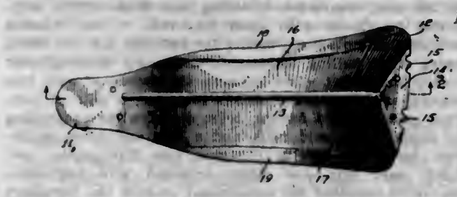
1. As an article of manufacture, a unit for a leaf spring comprising an integral mass of layers of iron and steel.

1,638,517. CONTACT-MAKING DEVICE. FRED C. BAUER, Irvington, N. J., assignor to Bauer Devices Inc., a Corporation of New York. Filed Aug. 13, 1925. Serial No. 49,944. 2 Claims. (Cl. 200—105.)



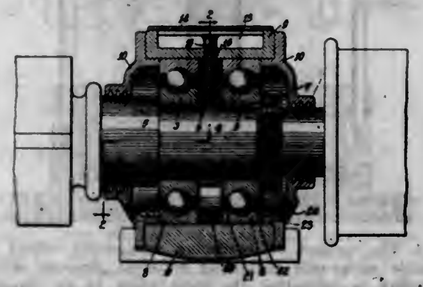
2. A contact making device comprising a support, a receptacle and a magnet placed side by side on the support, a lever and an arm opposed thereto, both pivoted to the support and in pivotal connection, a rod in the magnet and secured to the lever, a set of contacts in the receptacle and near the edge, a plunger in the receptacle with grooves to receive the contacts, mercury in the receptacle, a connection for moving the plunger from the arm; a make and break device for energizing the magnet, a cylinder above the lever, and a piston in the cylinder to open the said make and break device when it is raised by the lever and to close the said device when it descends.

1,638,518. CARTON-BLANK SEPARATOR. HAZEN KIRKE BECKER and EMIL G. JURGENS, Chicago, Ill., assignors to Peters Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1925. Serial No. 50,260. 10 Claims. (Cl. 271—18.)



1. A device of the class described comprising a magazine adapted to support a stack of cards, a horizontal conveyer located at one side of said magazine, lifting means adjacent the upper end of said magazine adapted to penetrate the uppermost card and to separate a portion thereof from the stack, a second conveyer arranged to elevate said separated card portion to said horizontal conveyer, and means arranged to push the uppermost card onto said horizontal conveyer while its said portion is elevated.

1,638,519. AUTOMATIC SPRINKLING SYSTEM. JOHN A. BROOKS, Detroit, Mich. Filed Nov. 18, 1926. Serial No. 149,028. 6 Claims. (Cl. 137—78.)



6. In an automatic sprinkling system, having a plurality of control units, a separate supply duct for each unit, a separate discharge duct for each unit, and means controlled by fluid pressure from a preceding unit to operate a succeeding unit after the former has approached the end of its spraying period.

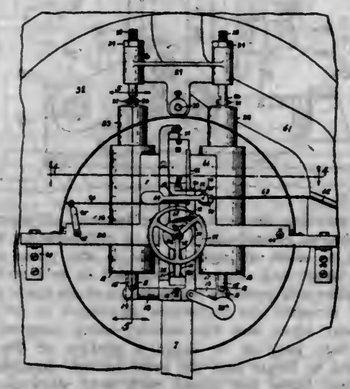
1,638,520. METAL SHOE SHANK. CHARLES H. BROWN, Flushing, N. Y. Filed Apr. 22, 1924. Serial No. 708,237. 5 Claims. (Cl. 36—76.)

1. A shoe shank as described comprising an arched plate, a longitudinal rib centrally disposed on said plate, and flanges extending from the side edges of said plate a distance requisite for engagement under the welt of a shoe.

1,638,521. ANTIFRICTION-BEARING LUBRICATION. HAROLD E. BRUNNER, Mamaroneck, N. Y., assignor to The Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 15, 1925. Serial No. 56,462. 5 Claims. (Cl. 308—187.)

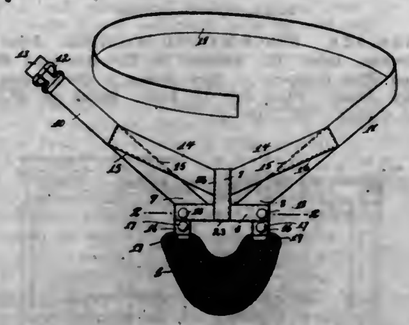
1. The combination with a housing, a rotary shaft mounted therein by a pair of spaced apart anti-friction bearings, of means to supply lubricant between the anti-friction bearings, the bearings being so mounted in the housing that there is a lubricant space afforded at the lower portion between the bearings, and there being a space afforded at the lower portion outwardly of each of the bearings for receiving used and surplus lubricant.

1,638,522. PROCESS OF CONVERTING A CYANIDE COMPOUND INTO AMMONIA. GUY H. BUCHANAN, Westfield, and JOHN L. OSBORNE, Elisabeth, N. J., assignors to American Cynamid Company, New York, N. Y., a Corporation of Maine. Filed Dec. 18, 1923. Serial No. 681,445. 5 Claims. (Cl. 23—195.)



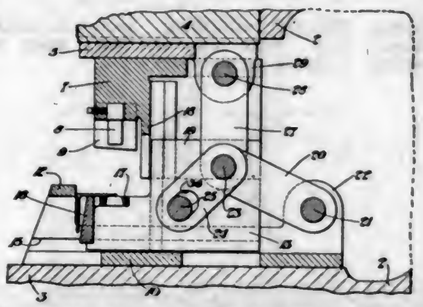
1. A method of forming ammonia which comprises digesting a composition containing calcium cyanide with water at a super-atmospheric pressure and at elevated temperatures, maintaining said pressure by venting the ammonia produced, and then expelling the remainder of the ammonia.

1,638,523. FOUNTAIN HAIR COMB. JOHN W. BUROWITZ, Detroit, Mich. Filed Feb. 2, 1927. Serial No. 165,276. 4 Claims. (Cl. 132—13.)



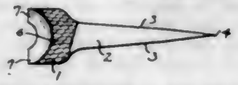
1. A device of the class described comprising a tubular handle; a tubular holder carried by said handle, having on one of its faces an axially extending groove and provided at opposite sides of said groove with a plurality of perforations and a comb detachably positioned in said groove.

1,638,524. WEIGHT INDICATOR. ADOLPH A. CAILLE, Detroit, Mich. Filed Sept. 23, 1921. Serial No. 502,675. 2 Claims. (Cl. 194—47.)



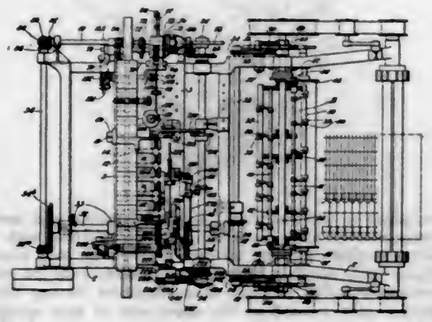
1. In a scale, a weight indicating pointer, means to move the pointer, a load actuated device to limit the movement of the pointer, a shaft for the pointer, a ratchet wheel on the shaft, a pawl adapted to engage the ratchet wheel and prevent rotation of the pointer shaft, a lever to lift the pawl, check operated means connected to the lever to swing the same and lift the pawl, a latch to hold the lever elevated, a bar connected to the load actuated device to release the pawl from the latch, and means connected to the pointer operating means to release said bar from said latch.

1,638,525. SUSPENSORY BANDAGE. ARRON R. CHISHOLM, East Orange, N. J. Filed Apr. 30, 1926. Serial No. 105,654. 1 Claim. (Cl. 128—158.)



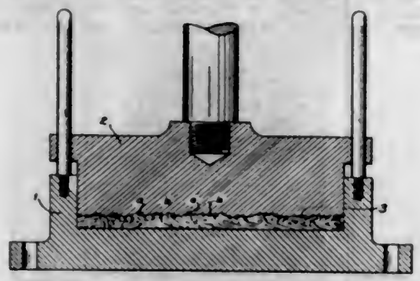
A device of the character described comprising a sack, a cross-member having means for supporting the sack, a relatively short upright member secured to said cross-member, belt members secured to opposite ends of said cross-member, and inclined brace members having their adjacent ends secured to the upper end of said upright member, said brace members being fixedly connected with the belt members and disposed at an acute angle to the belt members and overlapping the latter for a greater portion of their length, all of said members being of flexible inelastic webbing.

1,638,526. COPING AND PUNCHING MACHINE. HANS L. CHRISTIE, Los Angeles, Calif. Filed Feb. 2, 1927. Serial No. 165,409. 8 Claims. (Cl. 164—11.)



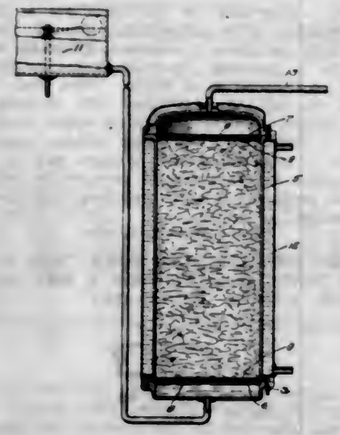
3. A machine for coping, punching and clipping rolled metal shapes, comprising a base, a reciprocating member adapted to move at right angles to the plane of said base, a punch and shear blade carried by said reciprocating member and movable therewith, a shear blade and die member mounted for transverse movement on said base, said shear blade and die member being adapted to be moved into position to shear a portion of the work-piece and to locate said die prior to the engagement of said shear blade and punch with said work-piece, and means for moving said shear blade and die transversely of said base.

1,638,527. GOLF TEE. GEORGE CLAUSING, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Filed Mar. 19, 1927. Serial No. 176,810. 2 Claims. (Cl. 273—33.)



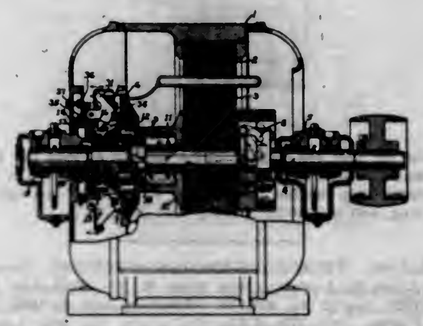
1. In a golf tee, a head having a semi-circular depressed upper surface, and a plurality of semi-circular upstanding golf ball engaging edges, said depressed surface and golf ball engaging edges being laid out on the surface of the semi-circular head, and a depending ground engaging member for supporting the head.

1,638,528. FENCE-MAKING MACHINE. JOHN A. COCKER, Joliet, Ill., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed July 13, 1925. Serial No. 43,170. 11 Claims. (Cl. 140—5.)



1. A machine for making lawn fence having a plurality of spaced line or cable strands, each of which is composed of a plurality of wires twisted together, and spaced picket wires arranged transversely of the line strands and held between the twists thereof, said machine comprising a suitable frame, a pull-out drum on said frame adapted to pull the line or cable strands through the machine, means for revolving said drum with a step-by-step movement with short intervals of rest between each step of movement, means for twisting the line wires during their pulling movement, means for automatically feeding the picket wires between the twists of said line strands, said last-named means including a pair of combined crimping and feeding rolls, a clutch for controlling the operation of said rolls, and a cam and lever mechanism for automatically engaging and disengaging said clutch, said cam disk being provided with adjustable cam faces mounted for adjustment around the periphery of said cam disk so as to vary the length of the cam faces and thereby vary the engagement time of said clutch and thus vary the length of said picket wires.

1,638,529. LUSTROUS, VARIEGATED, PLASTIC PRODUCT AND METHOD OF MAKING SAME. HERBERT A. COOK, Bloomfield, N. J. Filed Jan. 29, 1927. Serial No. 164,527. 11 Claims. (Cl. 18—51.)

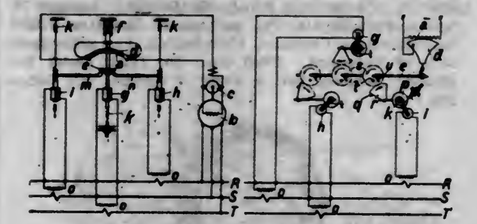


1. The method of producing ornamental effects in plastic compounds containing scale-like pigments which consists in subjecting the same while at an elevated temperature to the action of a die having a highly uneven impression surface, and then removing the principal portion of the superficial pattern impressed on the plastic and polishing the resultant surface of the plastic.

1,638,530. REMOVING OIL FROM OIL-BEARING MATERIALS. WILLIAM HOSKINS, Chicago, Ill. Filed Mar. 1, 1922. Serial No. 540,346. 3 Claims. (Cl. 87—6.)

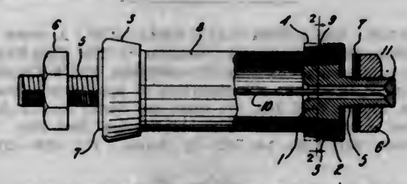
1. The process of removing oil from comminuted oil-bearing material which consists in packing said material in a confined body between two porous septums, providing between the particles adjacent one septum a continuous phase of the oil therefrom, and passing a liquid other than the oil of said material through the last-named septum and the oil-bearing material, thereby displacing the oil and forcing it through the oil-bearing material and the opposite septum without substantial admixture with the liquid.

1,638,531. ELECTRIC MOTOR. HARRY W. JEANNIN, Toledo, Ohio, assignor to The Jeannin Electric Company, Toledo, Ohio, a Corporation of Ohio. Filed May 11, 1925. Serial No. 29,295. 6 Claims. (Cl. 172—279.)



1. In an electric motor, a motor shaft, a commutator, brushes in contact with said commutator, pivoted brush carrying arms, the axes of whose pivots are mounted in planes at right angles to the axis of the motor shaft, said arms being disposed in tangential relation to said motor shaft, a speed responsive device, and connections between said speed responsive device and said brush carrying arms for moving said brushes from said commutator after the motor speed has attained a predetermined maximum.

1,638,532. SYRINGE HEAD. ERNST KALLMEYER, New York, N. Y. Filed Feb. 2, 1924. Serial No. 690,135. 5 Claims. (Cl. 128—239.)

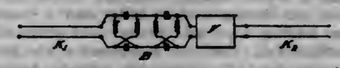


1. A head for syringes comprising: a chamber-forming elongated body-member of wave-like extending cross section so as to form alternative ribs and channels on its outer circumference; in combination with an inwardly domed end wall having fluid outlet openings directed substantially perpendicularly to the axis of the body-member, so that the fluid jets do not strike directly against the epidermis but mingle within the cavity of the domed wall, to exude gradually over the crest of the domed part.

1,638,533. PROTECTIVE DEVICE FOR USE IN POLYPHASE-CURRENT INSTALLATIONS. ROBERT KELLER, Ennetbaden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri and Cie., Baden, Switzerland. Filed Nov. 3, 1925, Serial No. 66,617, and in Germany Nov. 17, 1924. 12 Claims. (Cl. 171—229.)

1. Means for controlling overloads in polyphase installations comprising a single regulating member to control the current supplied by the generator, a plurality of electrically separate electromagnetic devices connected one in each phase and an operative connection between each electromagnetic device and the regulating member.

1,638,534. CARTRIDGE FUSE. LE ROY W. KELSAY, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 5, 1924. Serial No. 724,372. 3 Claims. (Cl. 200—132.)



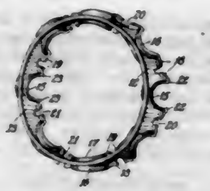
1. In an electrical cartridge fuse, a hollow cylindrical casing, a fusible link, frustro-conical contact plugs in the ends of said casing and supporting said fusible link, said plugs being cone-shaped and their largest diameter being greater than the inside diameter of said casing and having external longitudinal ribs to engage the inside of said casing, and cup-shaped ferrules secured over the distorted ends of said casing and including said plugs.

1,638,535. PLASTIC MATERIAL. ARCHIE R. KEMP, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 12, 1924. Serial No. 725,691. 14 Claims. (Cl. 18—53.)

1. A material having the thermoplastic properties of gutta percha comprising a rubber mixed with 8 to 16% sulphur and subjected to a temperature sufficiently high to render the material thus thermoplastic.

1,638,536. DISTORTION COMPENSATOR. KARL KÜPFMÜLLER, Berlin-Friedenau, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Feb. 1, 1924, Serial No. 689,972, and in Germany Oct. 5, 1923; Nov. 27, 1923. 6 Claims. (Cl. 178—44.)

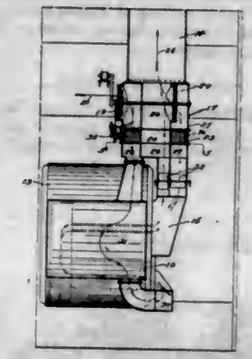
1. The combination in a wave transmission system of a loaded line for the transmission of signals over long distances, with a localized compensating network, which pro-



duces a phase displacement supplementary to that produced by the loaded line, so that the phase angle between the initial voltage and the terminal voltage increases substantially in proportion to the frequency of the transmitted waves.

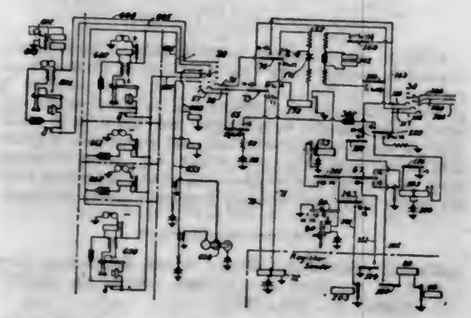
1,638,537. CAGE FOR BALL BEARINGS. ANDREW H. LINDB, Philadelphia, Pa., assignor to The Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 20, 1926, Serial No. 82,568. Renewed Dec. 4, 1926. 7 Claims. (Cl. 308—201.)

1. A spacing cage for ball bearings consisting of a folded body portion presenting two plates disposed face to face and provided at intervals in their edges with open notches, and having flanges extending outwardly from the notches laterally beyond the outer faces of the plates and constituting conjointly ball holding sockets, the flange upon each plate being continuous and extending along the edge of such plate between sockets.



1,638,538. CAGE FOR BALL BEARINGS. ANDREW H. LINDB, Philadelphia, Pa., assignor to The Hess-Bright Manufacturing Company, Philadelphia, Pa., a Corporation of Delaware. Continuation of applications Serial No. 82,569, filed Jan. 20, 1926, and Serial No. 121,511, filed July 10, 1926. This application filed Nov. 17, 1926. Serial No. 148,782. 6 Claims. (Cl. 308—201.)

1. A spacing cage for ball bearings comprising a flat body portion provided in its edge with open notches, and having flanges projecting outwardly from the edges of said notches laterally beyond the faces of the body portion and constituting conjointly sockets for holding the balls as an independent structure, the flanges being continued and extending along the edge of the body between sockets.



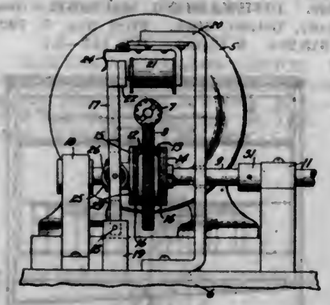
1,638,539. REGENERATIVE AIR AND GAS PREHEATER. FREDRIK LJUNGSTRÖM, Lidingo-Brevik, and NILS FREDRIK FILEMON ANDERSSON, Stockholm, Sweden, assignors to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Aug. 3, 1922, Serial No. 579,528, and in Sweden Nov. 21, 1921. 10 Claims. (Cl. 110—56.)

1. In a marine boiler plant, the combination with a boiler and a stack leading vertically therefrom; of a channel for air leading to said boiler and a channel for flue gases leading from said boiler, said channels lying partly within said stack, a regenerative air preheater comprising a mass of regenerative material having passages through the same for air and flue gases, means for causing relative motion between said channels and said mass, a casing around said mass forming a section of said stack, a second casing forming a section of said stack above said preheater, said last named casing having an aperture therein and being divided to form the

inlet for said air channel and a portion of said flue gas channel, a fan located in said inlet aperture, a fan located within the flue gas channel within said last-named casing, and means for driving said fans.

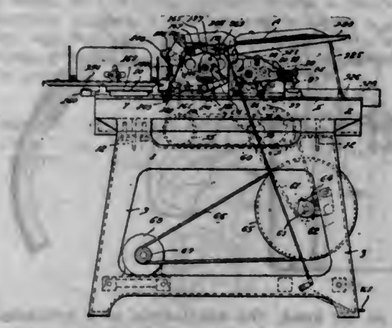
1,638,540. TELEPHONE-EXCHANGE SYSTEM. GEORGE ALBEN E. LUNDELL, New York, N. Y. Filed Apr. 11, 1921, Serial No. 460,271. Renewed Jan. 8, 1927. 6 Claims. (Cl. 179—6.3.)

6. In a telephone exchange system, a selective party line, a direct line having a polarized device, a plurality of variously characterized sources of current adapted to signal a party of the line, a plurality of variously characterized sources of current adapted to control the polarized device selectively, and a single selecting means for selecting any one of said sources.



1,638,541. CUSHION MATERIAL FOR BOTTLE CLOSURES. CHARLES E. MCMANUS, New York, N. Y. Filed July 6, 1922. Serial No. 573,178. 5 Claims. (Cl. 154—45.5.)

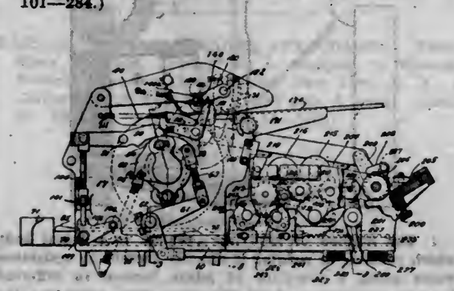
1. Cushion material for bottle closures embodying therein, in a unitary structure and in strip form, a lamina of resilient material, a facing lamina consisting



of liquid and gas impervious fibrous material, an intermediate lamina of fibrous material bonded to said resilient material, and a stratum of moisture resisting cement bonding said intermediate and said facing lamina.

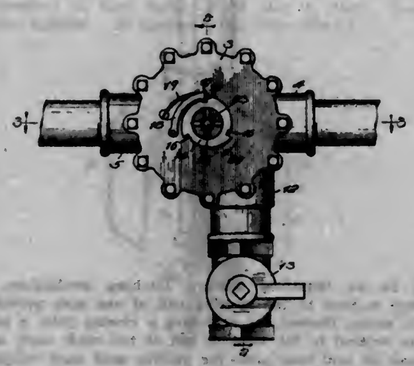
1,638,542. CLUTCH. JOSEPH O. MESA, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1924. Serial No. 711,752. 2 Claims. (Cl. 192—84.)

1. In combination, a clutch comprising a driving shaft, a pinion fixedly mounted on said shaft, a gear interlocking with said pinion and having friction surfaces on opposite sides, a driven shaft arranged to rotatably support said gear, a pair of discs arranged adjacent to the opposite sides of said gear, friction members secured to said discs and in engageable relation with the friction surfaces of said gear, a pair of standards for supporting said driven shaft, a collar fixedly mounted on said driven shaft adjacent to one of said standards, an electromagnetic means for sliding first, one of said discs into engagement with one of said friction surfaces of said gear and secondly, both disc and gear into engagement with the other of said discs to effect the rotation of said driven shaft, said collar being provided for the purpose of preventing the longitudinal movement of said driven shaft when said gear engages the second mentioned disc.



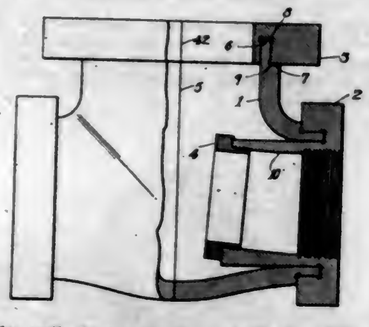
1,638,543. PRINTING PRESS. LAWRENCE H. MORSE, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 20, 1922. Serial No. 602,161. 18 Claims. (Cl. 101—280.)

1. In a printing press of the bed and cylinder type, the combination with a reciprocating bed, of a rotary platen eccentrically mounted, a spring tending to raise the



platen from the bed, a latch normally preventing such action, and a cam on the bed operating to release the latch.

1,638,544. PRINTING PRESS. LAWRENCE H. MORSE, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1925. Serial No. 14,013. 18 Claims. (Cl. 101—284.)



1. In a printing press, the combination of a printing couple, a variable cam on one member thereof, mechanism actuatable by the cam for causing the couple to coact and means controlled by the paper for varying said cam effect.

1,638,545. TRAP. RUDOLPH MUELLER and OTTO L. MUELLER, Chicago, Ill. Filed July 24, 1922. Serial No. 576,932. 1 Claim. (Cl. 210—165.)

In a trap of the kind described, a cylindrical chamber, an inlet therefor and an outlet arranged in the cylindrical wall and oppositely disposed, an axial shaft in the chamber, a plurality of radially arranged screens on the shaft, each extending from the shaft to the cylindrical wall, means for retaining the shaft against rotation in predetermined positions, a space at the lower part of the trap for receiving screened out material, a discharge valve for said space, one of said screens being adapted to be arranged in inclined relation to the direction of flow of water through the trap for deflecting solid and semi-solid materials into said space, the next successive screen below the inclined screen being substantially vertically disposed, the movement of the inclined screen downwardly to vertical position causing a reversed flow of the liquid through the screen as and for the purpose specified.

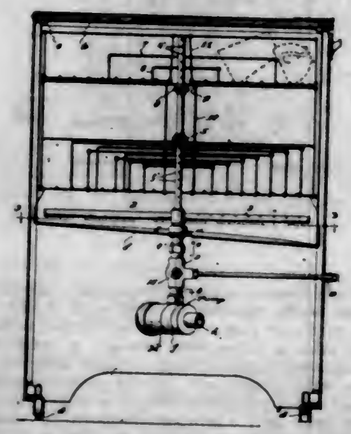
1,638,546. VALVE AND THE LIKE AND METHOD OF MANUFACTURE. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Feb. 28, 1923. Serial No. 621,730. 7 Claims. (Cl. 251—155.)

1. The method of applying a flange to a metal body which consists in welding it directly thereto by resistance welds along a plurality of joints located in different transverse planes and at the same time spreading the metal of one of the parts into an undercut recess in the other so as to lock them mechanically.

1,638,547. LOCKING MECHANISM FOR WINDOW SASHES. WINTER W. MYERS, Brooklyn, N. Y., assignor to Austral Window Company, New York, N. Y., a Corporation of Maine. Filed Sept. 23, 1922. Serial No. 590,012. 3 Claims. (Cl. 268—110.)

1. In an improved window latching mechanism, a keeper secured to the meeting rail of one sash provided with means thereon for attaching a closing cord, a base plate secured to the meeting rail of the other sash, and means on said base plate for guiding said cord comprising an outwardly projecting arm, and guide members on said arm over which the said cord passes.

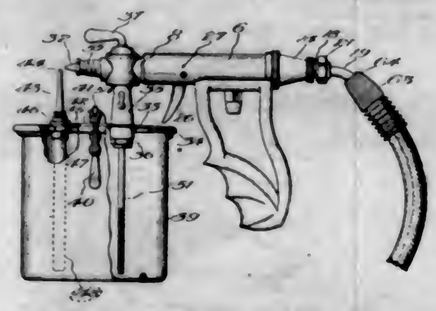
1,638,548. CONFECTION AND PROCESS FOR MAKING CONFECTIONS. CHRISTIAN K. NELSON, Onawa, Iowa, assignor to Eskimo Pie Corporation, Chicago, Ill., a Corporation of Delaware. Filed Dec. 17, 1921. Serial No. 523,195. 23 Claims. (Cl. 99—11.)



1. A process of manufacturing a confection which comprises freezing a normally liquid edible material to a substantially solid state and covering the frozen material with an edible form retaining and form sustaining casing.

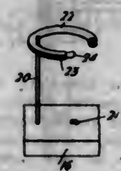
5. A process of making a confection as described in claim 1, and wherein the material of the coating is selected so as to be capable of dissolving substantially simultaneously with the core material when taken with such core into the mouth of a consumer.

10. The method of coating frozen articles of the character referred to, which consists in first applying an edible insulator thereto, and then enrobing the article with a chocolate coating.



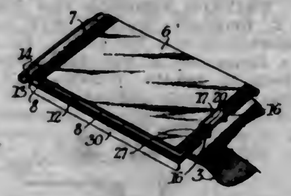
19. A confection comprising a body of normally liquid material frozen to a substantially solid state, and an edible enclosing envelope encasing the frozen material to sustain and retain its form, said envelope consisting of an outer layer of chocolate and an inner insulating coat surrounding the frozen material.

1,638,549. DISHWASHING MACHINE. GRAYSTON L. OHMART, Detroit, Mich. Filed Nov. 7, 1921. Serial No. 513,288. 8 Claims. (Cl. 141—9.)



1. In a dish washing machine, the combination of a cabinet provided with a washing chamber and a revolving spray having horizontal arms at the bottom provided with lines of upwardly-directed jet openings on the rear sides of said arms, and a vertical spindle provided with rose heads having jet openings, the said spindle also having jet openings in its sides, the jet openings in the spindle and in rose heads arranged in vertical planes angularly with respect to the jet openings in the horizontal arms.

1,638,550. AIR BRUSH AND THE LIKE. JENS A. PAASCHE, Wilmette, Ill. Filed June 4, 1925. Serial No. 34,803. 3 Claims. (Cl. 91—45.)



1. In an air brush, the combination of a cylindrical body member having a longitudinal bore in its rear portion communicating with a forwardly reaching passage at its front end, a partition across the front portion of said bore establishing a front chamber communicating with said passage, a partition across the rear end of the bore, an air tube reaching through the bore and through the partition, a cap member secured to the rear end of the cylindrical member and establishing a rear chamber in conjunction with the rear partition, a valve chamber in the rear portion of said cap member, a port in the cap member between the valve chamber and the rear chamber aforesaid, a spring seated tappet valve working in said port, a trigger pivotally mounted in the front portion of the bore of the cylindrical member, a rearwardly facing recess in said trigger, a link reaching between said recess and the valve aforesaid, and a suitable connection for the supply of compressed air to the cap member, substantially as described.

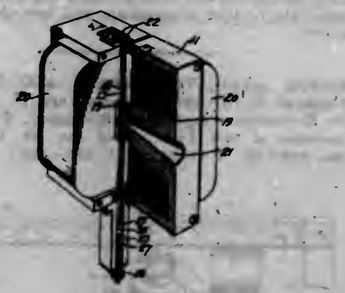
1,638,551. ELECTRON-DISCHARGE DEVICE. VICTOR L. RONCI, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 30, 1924. Serial No. 729,016. 1 Claim. (Cl. 250—27.5.)

An electron discharge device comprising an evacuated vessel, an electrode assembly, a hollow ring having an opening in its outermost circumference, said ring being supported from said assembly near the top of the vessel and a vaporizable reducing medium within said ring.

1,638,552. FILM-PACK CONSTRUCTION. ALFRED A. RUTTAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 4, 1925. Serial No. 73,125. 16 Claims. (Cl. 95—22.)

1. In a photographic film pack, the combination with a casing, of a partition member therein, a flange on the partition member, a film element including a sheet of film and backing paper adapted to cooperate with the flange whereby the film element may be positioned on the partition.

1,638,553. DENTURE ATTACHMENT. ISIDOR STERN, New York, N. Y. Filed Nov. 24, 1924. Serial No. 751,742. 2 Claims. (Cl. 32—12.)

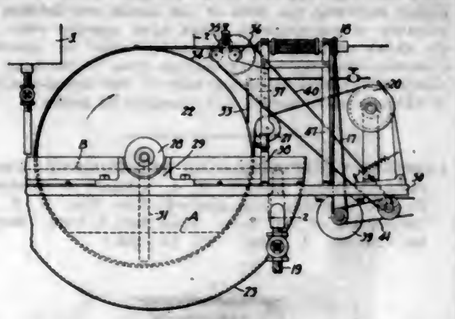


1. A denture attachment for removable bridge work comprising a support, T-shaped in horizontal cross section, whereof the head is adapted to be received in a pier tooth socket and the shank is adapted to be secured to a dental bridge, said head being formed with a plurality of horizontal slots extending, respectively, from the edges of the head inwardly to the vertical planes including the sides of the shank and defining a plurality of superimposed wings upon opposite sides of the shank adapted to be alternately offset in opposite directions from the vertical median plane of the head to alternately yieldingly engage each of the opposed walls of the pier tooth socket at a plurality of points.

1,638,554. VACUUM-CLEANER ATTACHMENT. FREDERICK A. VOOS, Newark, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 3, 1924. Serial No. 724,090. 1 Claim. (Cl. 15—158.)

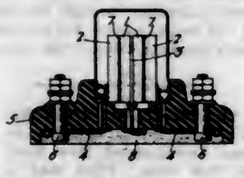
A vacuum cleaner for cleaning slotted interrupter drums comprising a tube of insulating material for attachment to the hose of a vacuum cleaner, said tube having a contact edge curved to fit the curve of the drum to be cleaned, a brush axially mounted within said tube, projecting beyond said contact edge, and means comprising a screw projecting through the side of the tube and engaging the brush handle for determining the distance the brush projects beyond the contact edge.

1,638,555. TRANSLATING DEVICE. EDWARD C. WENTE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 1, 1923. Serial No. 635,886. 26 Claims. (Cl. 179—100.1.)



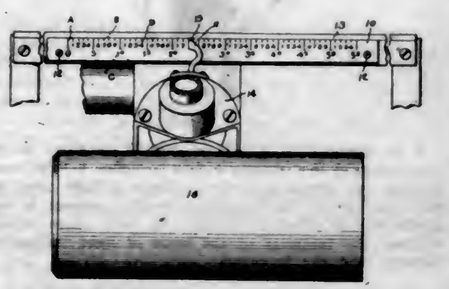
1. In combination, a pair of parallel electrical conductors arranged in a magnetic field to define a light transmitting slot, means to project a beam of light upon said slot, and means for supplying electric current to said conductors to effect a variation in their space relation whereby the intensity of the beam of light transmitted through said slot is varied.

1,638,556. PROCESS OF MAKING INSULATED CONDUCTORS. EDMUND B. WHEELER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1925. Serial No. 75,035. 3 Claims. (Cl. 92—41.)



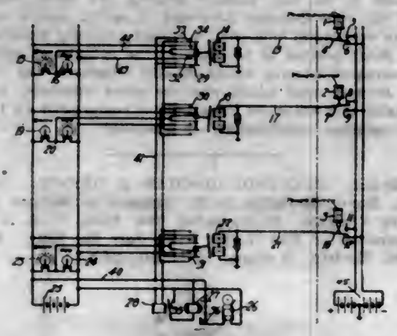
1. A method of coating a core in strand form having continuous fibrous threads adjacent thereto, consisting in subjecting the core and fibrous threads to a liquid

containing pulp in such a manner that pulp is applied thereto, and then forming the pulp on the core and



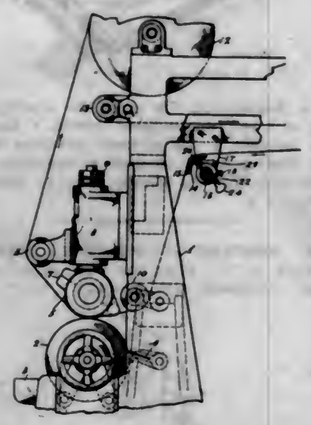
threads to constitute a coating conforming with the core and retained on the core by a felting of the pulp fibers.

1,638,557. INSULATING COMPOUND. JOHN M. WILSON, Bronx, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 30, 1924. Serial No. 729,041. 3 Claims. (Cl. 106—15.)



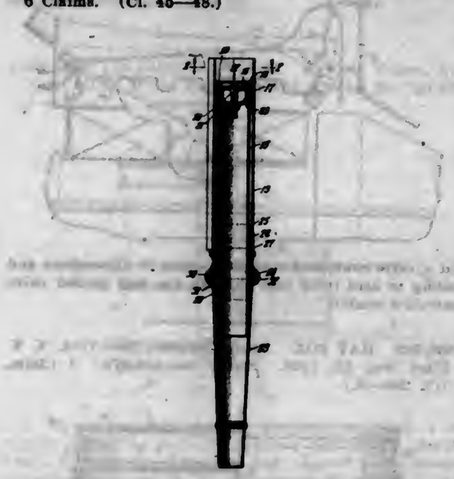
1. An insulating cement comprising by weight substantially 10 per cent alcohol, 10 per cent shellac, and 80 per cent pulverized filler having a degree of alkalinity comparable to that of porcelain and low electrical conductivity.

1,638,558. INDICATING MEANS AND THE LIKE. CHARLES K. WOODBRIDGE, New York, N. Y., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Jan. 25, 1924. Serial No. 688,523. 1 Claim. (Cl. 197—194.)



As a new article of manufacture, a scale having major and minor graduations, each of the minor graduations being provided with a numeral and each of the major-graduations being provided with a numeral having the tens digit larger than the units digit and larger than the minor-graduation numerals, the tens digit of the numeral for the major-graduation being adapted to be read with the relatively smaller numeral for the minor-graduation.

1,638,559. SIGNALING SYSTEM. FERDINAND ZOGBAUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 18, 1921. Serial No. 516,078. 2 Claims. (Cl. 177—311.)

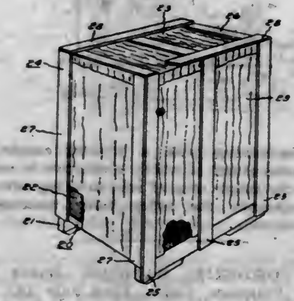


1. In a system for indicating the operation of electrical apparatus, a central station, a remote station, a power switch at said remote station, a polarized relay at said central station, a circuit including said polarized relay and controlled by said power switch, a pair of indicating devices, an energizing circuit for said indicating devices, means controlled by said polarized relay for selectively rendering one of said indicating devices inoperative, a relay at said central station, a circuit for normally energizing the same, a slow releasing relay, a circuit therefor including a back contact of said normally energized relay, an alarm device, means operated by said slow releasing relay for actuating the same, and means for momentarily de-energizing said normally energized relay upon the operation of said switch controlled relay to operate said alarm device.

1,638,560. WRINKLE REMOVER FOR WEB ROLLS. ERNEST G. BEVERIDGE, Brooklyn, N. Y., assignor, by mesne assignments, to R. Hoe and Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 6, 1922. Serial No. 586,419. 6 Claims. (Cl. 271—2.1.)

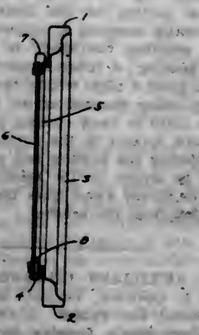
1. The combination with a printing couple to which a web is forwarded for printing, of a metal tensioning device having a smooth curved surface in contact with the web and over which the web runs, and means for independently adjusting the surface to and from the web at a plurality of points widthwise thereof.

1,638,561. LEG CONSTRUCTION. CHARLES H. BUSCH and WILLIAM A. VOLLMER, Kenosha, Wis., assignors to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed May 11, 1923. Serial No. 638,235. 6 Claims. (Cl. 45—48.)



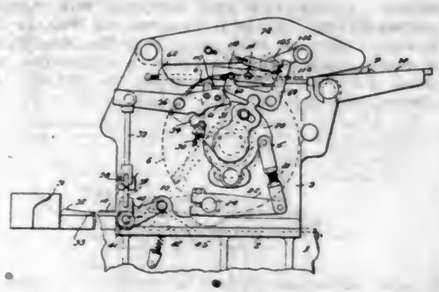
1. In an article of furniture, the combination of a frame, a tubular corner post integrally united to said frame, an annular ornamental trimming secured on the lower end of said corner post and apertured coaxially with said post, a leg having an upper parallel portion insertable through said trimming upwardly into said post and having a tapered portion into which the lower end of said parallel portion is secured at a point intermediate of the length of said tapered portion, said tapered portion terminating in an external shoulder above said point and threaded parts respectively provided in the post and on the upper end of said parallel portion and engageable by rotation of the leg in the post, said trimming being formed to conceal said shoulder.

1,638,562. PHOTOGRAPHIC MOUNT. JAMES A. CAMERON, Chicago, Ill., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 3, 1925. Serial No. 12,930. 5 Claims. (Cl. 40—148.)



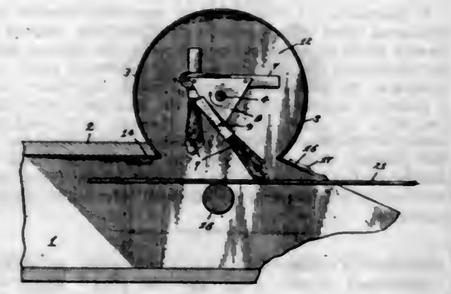
1. A mount for photographs comprising a supporting sheet having thereon embossed corner pocket members, the space within said members being an exhibiting area, and a second sheet separable from the first and comprising a central portion adapted to be engaged in said corner pockets and having an exhibiting area lying over said first exhibiting area, and having a flap adapted to be folded over said exhibiting areas or to be folded back to render the central portion visible, the flap being shaped so that, when folded down above said area, it will lie in the plane of the pockets and not interfere with the pockets.

1,638,563. APPARATUS AND METHOD FOR PACKAGING PAPER. HENRY P. CARRUTH and WILLIAM C. LUDWIG, Chillicothe, Ohio, assignors to The Mead Pulp & Paper Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 11, 1924. Serial No. 705,821. 4 Claims. (Cl. 217—36.)



1. Apparatus of the character described adapted for packaging sheet paper, comprising a platform adapted to receive sheet paper in a stack thereon and having skids for supporting the platform at such a distance above the ground as to receive an elevating truck thereunder, and a confining structure secured to the platform for binding the stack of paper immovably thereon, said confining structure includes upright members securely fastened to the platform and lying along the side of the stack to closely confine the latter, and a top member lying over the top of the stack and connected with said upright members.

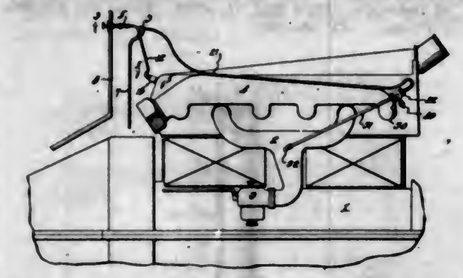
1,638,564. COMMERCIAL SIGN. EDWARD M. CLARK, Davenport, Iowa. Filed Apr. 26, 1926. Serial No. 104,851. 3 Claims. (Cl. 40—133.)



1. A sheet metal frame, comprising a back plate having its lower edge turned upwardly against itself, and a cornice formed integrally with said back plate, and having its lower edge rolled round the lower edge of said back plate.

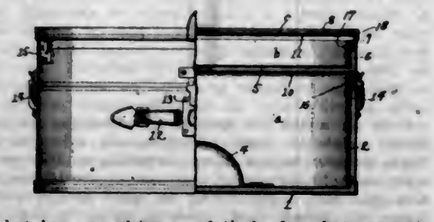
1,638,565. SAFETY DEVICE FOR FLAT-BED PRINTING PRESSES. PETER COLQUHOUN, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1925. Serial No. 14,123. 13 Claims. (Cl. 101—284.)

1. The combination with a printing couple, of two latching devices either of which is effective to control the coaction of the couple, one of said latching devices being manually operable, the other being inaccessible for manual operation.



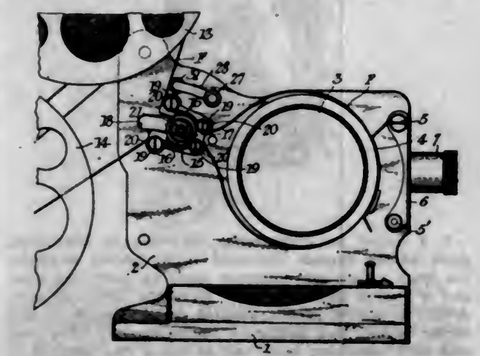
1,638,566. POWDERING MACHINE. HARRY R. CONGDON, San Francisco, Calif. Filed July 15, 1924. Serial No. 726,185. Renewed Apr. 22, 1927. 11 Claims. (Cl. 91—59.)

11. A machine for powdering plates, preparatory for etching, comprising a housing; a shaft mounted within the forward portion of the housing; a plurality of brushes pivotally mounted in connection with the shaft; means for rotating the shaft to revolve the brushes within the housing; a roller mounted below the shaft to support and guide a plate within the path of the brushes, said brushes being dragged at an angle across the surface of the plate to bank etching powder into the edges of depressions formed in the surface of the plate; and a cover enclosing the brushes and provided with an edge adapted to be struck by the bristles of the brushes as the same are moved away from the plate for displacing excess powder from the brushes.



1,638,567. AUXILIARY CHARGE-FORMING DEVICE. ANDREW J. COPPOCK, Detroit, Mich. Filed Mar. 18, 1925. Serial No. 16,284. 1 Claim. (Cl. 123—25.)

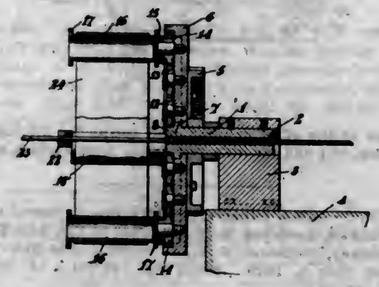
An auxiliary charge forming device for internal combustion engines having a carburetor, an intake manifold and an exhaust manifold, consisting of a tube opening at one end to the intake manifold between the carburetor and cylinders, a second tube extending into the exhaust manifold longitudinally thereof from one end and having a closed end adjacent the discharge end of the manifold and the first tube opening to the second tube outside the exhaust manifold, a third tube extending into the second tube and having an open end adjacent the closed end of the second tube, a valve controlled conduit connecting the third tube to the water jacket of the engine,



and a valve controlled conduit opening to atmosphere and leading to said third tube through the first named valve controlled conduit.

1,638,568. HAT BOX. JESSE DREYFUS, New York, N. Y. Filed May 10, 1926. Serial No. 108,070. 1 Claim. (Cl. 206—8.)

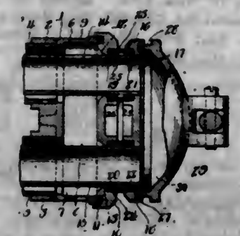
A hat box comprising a relatively deep hat compartment, the upper edge of the side wall of said compartment having an inner flange forming a shoulder for receiving the lower edge of the side wall of a tray positioned above the hat compartment, the tray having a permanently secured bottom closing the top of the hat compartment, the side wall of the tray having an inner flange forming a shoulder at its upper edge, a cover having a short flange fitting in the shoulder formed by the upper flange of the tray, said cover co-operating with said tray to form a shallow compartment for wearing apparel and accessories, and separate, independent locking means for retaining the hat compartment and the tray in closed position.



1,638,569. MOTION-PICTURE PROJECTOR. EDWIN C. FRITTS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 20, 1925. Serial No. 10,599. 24 Claims. (Cl. 88—18.)

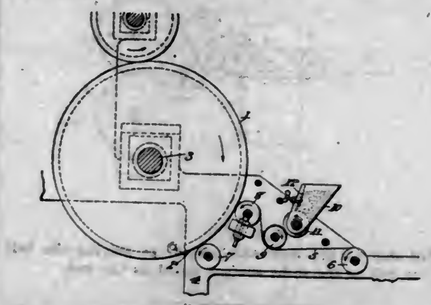
1. In motion picture apparatus, an exposure window, a film guide at a distance from the window, a sprocket

movable toward and from said guide at an acute angle thereto and thereby adapted when moved toward said guide to engage a film threaded past said window and guide and to move said film to form a loop therein between the window and guide.



1,638,570. POLISHING DEVICE. EDWARD FULDA, New York, N. Y. Filed Sept. 13, 1924. Serial No. 737,520. 4 Claims. (Cl. 51—148.)

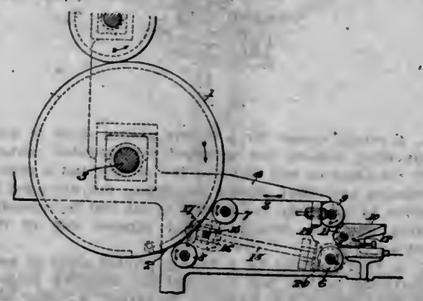
1. In an apparatus of the character described, a rotatable member, a travelling endless belt carried thereby and a belt tightener for said belt adapted to be thrown into operative position by the centrifugal action of said rotatable member.



4. In an apparatus of the character described, a stationary shaft provided with an opening extending longitudinally therethrough, a rotatable disk mounted upon said shaft, rotatabe pulleys mounted on said disk, means for causing one of said pulleys to be rotated by rotation of said disk, a flexible member encircling said pulleys and a guide secured to and projecting from said disk, said guide having a guideway in alignment with the opening in said shaft.

1,638,571. LIQUID-COOLING DEVICE. GRANDON D. GATES, Derby, Conn., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 29, 1926. Serial No. 138,367. 6 Claims. (Cl. 257—247.)

1. A device of the class described, comprising a base having a pair of flanged openings adapted to receive the ends of a pair of outer tubes in sealed relation to said base and having an opposite peripheral flange forming a chamber in communication with said openings, an inner plate abutting said latter flange and forming a closure for said chamber, said inner plate having a pair of openings adapted to receive a pair of inner tubes in slidable relation thereto, an outer plate having a pair of openings adapted to receive said pair of inner tubes, recesses in the proximate faces of each of said plates about said inner tube openings adapted to receive a compressible material, a ring positioned in each pair of said recesses between said plates, a cap abutting said outer plate and forming a chamber communicating with each of said inner tube openings therein, and means for securing said base, plates, rings and cap in abutting relation.

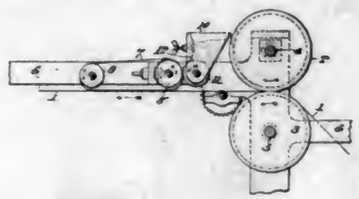


1,638,572. ANTIOFFSET MECHANISM FOR PRINTING PRESSES. RICHARD J. GREENWAY, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Stonington, Conn., a Corporation of Delaware. Filed Mar. 3, 1925. Serial No. 12,842. 8 Claims. (Cl. 91—54.)

1. A rotary carrier for a freshly printed sheet or web, a traveling endless belt arranged for contact with the sheet or web while on the carrier, and a fabric covered roll for applying anti-offset powder to the belt for transfer thereby onto the freshly printed outer side of the sheet or web.

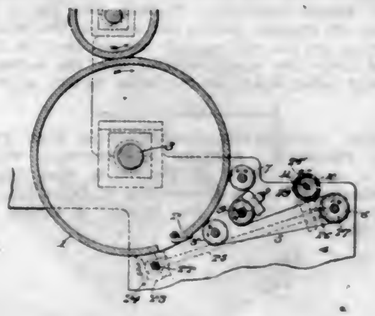
8. A rotary carrier for a freshly printed sheet or web, a traveling endless belt arranged for extended contact with the sheet or web while on the carrier, an anti-offset powder supply fountain, a fountain roll, and a fabric covered roll engaged thereby for applying the anti-offset powder to the belt for transfer thereby onto the freshly printed outer side of the sheet or web, the carrier, belt and rolls being driven at the same surface speed.

1,638,573. ANTIOFFSET MECHANISM FOR PRINTING PRESSES. RICHARD J. GREENWAY, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Stonington, Conn., a Corporation of Delaware. Filed Mar. 3, 1925. Serial No. 12,843. 4 Claims. (Cl. 91—54.)



4. A rotary carrier for a freshly printed sheet or web, a traveling endless belt arranged for extended contact with the sheet or web while on the carrier, an anti-offset powder supply fountain, and a fountain roll to apply the powder directly to the belt for transfer thereby onto the freshly printed outer side of the sheet or web, the carrier, belt and roll being driven at the same surface speed.

1,638,574. ANTIOFFSET MECHANISM FOR PRINTING PRESSES. RICHARD J. GREENWAY, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Stonington, Conn., a Corporation of Delaware. Filed Mar. 3, 1925. Serial No. 12,844. 4 Claims. (Cl. 91—54.)

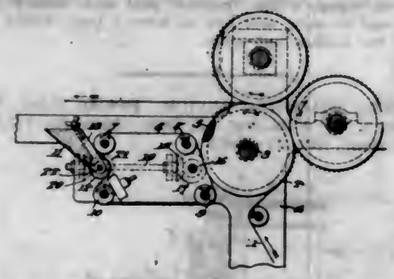


4. A traveling endless belt, means for passing a web beneath the belt with the freshly printed side of the web in extended contact therewith, an anti-offset powder sup-

ply fountain, a fountain roll arranged to apply the powder to the belt for transfer thereby onto the freshly

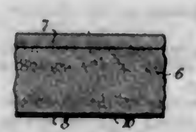
printed side of the web, and means for driving the belt and the roll at the same surface speed as the web.

1,638,575. ANTIOFFSET MECHANISM FOR PRINTING PRESSES. RICHARD J. GREENWAY, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Stonington, Conn., a Corporation of Delaware. Filed Mar. 3, 1925. Serial No. 12,845. 7 Claims. (Cl. 91—54.)



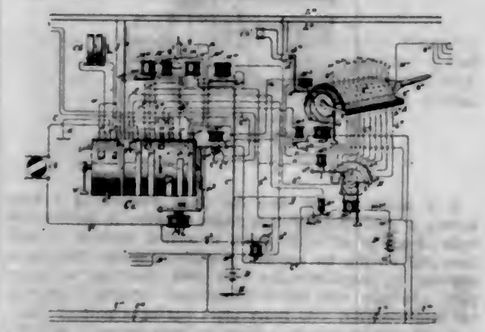
1. A rotary carrier for a freshly printed sheet or web, a traveling endless belt arranged for extended contact with the sheet or web while on the carrier, and a rotary perforated anti-offset powder containing roll arranged in position to distribute the powder to the belt for transfer thereby onto the freshly printed exposed side of the sheet or web.

7. A rotary carrier for a freshly printed sheet or web, a traveling endless belt arranged for extended contact with the sheet or web while on the carrier, a rotary perforated anti-offset powder containing roll arranged in position to distribute the powder onto the belt for transfer thereby onto the freshly printed exposed side of the sheet or web, means for driving the carrier and belt at the same surface speed and the powder containing roll at a lesser surface speed, and means for vibrating the said roll.



1,638,576. ANTIOFFSET MECHANISM FOR PRINTING PRESSES. RICHARD J. GREENWAY, Westerly, R. I., assignor to C. B. Cottrell & Sons Company, Stonington, Conn., a Corporation of Delaware. Filed Mar. 3, 1925. Serial No. 12,847. 2 Claims. (Cl. 91—54.)

2. A rotary offset cylinder around which a traveling web is passed with a freshly printed side in contact therewith, a traveling endless belt arranged for contact with said cylinder, an anti-offset powder supply fountain, a fountain roll for supplying anti-offset powder to the said belt for application thereby to the web contacting



surface of the offset cylinder, and means for driving the cylinder, belt and fountain roll at the same surface speed.

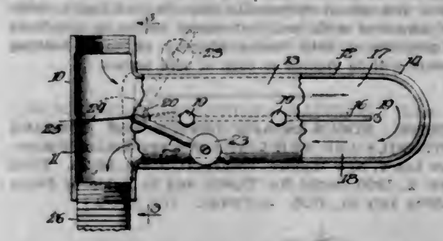
1,638,577. ROLL FILM CARTRIDGE. KENNETH C. D. HICKMAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 4, 1926. Serial No. 146,251. 18 Claims. (Cl. 95—9.)

1. A daylight loading cartridge of photographic film including a coiled film band, said film band comprising a support of light transmitting cellulosic material carrying upon one surface a sensitive photographic layer and directly upon the other surface a dye layer having the characteristics that it absorbs actinic light, is insoluble in water and is removable from the support by photographic baths.

1,638,578. AUTOMATIC TELEPHONE EXCHANGE. MYRON F. HILL, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Reflied for abandoned application Serial No. 523,852, filed Sept. 22, 1894. This application filed Nov. 25, 1922. Serial No. 603,178. 14 Claims. (Cl. 179—18.)

1. In a telephone exchange system, lines, automatic switches for establishing connections between said lines, a restoring switch for causing the restoration of said automatic switches, an operating magnet for said restoring switch, a retaining magnet effective to prevent the operating magnet from actuating the restoring switch, and inductively controlled means for rendering said retaining magnet ineffective, permitting the operation of the restoring switch by said operating magnet.

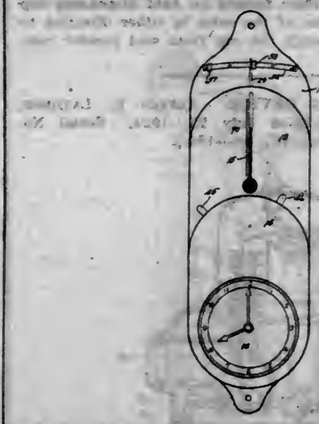
1,638,579. COATING COMPOSITIONS. CARL D. HOCKER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1923. Serial No. 680,848. 6 Claims. (Cl. 134—26.)



4. The process of forming a liquid coating composition which comprises heating a mixture of resin oil and gelatinizable vegetable oil, mixing therewith a substance to give a quick baking quality to said coating composition, and heating the mixture.

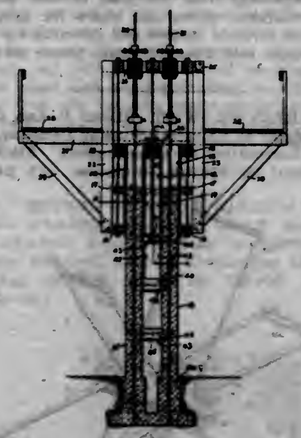
1,638,580. METHOD OF AND MEANS FOR TRANSMITTING SIGNALS. JOSEPH WARREN HORTON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 13, 1920. Serial No. 430,143. 13 Claims. (Cl. 179—171.)

1. The method of transmitting signals, which comprises modulating a carrier current by signaling current and equalizing the amplitudes of the current components, of carrier and side-band frequencies transmitted whereby maximum signaling effect may be produced at a receiving station.



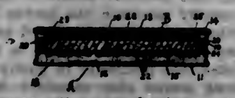
1,638,581. HEATER. HARRY L. HORNING, JAMES B. FISHER, and ARTHUR W. POPE, Jr., Waukesha, Wis., assignors to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Mar. 30, 1925. Serial No. 19,282. 4 Claims. (Cl. 123—122.)

3. In a stove structure for tempering the intake air of a carburetor, the combination of a direct unheated air passageway, said direct passageway having an air inlet and having an air outlet adapted for connection with the air intake of a carburetor, a heated passageway extending between said inlet and said outlet, a valve structure for said passageways, means tending to hold said valve structure in position to close said direct passageway and open the unheated passageway to the flow of air, said valve structure being responsive to the pressure of the air flowing from said inlet to said outlet to increase the passageway through said direct passageway and to positively restrict the flow through said heated passageway.



1,638,582. HEAT REGULATOR. JAY W. HOUCH, Minneapolis, Minn. Filed Feb. 1, 1926. Serial No. 85,175. 11 Claims. (Cl. 236—46.)

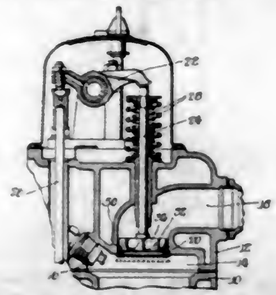
1. In a heat regulator, the combination with a thermostat, of a device for setting the thermostat for predetermined temperatures including an oscillatory indicator, a pair of adjustable stops in the path of movement of the indicator for setting the device for different temperatures, normally inactive automatic means for moving said device from one position to another at a predetermined time and



then returning the same at a predetermined time, and clock-actuated mechanism including an intermittently moved member for intermittently rendering said automatic means active.

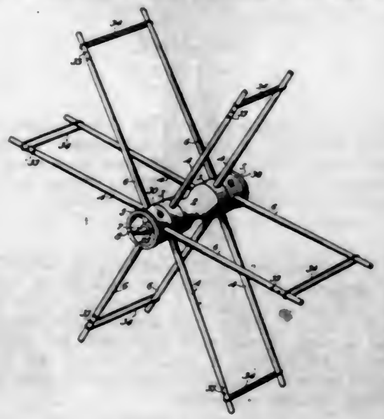
1,638,583. CONCRETE WALL CONSTRUCTION. WILL E. KELLER, Los Angeles, Calif. Filed Aug. 7, 1926. Serial No. 127,739. 5 Claims. (Cl. 25—131.)

1. A concrete mold form comprising a movable mold form consisting of a plurality of walls spaced apart to form mold cavities adapted to be utilized in the formation of a pair of hollow wall members, and means connected to some of said mold form walls and removable therewith for forming a plurality of concrete bonding members adapted to connect or tie the wall members together as the same are poured.



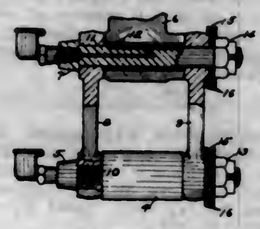
1,638,584. ADJUSTABLE POWDER DISPENSER. ALFRED J. KRANK, St. Paul, Minn. Filed Aug. 24, 1925. Serial No. 51,950. 2 Claims. (Cl. 132—83.)

1. An adjustable dispenser having, a top and bottom member, said bottom member being adapted to form a



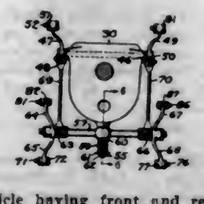
compartment for loose powder, means formed in the bottom member to prevent the powder from slipping therein, a dispensing cup carried by said bottom member and an engaging surface formed on said dispensing cup to permit the rotation of the same in either direction to dispense powder through the cup from said powder compartment.

1,638,585. MIXING DEVICE. ALFRED L. LATHROP, Waukesha, Wis. Filed July 25, 1924. Serial No. 728,092. 2 Claims. (Cl. 48—180.)



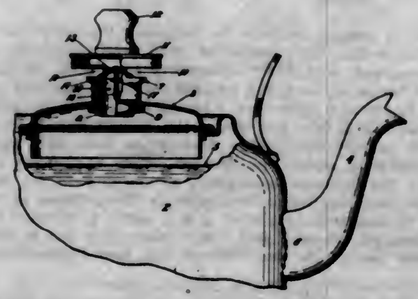
1. A mixing structure for internal combustion engines comprising a fluid inlet duct terminating in a cylindrical outlet passage, a valve disc, a spinner, said outlet passage having a seat for said valve disc, said spinner being cylindrical and located immediately back of the valve disc, said spinner being entirely within said outlet passage and separated from the sides of said passage by restricted clearance space, and vanes for said spinner causing rapid rotation thereof and directing all the fluid to flow through said clearance space before leaving said outlet.

1,638,586. REEL OR SWIFT. HARRY P. LEE, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 4, 1924. Serial No. 753,948. 9 Claims. (Cl. 242—111.)



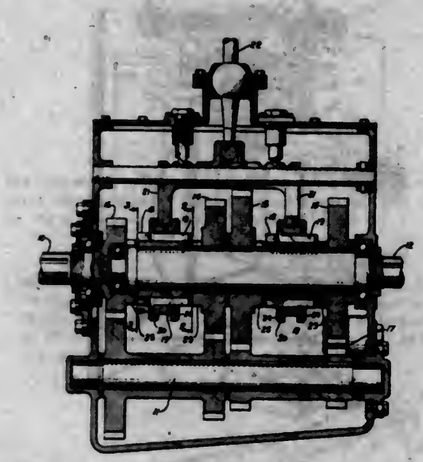
1. A reel or swift comprising two sets of alternating spokes with the spokes of one set adapted to be brought into closed relation with the spokes of the other set to contract the reel, and resilient means acting in opposite directions to normally maintain the spokes in open relation while allowing one set to be rotated on the axis of the reel in either direction with respect to the other set to bring the spokes into proximity to partly collapse the reel, said resilient means also operative to return the spokes to open relation after one set has been rotated with respect to the other set to contract the reel.

1,638,587. SPRING SHACKLE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Jan. 5, 1924. Serial No. 684,588. 5 Claims. (Cl. 267—54.)



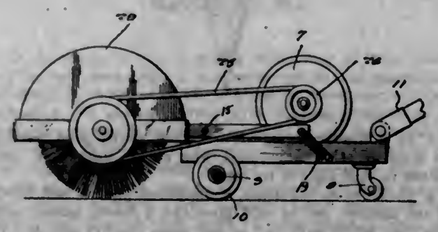
1. An anti-rattling device comprising two washers having a portion of their outer surfaces formed to the shape of a frustum of a cone, and a split spring ring contractible in a radial direction only seated against said surfaces.

1,638,588. BRAKE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Sept. 5, 1925. Serial No. 54,709. 7 Claims. (Cl. 188—204.)



7. In a vehicle having front and rear wheel brakes, means for operating said brakes comprising a rotatable shaft, means operatively connected to said shaft and said brakes, and means universally movable and bodily shiftable connected with said last-named means to distribute the pressure on said brakes whereby an equal braking pressure will be applied to each of said brakes.

1,638,589. STEAM-ESCAPE DEVICE FOR COOKING UTENSILS AND THE LIKE. WOLSEY NELSON COLUMBUS LOUW, New Modder, Transvaal, South Africa. Filed Jan. 2, 1926. Serial No. 78,893, and in Union of South Africa July 31, 1925. 2 Claims. (Cl. 53—9.)

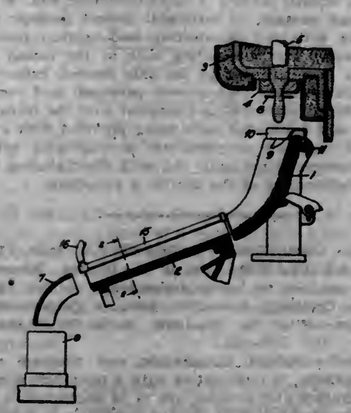


1. A steam escape device for cooking utensils comprising a hollow casing having an opening for communicating with the interior of the utensil and having also lateral steam escape apertures; and a casing top overhanging said escape apertures, said top including a detachable cover, removal of which gives access to the interior of the casing.

1,638,590. CLUTCH MECHANISM FOR A CONSTANT-MESH GEAR TRANSMISSION. PHILIP MACKENZIE, San Francisco, Calif. Filed Aug. 14, 1924. Serial No. 731,944. 4 Claims. (Cl. 192—67.)

1. A clutching mechanism for a constant mesh gear transmission having a gear rotatably mounted on a shaft and held against axial movement, a clutch collar secured on the shaft contiguous to the gear, a plurality of circumferentially spaced and axially extending clutch members carried by said clutch collar, a shifting collar arranged over said clutch collar and members and relatively associated with the latter, clutch jaws fixed to the adjacent face of the gear into engagement with which said members may be projected by axial movement of said shifting collar, the connection between said members and said shifting collar being yieldable whereby immediate and positive engagement between said members and said jaws may be effected to clutch said gear to said clutch collar.

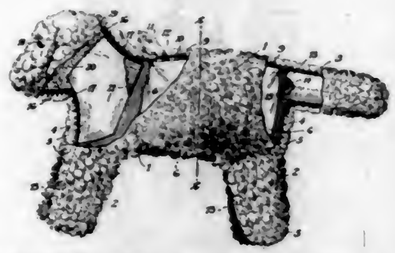
1,638,591. FLOOR-POLISHING MACHINE. RILEY E. MERRILL, Austin, Tex. Filed Apr. 6, 1926. Serial No. 100,105. 1 Claim. (Cl. 15—49.)



In a floor polishing device of the character described, a wheeled carriage, a motor anchored upon the carriage, a transversely extending block formed integrally with the carriage at the forward side thereof, said block being formed with a cross groove, a rod within said groove, a brush frame at the forward end of said carriage and pivotally secured to the opposite ends of the rod, springs secured to said carriage and brush frame normally holding said frame horizontal, a rotary brush within the frame and a driving connection between the brush and said motor.

1,638,592. UNION SUIT. HENRY F. MONHEIMER, New York, N. Y., assignor to Campe Corporation, New York, N. Y., a Corporation of New York. Filed July 9, 1926. Serial No. 121,411. 2 Claims. (Cl. 2—78.)

1. A union-suit comprising an upper body portion and a nether portion formed of woven substantially non-elastic fabric, an elastic waist band formed of knitted fabric extending across the back at the waist line with the upper body portion and nether portion permanently connected thereto along the upper and lower edges respectively so that the stretch of the elastic waist band will be transversely of its length and longitudinally of the garment, a centrally disposed reinforcing elastic insert of knitted fabric located at the back and superimposed upon the elastic waist band and secured at its upper and lower edges to the upper and nether portions of the garment respectively, but free and unattached between its upper and lower edges, and non-elastic stays connected to and extending from the opposite upper corners of the reinforcing insert towards the shoulders of the upper body portion of the garment and permanently secured thereto.



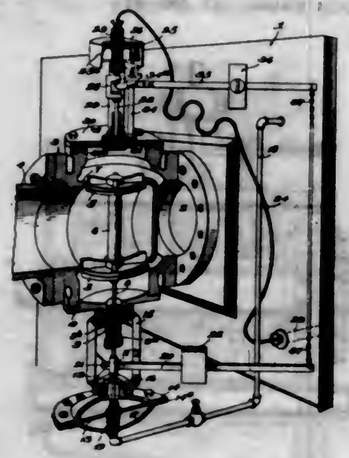
1,638,593. METHOD OF AND APPARATUS FOR CONVEYING PLASTIC GLASS. VERGIL MULHOLLAND, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Aug. 19, 1924. Serial No. 732,896. 22 Claims. (Cl. 49—55.)

1. The method of conveying molten glass from a feeder to a shaping machine, which comprises depositing the glass on a guideway and admitting gas under pressure

to the surface of the guideway to lubricate the same and exert a propelling force on the glass during its passage along the guideway.

1,638,594. PURSE. MARCUS ASH MYERS, Gloversville, N. Y., assignor to Myers' Woolly Animals, Inc., Gloversville, N. Y., a Corporation of New York. Filed May 10, 1927. Serial No. 190,181. 7 Claims. (Cl. 150—28.)

2. A hand bag comprising an animal shape made with a flexible outer covering, the extremities thereof being distended to simulate the contours of the body appendages of the animal and the central portion being hollow and pliant and provided with an article receiving pocket accessible through an opening in said outer covering.



1,638,595. SELF-THREADING SHUTTLE. HENRY POIRIER, New Bedford, Mass. Filed Oct. 26, 1925. Serial No. 64,965. 6 Claims. (Cl. 139—222.)

1. In a shuttle having a hand-threading slot, a vertical thread passage, a horizontal thread passage communicating with and intersecting said vertical passage, said threading slot intersecting each of the thread passages in a plane parallel to the axis thereof, cylindrical thread guides, one in each of said passages, said vertical guide having a radial slot in alignment with the threading slot, and said horizontal guide being provided with a tortuous slot the ends of which are in alignment with a common element of the guide and with the threading slot, whereby dethreading of the shuttle is prevented.

1,638,596. COMBINED TEMPERATURE AND PRESSURE REGULATOR. FRANK C. REEDER, Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Feb. 20, 1926. Serial No. 89,812. 17 Claims. (Cl. 236—92.)

1. A self-contained temperature and pressure regulator comprising, in combination with a receptacle wherein the temperature and pressure are to be controlled, a conduit for supplying a fluid to said receptacle, a valve for controlling the flow of the fluid through said conduit, adjustable means for normally maintaining said valve in open position, means controlled by the pressure in said receptacle for counteracting the effect of said adjustable means, movable means actuated by changes of temperature in said receptacle, and flexible means for connecting said

last-named means with said adjustable means whereby said temperature-responsive means actuates said valve only through said adjustable means.

1,638,597. FIRE EXTINGUISHER. KARL SCHMIDT, Neuruppin, Germany. Filed Feb. 1, 1924, Serial No. 690,023, and in Germany Feb. 1, 1923. 5 Claims. (Cl. 299—95.)

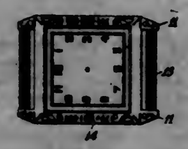
1. In a fire extinguisher, a siphon outlet pipe having its bend at the charge level, and an air inlet tube connected to said pipe at its bend.

4. In a fire extinguisher, a discharge pipe, a ball valve at the influent end of said pipe, and a sleeve within said pipe into which said ball moves when the extinguisher is in operative position, said sleeve acting to prevent the inflowing fluid from moving the ball against its seat.

1,638,598. RHEOSTAT. JAMES C. SNELL, Oak Park, Ill., assignor to Premier Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 2, 1925. Serial No. 27,399. 9 Claims. (Cl. 201—55.)

4. In a rheostat, the combination of a substantially flat rectangular core plate, a resistance element wound around said plate, insulating plates against the resistance elements, and frame-plates having margins conforming

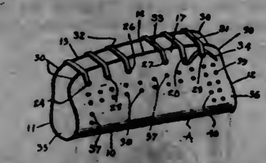
substantially to the core plate, terminal strips connected to the element and disposed along opposite margins of



the plates, an arched supporting bracket secured to the cover plates, a shaft carried by said bracket, and means on the shaft to contact with the element.

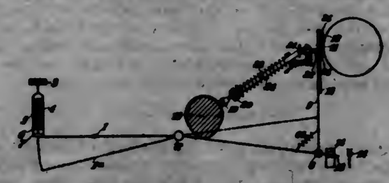
1,638,599. COWL VENTILATOR FOR MOTOR VEHICLES. LYLE K. SNELL, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 27, 1919. Serial No. 333,806. 15 Claims. (Cl. 98—2.)

15. In combination with a wall having a ventilating opening, and a cover movably supported in operative relation thereto, a spring tending to move the cover to closed position, and a screw shaft supported in such manner as to be reciprocated when turned and serving to adjust the cover in opposition to the aforesaid spring.



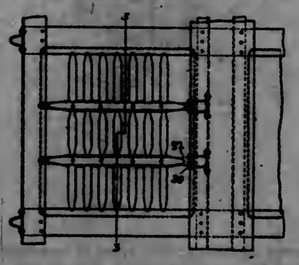
1,638,600. WATCHCASE. MAX SPIRO, Sea Gate, N. Y. Filed May 9, 1925. Serial No. 28,906. 1 Claim. (Cl. 58—88.)

In a watch having a casing consisting of two interlocking members, one of said members having oppositely disposed inwardly curved tongues, a movement carrier engaging the casing having said tongues comprising a flat plate square in outline, side walls on all four sides of said plate, flat-bottomed recesses formed in the walls of two opposing sides, said tongues registering in said recesses to retain the movement carrier in place in one of the casing members, said recesses being depressed inwardly and toward each other forming channels open on the outer surfaces of the walls, said movement carrier being open on one side, the casing members when interlocked engaging and releasably retaining the movement carrier in position.



1,638,601. ARMLET FOR INFANTS. STEPHEN STANCIU, St. Paul, Minn. Filed Mar. 18, 1926. Serial No. 94,453. 8 Claims. (Cl. 128—134.)

1. An armlet for infants comprising an elongated body member of semi-pliable material adapted to be bent longitudinally thereof around the arm and elbow, said member being of sufficient stiffness to prevent the bending thereof transversely, the longitudinal marginal portions thereof terminating in spaced relation to one another, and a lacing between said marginal portions, adjacent reaches of said lacing being spaced sufficiently medially of said

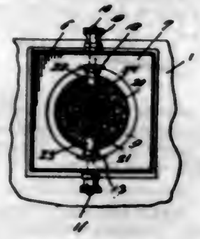


body member to provide a space for the protrusion of the elbow, said adjacent reaches of said lacing serving to engage the arm above and below the elbow to hold the armlet from sliding along the arm.

1,638,602. MECHANICALLY-DRIVEN TYPE-ROD TYPEWRITER. THEODOR STIEBEL, Berlin, Germany. Filed Nov. 19, 1926, Serial No. 149,403, and in Germany Apr. 12, 1923. 5 Claims. (Cl. 197—17.)

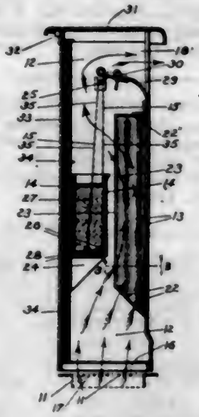
1. In a mechanically driven type-rod typewriter, a key lever fulcrumed at a point intermediate its ends, a type rod pivotally connected to said key lever, a push rod, a connecting rod to strike said push rod and thereby impart printing stroke to the type rod and a continuously revolving shaft having a cam to engage said key lever and to actuate said connecting rod.

1,638,603. HOPPER DOOR FOR RAILWAY CARS. JAMES S. SWANN, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed May 20, 1926, Serial No. 110,395. Divided and this application filed Oct. 21, 1926. Serial No. 143,186. 14 Claims. (Cl. 105—280.)



1. In combination with the other elements of a railway dump car, a door made of a metallic plate formed with a marginal portion surrounding a continuous web which surrounds a panel, said panel formed with corrugations which traverse the panel and merge into the opposite portions of the web, and other corrugations with their opposite ends merging into some of the first mentioned corrugations.

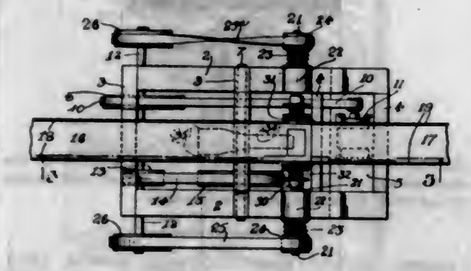
1,638,604. TIME-CONTROLLED LIGHTING SWITCH. BENNIE A. TARONINO, New Brunswick, N. J. Filed Jan. 19, 1925. Serial No. 2,472. 1 Claim. (Cl. 200—36.)



In a switch of the class described a casing, a stationary block of insulating material in said casing, the same being provided with an enlarged central opening, sta-

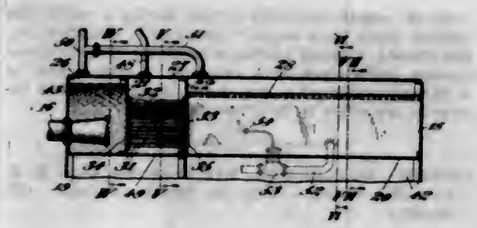
tionary contacts arranged at diametrically opposite points in the stationary block and extending into the opening, a rotatable disc arranged within the central opening of the stationary block, a pair of diametrically opposed contacts carried by the disc and adapted for cooperation with the stationary contacts, and means for effecting

the rotation of the disc, said means comprising a drive shaft, a conical head on the outer end thereof, the rear face of the disc having a conical recess formed therein for cooperation with the aforementioned conical head, and a coil spring associated with the shaft for holding conical head in engagement with the conical recess.



1,638,605. COMBINATION WARM-AIR CLEANER AND HEAT CONVERTER. LARS M. THORSON and KENNETH B. WARD, Chicago, Ill. Filed Oct. 28, 1926. Serial No. 144,825. 9 Claims. (Cl. 261—104.)

1. A device of the kind described comprising a duct body having an air inlet opening arranged to cover a warm air register, and an outlet opening arranged to discharge warm air in approximately horizontal directions; and a radiating element forming a wall of the duct body and provided with folds forming a series of air pockets between said openings.

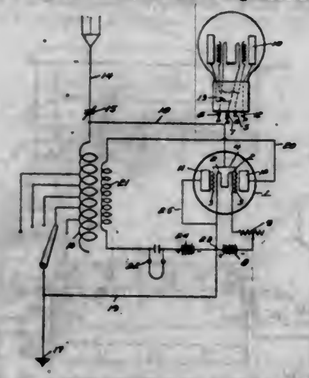


9. In combination, a duct body enclosing an air passageway containing a water pan, a perforated wick fabric and supporting means therefor; said duct body having an inlet opening adapted to cover the openings of a warm air register, and an outlet opening; said wick fabric having one edge held within said water pan and arranged to form a dust arresting screen across said passageway; and a radiating element having heat collecting projections extending into said passageway and constructed of folds constituting outside parts of said duct body.

1,638,606. CAN POLISHING AND SCOURING MACHINE. WILLIAM W. WADSWORTH, Tremonton, Utah. Filed Aug. 26, 1926. Serial No. 131,697. 12 Claims. (Cl. 15—70.)

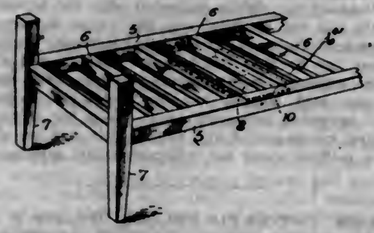
1. A can scouring and polishing machine comprising means for feeding cans into the machine, ejecting means for the cans, means for scouring and polishing the can ends and means for alternately operating the ejecting and polishing means.

1,638,607. FEED TANK. ROBERT WARRINER, Braintree, Mass., assignor to Bethlehem Shipbuilding Corporation. Filed June 1, 1925. Serial No. 33,979. 20 Claims. (Cl. 257—24.)



13. In a power plant, the combination with a condenser and its air ejector, of apparatus including a series of chambers, a tube bank for affording communication between the first and third chambers, means for conducting condensate from the condenser to the first chamber, outlet means for the last chamber of the series, means for admitting media discharged from the ejector to the second chamber, vent means for the noncondensible portion of said media communicating with the second chamber, outlet means for the condensible portion of said media communicating with the second chamber, a conduit connecting the main condenser with said apparatus at the downstream side of the tube bank, a valve in said conduit, and a thermostat in a chamber following the tube bank and connected to said valve.

1,638,608. WAVE FILTER RECEIVING CIRCUITS. PETER WELCH and AUDLEY MURPHY, Olean, N. Y. Filed Feb. 6, 1925. Serial No. 7,292. 1 Claim. (Cl. 250—27.)

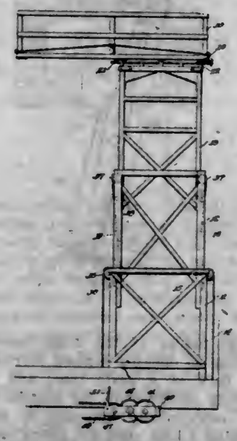


In a radiant energy receiving system, an electron discharge device having a filamentary cathode, a grid, a primary anode, an input circuit including the grid and cathode; an output circuit including the primary anode, cathode, a sound reproducer and a source of potential for applying a positive potential to said primary anode; a source of energy connected with said cathode, a secondary anode in said device having direct electrical connection with the positive terminal of said cathode and

energized with a positive potential by the source of energy connected with the cathode, the potential impressed on the secondary anode being substantially less

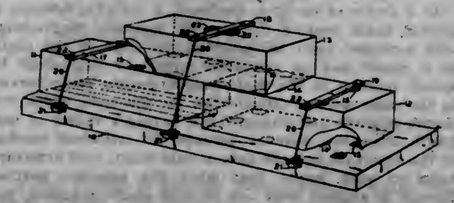
than that applied the the primary anode, said grid controlling the transfer of energy from each anode, and a ground connection with said secondary anode.

1,638,609. TRAY FOR SHOE RACKS. FREDERICK E. WILLIS, Brockton, Mass. Filed June 19, 1926. Serial No. 117,165. 1 Claim. (Cl. 211—14.)



A tray for shoe racks comprising a bottom having a longitudinally extending opening therein, side flanges integral with the bottom, a flange at the end of the tray opposite the slotted end, and aprons projecting outwardly from the upper edges of said flanges.

1,638,610. VENTILATING SCREEN FOR AUTOMOBILES. CLAIR A. BAKER, Detroit, Minn. Filed Nov. 18, 1925. Serial No. 69,783. 1 Claim. (Cl. 296—44.)



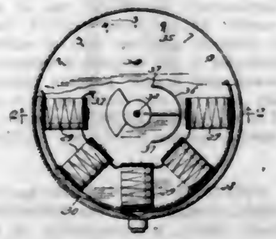
In combination with the window opening of an automobile provided with a slidable window, a spring-actuated roller mounted above said window openings, a fine mesh screen secured at its upper end to said roller, a horizontally extending tubular stiffening member to which the lower end of said screen is secured, spring-actuated clamping rods slidably mounted in said tubular member and having ends extending into the customary side grooves provided for the slidable window, and a flexible strip secured to the lower side of said tubular member for engagement with the upper edge of said slidable window when said screen is held in lowered position by said clamping rods.

1,638,611. EXTENSION TOWER. WILLIAM M. BALDWIN, Trenton, N. J., assignor to J. R. McCardell & Co., Trenton, N. J., a Corporation of New Jersey. Filed Nov. 3, 1922. Serial No. 598,889. 1 Claim. (Cl. 189—11.)

An extensible tower of the class described comprising three telescoping sections adapted to be positioned in nested relation when the tower is lowered, sheaves mounted at the top of the outer section on opposite sides thereof, and having their axes arranged below the top of the section whereby the sheave does not extend above the top thereof, sheaves at the base of the intermediate section on opposite sides thereof, and a pair of sheaves at the top of the intermediate section with axes arranged substantially below the top of said section, the outer section having cross bars at its top bowed downwardly adjacent said top sheaves substantially below the peripheries of the sheaves, a windlass associated with the tower and flexible hoisting means extending from opposite sides of said windlass over said sheaves and secured to the bottom of the innermost section, said innermost section having a revoluble platform thereon.

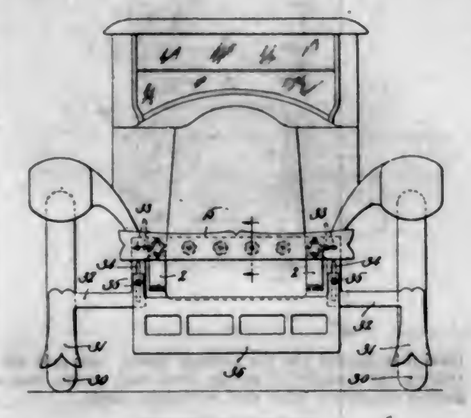
1,638,612. SHIPPING DEVICE. RICHARD E. BAUS, Detroit, Mich., assignor to The Studebaker Corporation, Detroit, Mich., a Corporation of New Jersey. Filed June 14, 1924. Serial No. 720,102. 5 Claims. (Cl. 280—179.)

1. Means for securing boxes to a floor during shipment, comprising anti-skid plates positioned between said boxes and said floor to prevent horizontal movement



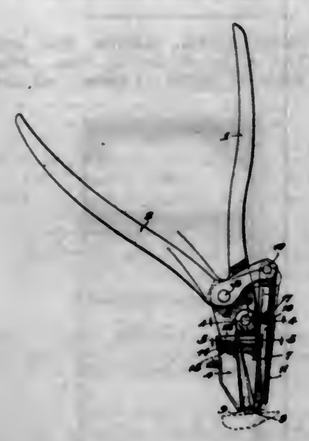
of said boxes, means for preventing vertical movement of said boxes relative to said floor comprising clamp bars overlying said boxes and drawn towards said floor by means of rods anchored adjacent said floor, and blocks secured to said boxes and engaging said clamping bars for preventing relative movement between said clamp bars and said boxes.

1,638,613. SUPPORT FOR COLLAPSIBLE CONTAINER TUBES. BEN CLIFFORD BLACKMON, Dallas, Tex. Filed Apr. 13, 1926. Serial No. 101,714. 1 Claim. (Cl. 221—60.)



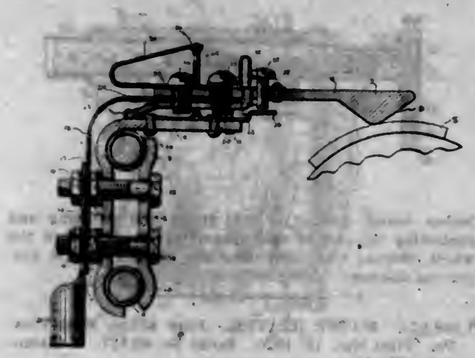
A paste tube holder of the class described including a bottom having an opening formed therein for receiving the threaded neck of a paste tube, and a non-yielding member pivotally mounted on the bottom and having an arcuate edge eccentrically disposed in relation to the pivot for forming a cam edge for biting engagement with the neck so that the same may be held against accidental displacement.

1,638,614. ELECTROMAGNETIC INDICATOR. FRANK G. BREWSTER, White River Junction, Vt. Filed Feb. 25, 1922. Serial No. 539,209. 1 Claim. (Cl. 172—239.)



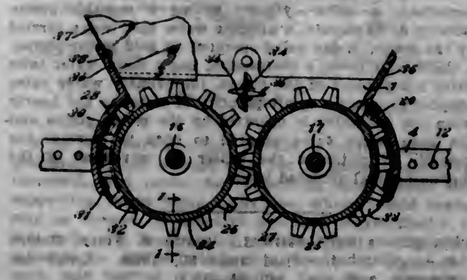
In a device of the type described, a movable member, a pivoted shaft bearing the movable member, electro-magnets arranged upon an arc with the axis of the shaft as a center and an armature carried by said shaft in spaced relation to the shaft, said armature being curved in the same general direction as the arc upon which the electro-magnets are arranged and having a radius of less length than the distance between the attached portion of the armature and the axis of said shaft, said armature being of such length that when the attached portion thereof is aligned with one of said electro-magnets, the end portions thereof are extended between adjacent electro-magnets and the shaft, said armature uniformly decreasing in size from its center to the ends thereof.

1,638,615. BUMPER AND FENDER. JULIUS BUNIS, Malden, Mass. Filed Feb. 16, 1927. Serial No. 168,584. 8 Claims. (Cl. 293—54.)



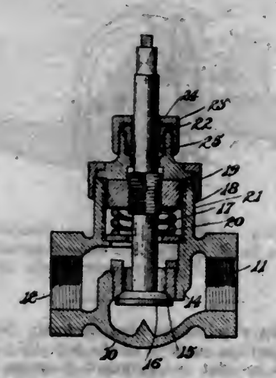
1. A bumper for automobiles comprising a pair of side bar sections adapted to be fixed to the chassis of the vehicle and each made tubular at its forward end; an abutment bar rigidly connected with the forward ends of said side bar sections; side bar piston sections fitting telescopically into said fixed side bar sections; a transverse bumper bar fixed to the forward ends of said side bar piston sections; metal springs between said abutment bar and said bumper bar for yieldingly holding the latter projected forwardly and stop for limiting the forward movement of the bumper bar and its side bar piston sections under the influence of said springs.

1,638,616. COTTER-PIN PULLER. WILLIAM H. BURKE, Winner, S. Dak., assignor, by direct and mesne assignments, to The Burgan Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 28, 1925. Serial No. 33,556. 24 Claims. (Cl. 29—86.2.)



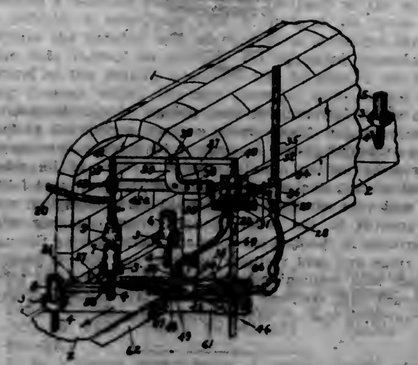
1. A pulling tool comprising pivoted cross handles, one end of one handle being formed with an integral jaw, a fulcrum member pivoted to the corresponding end of the companion handle, and a movable jaw closable against the integral jaw by the fulcrum member.

1,638,617. ELECTRIC SWITCH. HARRY E. CAMPBELL and EARL F. MEKELBURG, Milwaukee, Wis., assignors to Union Electric Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 3, 1925. Serial No. 47,809. 4 Claims. (Cl. 200—170.)



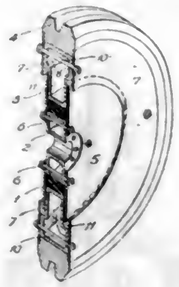
1. An electric switch comprising a supporting means having two contacting portions, a single right angular clamping arm engaging said two contacting portions and having an outwardly extending tongue at one end thereof, said tongue having recesses in the opposite side edges thereof, a single cooperating clamping arm also engaging said two contacting portions, a fulcrum strip mounted on said right angular clamping arm and having a stop portion at the outer end, a link member having one end portion pivotally carried between said fulcrum strip and the clamping arm, a lever arm also having one end portion pivotally carried between the fulcrum strip and the clamping arm, and provided with downwardly extending guide lugs engaging said recesses of said outwardly extending tongue to prevent lateral and endwise movement of the lever arm, yielding contact mechanism carried by said lever arm, and a U-shaped spring interposed between a portion of the link member and the contact mechanism for yieldingly holding the contact mechanism in its inner position.

1,638,618. VEGETABLE AND FRUIT CRUSHER. GIOVANNI R. CATOLDO, Boston, Mass. Filed June 2, 1925. Serial No. 34,362. 5 Claims. (Cl. 83—12.)



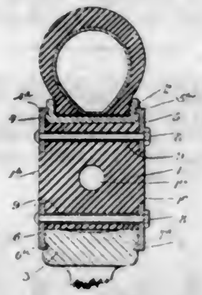
1. Apparatus of the class described comprising a substantially rectangular frame having vertical end walls, shafts journalled in said end walls, said shafts being provided with crushing rolls disposed inside of the frame, radially projecting teeth upon the peripheries of said rolls, said teeth being arranged in circumferentially extending axially spaced series, and ribs upon the inner surfaces of the side walls of the frame disposed between adjacent series of teeth upon the respective rolls.

1,638,619. PACKING-GLAND STRUCTURE. LLOYD D. COLLAR, Oakland, Calif., assignor to Collar Valve Corporation, Oakland, Calif., a Corporation of California. Filed Nov. 25, 1925. Serial No. 71,322. 1 Claim. (Cl. 286—34.)



A packing gland structure for a rotatable or reciprocable member of circular cross section, said gland structure including an element through which said member extends, said element being counter-bored at one end, a packing gland member being formed with a bore considerably larger than the diameter of said member and through which said member extends, said gland adapted to be received by the counter-bore in said element, means adapted to engage with said element and force said gland inwardly with respect to the inner end of said counter-bore, said gland member being formed with an inwardly projecting thin annular lip at its inner end contacting with the sides of the member whereby the latter may pivot slightly with said lip as a pivot point.

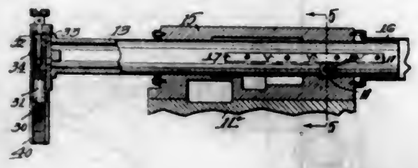
1,638,620. METHOD AND APPARATUS FOR SHAPING ARTICLES OF GLASS. VIRGIL O. CORNWELL and ALBERT MOELLER, Columbus, Ohio, assignors to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 17, 1923. Serial No. 625,718. 41 Claims. (Cl. 49—7.)



1. The method of treating glass containers which comprises heating their edges to plastic condition, applying an external annular forming device to such edges, and internally bracing such edges with fluid pressure.

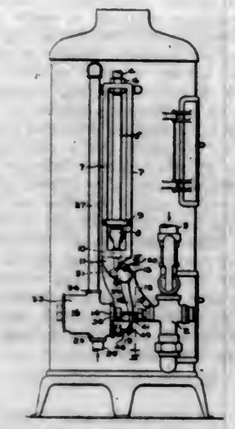
1,638,621. VEHICLE WHEEL. OLAVO DE ARAUJO, London, England. Filed May 18, 1927. Serial No. 192,286, and in Great Britain Dec. 4, 1925. 3 Claims. (Cl. 152—36.)

1. A resilient wheel of the kind set forth, characterized in that the abutting surfaces of the hub, felly and interposed cushion are flat and arranged in prism formation to prevent their turning relatively to one another, and that the hub and felly are hollow, and that the felly is constituted by a hollow annular T-head provided with side plates secured to said T-head by bolts passed through the same, said plates extending inwardly of said T-head to form annular gaps therebetween and the leg of the T-headed felly, and said plates extending beyond said felly to embrace a solid rubber tyre thereon.



1,638,622. VEHICLE WHEEL. EDWARD DONAGHY, Lisburn, Ireland. Filed Nov. 10, 1925, Serial No. 68,223, and in Great Britain June 4, 1925. 1 Claim. (Cl. 152—36.)

A wheel for vehicles comprising, in combination, a felloe having a transversely concave peripheral surface and an annular groove in each of its sides, a tyre carrying rim having an annular groove in each of its sides, a resilient annular member interposed between said felloe and said tyre carrying rim, flanged rings engaging with the grooves in the felloe, flanged rings engaging with the grooves in the tyre carrying rim, bolts passing through said rings and said resilient member, and sleeves passing through said resilient member and surrounding the bolts, to secure said resilient member on said felloe and said tyre carrying rim on said resilient member.

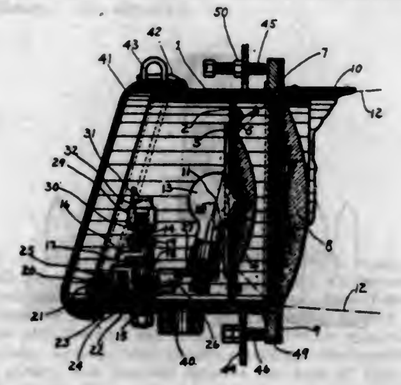


1,638,623. WHEEL-TRUING DEVICE. ALDEN M. DRAKE, Greenfield, Mass., assignor to Greenfield Tap & Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1926. Serial No. 93,001. 8 Claims. (Cl. 125—11.)

5. In a grinding machine, a frame, a wheel shaft rotatably mounted therein, a wheel dressing tool, a tubular supporting member for said dressing tool, said member being slidable in a bearing adjacent said wheel shaft and in a path parallel to and axial of said wheel shaft, and a

hollow casing secured to said frame and receiving and protecting the end of said supporting member when the wheel dressing tool approaches the bearing of said supporting member.

1,638,624. WATER HEATER. JOHN ELLIS, West View, Pa. Filed Mar. 11, 1926. Serial No. 93,837. 3 Claims. (Cl. 236—23.)



1. In a water heater, the combination of a water motor comprising a water cylinder having a movable piston slidably fitted therein, a primary water inlet valve carried by the piston, a gas valve operated by said motor piston, a thermostat lever, a thermostat, and a main water inlet valve independent of the piston, the primary water valve adapted to admit a small quantity of water to the heater when the gas valve is operated by the motor piston and the main water valve adapted to open to increase the quantity of water to the heater by movement of the thermostat and actuated lever.

1,638,625. LIGHT SIGNAL. OSCAR S. FIELD, Roselle Borough, N. J. Filed June 30, 1924. Serial No. 723,225. 5 Claims. (Cl. 24—44.)

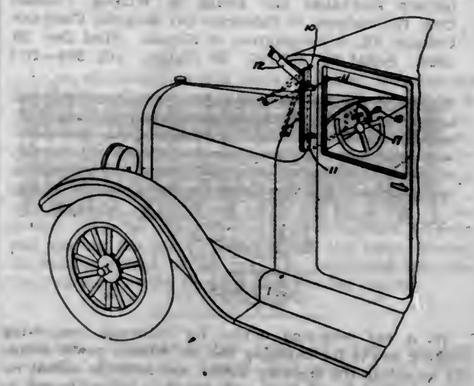
1. A light signal comprising a case, a source of light in said case, optical means supported by said case for projecting a beam of light from said source, a first stud rigidly attached to said case, a carrier member provided with a hole freely receiving said stud, means for locking the carrier member in adjusted position with respect to said first stud, a second stud attached to said light source and mounted in said carrier member for movement relative thereto at right angles to said first stud, means for locking said second stud in adjusted position with

respect to said carrier member, and sighting means receiving light from said source whereby said source may

be accurately located at the focal point of said optical means, a portion of said sighting means being supported on said first stud.

1,638,626. HEATING MEANS FOR ROLLS. GORDON FOX, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 30, 1925. Serial No. 26,904. 8 Claims. (Cl. 80—41.)

8. In combination, a pair of rolls, a heater mounted in proximity to one of said rolls but in spaced reationship therewith, and means for supporting said heater, said supporting means being adjustable, whereby said heater may be secured at selective positions longitudinally of said rolls, said heater being provided with heating strips mounted in spaced relationship longitudinally of said rolls, said heating strips having their long dimensions arranged circumferentially of said rolls, said heating strips being provided with means for individually controlling the heating effects of said strips.

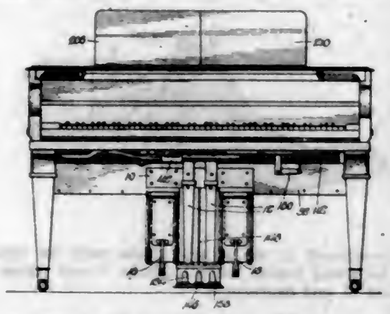


1,638,627. HINGED LAST. EDWARD W. GERRISH, West Lynn, Mass. Filed Oct. 16, 1926. Serial No. 141,923. 10 Claims. (Cl. 12—136.)

1. A last consisting of a fore part and a heel part having alined vertical slots and transverse semi-cylindrical depressions in their opposed faces; vertical plates secured one in each part and overlapping each other and one movable relatively to the other; and a pivot pin immov-

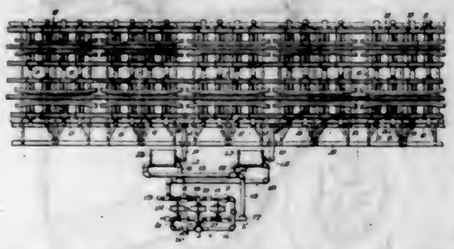
ably positioned in one of said plates with its opposite ends extending beyond the outer faces of said plates and disposed in said depressions.

1,638,628. AUTOMOBILE SIGNAL DEVICE. JACOB GRANTER and JACOB DAVIS, Oakland, Calif. Continuation of application filed Apr. 6, 1925, Serial No. 21,236. This application filed Dec. 1, 1926. Serial No. 151,848. 2 Claims. (Cl. 116—54.)



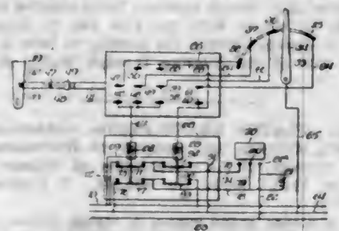
1. A direction indicator of the character described comprising a housing adapted to be arranged at the side of a vehicle, a semaphore arm pivoted at its upper end within the housing and adapted to be extended through one side thereof to indicate the intended direction of travel of the vehicle, a closure for the side of the housing through which the arm extends, said closure comprising an upper closure member pivoted at its upper end to the housing, and a lower closure member secured to said arm, said closure members being adapted to swing outwardly in unison with the arm and to unite when the arm is disposed within the housing to form a closure for the side of the housing through which said arm operates.

1,638,629. PLAYER GRAND PIANO. CHRISTIAN GULBRANSEN, Chicago, Ill., assignor to Gulbransen Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 26, 1923. Serial No. 670,875. 7 Claims. (Cl. 84—27.)



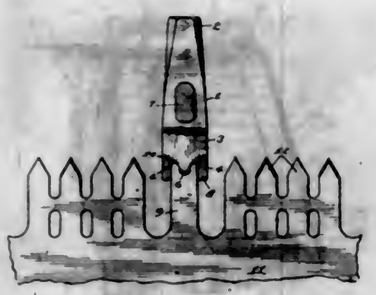
1. In a player grand piano, a casing, frame, strings, bed and piano action, a roll box on the top of the frame serving also as a music stand, a tracker bar in said roll box, a player action fastened to the bottom of the bed, and having striker rods, a cleat fastened to the bottom of the bed above the player action striker rods, vertically slidable extensions in said cleat riding on the player action striker rods and connecting them to the piano

keys, pneumatic tubes connected to said player action, connectors in said cleat receiving said tubes, tubes extending from said cleat connectors above the frame, tubes



leading from the tracker bar out of said roll box, and detachable connecting means above the frame for connecting the tubes from the tracker bar with the tubes from the cleat.

1,638,630. CONTROL MECHANISM FOR BRAKES. GEORGE HANNAUER and EDGAR M. WILCOX, Calumet City, Ill., assignor to Hannauer Car Retarder Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 20, 1924. Serial No. 757,105. 33 Claims. (Cl. 303—20.)



10. A car retarding device for railroads comprising braking means for engaging the car wheels, power means for actuating the breaking means, and multiple circuit remote control means for governing said power means to cause the braking means to engage the car wheels with any one of a plurality of predetermined pressures.

1,638,631. TRACK-BRAKE MECHANISM AND CONTROL MEANS THEREFOR. GEORGE HANNAUER, Calumet City, Ill., and EDGAR M. WILCOX, Hammond, Ind., assignors to Hannauer Car Retarder Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1925. Serial No. 30,433. 40 Claims. (Cl. 188—162.)

21. Track brake apparatus for railroads comprising retarding means coacting with the car wheels, a motor, a member through which said motor actuates said retarding means, and multiple circuit control means operatively associated with said member for controlling said motor, whereby said retarding means may exert graduated braking pressures.

1,638,632. SAW-SWAGING HAMMER. JENS HARSELBERG, Sacramento, Calif. Filed Dec. 14, 1925. Serial No. 75,348. 3 Claims. (Cl. 76—56.)

2. A saw swaging hammer comprising a body having an eye adapted to receive a handle, one end of said body being slightly tapered to form a striking element; a swaging portion formed upon the opposite end of the body said portion being of reduced thickness and having angularly disposed arcuate surfaces formed upon the outer end thereof, said surfaces intersecting at a central apex and being adapted to expand and shape the outer ends of raker teeth of saws; and a guide adjacent one side of the swaging portion to engage the back of a tooth.

1,638,633. INTERNAL MANDREL FOR SECTIONAL BOILER HEADERS. JOHN H. HINMAN, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 11, 1925. Serial No. 68,376. 8 Claims. (Cl. 153—73.)

1. A mandrel for internally supporting a tube that is being deformed to produce a sectional header, consisting of die bars provided with die elements, a collapsible means for rigidly supporting said die bars during the deforming operation comprising a pair of members arranged between said die bars and provided with oppositely-inclined contacting surfaces and means for moving one of said members longitudinally of the other member at the completion of the deforming operation so as to partially collapse the mandrel and thus prevent the header from gripping the die elements.

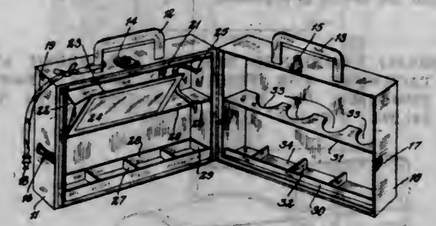
1,638,634. GIRDER. LAURENCE S. LACHMAN, New York, N. Y., assignor to Universal Electric Welding Company, a Corporation of New York. Filed Nov. 9, 1923, Serial No. 673,656. Renewed May 5, 1927. 7 Claims. (Cl. 189—37.)

4. An electrically welded girder comprising upper and lower pairs of bars disposed on edge and which are flat except for indented projecting portions, the projecting portions of the bars of each pair extending toward each other and diagonal bar members inclined in opposite directions, having their planes extending transversely of the girder, and disposed between the bars of each pair and electrically welded to the latter through the intermediary of the indented projecting portions.

1,638,635. GIRDER. LAURENCE S. LACHMAN, New York, N. Y., assignor to Universal Electric Welding Company, a Corporation of New York. Filed Nov. 9, 1923, Serial No. 673,657. Renewed May 5, 1927. 3 Claims. (Cl. 189—37.)

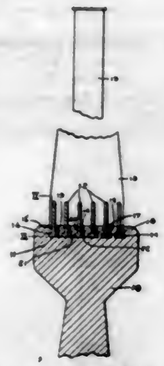
1. A skeleton girder comprising parallel angle members, the apices of which oppose each other, a zigzag member provided with projections spaced laterally to each other, the angle members being electrically welded to to the bends of the zigzag members at their apices so that the sides of an angle member seat upon the projections.

1,638,636. ELECTRICALLY-WELDED GIRDER. LAURENCE S. LACHMAN, New York, N. Y., assignor to Universal Electric Welding Company, a Corporation of New York. Filed Nov. 9, 1923, Serial No. 673,658. Renewed May 5, 1927. 3 Claims. (Cl. 189—37.)



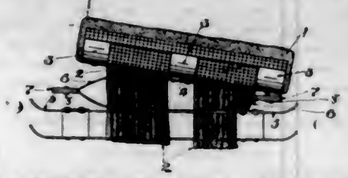
1. A structural beam comprising parallel angle members, the apices thereof opposed to each other, two zigzag bars each provided with parallel indented ribs, each of the zigzag members being electrically welded at its outer bends to the apex of an angle member so that the sides of the angle seat upon the ribs, and the inner bends of the angle members being electrically welded at their grooved surfaces.

1,638,637. GIRDER. LAURENCE S. LACHMAN, New York, N. Y., assignor to Universal Electric Welding Company, a Corporation of New York. Filed Nov. 9, 1923, Serial No. 673,660. Renewed May 5, 1927. 2 Claims. (Cl. 189—37.)



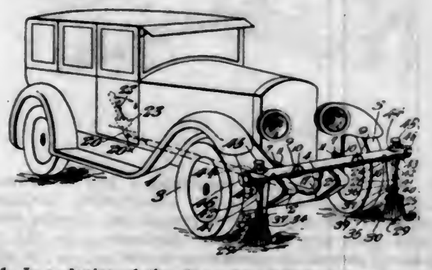
1. An electrically welded skeleton, girder, beam or the like the upper and lower members of which consist each of a pair of metal bars arranged parallel to one another each provided with a flange projecting toward one another, the general plane of each bar being substantially parallel to the general plane of the girder, and a zigzag member defining braces or struts and consisting of a plate disposed at all points in planes transverse to the general plane of the structure and interposed between and spacing the pairs of bars apart, the bends thereof electrically welded to the bars and contacting with the inner surfaces of the flanges and supported thereby.

1,638,638. COMBINATION DISPLAY AND VANITY CASE. THOMAS J. LEWIS, New York, N. Y. Filed Jan. 19, 1927. Serial No. 162,173. 3 Claims. (Cl. 182—79.)



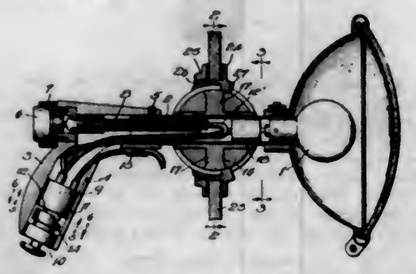
1. A case as described comprising a pair of endwise hingedly connected parts, flat, substantially U-shaped handles for the parts, partition walls for dividing each of said parts into a plurality of chambers for the reception of articles of personal wear and use, one of said chambers closed by a bellows-like structure, and means for locking and holding the parts together in the closed position of the case.

1,638,639. TURBINE BLADING. ROLAND MARSLAND, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 18, 1923. Serial No. 663,435. 8 Claims. (Cl. 253—77.)



1. In a turbine, the combination of a rotor having a plurality of circumferential grooves which are L-shaped in cross section and blades each of which is provided with a plurality of L-shaped root portions fitting in the grooves.

1,638,640. LUBRICATING DEVICE FOR RAILWAY VEHICLE AXLES. ERNEST MOONEY, York, England. Filed Jan. 27, 1927, Serial No. 163,981, and in Great Britain Feb. 26, 1926. 4 Claims. (Cl. 308—88.)



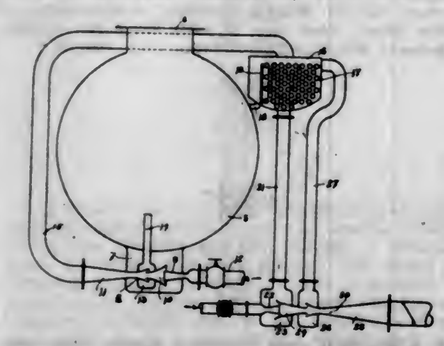
1. In a lubricating device of the class described, an absorbent pad, a yieldable frame supporting said pad, said frame comprising a cradle, side members, elliptical members connected to said cradle and said side members, and means extending transversely of the frame and connected to said elliptical members to prevent the wedging of the cradle between the elliptical members when the device is depressed.

1,638,641. COMBINED BUMPER AND BRUSH ATTACHMENT FOR VEHICLES. THOMAS O'BRIEN, Philadelphia, Pa. Filed Nov. 9, 1926. Serial No. 147,224. 7 Claims. (Cl. 293—55.)

1. In a device of the character stated, a front, tubular bumper adapted for installation transversely upon a vehicle, vertical sleeves secured to the outer ends of said bumper, rods carrying brushes at their lower ends and telescoping into said sleeves, pulleys in said bumper, cables extending over said pulleys and through said tubular bumper and having their outer ends connected to said rods and brushes, and means connected to the inner ends of said cables for actuating said cables, rods and brushes to raise and lower the latter.

1,638,642. COMBINED SPOTLIGHT AND CIGAR LIGHTER. RICHARD F. SCHIELE, Glen Ellyn, Ill. Filed May 17, 1923. Serial No. 639,660. 6 Claims. (Cl. 175—296.)

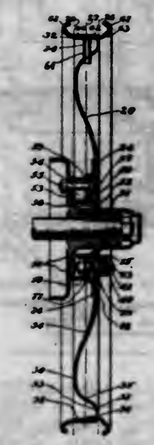
1. In combination, a lamp, a lighter removably secured thereto, an electrical contact for each of said members, and a movable contact carried by said lighter and operable to selectively engage said contacts.



1,638,643. MEDIUM FOR TREATING OILS AND METHOD OF MAKING THE SAME. HANS SCHLOSSTEIN, Chicago, Ill. Filed Feb. 25, 1927. Serial No. 171,082. 5 Claims. (Cl. 252—1.)

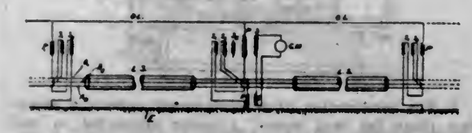
1. A hydrous-alumino-silicate containing magnesium hypochlorite combined therewith and double salts of aluminum and magnesium hypochlorites.

1,638,644. MEDIUM FOR TREATING OILS AND METHOD OF MAKING THE SAME. HANS SCHLOSSTEIN, Chicago, Ill. Filed Apr. 21, 1927. Serial No. 185,664. 3 Claims. (Cl. 252—1.)



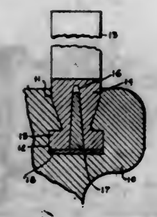
1. A hydrous-alumino-silicate admixed with calcium chloride, magnesium hydroxide and chlorine.

1,638,645. CONDENSER INSTALLATION. HENRY F. SCHMIDT, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 28, 1920. Serial No. 433,683. 7 Claims. (Cl. 162—1.)



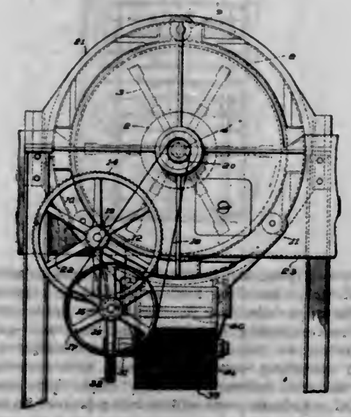
1. In combination with a condenser, first and second stage ejector apparatus for removing condensate from the condenser, a cooler interposed between the first and second stage ejectors, and overflow means associated with the second stage ejector and discharging into the cooler.

1,638,646. WHEEL. FRED C. SCHOENTHAL, Buffalo, N. Y., assignor, by mesne assignments, to Steel Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed June 29, 1922. Serial No. 571,811. 10 Claims. (Cl. 301—9.)



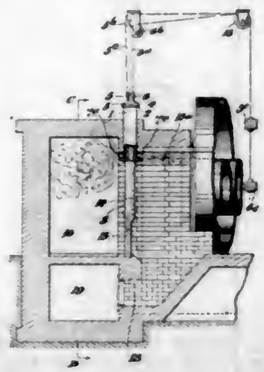
9. In a disk wheel, a hub, an adapter carried by and rigidly secured to said hub, said adapter having an annular shoulder and a conical face, a disk having a central opening of a diameter larger than that of the shoulder, a ring on said disk having a conical inner face engaging the face of said adapter when the wheel is assembled, means for securing said adapter to said hub, and means independent of said adapter securing means for securing said disk to said adapter.

1,638,647. ELECTRIC POWER-TRANSMISSION SYSTEM. ALFRED MILLS TAYLOR, Erdington, Birmingham, England. Filed Jan. 11, 1927, Serial No. 160,494, and in Great Britain July 11, 1925. 5 Claims. (Cl. 171—97.)



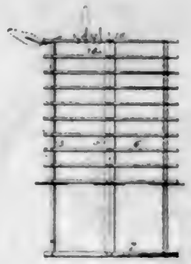
1. In a high-tension alternating-current transmission system, transmission conductors including the combination of overhead lines and intersheathed underground cables, means to transmit current through said overhead lines and underground cables at high voltages on the interstheathed cables and a relatively higher voltage on the overhead lines than the limits possible with the underground cables, and transformers with tappings connecting the overhead lines and cores of the cables for distributing the potentials and adjusting the loads on the individual cores of the cables.

1,638,648. TURBINE-BLADE FASTENING. HENRY R. TROTTER, Swarthmore, and HENRY F. SCHMIDT, Lansdowne, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 13, 1923. Serial No. 657,211. 5 Claims. (Cl. 253—77.)



1. In a turbine, the combination of a blade-carrying element having a blade groove therein with lateral recesses, a blade having a root portion with lateral projections to fit the groove and being divided longitudinally so as to provide an intermediate recess having walls inclined longitudinally of the blade, wedge means fitting the inclined walls of said recess, and second wedge means for driving the first wedge means longitudinally of the blade.

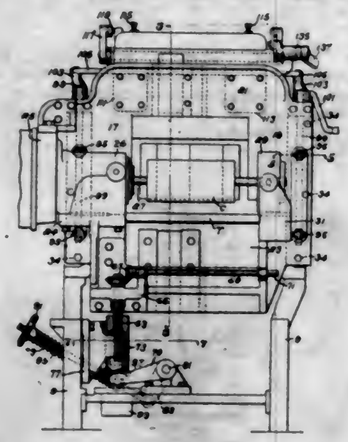
1,638,649. HORIZONTAL OPENER AND CLEANER. JOHN K. WHITTIER, FELIX D. LANGEVIN, and ROBERT S. CURLEY, Lowell, Mass., assignors, by mesne assignments, to Kitson Machine Shop, a Corporation of Massachusetts. Filed Sept. 30, 1924. Serial No. 740,779. 6 Claims. (Cl. 19—90.)



1. A cotton cleaning and opening machine comprising, in combination, a casing having inlet and outlet openings for the entrance and discharge of the cotton, mechanism within said casing for acting on the cotton to separate the dirt therefrom, and a belt conveyer for receiving the dirt so separated and discharging it from the casing, said conveyer having yieldingly faced lugs spaced thereon and extending transversely across the belt, and said casing having housings cooperating with said lugs to prevent any substantial leakage of air around the conveyer.

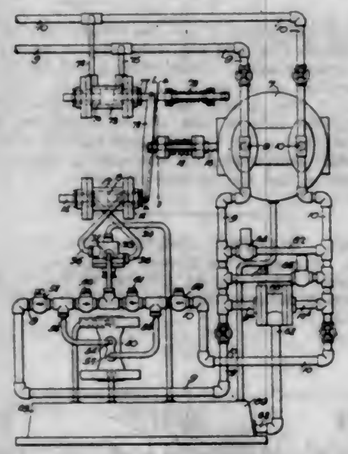
1,638,650. DAMPER FOR BOILER AND LIKE FURNACES. THOMAS WILLIS, Mumbles, Swansea, South Wales. Filed Nov. 10, 1926, Serial No. 147,532, and in Great Britain Feb. 10, 1926. 1 Claim. (Cl. 126—285.)

A device adapted to be positioned within a flue or other passage for controlling the draft therethrough comprising a frame, a pair of damper plates mounted in said frame for sliding movement into different overlapping and relatively separated positions, and means affording passage for gas through said frame in all positions of said plates with respect thereto.



1,638,651. SEED-CORN DRYING RACK. BENJAMIN L. BAIN, Cedar Rapids, Iowa. Filed Dec. 1, 1926. Serial No. 152,038. 4 Claims. (Cl. 34—26.)

1. A corn-drying rack having parallel upright standards and uniform, connecting, horizontal rails, a supplemental rack adapted to abut on the top of the main rack, and having corresponding standards, the terminal standards being pierced for lateral connection with adjacent racks, laterally extending supplemental racks with corresponding standards, and splices to connect the main and supplemental standards, said splices being pierced to coincide with both the lateral extension holes and the rail connection holes of the standards.

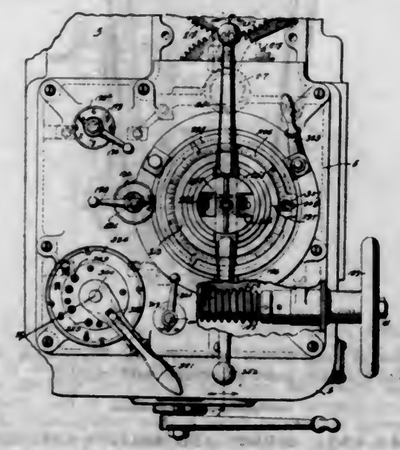


1,638,652. WOODWORKING MACHINE. LAURENCE E. BLOOD, Boston, Mass., assignor to S. A. Woods Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 16, 1926. Serial No. 155,189. 14 Claims. (Cl. 144—134.)

1. In a machine of the type described, in combination with the table over which the work is fed, a cutter head yoke freely reciprocable vertically and carrying a cutter head overlying the table, shoes carried by the yoke to ride on the work on the table whereby to position said yoke, a lever system on which the yoke rests and means projecting at the side of the machine for manipulation

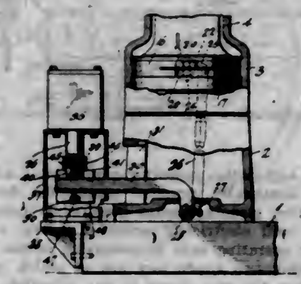
for applying a variable counterbalancing pressure to said system for counterbalancing a desired portion of the weight of the yoke and parts thereon.

1,638,653. HYDRAULIC MECHANISM. EARL CANNON, Philadelphia, Pa., assignor, by mesne assignments, to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 25, 1923. Serial No. 641,443. 19 Claims. (Cl. 60—52.)



2. The combination of a continuously operating pump; two pipes for said pump; a motor connected to said pipes; and a device connected to be actuated by changes in pressure of liquid in said pipes for automatically reversing the direction of flow of liquid therein.

1,638,654. RADIAL DRILL. JACK C. CARLTON, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 12, 1924. Serial No. 698,686. 8 Claims. (Cl. 192—189.)

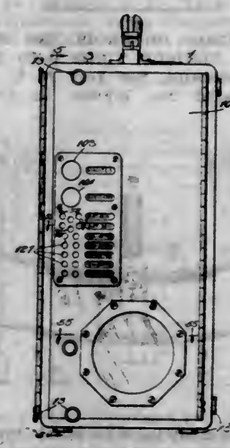


1. A driving element independently mounted, a journal, a driven element on said journal, friction discs for each element adapted when compressed to cause rotation of

the elements in unison, means for compressing said discs, and means for automatically releasing said compressing means, comprising a translatable member traversing said journal and attached at one end to said compressing means, and further adapted to be actuated by and to actuate said compressing means, a portion of said trans-

latable member engageable from an outside point, a lever independently mounted having one end engageable with said translatable member when the discs are compressed, and a lug upon said driven element engageable with the lever whereby when said lug engages said lever said translatable member is actuated to release said compressing means.

1,638,655. RADIAL-DRILL COLUMN-CLAMP CONTROL. JACK C. CARLTON, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 7, 1926. Serial No. 79,834. 1 Claim. (Cl. 77—28.)

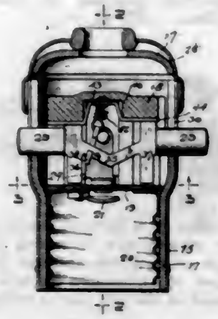


In a radial drill, a column, an arm carrying sleeve concentrically engaged about and rotatable upon the column, frictional clamping means interposed between the column and sleeve for rigidly binding said parts together, a rock shaft at the base of the column, connections between said rock shaft and clamping means for actuating said clamping means, a lever arm fixed to the rock shaft, a weight loosely engaged upon said lever arm for depressing said lever arm and maintaining said clamping means in active position for binding the column and sleeve, and an electromagnet having an armature engaging with said weight for operating said arm when the magnet is energized, releasing the binding engagement of the friction means with the column and sleeve.

1,638,656. METHOD OF AND MEANS FOR RECLAIMING LANDS AND FORMING BULKHEADS. ALEXANDER CRAWFORD CHENOWETH, New York, N. Y.; Catharine R. Chenoweth administratrix of said Alexander Crawford Chenoweth, deceased. Original application filed June 11, 1915, Serial No. 33,608. Divided and this application filed Oct. 16, 1920. Serial No. 417,309. 4 Claims. (Cl. 61—4.)

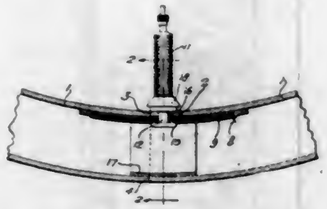
2. The combination of a vertical elevated structure arranged upon the ground, and protecting reinforced composition coverings or mats resting upon the said ground and at their upper ends engaging the said structure and forming a bulkhead or the like, and a filling back of said mats.

1,638,657. TESTING AND RECORDING DEVICE. CLAUDE E. COX, Detroit, Mich. Filed Aug. 22, 1921. Serial No. 494,205. 17 Claims. (Cl. 234—1.)



1. In an apparatus of the kind described and in combination, a movable chart having scale lines thereon, means operating in conjunction with said scale lines for indicating and recording desired information at definite intervals on said chart, said last-named means comprising a chronometer, a frame movable relatively to said chart, marking means pivotally carried by said frame, means engageable for intermittently actuating said marking means, and electromagnetic means controlled by said chronometer for periodically moving said frame in alternate directions to engage said marker actuating means.

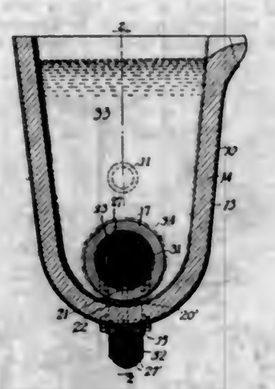
1,638,658. ELECTRIC SWITCH. HENRY O. ENGSTROM, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 11, 1924. Serial No. 719,893. 3 Claims. (Cl. 173—335.)



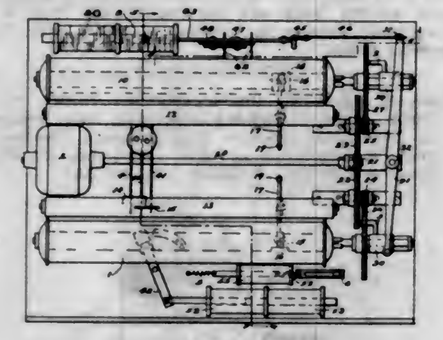
1. An electric switch comprising an insulating body recessed to afford a switch chamber with guideway opening thereto, a rectilinearly movable actuator accommodated in said guideway and movable across said switch

chamber, said actuator comprising a peaked cam, a switch piece movable across the switch chamber and riding said cam, a spring anchor to which one end of said

spring is attached, and a sliding engagement between said anchor and the actuator serving to hold said anchor against displacement under the stress of the spring.



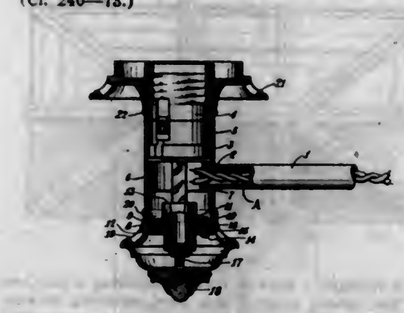
1,638,659. METHOD OF PRODUCING PNEUMATIC TUBES FOR VEHICLE TIRES AND THE LIKE. WALTER L. FAIRCHILD, New York, N. Y. Filed Sept. 11, 1924. Serial No. 737,088. 2 Claims. (Cl. 154—14.)



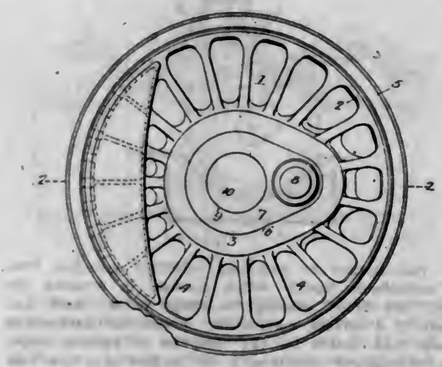
1. A method of producing a pneumatic tube for vehicle tires, which comprises providing a tube of unvulcanized rubber, providing a ring composed of two superimposed strips of unvulcanized rubber with interposed fabric reinforcing means, inserting a valve stem through said ring, positioning said ring into one of the free ends of said tube so that said valve stem extends therethrough, abutting the opposite end of said tube with the first mentioned end thereof, so that both ends of the tube embrace said ring, kneading the material of said tubes adjacent the ends thereof so that the free ends of said tube and said ring become substantially homogeneous, and then vulcanizing said tube and ring.

1,638,660. ELECTROTHERMIC CRUCIBLE. CHARLES B. FOLEY, Dayton, Ohio, assignor to Charles B. Foley, Inc., a Corporation of New York. Filed Nov. 17, 1913, Serial No. 801,474. Renewed Dec. 28, 1916. Serial No. 139,437. 23 Claims. (Cl. 204—64.)

1. An electric induction furnace, comprising a crucible provided with a refractory channel extending through the crucible from side to side and opening exteriorly thereof, said channel being so located as to produce the greatest heating effect at the bottom of the crucible and having its sides so arranged relatively to the sides of the crucible as to leave a passage between them which increases in cross-section upwardly, in combination with induction means passing through said channel.



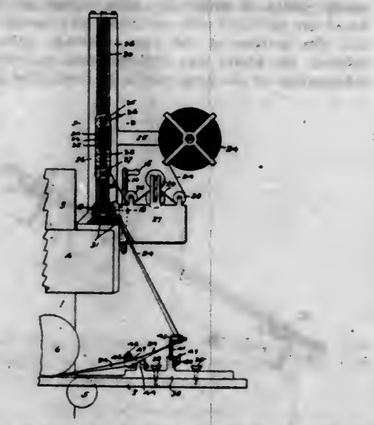
1,638,661. STREET AND STATION INDICATOR. THOMAS BRYAN FOTHERINGHAM and MAR MCINTYRE, Seattle, Wash. Filed June 1, 1926. Serial No. 112,863. 1 Claim. (Cl. 40—53.)



A street and station indicator comprising a name carrying web, electrically actuated means for feeding said web, and feed stopping means comprising means for de-energizing said electrically actuated means, an electric circuit for operating said de-energizing means, said circuit including two conductors one of which carries the current when the web moves in one direction, the other of which carries the current when the web moves in the other direction, an electrically operated reversing mechanism and a switch operated thereby for switching one or the other of said conductors into the circuit depending on the direction of movement of the web, each of said conductors having a contact finger, a third contact finger in said circuit, a roller turned by the feeding of the web, said roller having two bridge bars extending lengthwise of and at the surface of the roller, said bridge bars being angularly spaced and longitudinally overlapping towards one end, said third contact finger being arranged to engage both bridge bars, and each of the other contact fingers being arranged to engage its respective one of the bridge bars to thereby close the circuit of the feed stopping means.

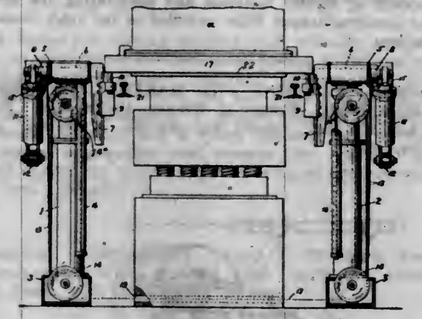
1,638,662. ELECTRIC-SOCKET SUPPORT AND HOUSING. FREDERICK A. FERRICHS, Philadelphia, Pa., assignor to The Horn & Brannen Manufacturing Co. Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1926. Serial No. 104,135. 8 Claims. (Cl. 240—73.)

1. A fixture stem, a standard electric socket shell, a hickey secured to the shell, a housing in which said shell is mounted, said housing having a thickened wall where the stem joins it, an apertured disc which closes the lower end of said housing, a plate secured to the disc, a threaded stem thereon which enters said aperture, said stem fitting the threaded part of the hickey of said socket shell, and means to prevent the rotation of said disc carrying the shell.



1,638,663. DRIVING WHEEL FOR LOCOMOTIVES, ETC. HARRY GLAENZER, Philadelphia, Pa. Filed June 22, 1927. Serial No. 200,688. 3 Claims. (Cl. 295—2.)

1. The combination in a driving wheel for locomotives, etc., of a wheel centre having a hub provided with an opening; and a supplemental hub driven into the opening and having a crank pin integral therewith.

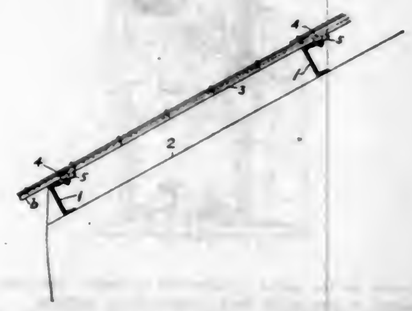


1,638,664. VENEER-TAPING MACHINE. HUGH G. GREENFIELD, Tacoma, Wash., assignor of one-half to Variety Machinery Company, Tacoma, Wash., a Corporation of Washington. Filed Oct. 11, 1926. Serial No. 140,774. 4 Claims. (Cl. 144—279.)

1. In a veneer taping machine, the combination with a veneer feed mechanism; a variable-speed drive mechanism; a variable-course tape-guiding mechanism; and manually-operated means connecting said variable-speed drive mechanism to said variable-course tape-guiding mechanism, whereby the length of exposed moist tape is

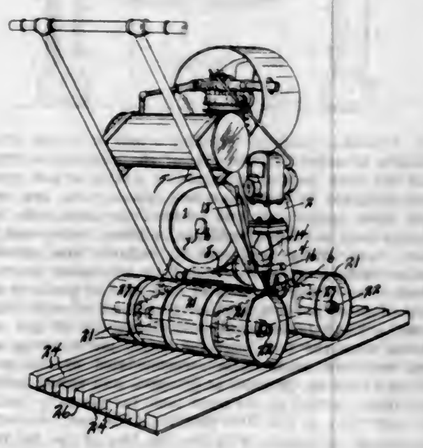
increased as the speed is increased to render the time of exposure of the moist tape substantially uniform.

1,638,665. MOLDING MACHINE. WILFRED LEWIS, Haverford, Pa., assignor to The Tabor Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 26, 1925. Serial No. 58,687. 7 Claims. (Cl. 22—29.)



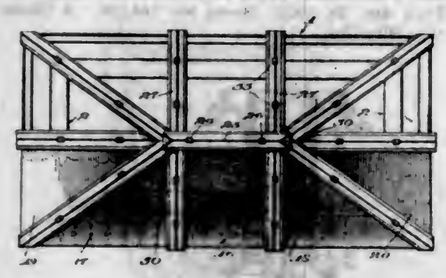
1. A molding machine including a pair of spaced lifting plungers arranged at each side of the machine, a lifting head for each pair of plungers, a double armed crank shaft mounted in each head and whereof one arm is a mold table carrier arm and whereof the other arm is a rollover arm, a rollover cylinder, a piston interposed between each lifting head and its rollover arm, parallel motion cable gear accommodated by the space provided between the lifting plungers of each pair of plungers and adapted to secure synchronous movement of said lifting heads, a mold table having detachable lift off pin connection with the table carrying arms, jar ramming and flask receiving mechanisms accommodated by the space provided between the pairs of plungers, and spring locking mechanism carried by the mold table for normally locking the mold table to the table carrying arms and adapted to be released by contact with the top face of the jar ramming mechanism.

1,638,666. ROOF OR SKYLIGHT CONSTRUCTION. ARNO SHUMAN, Philadelphia, Pa., assignor to Pennsylvania Wire Glass Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Dec. 20, 1924. Serial No. 757,089. 1 Claim. (Cl. 108—16.)



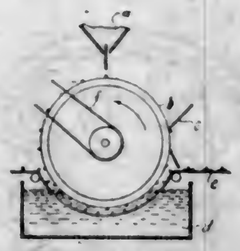
A skylight and roof construction including purlins, V-bars arranged on top and crosswise of the purlins with

their gutter-faces confronting the purlins, slip shackles embracing the free edges of the gutter walls of the bars, clamp plates of which the tails engage the purlins and which are provided with upturned blunt-wedge toes taking into the gutters of the bars, carriage bolts interposed between the plates and shackles and operative to cause deformation of the bars, sheets of corrugated glass resting



on the purlins with their margins spaced apart at the bars, metal strips overlying the adjoining margins of the sheets and covering the bars and provided with toes engaging the eave edges of the sheets, and pointed screws disposed at rigular intervals and penetrating the strips and engaging tapped holes provided in the ridge faces of the bars.

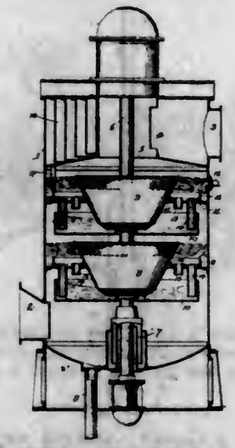
1,638,667. MACHINE FOR MAKING COMPRESSED CONCRETE. ROBERT C. STUBBS, Dallas, Tex. Filed Jan. 27, 1927. Serial No. 164,094. 4 Claims. (Cl. 94—48.)



2. In a device for compressing concrete by means of vibrations; a plate adapted to be placed in contact with freshly laid plastic and provided with direction controlling openings for escape of air and surplus water and provided with direction controlling openings for escape of air and water.

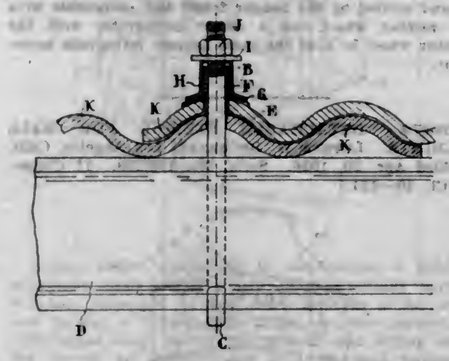
1,638,668. SKYLIGHT. SIDNEY VOLK, Benton Harbor, Mich. Filed May 1, 1925. Serial No. 27,251. 2 Claims. (Cl. 108—16.)

1. In a skylight, a metallic frame comprising a base bar, a ridge bar, spaced inclined sash bars extending between the ridge bar and the base bar, and glass panels extending between the ridge bar and base bar and each having the lateral edge portions thereof supported upon adjacent sash bars, said sash bars having oppositely extending glass panel supporting flanges at their upper edges, said flanges having the outer edges thereof turned upward to retain putty on said flanges underneath the overlying edge portions of said glass panels.



1,638,669. METHOD OF OBTAINING SOLIDIFIED GRANULES OR PEARLS FROM LIQUIDS. WILHELM WACHTEL, Berlin, Germany, assignor to the Firm Aktiengesellschaft für Chemische Produkte vormals H. Scheidemandel, Berlin, Germany. Filed June 20, 1925. Serial No. 40,363, and in Germany Dec. 15, 1924. 4 Claims. (Cl. 83—91.)

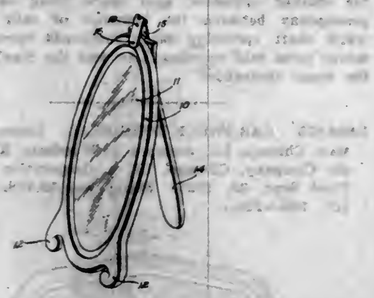
1. The method of obtaining solidified granules from hot solidifiable liquids which consists in forming the liquid into drops, causing the drops to fall upon and adhere to a surface, moving the surface continuously to present new points for the reception of further drops, and continuously maintaining the surface at a low temperature to gradually solidify the drops, passing the drops while adhering to the surface through a cooling bath, and removing the solidified drops from the surface.



1,638,670. LIQUID AND GAS CONTACT APPARATUS. FREDERICK H. WAGNER, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed June 17, 1925. Serial No. 37,794. 6 Claims. (Cl. 261—91.)

1. In an apparatus of the character specified, the combination of a casing; a receptacle located therein with its edges in spaced relation to the wall of the casing; means extending into said receptacle for withdrawing a liquid therefrom and spraying the same outwardly; a diaphragm extending inwardly from the wall of the casing at a point above the receptacle, said diaphragm receiving the liquid flowing from the spray; and a series of tubular members extending through the diaphragm through which

the liquid passes from the diaphragm and through which the gas undergoing treatment also passes in counterflow to the liquid.

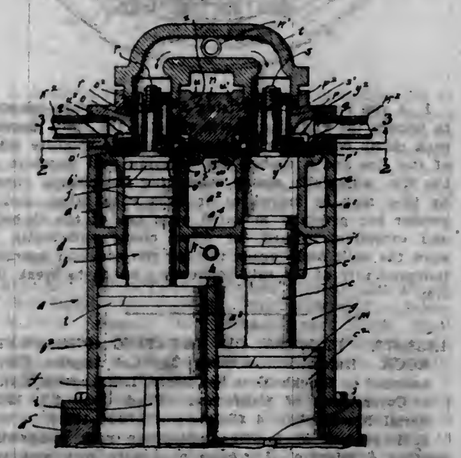


1,638,671. ROOFING FASTENING. MARCEL WAGNER, Mulhouse, France. Filed Apr. 22, 1926, Serial No. 103,914, and in France Apr. 28, 1925. 6 Claims. (Cl. 189—35.)

1. Means for fastening overlapping roofing plates to a supporting framework, comprising a fastening rod which projects upwardly through a perforation in at least one of the overlapping plates and which has its lower end rigidly engaged with the adjacent member of the framework; a rigid strengthening member through which said rod extends having its entire upper face fitting flush against the inner surface of the perforated plate; a malleable metal washer mounted on the projecting portion of the rod and disposed against the external surface of said perforated plate; and a clamping member threaded on said projecting rod portion and anchored in the external surface of said washer.

1,638,672. COMBINED HAND MIRROR AND TABLE MIRROR. JOHN J. WALSH, Yonkers, N. Y. Filed Jan. 20, 1927. Serial No. 162,846. 3 Claims. (Cl. 45—98.)

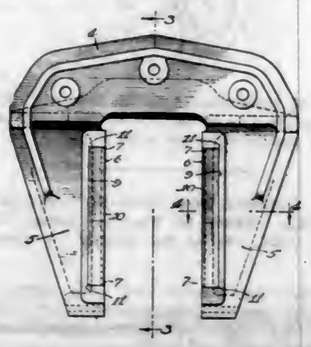
1. A mirror, a handle pivoted thereto, means for locking the handle against pivotal movement when it is axially aligned with the mirror, or when it is disposed at an acute angle relatively to the mirror whereby the handle may selectively serve as an easel, the locking means including a stiff strip fixedly attached to the handle and normally overlying and latched to the mirror,



and a second strip pivoted to the free end of the first strip and adapted to be latched to the mirror when the mirror and handle define an acute angle.

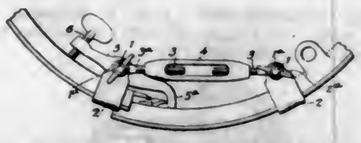
1,638,673. UTENSIL FOR COOKING ANNULAR FOOD PRODUCTS. HENRY M. WILCOX, Chicago, Ill. Filed May 13, 1926. Serial No. 108,722. 1 Claim. (Cl. 53—10.)

A device for cooking annular food products, comprising an imperforate two-part mold having at the top and bottom central tubular reentrant portions that abut against each other when the two parts are placed together, thus producing a central passage extending through the mold and a closed annular molding compartment surrounding said passage, the walls of the mold and of the tubular portions being of approximately uniform thickness.



1,638,674. COMPRESSOR. JOHN P. WILDMAN, Portland, Oreg. Filed Mar. 26, 1925. Serial No. 18,480. 1 Claim. (Cl. 230—27.)

In a compressor; two pairs of aligned and connected pistons and crossheads, the pistons of each pair being smaller than the crosshead of the same pair; parallel



pairs of cylinders for each of said pistons and crossheads; a wall common to both of the larger cylinders and extending upwards to terminate in a space between the smaller cylinders, said space being an equalising passageway between the housings of said pistons; a crank shaft operating said crossheads oppositely; and means upon said crossheads to seal the crank case from the space thereabove.

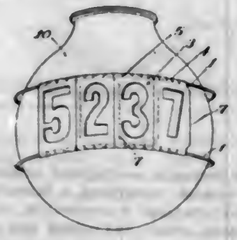
1,638,675. CAR-TRUCK PEDESTAL. GEORGE A. WOODMAN, Chicago, Ill., assignor to Woodman Railway Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 30, 1925. Serial No. 59,488. 5 Claims. (Cl. 105—225.)

1. A car truck pedestal comprising jaws adapted to receive a journal box therebetween, and a liner on the surface of each jaw next to the journal box and made of channel form embracing the jaw, said liner being made of spring material and held in position by the resiliency thereof and by means arranged on the side of the jaws for restricting lateral movement of the liners.

1,638,676. RIM TOOL. JOHN H. BANKA, Battle Creek, Mich. Filed Apr. 13, 1927. Serial No. 183,393. 4 Claims. (Cl. 157—1.)

1. A rim breaker, comprising a pair of clamps adapted to engage the rim at opposite sides of the split therein, each clamp comprising members to engage opposite sides of the rim and a tie-bolt for securing said members to the rim; adjustable means connecting the clamps whereby they may be moved to or from each other, and a presser bar pivotally mounted upon one of the tie-bolts and extending toward the other clamp sufficiently to span the split and engage the far rim end and operable independently of the said connecting means to break the rim.

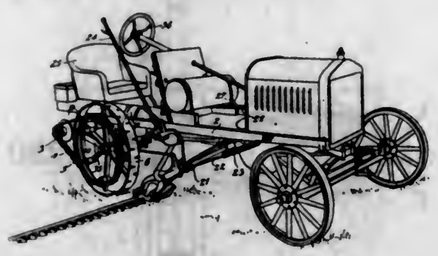
1,638,677. PROCESS OF TREATING PHOSPHATE ROCK. HENRY BLUMENBERG, Jr., Los Angeles, Calif., assignor to Stockholders Syndicate, Los Angeles, Calif., a Corporation of California. Filed June 23, 1925. Serial No. 39,044. 4 Claims. (Cl. 23—106.)



1. A process of treating phosphate rock comprising heating a mixture of ground phosphate rock and ammonium sulphate in a closed retort to a temperature not to exceed 300° C. to produce ammonium phosphates and calcium sulphate.

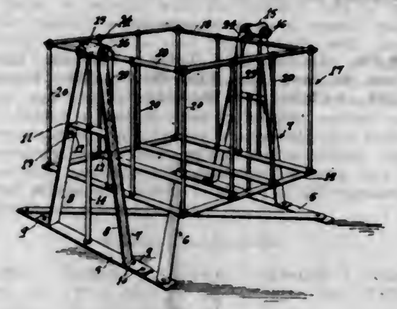
1,638,678. TORPEDO HOOK. OSCAR BOND, Sapulpa, Okla. Filed Jan. 23, 1926. Serial No. 83,378. 3 Claims. (Cl. 294—83.)

1. A torpedo hook comprising a hanger frame, a hook body slidably mounted on the hanger frame and having torpedo supporting means, spring means for pulling the hook body upwardly on the hanger frame, a locking bar for preventing disengagement of the torpedo and its supporting means, a release for said locking bar operable by the relative movement of the hanger frame and hook body and comprising a shaft rotatably mounted on the hook body, motion transmission means between the shaft and the bar, a ratchet wheel fixed on the shaft, a pawl carried by the hanger frame and cooperable with the ratchet wheel and a detent co-operable with the ratchet wheel to hold the same against retrograde movement.



1,638,679. DETACHABLE STENCIL FOR BALL LIGHTS. LUTHER H. BUCHANAN, Los Angeles, Calif. Filed Apr. 20, 1926. Serial No. 103,239. 11 Claims. (Cl. 40—131.)

1. In combination with a globular structure, a pair of wires of a resilient nature partly encircling the structure, stencils having indicia thereon, the stencils having beads, the wires extending through the beads of the stencils, and clips secured to the wires at the opposite ends of the series of stencils, having frictional arrangement with the wires, and adapted to maintain the wires in position.



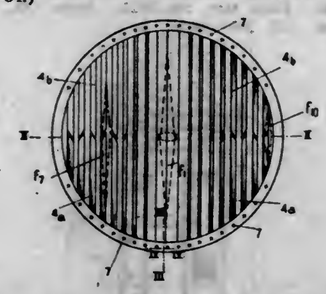
1,638,680. POWER ATTACHMENT FOR MOWERS. JOHN A. COOK, Franklin Furnace, N. J. Filed Sept. 8, 1926. Serial No. 134,288. 1 Claim. (Cl. 180—1.)

In a combined mowing machine and automobile, means for connecting the driving mechanism of the automobile with the traction wheels of the mowing machine whereby the automobile will drive the mowing machine, said means including a specially constructed traction wheel for the mowing machine, said traction wheel including

a member for gripping the ground, a plurality of spokes, each spoke having an enlarged tubular section, and means for clamping a sprocket wheel to said enlarged tubular section.

1,638,681. CAN HOLDER. THOMAS B. COOK, Los Angeles, Calif. Filed May 5, 1924. Serial No. 711,141. 1 Claim. (Cl. 248—58.)

A can holder comprising in combination a pair of standards, each having a pair of substantially upright members connected at their lower ends by a bed strap and having a cross-shaped fitting member secured to their upper ends, one of the bars of each fitting member having an aperture and each standard having a transverse member between the upright members below the fitting, a vertical member connecting the transverse member and the bed strap, a cross brace connecting the pair of bed straps, a cradle having an upper frame and a lower frame, said frames extending completely around the upper and lower periphery of the cradle, upright bars connecting said frames, and a pair of said bars at opposite sides of the cradle extending above the upper frame and each having a lateral bent portion journaled in each aperture in the cross-shaped fitting member.

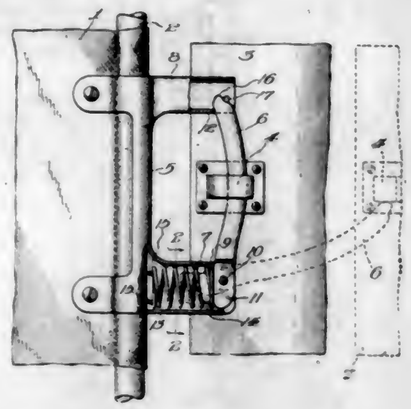


1,638,682. COIN-CONTROLLED DEVICE. WILLIAM C. DE ARMOND and WILLIAM RAY H. WATT, Philadelphia, Pa. Original application filed July 2, 1925, Serial No. 40,997. Divided and this application filed Sept. 10, 1925. Serial No. 55,429. 7 Claims. (Cl. 194—54.)

1. In a device of the character stated, a coin support, actuating means to displace said coin support in a fixed path, a stationary serrated element and yieldable means intermediate said coin support and said stationary serrated element, adapted normally to interlock with the serrations thereof, thereby to retain said coin support

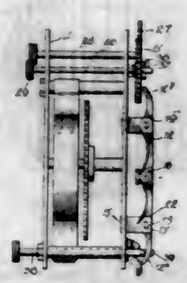
fixedly and adapted to be withdrawn from engagement with said serrations by the insertion of a coin into said coin support and an opposed serrated element for engagement by the coin.

1,638,683. SHIELD FOR USE IN THE PRODUCTION OF RADIOSCOPES OR RADIOGRAPHS. MARIO DEMARCHI, Biella, Italy. Filed Jan. 12, 1926, Serial No. 80,826, and in Italy Jan. 17, 1925. 5 Claims. (Cl. 250—34.)



1. A shield for use in the production of radioscopes or radiographs, comprising a circular frame, strip-shaped blades of X-ray opaque material mounted in said frame with their longer sides parallel to one diameter thereof, each blade being formed in two halves, and each half being fixed at one end to the frame, and being free to vibrate at the opposite end upon a motion being imparted to the frame.

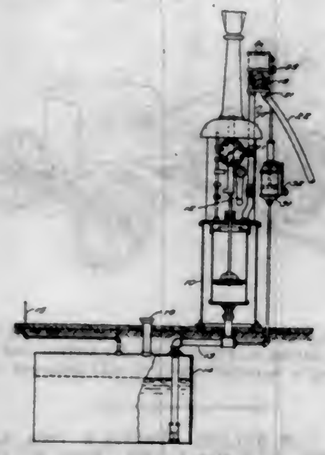
1,638,684. REDUCTION PROCESS USING CIRCULATING REDUCING GASES. EMIL EDWIN, Trondhjem, Norway, assignor to Aktieselskapet Norsk Staal Elektrisk-Gas-Reduktion, Oslo, Norway. Filed Oct. 15, 1925, Serial No. 62,654, and in Norway Sept. 27, 1922. 3 Claims. (Cl. 75—17.)



1. In reduction processes using circulating reducing gases the steps which consist in withdrawing part of the circulating gases, subjecting said part of the gases to treatment with steam, whereby carbon monoxid is transformed into carbon dioxid and hydrogen, removing the carbon dioxid formed and reintroducing the remaining gas into the circulation system.

1,638,685. VESTIBULE-CURTAIN HANDLE. PLATO G. EMERY, Chicago, Ill. Filed Nov. 26, 1926. Serial No. 150,852. 8 Claims. (Cl. 105—24.)

1. A curtain handle comprising a handle-forming member pivoted at one end, a stationary abutment with which the other end of said member engages, and a spring acting on said member in the vicinity of the pivoted end normally to hold said member against said abutment and permit it to swing away therefrom when a predetermined pull is exerted on said member.

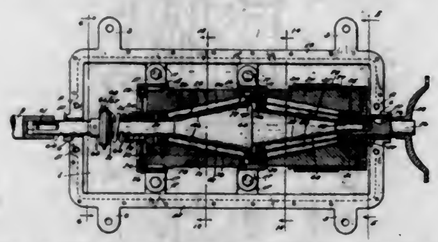


1,638,686. CIRCUIT BREAKER. FRANK J. FENCL, Chicago, Ill. Filed Mar. 26, 1925. Serial No. 18,353. 4 Claims. (Cl. 200—38.)

1. A circuit breaker comprising a pair of supporting members, a pair of arms pivoted to said members by pin and slot connections, a member pivotally connected to the inner ends of said arms, means for preventing the arms from moving in one direction past their substantially dead-center position, leaf springs between the supporting members and said member for shifting said arms and member in the opposite direction after the arms have been moved out of said position, and switch means controlled by one of said arms.

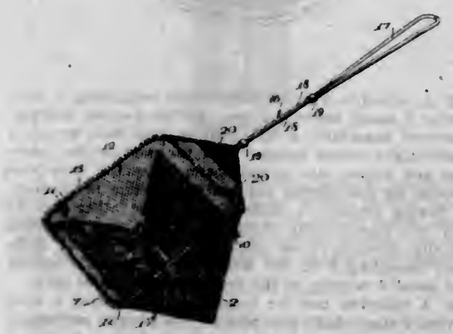
1,638,687. GASOLINE-DISPENSING APPARATUS. PAUL W. FENTON, New York, N. Y. Filed Aug. 5, 1925. Serial No. 48,203. 5 Claims. (Cl. 221—102.)

1. In dispensing apparatus of the character described including a liquid dispensing pump with dispensing chamber communicating therewith and provided with an outlet: means to maintain automatically in the dispensing chamber thereof and while the pump is at rest a predetermined level of the liquid; and supplementary means



associated therewith for affording independently of the dispensing pump a supply of liquid to the said means for maintaining the predetermined level.

1,638,688. AUTOMOBILE LOCK. WILLIAM FREDRICK FIPPS, St. Louis, Mo. Filed Feb. 9, 1925. Serial No. 7,994. 1 Claim. (Cl. 70—132.)

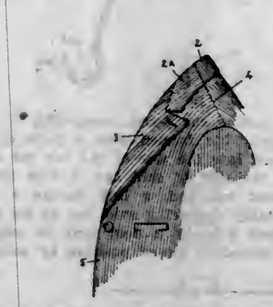


An automobile lock for use on hand brakes including a hand lever provided with a lengthwise bore enlarged at its upper end, a latch rod snugly though slidably fitted in said bore, and comprising a combined operating member and lock casing, the casing being threadedly connected to the latch rod and slidably and rotatably though snugly fitted in the enlarged upper end of the bore of the lever, a key operated lock in said casing having a radially sliding bolt, said hand lever having a radial opening communicating with the enlarged portion of its bore and in which the projected portion of the bolt is adapted to be snugly fitted to positively lock and hold the rod against both rotating and sliding movement and to prevent the rod from being sprung to disengage the bolt from said radial opening.

1,638,689. AUTOMATIC GEARLESS TRANSMISSION. THEODORE GENSMER and ROBERT Z. FARMER, Portland, Oreg., assignors to Automatic Transmission Company, a Corporation of Oregon. Filed Dec. 24, 1924. Serial No. 757,784. 19 Claims. (Cl. 74—34.)

1. Variable speed transmission apparatus, consisting in a housing, annular bearing straps rigidly mounted in spaced relation interiorly of said housing, a cylinder rotatably journaled in said bearing-straps having an interior, axially conical chamber, a fixed casing mounted in axial alignment with said cylinder formed with an interior, axially conical chamber oppositely disposed to said cylinder-chamber, a clutch device to prevent reverse rotation of said cylinder, a rotatable frame mounted in said chambers and operatively connected with a driven shaft, a plurality of cylindrical rollers rotatably supported in said frame in parallel with the inclined wall of said cylinder-chamber, a plurality of pairs of tapered rollers rotatively supported in said frame within said casing-chamber, said pairs of rollers being arranged in radial, superposed relation, a driving-member journaled in said housing and slidably connected to a power-driven shaft and including a pair of cones in integral opposed relation disposed in said chambers, respectively, and slidable to selectively engage either of said sets of rollers, means to resiliently engage said driving-member with said cylindrical rollers, and means to shift said driving-member to engage said tapered rollers.

1,638,690. INSECT CATCHER. CHARLES Y. HAKE, York, Pa. Filed Mar. 8, 1927. Serial No. 173,717. 1 Claim. (Cl. 43—134.)



A device of the character described comprising a cage open at its lower end and having an impounding chamber with an entrance inside said cage, and means for discharging the dead insects from the bottom of said impounding chamber, an opening formed between the walls of said body at the bottom thereof, the inner wall having a threaded stud secured thereto and extending through the outer wall and equipped with means for drawing said walls together for closing said opening.

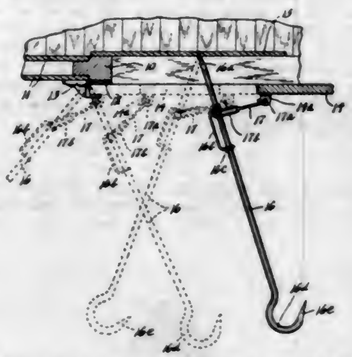
1,638,691. LAMP-SOCKET CONSTRUCTION. LAWRENCE A. HOFSTETTER, Union City, N. J. Filed Apr. 14, 1926. Serial No. 102,024. 4 Claims. (Cl. 173—358.)

1. A lamp socket which comprises a socket to receive a lamp base, a casing in which the socket is movably mounted, resilient means for supporting the socket in the casing and holding it in normal position, means for placing the lamp filament in circuit when the socket is held in normal position in the casing, and means for short-circuiting the filament when the socket is moved against the action of the resilient means.

1,638,692. COAT COLLAR. FRANK HOHENSTEIN and HENRI HOHENSTEIN, Rochester, N. Y. Filed Mar. 28, 1927. Serial No. 178,837. 2 Claims. (Cl. 2—98.)

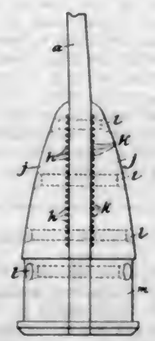
1. A collar and lapel for a coat made of striped or figured material and having a shoulder seam, said collar comprising a central or rear section having its stripes or figures parallel and in line with the back of the coat, end or front sections attached to said rear or central section and having with the seam between the end front section and the central or rear section located in line with and forming a continuation of the shoulder seam between the front and back of the coat, a lapel forming a continuation of said end or front section of said collar and having its stripes or figures in line with the stripes or figures of said end or front section of said collar.

1,638,693. TRANSPLANTING DEVICE. BESS HOOKS, Thomas, Okla. Filed Sept. 16, 1926. Serial No. 135,917. 3 Claims. (Cl. 47—37.)



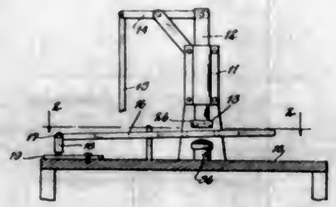
3. A transplanting device comprising a flat thin plate of a size and shape to conform to the bottom of a flower pot or the like and adapted to engage and support the dirt contained in the flower pot or the like, thin narrow arms integrally formed with the plate at diametrically opposite portions thereof, the arms inclining upwardly

and outwardly and being transversely curved to snugly fit against the inner wall of the flower pot or the like,



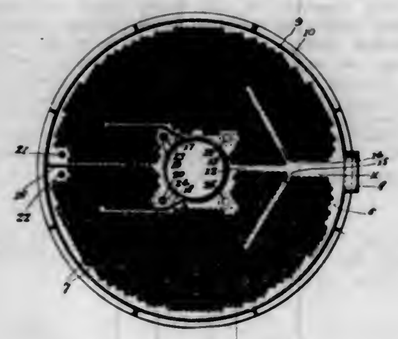
the edges of the arms being sharpened, the upper ends of the arms being extended laterally to provide handle portions.

1,638,694. DOOR-CLOSING DEVICE FOR BOX CARS. LE ROY FRANK JOHNSON, Willmar, Minn. Filed Oct. 29, 1926. Serial No. 144,973. 3 Claims. (Cl. 254—131.)



1. A device for closing car doors, comprising a comparatively long narrow bar formed with a point at one end so as to be stuck into the side of the box car or to engage a ledge at the side of said car, a loop formed on said bar adjacent one end, a link having a hook at its free end slidably embracing said bar at its other end within said loop whereby a door may be engaged by said hook and moved to closed position by said bar acting as a lever.

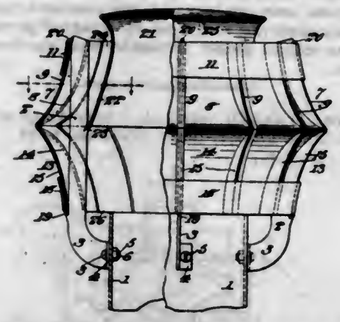
1,638,695. SCREW PROPELLER. HENRY LEITNER, Croydon, England. Filed June 8, 1925, Serial No. 35,676, and in Great Britain June 23, 1924. 7 Claims. (Cl. 170—173.)



1. In a screw propeller of the character described, a blade body, and means applied to opposite faces of said body at the root end forming a cylindrical root, recessed circumferentially.

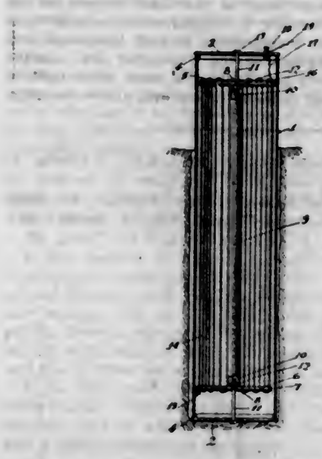
1,638,696. COMPACT PRESS AND METHOD OF MAKING COMPACTS. THOMAS J. LEWIS, New York, N. Y. Filed Feb. 21, 1927. Serial No. 169,965. 7 Claims. (Cl. 18—16.)

1. Powder compact press comprising a bar, a seat formed with said bar for seating a compact to be pressed, means for carrying the compact on said seat under a die press, means for allowing a manipulation of said bar, a means for guiding said bar, and a means for adjustably securing said bar.



1,638,697. EVAPORATOR. IRA MERLIS, New York, N. Y., assignor to Kelvin Engineering Co. Inc., New York, N. Y., a Corporation of Delaware. Filed July 17, 1926. Serial No. 123,191. 6 Claims. (Cl. 159—27.)

2. A calandria belt for evaporators comprising a shell having a single inductance port for the heating medium, a central down-take, a tube body in said shell having a substantially radial passage from the port to the down-take and having also lateral channels leading from said passage for distributing the heating medium in oppositely flowing streams, a baffle plate at the other side of said belt diametrically opposite the port and extending radially inwardly from the shell, and a lateral baffle plate extending from the down-take in laterally spaced and parallel relation to the first mentioned baffle plate.

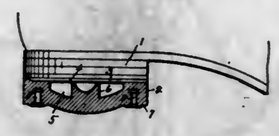


4. A calandria belt for evaporators comprising a shell having a single induction port for the heating medium, a central down-take, a tube body in said shell having a substantially radial passage from the port to the down-take and having also lateral channels leading from said passage for distributing the heating medium in oppositely flowing streams, a baffle plate at the other side of said belt diametrically opposite the port and extending radially inwardly from the shell, lateral baffle plates extending from the down-take in spaced and parallel relation to the first mentioned baffle plate, and at opposite sides thereof, and means for drawing off the incondensible gases between said lateral baffle plates, adjacent the down-take.

1,638,698. VENTILATOR. ARTHUR MILLER, Astoria, N. Y. Filed Apr. 18, 1925. Serial No. 24,129. 8 Claims. (Cl. 98—78.)

1. A ventilator comprising a pipe, an element disposed above and laterally from said pipe, said element having a series of curved tapered channels disposed longitudinally on its exterior for deflecting the air currents in substantially vertical paths, and a cap provided with a depending wall within the element and spaced therefrom for protecting the pipe and providing an outlet therebetween.

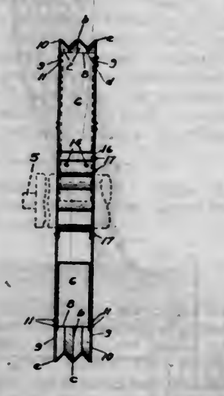
1,638,699. UNDERGROUND ANTENNA. ALMER L. MOBURG, Palms, Calif. Filed Mar. 30, 1926. Serial No. 98,501. 6 Claims. (Cl. 250—33.)



1. An underground antenna comprising in combination a substantially cylindrical casing having closure caps, a cage formed of the antenna wire in the casing, means operatively connected to the caps to stretch the cage, and an electric lead from the cage through the casing.

1,638,700. FISH-OIL PRODUCT AND METHOD OF MAKING THE SAME. DAVID MOLOFSKY, Vineland, N. J., assignor to Silmo Chemical Company, Inc., Vineland, N. J. Filed Oct. 23, 1926. Serial No. 143,795. 6 Claims. (Cl. 99—11.)

4. The process of making a powdered fish oil product, which consists in preparing a semi-solid mixture of water and a calcium salt, mixing therewith the oil, homogenizing the mixture, and then driving off the water and collecting the solid product.

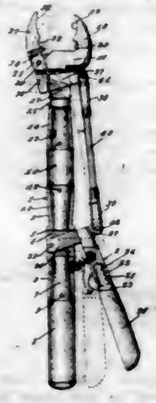


6. A fish oil product for use as a conditioning element in stock foods comprising fish oil held in finely divided condition in a calcium salt, said product being in powdered form and adapted for admixture in such form with the stock food, the calcium salt serving as a vehicle preventing absorption of the oil by the food substance while freely liberating it for absorption in the alimentary tract of the animal.

1,638,701. RUBBER-CUSHIONED HEEL. HARRY G. NORWOOD, Baltimore, Md., assignor, by mesne assignments, to Balloon Rubber Heel Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed Jan. 15, 1925. Serial No. 2,632. 2 Claims. (Cl. 36—35.)

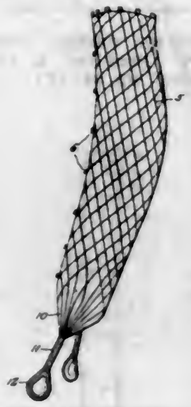
1. The combination with a shoe having a heel, a cushion lift secured to the under face of the heel and having a concavity in its upper face and a substantial convexity on its lower face, said cushion lift being provided within the concavity with a post having its upper end in the plane of the shoe heel, the post offering immediate resistance to the initial depression of the convexity and continued and increasing resistance as the depression of the convexity is increased.

1,638,702. GROOVED WHEEL. WILLIAM O'BRIEN, Washington, Pa. Filed Oct. 4, 1924. Serial No. 741,572. 2 Claims. (Cl. 64—17.)



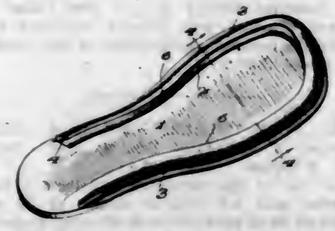
1. A grooved wheel comprising an annular peripheral groove member of structural angle shape bent to circular form and welded together, said wheel having an initially concaved outer bottom portion and outwardly rounded terminals, a central hub, and flanged spokes extending therefrom having parallel side plates secured thereto and provided with beveled terminals engaging underneath the rounded edge portions of the groove member and welded thereto.

1,638,703. FUSE PULLER. CHARLIE A. PENDLETON, Cramerton, N. C. Filed Feb. 2, 1926. Serial No. 85,596. 6 Claims. (Cl. 81—3.)



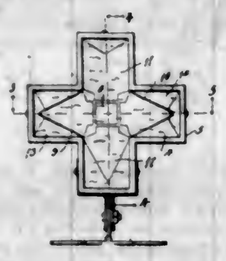
1. In a tool of the character described, a handle, a jaw member, said jaw member formed at its rear end with one end of a head disposed at right angles to and connected to the forward end of the handle and providing for the offsetting of said jaw member laterally with re-

spect to said end of the handle, a co-operating jaw member pivotally connected to the other end of said head, and



spring controlled means connected with said pivoted jaw and with the handle for actuating the pivoted jaw relative to the jaw member.

1,638,704. CALF AND ANKLE GRIP. CHARLES ALBERT POPE, Elizabeth, N. J. Filed Sept. 13, 1926. Serial No. 135,155. 2 Claims. (Cl. 128—80.)

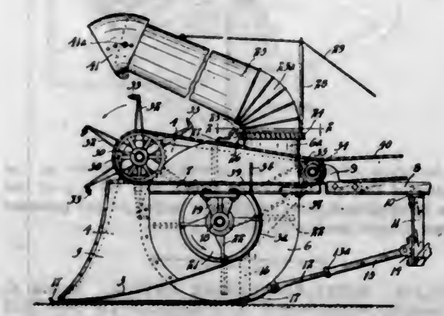


1. A calf and ankle grip for surgical extension apparatus including a puttee-shaped casing formed of mesh material to encase the calf and ankle of a person, the strands of said mesh material being extended at one end adjacent the calf and grouped and bent to form relatively rigid eyes.

1,638,705. MOLDED-FLANGE INSOLE. ADAM H. FRENZEL, Halifax, Pa. Filed July 9, 1925. Serial No. 42,544. 1 Claim. (Cl. 36—22.)

A shoe sole having a channel cut from a place interiorly of one side surface toward the edge producing a feather edge flange, said flange being in upstanding relationship to the sole and being cross sectionally curved so that the feather edge is spaced above the adjacent said surface of the sole and is directed toward the interior of the sole and arched over the channel, the concaved interior of the flange and the bottom of the channel providing an ample peripheral pocket accessible from the interior of the sole.

1,638,706. TRAFFIC SIGNAL. JOSE E. QUE, Manila, P. I. Filed Feb. 17, 1925. Serial No. 9,797. 1 Claim. (Cl. 177—329.)



A vehicle signal, comprising a cruciform casing, a transparent plate closing the front of the casing and having portions rendered opaque, the transparent portions delineating signal devices disposed to cross, a smaller rectangular compartment arranged in the middle of the casing, partitions extending from the corner walls of the smaller compartment to the inner corners of the cruciform casing forming a compartment in each arm thereof, and another compartment in each horizontal arm of the cruciform casing having a pointed end pointing outwardly of the arm and having its inner walls inclined from the pointed end inwardly of the arm and rearwardly.

1,638,707. WINDOW-SHADE BRACKET. VERDIE C. RUFTY, Stony Point, N. C., assignor of one-half to L. O. Moose and J. O. Rufty, Stony Point, N. C. Filed Oct. 19, 1926. Serial No. 142,678. 1 Claim. (Cl. 156—27.)

A shade fixture for the purpose referred to comprising a bracket formed at its inner side with an ear disposed at right angles with respect thereto, said ear having a perforation for rotatably receiving a flat sided pintle and further formed with an upwardly directed straight sided locking slot disposed tangentially of and opening into said perforation, an arm extending upwardly from the top of the bracket and formed at its upper end with an outturned portion, and a coiled spring having its upper end connected to said outturned portion and adapted to have its lower end loosely engage, exteriorly of said ear, the pintle of the shade roller within the perforation to automatically shift the pintle from the perforation into the slot for normally retaining it therein under tensioned suspension.

1,638,708. SNOWPLOW. FRANK SAXON, Worthington, Minn. Filed Mar. 17, 1926. Serial No. 95,256. 4 Claims. (Cl. 37—43.)

1. A snow plow adapted to be mounted on a vehicle, having in combination a snow scoop, a rotary snow disintegrating means, ejecting means and conveying means rotating about an axis below and to the rear of the axis about which said disintegrating means rotates, said conveying means being adapted to move the snow from said scoop to said ejecting means, said disintegrating means being adapted to act in advance of said conveying means to force the snow downwardly and rearwardly to said conveying means.

1,638,709. ACID-RESISTING COMPOUND. NEWTON H. SCHNEIDER, Salinas, Calif. Filed Apr. 20, 1925. Serial No. 24,677. 4 Claims. (Cl. 167—9.)

1. The method of forming an adherescent acid proof composition comprising mixing white lead with linseed oil and thinning with gasoline, adding baking soda thereto and mixing, and as a separate step heating resin and adding thereto castor oil, combining the white lead and baking soda mixture with the heated resin and mixing, and finally thinning with alcohol and eucalyptus oil.

3. An acid proof composition comprising white lead, baking soda, commercial resin and alcohol to thin the mixture, and in addition, a small amount of castor oil and a small amount of eucalyptus oil.

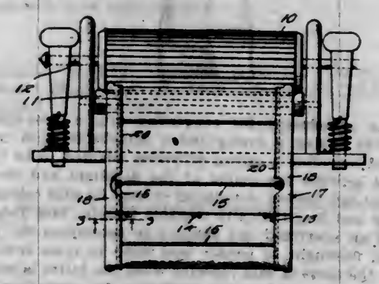
1,638,710. NONCORROSIVE SOLUTION. MORTON ROLAND SHERBINO, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a Corporation of California. Filed Mar. 19, 1926. Serial No. 96,083. 12 Claims. (Cl. 252—5.)

1. A solution of castor oil in alcohol, rendered noncorrosive by the addition of an alkali metal salt including a metal of the arsenic group.

1,638,711. NONCORROSIVE SOLUTION. MORTON ROLAND SHERBINO, Detroit, Mich., assignor to Hydraulic Brake Company, Detroit, Mich., a Corporation of California. Filed Mar. 19, 1926. Serial No. 96,084. 10 Claims. (Cl. 252—5.)

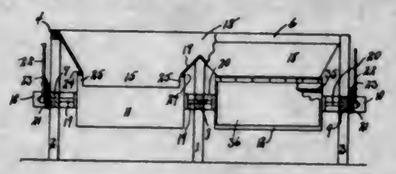
1. A solution of castor oil in alcohol, rendered noncorrosive by the addition of an alkali metal phosphate.

1,638,712. SANITARY HEATED HOG HOUSE. CHARLES V. SHORT, Des Moines, Iowa. Filed Mar. 4, 1927. Serial No. 172,861. 8 Claims. (Cl. 119—16.)



1. A hog house comprising an outer wall and a plurality of partition members each having one end abutting the outer wall and the other end abutting an intermediate portion of the next succeeding partition of the series whereby to form a plurality of main pens and also to form a central polygonal space each side of which consists of a portion of one of said partitions.

1,638,713. PROCESS OF MANUFACTURING VINYL ESTERS. FREDERICK W. SKIRROW and OTTO W. HERZBERG, Shawinigan Falls, Quebec, Canada, assignors, by mesne assignments, to Canadian Electro Products Company, Limited, Montreal, Quebec, Canada. Filed Nov. 8, 1920. Serial No. 422,693. 10 Claims. (Cl. 260—106.)



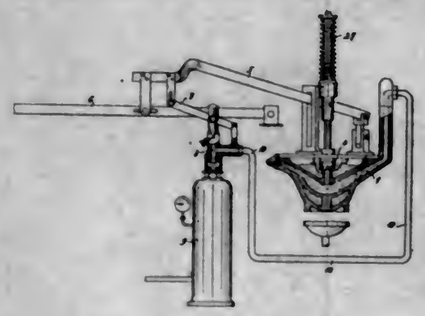
1. A process of producing a vinyl ester, which comprises bringing together an excess of acetylene and a carboxylic acid in presence of a catalyst and removing the vinyl ester as formed from the reaction by maintaining conditions such that the ester is carried out of the reaction in the escaping excess of acetylene.

1,638,714. WASHING MACHINE. NELLA B. STRAWN, Antonito, Colo. Filed Dec. 9, 1926. Serial No. 153,628. 1 Claim. (Cl. 68—22.)

An attachment for washing machines of the character described comprising a strip of material having near its opposite end edges coacting fasteners whereby said end edges may be connected to form an endless band of the strip, holding elements extending transversely of the band on one face thereof and bearing elements extending longitudinally of the side edges of the band, said holding elements each comprising a bar having means securing its ends to the strip adjacent the side edges thereof, said bearing elements each comprising a compressible bead and an attaching stem therefor, the attaching stems of the beads extending over the securing elements of the bars and connected to said strip.

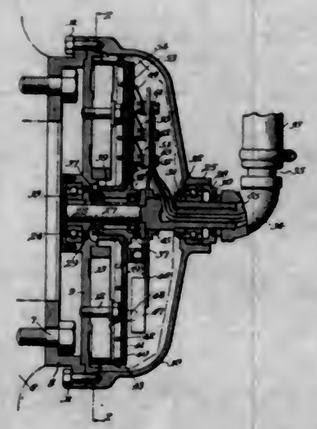
1,638,715. MEASURING DEVICE FOR STREET AND ROAD PAVING AND THE LIKE. ROBERT C. STUBBS, Dallas, Tex. Filed Sept. 24, 1924. Serial No. 739,703. 5 Claims. (Cl. 221—107.)

1. A measuring device for street and road paving and the like comprising a revolnble cylindrical receptacle, a longitudinal diametral partition dividing said receptacle into compartments, each compartment having an opening for receiving and discharging material, means within each compartment for varying the cubical capacity thereof consisting of a pair of disks revolnbly mounted in said receptacle, means for fixedly connecting said disks to the ends of said receptacle, and dividers rigid with said disks, and means for revolving the receptacle.



1,638,716. SPOTLIGHT. LAWRENCE O. SURLES, Atlanta, Ga. Filed Aug. 7, 1925. Serial No. 48,861. 5 Claims. (Cl. 240—10.5.)

1. An attachment for converting into a spot-light a flashlight having a casing and a detachable glass carrying cap, including a casing extension adapted to be intercalated between the casing of the flashlight and the detachable cap thereof, a reflector carried by said casing extension and longitudinally movable therein, said reflector having an apertured end adapted to encompass the lamp of said flashlight to permit said lamp to come into and out of the focus of said reflector when the latter is moved, and means on said casing extension for operating said reflector.

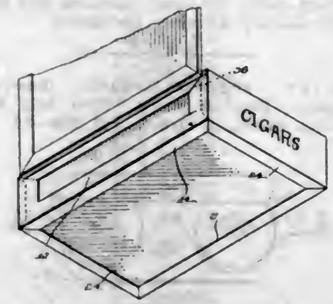


1,638,717. DIE-CASTING MACHINE. EMIL THIESLACK, Berlin, Germany. Filed Mar. 3, 1927, Serial No. 172,508, and in Germany Oct. 30, 1925. 1 Claim. (Cl. 22—70.)

A die casting machine comprising a melting reservoir, a casting reservoir arranged immediately therebeneath, the bottom of the melting reservoir serving as the top of the casting reservoir, an upright hollow boss rising from the bottom of the melting reservoir and provided in its wall with a lateral opening which serves to establish communication between the reservoirs, a sleeve-like valve movably mounted exteriorly of the boss for controlling the passage of fluids through said opening, means for supplying fluid under pressure to said casting reservoir

to facilitate ejecting of the contents subsequent to the closing of the opening by the sleeve, and the top of the boss being closed so as to prevent action of the pressure supply means on the valve.

1,638,718. SPEED-RESPONSIVE DEVICE. ERWIN C. VROMAN, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Apr. 18, 1925. Serial No. 24,240. 7 Claims. (Cl. 200—52.)



1. A speed responsive device comprising in combination a rotatable field member; a rotatable armature member associated therewith; means for rotating one of said members in either direction at variable speeds; yielding means arranged to permit limited rotary displacement of the other of said members conforming in direction and extent with the direction and speed of rotation of the first member; and a series of electric switch contacts arranged to be successively opened and closed in a chosen order by the displacement of said other member in either direction relatively to its normal position.

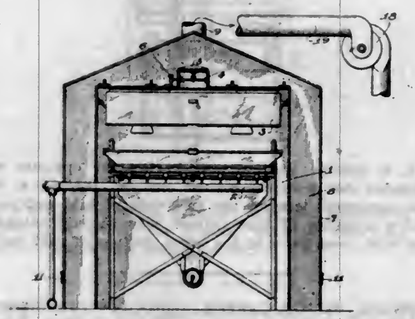
1,638,719. MANUFACTURE OF CIGAR BOXES AND THE LIKE. ALLAN A. ADAMSON, Rochester, N. Y., assignor to George H. Harris, Rochester, N. Y. Filed Jan. 31, 1925. Serial No. 5,920. 4 Claims. (Cl. 229—6.)

1. In combination with a cigar box lid, a combined label and edging blank having a main portion covering

the inner face of the lid and provided with tongues on three sides, extending around three edges of the lid and

onto the top surface thereof, the hinging edge of the box or lid being exposed for the attachment of a hinging piece.

1,638,720. PULLEY WHEEL. ALFRED ANDERSON, Dunedin, Fla. Filed Sept. 15, 1924. Serial No. 737,822. 1 Claim. (Cl. 64—17.)

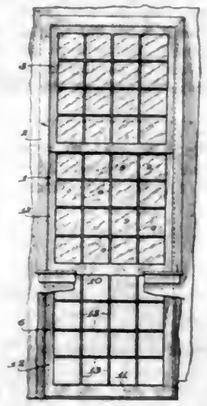


A saw blade driving pulley consisting of a hub provided with a pair of opposed spaced laterally projecting annular flanges, said hub provided with ports intermediate its ends, a pair of oppositely disposed metallic convexed disks having the inner marginal portions thereof opposing said flanges, said disks being apertured and seated on said hub, an annulus interposed between said disks at the inner marginal portions thereof and spaced from said hub to provide a lubricant trapping chamber having said ports communicating therewith, said annulus providing a spacing means between the disks at the inner marginal portions thereof, hold fast device for securing said flanges, disks and annulus together, a pair of spaced bands having the outer marginal portions of said disks positioned therebetween and forming in connection with said outer portions the rim of the pulley, and a non-metallic band circumferentially extending around said rim.

1,638,721. ASBESTOS DRIER FELT. EDUARD V. ASTEN, Eupen, Belgium. Filed Feb. 6, 1926. Serial No. 86,576. 2 Claims. (Cl. 28—1.)

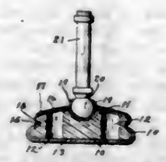
1. The process of manufacturing asbestos drier felts which consists in weaving the felt in the desired length and width, taking the stretch out of the felt by stretching it and subjecting it to pressure, at the same time calendering the surface to be applied to the paper and treating it with a size for making the surface smooth.

1,638,722. CARBON-BLACK-PRODUCING APPARATUS. CLYDE A. BARBOUR, Jr., Monroe, La. Filed June 11, 1926. Serial No. 115,379. 20 Claims. (Cl. 134—60.)



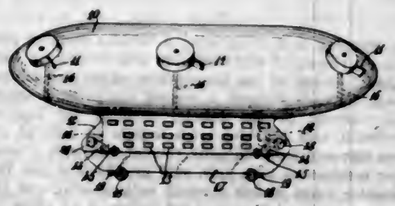
9. In combination, a retort wherein the internal pressure thereof is less than atmospherical, gaseous fuel burners within the retort adapted to effect an imperfect combustion of fuel delivered thereto, a plurality of adjustable ventilators in the top of said retort, a housing receiving the retort having certain of the side walls of the same spaced from the adjacent side walls of said retort and the top thereof spaced from the top of said retort, outlet means communicating with the top of said housing, the lower portions of said side walls of the housing having a series of inlet openings therein, and collectively adjustable damper means cooperatively associated with said inlet openings.

1,638,723. WHEEL GAUGE. OTTO H. BARNES, Tulsa, Okla. Filed Mar. 23, 1926. Serial No. 96,781. 1 Claim. (Cl. 33—203.)



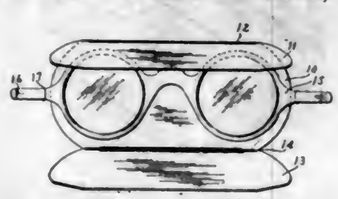
A gauging tool comprising a tubular member provided with an elongated sight opening and having an indicator disposed at one of the longitudinal edges and midway between the ends thereof, a second elongated member slidably received in the tubular member for longitudinal movement and provided with a pair of sets of graduations disposed longitudinally thereof and with a zero character common to both sets, said graduations and the zero character being visible through said opening and adapted to move with relation to said indicator to show the direction and extent of the relative movements of the members.

1,638,724. WINDOW GUARD. BENJAMIN AGEE BOWLES, Washington, D. C. Filed Feb. 11, 1926. Serial No. 87,650. 4 Claims. (Cl. 20—71.)



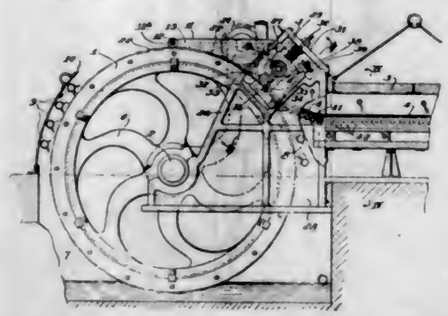
1. A slidable window sash having the opposite sides extended for distances beyond one end thereof, a cross bar connected between the free ends of said extensions, and a plurality of bars carried between said extensions and said cross bar and the lower portion of said sash.

1,638,725. GLIDE CASTER. JOHN LOUCIEN CHESNUTT, Merced, Calif., assignor to Walter Raleigh Darnell, Long Beach, Calif. Filed Apr. 24, 1925. Serial No. 25,572. 3 Claims. (Cl. 16—42.)



1. A glide caster, comprising a cushion member formed with a plurality of vertical apertures, a shoe embracing the lower portion of said member and having a flat lower surface adapted for contact with a floor, a metallic member secured to the upper portion of said cushion member, and attaching means adapted to engage a load object, together with ball-and-socket connections between said attaching means and the metallic member, whereby when the load object is tipped the shoe may remain in flat contact with the floor and the cushion member be compressed in a plane obliquely thereto.

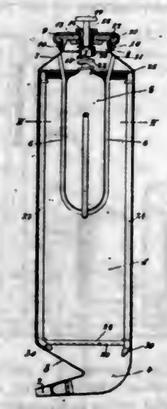
1,638,726. PROPELLING MECHANISM FOR AIR NAVIGATORS. ANTONIO CHIABELLI, New York, N. Y. Filed Dec. 11, 1925. Serial No. 74,683. 6 Claims. (Cl. 244—8.)



6. In a propelling and manœuvring system for aircrafts, the combination of an inflated airship body, a plurality of propellers of the drum and paddle type spaced thereabout with the planes of propeller rotation tangential to the said body and intersecting each other, certain rotatably adjustable shafts connected to each propeller, and adapted to change the timing of the paddle action, means connected with the shafts for individually adjusting the said shafts, and means connected with the shafts for simultaneously adjusting the shafts.

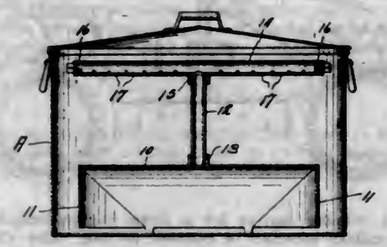
1,638,727. SPECTACLE CASE. HAROUTUNE M. DADOURIAN, Hartford, Conn. Filed July 24, 1925. Serial No. 45,865. 2 Claims. (Cl. 206—5.)

1. A spectacle case comprising a rear member, a front member hinged thereto along one side edge thereof and designed to overlie the rear member to form a receptacle, and a flap hinged to the opposite side edge of the rear member and designed to be folded thereover and over the free edge of the second member, the case so formed being left open at the ends for the projection of the bows of the spectacles therethrough, said case being held in closed position by the folding of the bows over the front thereof.



1,638,728. APPARATUS FOR MAKING SHEET GLASS. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 18, 1926. Serial No. 95,590. 3 Claims. (Cl. 49—33.)

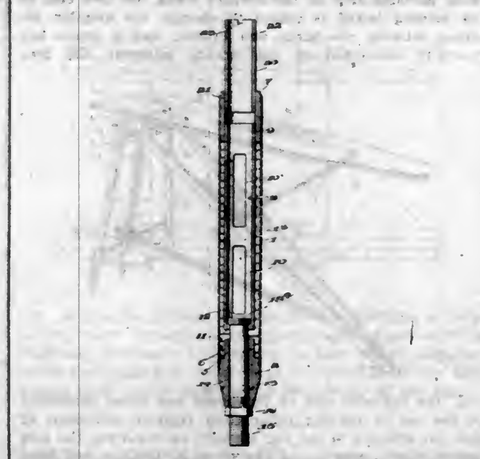
1. In apparatus for making sheet glass, a casting roll of large diameter mounted for rotation, a driven sizing roll above the casting roll positioned so as to provide a pocket between the two rolls for receiving the molten glass to be rolled, bearings in which the sizing roll is journaled mounted for movement toward the casting roll, spacing means mounted to move with said bearings in fixed relation thereto and contacting with the periphery of the casting roll, and a runway for receiving the glass sheet formed between the rolls.



1,638,729. DRY FIRE EXTINGUISHER. WILHELM FRIEDRICH, Berlin-Lankwitz, Germany. Filed Mar. 29, 1922. Serial No. 547,652, and in Germany Jan. 27, 1922. 5 Claims. (Cl. 169—31.)

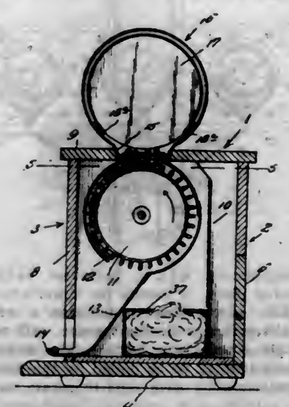
1. A fire extinguisher for use in connection with an extinguishing powder, comprising, in combination, a receptacle adapted to receive said powder, a gas-bottle located completely within said receptacle, the gas escape opening of the bottle being in direct communication with the space above the extinguishing powder in said receptacle when the bottle has been opened, means for opening said bottle from outside the receptacle, a de-

livery nozzle at the other end of the said receptacle, and tubes connecting the two ends of the receptacle with each other and being adapted to conduct the driving gas from the space around the top of the gas bottle to the space at the delivery nozzle, substantially as set forth.



1,638,730. CLOTHES WASHER. OLIVER P. GREENSTREET, Owensville, Mo., assignor of one-fourth to Walter H. Oberg, St. Louis, Mo., and one-fourth to Joseph T. Tate, Owensville, Mo. Filed Mar. 27, 1926. Serial No. 97,935. 1 Claim. (Cl. 68—30.)

A clothes washer of the character described comprising a chamber open at the bottom and defined by a horizontally disposed wall and depending flanges at the sides and ends of said wall, the wall having depending lugs whereby to support the chamber in spaced relation from the bottom of a wash boiler, an internally threaded boss formed on the upper side of the horizontal wall and disposed centrally thereof, a vertically extending pipe extending upward from the chamber and having its lower end threaded into said boss, a cross pipe having an interiorly threaded boss for receiving the upper end of said first named pipe and having a length approximately equal to the length of the chamber, removable plugs normally closing the ends of the cross pipe, the under face of the cross pipe having a plurality of spaced perforations therein.

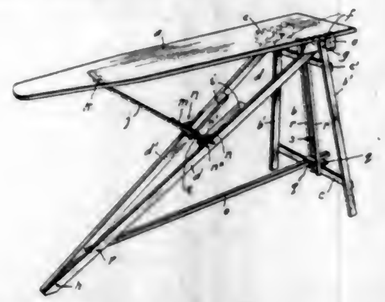


1,638,731. WELL SCREEN. HENRY E. HANSON, Nevis Minn. Filed May 16, 1925. Serial No. 30,809. 5 Claims. (Cl. 166—8.)

1. A well screen having a spring screen body made up of a plurality of convolutions and means for varying the distances between the convolutions while the well screen is in the well, and including a head having spiral grooves engaged with certain of said convolutions, and

means fixedly connected with the head and adapted to be turned from above the ground whereby the head is turned to adjust the spring screen.

1,638,732. CIGARETTE-DISPENSING MACHINE. JOSEPH HANTSCHEL, Appleton, Wis. Filed Dec. 28, 1925. Serial No. 77,987. 3 Claims. (Cl. 211—8.)

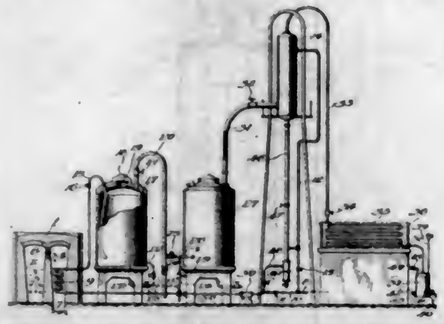


1. In a vending machine, a casing, vending means in said casing, and means for supplying cigarettes to said vending means, said supply means comprising a holder mounted on top of said casing, said holder being open on its side and provided with a closure permitting access to be had to the interior of the holder, to adapt the holder for reception of a cigarette containing package, said closure being transparent to permit the passage to be inspected from the exterior without opening said closure.

1,638,733. IRONING TABLE. ABRAHAM LINCOLN HARTMAN, Wapinitia, Oreg. Filed Apr. 19, 1923. Serial No. 633,175. 2 Claims. (Cl. 68—10.)

1. In a collapsible ironing table, an ironing board, a leg therefor, a crutch, said leg and crutch being hingedly connected to the board adjacent one end thereof, a strut hingedly connected to the under side of the iron-

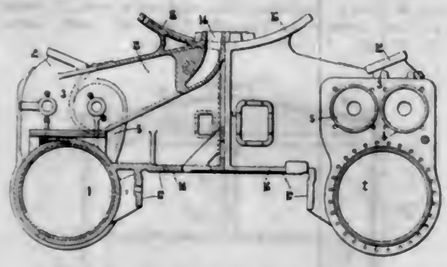
ing board, keepers arranged on the crutch, a member carried by the strut to automatically lock with the keepers when the parts are in extended position, said member being movable free of the keepers when the free end of the ironing board is raised to change the angular relation between the strut and crutch, and a brace bar pivotally connected to the crutch adjacent the free



end, the opposite end of the brace bar being connected to the leg to prevent other than vertical movement of said bar relative to the leg, whereby on elevating the free end of the ironing board the strut is disconnected from the keepers and the strut and crutch may be folded against the board to cause the brace bar to compel an initial folding movement of the leg.

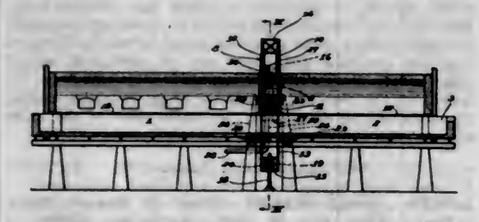
1,638,734. METHOD AND MEANS FOR TUNING RADIORECEIVERS. WILFRID PAUL HEATH, Chicago, Ill. Filed Nov. 13, 1924. Serial No. 749,771. 12 Claims. (Cl. 74—7.)

1. The combination with a radio set having a plurality of tuning dials, of means for simultaneously moving said dials to set them to indicate a certain combination of characters or figures thereon, said means comprising flexible connections having tabs indicating different stations adapted to be pulled by the operator, and means for transmitting such pull to rotate and set said dials.



1,638,735. METHOD OF HYDROCARBON OIL CONVERSION. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 18, 1925. Serial No. 69,736. 5 Claims. (Cl. 196—49.)

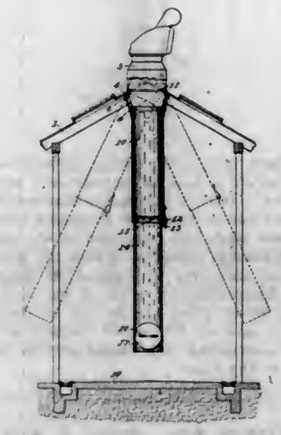
1. A process for cracking hydrocarbon oil, consisting in raising the oil to a cracking temperature while flowing in a restricted stream through a heating coil positioned in a furnace, in collecting a body of the heated oil, subsequent to its passage through the heating coil, in an enlarged reaction zone, wherein conversion occurs, in separately removing the vapors evolved from the oil and unvaporized liquid oil from said reaction zone, in admitting said vapors and unvaporized liquid oil to a zone maintained under a lower pressure than said reaction zone, wherein substantial quantities of the unvaporized liquid oil is vaporized by the contained heat thereof, in removing the unvaporized oil from said zone maintained under said lower pressure without again returning the same to said zone, in subjecting the vapors evolved from the oil in said reaction zone and the vapors evolved from the unvaporized liquid oil in said zone of reduced pressure, in a commingled state, to reflux condensation, in aiding in the reflux condensation of the vapors by employing



charging oil for the process as a cooling medium therefor and to also preheat the charging oil, in collecting a supply of commingled reflux condensate separated from the vapors and preheated charging oil in a zone out of contact with unvaporized liquid oil introduced to said zone of reduced pressure, and in continuously admitting oil from said supply to said heating coil.

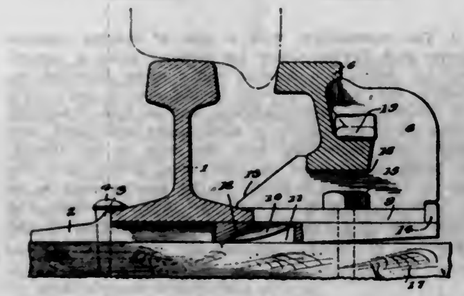
1,638,736. CYLINDER CASTING FOR STEAM ENGINES. JOHANN KUPKA, London, England. Filed Dec. 9, 1926. Serial No. 153,575. 8 Claims. (Cl. 105—44.)

1. A cylinder casting for a steam engine comprising in a unitary structure a cylinder portion, valve chests at each end of the cylinder arranged to support poppet valve seats, and a boiler supporting saddle.



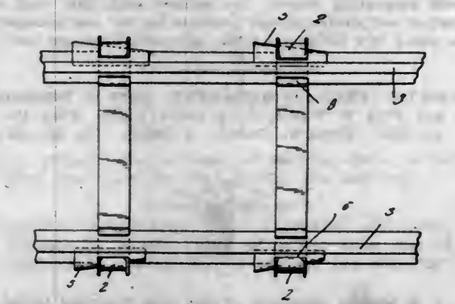
1,638,737. GLASS-MELTING TANK. KARL G. KUTCHKA, Wilkinsburg, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Dec. 10, 1925. Serial No. 74,557. 6 Claims. (Cl. 49—54.)

1. The combination with a glass melting tank having a melting end and a working end, of an arch member lying between said ends and having depending walls at



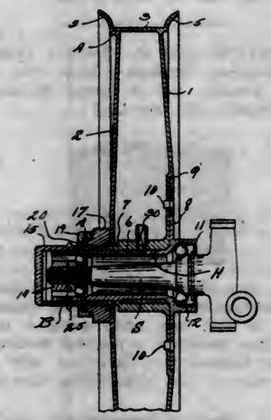
the ends of such member and mounted for vertical movement, so that a greater or less portion of the member may be moved inside the tank depending upon the vertical position of the member, and means for adjusting the member vertically.

1,638,738. VENTILATING OUTTAKE FLUE. NORMAN A. LICHTY and CHARLES L. OSTRANDER, Waterloo, Iowa, assignors to Lichty Metal Products Company, Waterloo, Iowa. Filed Jan. 29, 1926. Serial No. 84,650. 4 Claims. (Cl. 98—42.)



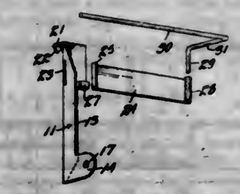
1. A device of the class described, comprising in combination, a vertically disposed ventilator outtake flue, and a plurality of flexible means detachably connecting opposite parts of the upper end of the flue in communication with a roof opening for free swinging displacement of the flue when certain of said flexible means are disconnected.

1,638,739. GUARD-RAIL FASTENING. THOMAS MANEY, Louisville, Ky. Filed June 18, 1926. Serial No. 116,895. 13 Claims. (Cl. 238—20.)



1. In a device of the character described, the combination of a main rail, a tie plate therefor, and a chair seat or brace seated upon said tie plate and abutting against the edge of the main rail flange, said chair seat or brace having a flange extending outwardly therefrom and overlapping the main rail flange for holding said main rail in position.

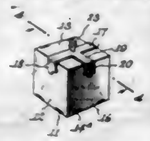
1,638,740. RAIL TIE. MICHAEL JOSEPH MCANDREW, Clarksburg, W. Va. Filed Feb. 25, 1927. Serial No. 170,913. 3 Claims. (Cl. 238—10.)



1. A rail tie of the class described comprising a body having hooks formed at its opposite ends, together with yieldable extensions terminating in base flange engaging hooks and shaped to conform to the interior of the first named hook and to underlie the base flange of the rail.

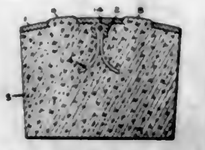
1,638,741. VEHICLE WHEEL. JOHN MCGINNIESS, Trinidad, Colo., assignor to McGinniess Vehicle Wheel Company, a Corporation of Colorado. Filed Oct. 12, 1926. Serial No. 141,222. 8 Claims. (Cl. 301—9.)

1. A vehicle wheel comprising a pair of discs, a hub sleeve carried by one of said discs and extending through and beyond the second disc, a rim flange carried by one of the discs and bridging the space between the two discs, and means carried by the hub sleeve and engaging a disc for maintaining the discs in assembled relation.



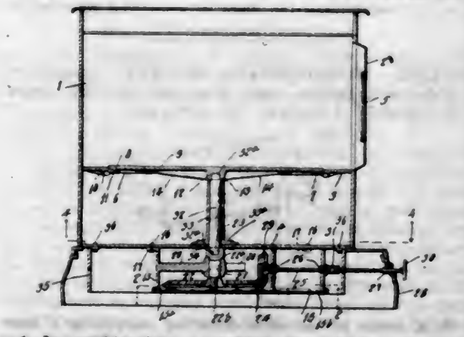
1,638,742. WINDOW-SHADE BRACKET. DANIEL M. PARKINSON, Dayton, Ohio. Filed Dec. 30, 1925. Serial No. 78,467. 5 Claims. (Cl. 156—24.)

5. A device of the class described comprising a sheet metal body having an upstanding slotted flange formed to support a window shade roller, a supporting element



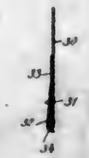
on said body in spaced relation to the slot in said flange, a longitudinally slidable auxiliary supporting bracket extending through the slot in said flange and resting on said supporting element flat against said body, and a curtain rod pivoted on said auxiliary bracket and arranged to swing in a horizontal plane, substantially as set forth.

1,638,743. PENDANT ORNAMENT. GUST W. PETERSON and BERT T. WALLS, Long Beach, Calif. Filed Dec. 22, 1925. Serial No. 76,998. 3 Claims. (Cl. 63—23.)



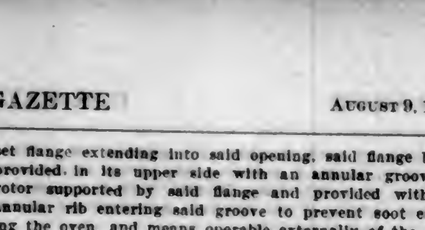
1. A pendant ornament of the class described including six quadrilateral pyramidal sections, four of said sections being hingedly connected to the side edges of a fifth section, the sixth section being hingedly connected to the outer edge of one of the four sections above mentioned, said four sections being adapted for folding over into engagement with the fifth section, and the sixth section being adapted for folding over into engagement with the four sections, and means for locking all of said sections against unfolding including three spring fingers rigidly carried by the back of one of the four sections, said fingers snapping over two others of said four sections and the sixth section.

1,638,744. PAVING BLOCK. THOMAS JAMES PRIESTMAN, Birmingham, England. Filed Nov. 13, 1926, Serial No. 148,287, and in Great Britain Oct. 12, 1925. 4 Claims. (Cl. 94—1.5.)



2. A traffic sign element comprising a block formed of a metal plate having lugs on one side, anchorage members secured in said lugs and having a plurality of prongs projecting therefrom, a moulded backing in which the anchorage members are embedded, said plate having openings therein, and non-slipping material in said openings.

1,638,745. PAN-TURNING DEVICE FOR COOKING STOVES. LLOYD G. RANDOLPH, Big Run, Pa. Filed Oct. 17, 1925. Serial No. 63,058. 2 Claims. (Cl. 126—338.)



1. In combination, a cooking stove having an oven bottom provided with an opening and a downwardly offset flange extending into said opening, said flange being provided in its upper side with an annular groove, a rotor supported by said flange and provided with an annular rib entering said groove to prevent soot entering the oven, and means operable externally of the oven for turning the rotor.

1,638,746. ROOFING ELEMENT. THOMAS ROBINSON, New York, N. Y., assignor to Anaconda Sales Company, New York, N. Y., a Corporation of Delaware. Filed June 26, 1924. Serial No. 722,452. 12 Claims. (Cl. 108—8.)

1. A thick-butt metal-clad roofing element comprising the combination of a base of non-metallic material resistant to water, a shell of thin metal disposed at one end of the base, one end of this shell extending over the end edge of the base while the other end of the shell terminates in a flat portion extending across the base between the ends thereof and lying flat against the upper face of the base, the intermediate portion of the shell between its ends being raised above the surface of the base, and filling material between the raised portion of the shell and the base supporting this raised portion and securing the shell to the base.

1,638,747. HANGER BOX. ROBERT F. RUNGE, Forest Hills, N. Y., assignor to the Skayef Ball Bearing Company, a Corporation of Connecticut. Filed June 26, 1923. Serial No. 647,806. 5 Claims. (Cl. 308—189.)

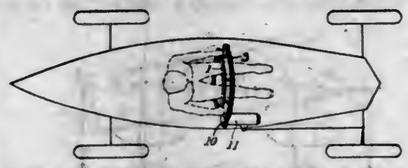
1. The combination with a pair of bearing adapter sleeves each having a bore for fitting a shaft, a tapered seat for receiving a bearing, and a screw threaded extension, the tapered portion having one or more slots for facilitating compressibility, and a tube integrally connected to the sleeves at their larger ends, such tube having slots registering with the slots in the sleeves, the inside diameter of the tube being greater than the bore of the sleeves inwardly of the bearing seats so as to form a clearance between the tube and shaft and permit the free compressibility of the sleeves at the regions of the seats.

1,638,748. CLOSURE FASTENING. WALTER H. SANTEE, Allentown, Pa. Filed Jan. 27, 1926. Serial No. 84,238. 2 Claims. (Cl. 70—74.)

1. In combination with double doors hinged at their outer sides and meeting at their inner edges, a closure fastener including a master latch pivotally mounted on one of said doors having an end thereof over-lapping the adjacent edge of the other door when in latched position, and a plurality of pivotally mounted auxiliary latches

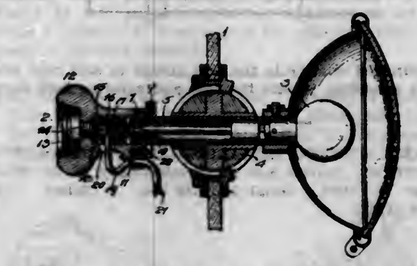
operated by said master latch and positioned one at the top and one at the bottom of said door, keeper-means secured to the upper and lower sills for engagement by said auxiliary latches, rods connecting said master latch and auxiliary latches, said rods being pivotally attached

to said latches eccentrically thereof, means for independently adjusting the length of said connecting rods and a lock on said door engageable with said master latch when the latter is in latched position for simultaneously locking all said latches.



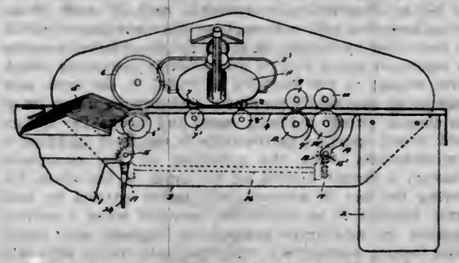
1,638,749. PRUNING SAW. GUILLERMO F. SANTOYO, Santa Paula, Calif. Filed Dec. 21, 1925. Serial No. 76,850. 1 Claim. (Cl. 30—11.)

A pruning saw comprising a handle having a longitudinally extending groove, a pivot bolt mounted therein, a blade supported by said bolt for swinging movements toward and away from said groove, and having a tapering opening to one side of said bolt and an inclined edge to the opposite side of the bolt, a casing embedded in the handle having a tapering opening arranged to align with said first opening and a bolt pivotally mounted within said housing and having a tapering extending portion adapted to have a wedging action with said tapering opening in the extended position of the blade and in abutting relation with said inclined edge when the blade engages within said groove.



1,638,750. STEERING DEVICE FOR MOTOR VEHICLES. CHARLES SCHAEFFER, Paris, France. Filed Feb. 19, 1927, Serial No. 169,581, and in France Mar. 6, 1926. 5 Claims. (Cl. 280—87.)

1. In a steering device for motor vehicles provided with pivoted vehicle wheels, the combination of a steering wheel and means connecting the said steering wheel with the controlling mechanism of said pivoted vehicle wheels, said steering wheel consisting of a large

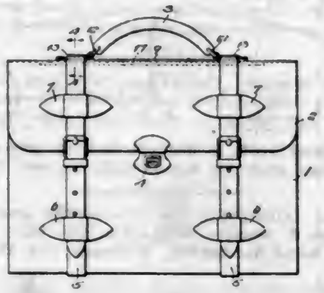


ring, without arms, so disposed that the driver of the vehicle may place his legs through the said ring.

1,638,751. COMBINED CIGAR LIGHTER AND LAMP. RICHARD F. SCHIELS, Glen Ellyn, Ill. Filed May 17, 1923. Serial No. 639,661. 7 Claims. (Cl. 175—296.)

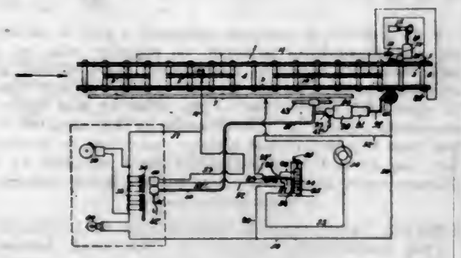
1. In a device of the class described, a pair of electrical instrumentalities mounted on opposite ends of a tube, means for adjusting the distance apart of said instrumentalities, a switch movable axially of said tube to selectively actuate one or the other of said instrumentalities when the instrumentalities are mounted at less than a predetermined distance apart and to actuate only one of said instrumentalities when mounted at a distance apart greater than said predetermined distance.

1,638,752. ADJUSTABLE TRACK FOR MAIL-STAMPING MACHINES. GEORGE E. SHELDRICK, Detroit, Mich., assignor, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed Oct. 22, 1923. Serial No. 670,190. 10 Claims. (Cl. 101—240.)



1. In a machine of the character described, the combination with means for operating upon articles, and a track upon which articles are adapted to be fed to said means, a feed table and a delivery table connected with said track and adjustable therewith, of spaced screws supporting said track, and means for driving said screws in unison to shift the track relative to said operating means.

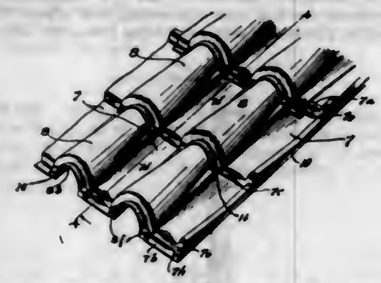
1,638,753. BRIEF CASE. MICHAEL H. STEIN and LEO STEIN, Chicago, Ill.; said Michael H. Stein assignor to said Leo Stein. Filed Dec. 29, 1923. Serial No. 683,895. 5 Claims. (Cl. 150—1.6.)



1. In a device of the kind described and in combination, a brief case and a carrying handle therefor, said brief case having a single lateral slot therein at its upper

edge adjacent the hande ends, said handle having means thereon engageable in said slots whereby it may be later-

ally adjusted relative to the load carried in said case, and straps extending around the case and covering said slots.

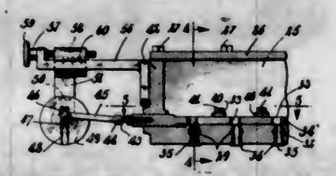


1,638,754. TRAIN SIGNALING AND CONTROLLING SYSTEM. JOSEPH SZUCHY, Perth Amboy, N. J. Filed June 19, 1923. Serial No. 646,486. 3 Claims. (Cl. 246—187.)

1. In a train signaling and controlling system for electric trains in which the trackway is divided into a series of blocks electrically interrelated, each of said blocks being provided with a semaphore the operation of which is controlled by a train in the block in advance, a series of separated signal rails of progressively increasing length with respect to the direction of travel of the train said rails being electrically connected and forming a portion of an electric circuit normally open, and means for closing said circuit operated by the train in the block in advance simultaneously with the actuation of the semaphore thereby, a circuit carried by the train in the block following the one in advance, and means carried by said train adapted to be electrically operated when a contact member on said train successively engages said signal rails thereby successively connecting said circuit with said semaphore circuit and successively establishing an energized circuit whereby the current driving said train will be alternately interrupted and reestablished corresponding with the successive engagement with the said rails and the brakes thereby alternately applied and released and the speed of the said train reduced accordingly, the final signal rail being of sufficient length to stop the said train.

1,638,755. METAL SPANISH TILE. JOSEPH TYBA, Minneapolis, Minn. Filed Apr. 13, 1925. Serial No. 22,782. 8 Claims. (Cl. 108—17.)

8. A section of a sheet metal roofing comprising a member of substantially semi-cylindrical shape, having an offset portion at one end of larger diameter than the adjacent portion and having an offset portion at its other end of smaller diameter than its adjacent portion, said section having a flat ledge at each side between said

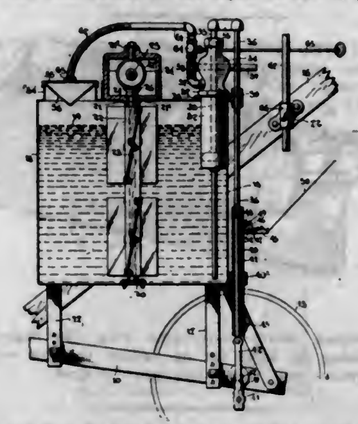


offset portions and a flat ledge at each side of said offset portion of smaller diameter.

1,638,756. HEADDRESS. HULDA WALLMAN, New York, N. Y. Filed June 29, 1926. Serial No. 119,503. 2 Claims. (Cl. 132—46.)

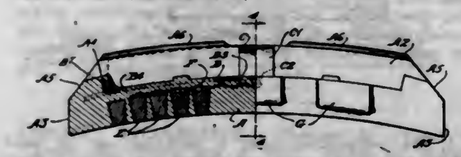
1. An ornamental head dress comprising two head encircling bands, means adjustably and pivotally connecting said bands together, said means consisting of headed elements each having a cross sectionally rectangular portion which coacts with portions of overlapping ends of said bands, said portions being provided by virtue of multiplex keyhole slots in each of the overlapping ends.

1,638,757. PAPER-COLORING DEVICE. KARL WILLE, Somerville, N. J., and WILLIAM TIEKE, Astoria, N. Y., said Tieke assignor to said Wille. Filed July 26, 1926. Serial No. 124,994. 5 Claims. (Cl. 91—43.)



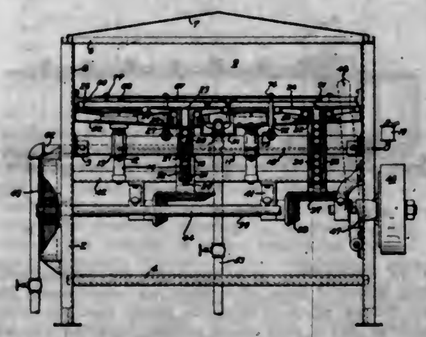
5. In a coloring device of the class described, a plurality of containers for coloring material having openings in the bottoms thereof, slidable members having openings therein slidably mounted in grooves in the bottoms of said containers, and actuating mechanism for reciprocating said slidable members to position the openings in the latter alternately into and out of registration with the openings in said bottoms for regulating dripping of coloring material therethrough to produce a repeated irregular design.

1,638,758. PLANT-SPRAYING APPARATUS. JESSE B. BOYETT, Tampa, Fla. Filed May 20, 1924. Serial No. 714,616. 2 Claims. (Cl. 299—42.)



1. An apparatus for spraying plants comprising a tank for containing a spraying liquid, a pump element having its inlet within the tank and including an air chamber adapted to be coupled with a spray nozzle whereby a uniform spray is produced, in combination with a revoluble shaft arranged centrally of and extending from the top

to the bottom of the tank, upstanding, spaced sets of agitators arranged in superposed relation and fixed to and bodily revoluble with said shaft whereby a thorough mixing of the constituents of the liquid is had to prevent

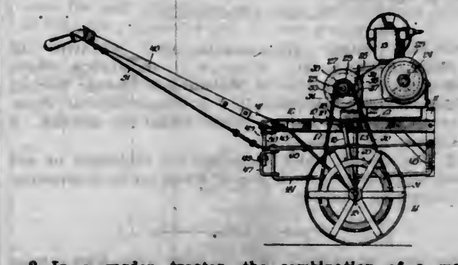


burning of the plants when sprayed and accumulation of solid matter at said inlet is prevented, each of the agitators of each set inclining throughout across the axis of the shaft.

1,638,759. BRAKE SHOE. CHARLES COBB, Jr., Marshall, Tex. Filed May 18, 1926. Serial No. 109,900. 21 Claims. (Cl. 188—257.)

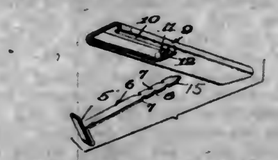
13. The combination of a flanged wheel and a brake shoe which has a cast metal body having along one side edge a channel and having along its other edge lugs reaching from the back face of the body toward its inner face, the width of said body between said lugs and said channel being such as to cause said lugs to project laterally beyond the plane of the adjacent edge of the wheel when the shoe is in place on the wheel, and a plate metal back secured to said body, substantially as described.

1,638,760. EXHAUST BOX. WILLIAM DE BACK, San Leandro, Calif., assignor to Sprague-Sells Corporation, Hoopeston, Ill., a Corporation of Delaware. Filed Nov. 24, 1926. Serial No. 150,520. 14 Claims. (Cl. 126—272.)



1. In a disk conveyor, a disk having an annular carrier portion and a recessed central portion.

1,638,761. NAME PLATE AND SIGN FRAME. ALBERT E. DIEUDONNE, New Iberia, La. Filed July 19, 1926. Serial No. 123,544. 4 Claims. (Cl. 40—132.)

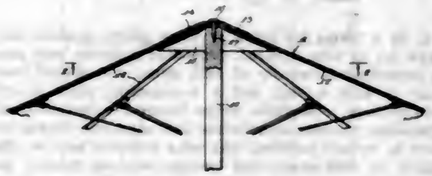


2. In a frame for signs or name plates, a sheet metal blank cut to form a panel, depending portions bent parallel extending forwardly of said panel and spaced therefrom to hold a sign and a transparent plate inserted therebetween, removable strips inserted underneath said depending portions to maintain said sign and transparent plate in desired position, and wing portions bent at right angles to said panel and having sections thereof bent along a diagonal to form a base for, and to support, said panel in inclined position.

1,638,762. GARDEN TRACTOR. FORREST V. DONALD, Port Washington, Wis., assignor to Gilson Manufacturing Company, Port Washington, Wis., a Corporation of Wisconsin. Filed June 5, 1922. Serial No. 566,113. 2 Claims. (Cl. 180—19.)

2. In a garden tractor, the combination of a main frame, ground engaging propelling members, arched axles upon which said propelling members are mounted and which are adjustably connected to said frame whereby the propelling members may be adjusted laterally with respect to the frame to permit said propelling members to span variable distances for different conditions, and a tool draft frame carried under the main frame and permanently supported thereby, said draft frame normally fitting within the arch of the axles when in use.

1,638,763. FASTENING DEVICE. GEORGE H. ENNIS, New York, N. Y. Filed Mar. 24, 1926. Serial No. 97,118. 4 Claims. (Cl. 24—153.)



1. A fastening device comprising a penetrating prong and a co-operable tubular holding bar, said penetrating prong and said holding bar having positively engageable locking means including a lug on the holding bar.

1,638,764. UMBRELLA COVER, RIB, AND STICK CONNECTION. FRANK FABRIN, Tallman, N. Y., assignor, by direct and mesne assignments, to Continental Products Corporation, New York, N. Y., a Corporation of Delaware. Filed June 7, 1926. Serial No. 114,324. 5 Claims. (Cl. 135—20.)

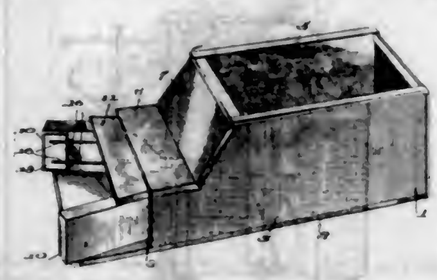
5. In an umbrella construction, a cover, a circular piece of material within the cover at the central portion

thereof adhesively secured thereto, ribs having the upper ends adhesively secured to said piece of material with the remaining outer surfaces adhesively secured to the inside of the cover, a second circular piece of material overlying the upper ends of the ribs adhesively secured thereto and to the first-mentioned piece of material be-

tween the ribs, a stick having its upper end disposed in abutting relation to the central portion of the second-mentioned piece of material, and a fastening element extending through the central portion of the cover, the said pieces of material and anchored axially within the end of the stick.

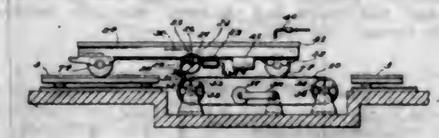
1,638,765. WOOD SEPARATOR AND METHOD OF PREPARING SAME. WILLIAM H. GRIMDITCH, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 5, 1923. Serial No. 623,066. 5 Claims. (Cl. 136—150.)

2. The method which comprises the subjection of wet wood separators to the action of warm air of progressively decreasing humidity.



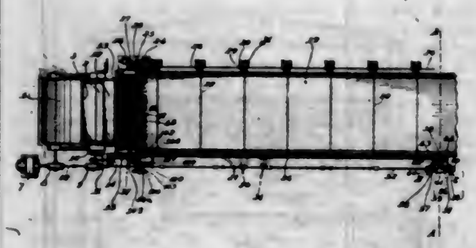
1,638,766. FLEXIBLE WASTE-PIPE CLEANER. FRED E. GROSVOLD, Eau Claire, Wis. Filed June 4, 1926. Serial No. 113,769. 2 Claims. (Cl. 137—70.)

1. A waste-pipe cleaning device including a shank formed of a spring coil, the convolutions of which at the front end of the shank are enlarged, a pilot head held to the shank at the terminal convolution of the shank, a cap disposed about the rear end of the shank and having its end separated from the adjacent end of the shank by an intervening space, an elongated spring extending longitudinally through the shank from said cap to said enlarged convolutions of the shank, and a ball on said elongated spring and disposed within the said enlarged convolutions of the coil.



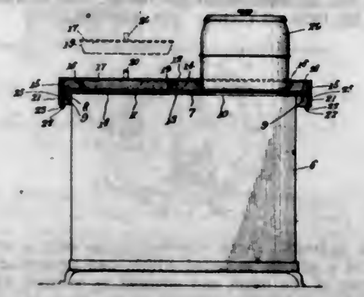
1,638,767. ANIMAL TRAP. WILLIAM I. HARMON, Langley, Wash. Filed Jan. 30, 1925. Serial No. 5,845. 2 Claims. (Cl. 43—65.)

1. In an animal trap, a receptacle having means defining an entrance, said entrance having side walls converging into the receptacle but having their inner ends spaced and a plurality of elongated resilient fingers carried by each side wall, each resilient finger having its outer end fastened to the side wall on which it is mounted and having its inner end free and pointed, the fingers being bowed so that their pointed ends lie closely adjacent to prevent egress from the receptacle, the fingers being readily flexed to permit ingress to the receptacle,



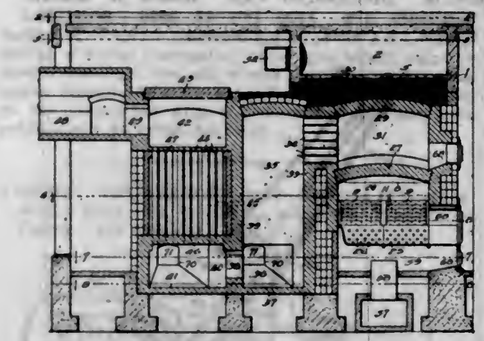
and holding means co-operable with the fingers for maintaining the same flat up against the side walls of the entrance and inoperative when desired.

1,638,768. GLASS-SURFACING APPARATUS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 22, 1925. Serial No. 25,006. 5 Claims. (Cl. 51—235.)



1. The combination with a surfacing car or table mounted for movement along a track and having a glass supporting surface, of a vacuum pump carried by the table, communicating means leading from the top surface of the table to the pump, and driving means for the pump positioned adjacent the path of movement of the table and arranged to actuate the pump while the table is moving past such driving means.

1,638,769. LEER CONSTRUCTION. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 30, 1926. Serial No. 151,693. 9 Claims. (Cl. 49—47.)

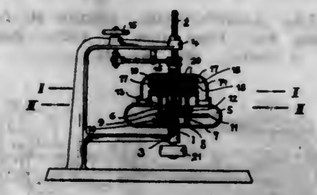


1. In combination with apparatus for intermittently rolling sheets of glass, of a roller leer comprising a high speed section which receives the sheets from the rolling apparatus and a slow speed section following the high speed section, means for driving the rolls of both sections at a relatively low peripheral speed, such means including one way clutch means for driving the rolls of the high speed section, and other means for driving the rolls of the high speed section at a relatively high speed, such means including another set of one way clutch means.

1,638,770. INSULATED STOVE-TOP ATTACHMENT. ARTHUR C. JONES, South Pittsburg, Tenn., assignor to Alan S. Kelly, South Pittsburg, Tenn. Filed Nov. 1, 1926. Serial No. 145,524. 3 Claims. (Cl. 126—211.)

1. In combination with a range having a permanent top with eyes therein and an overhanging ledge and a down-turned flange, lids for the eyes, a removable insulated top attachment comprising upper and lower spaced walls, heat-insulating material therein and an outer wall connecting the inner and outer walls, said attachment having openings with inclined walls of greater diameter than the diameter of the eyes, said attachment having overhanging edges extending beyond said ledge and flange, and hook-shaped clamps removably secured beneath the overhanging portions and interlocking with said ledge and flange.

1,638,771. INCINERATOR. EDWARD M. JONES, St. Louis, Mo. Filed Aug. 6, 1923. Serial No. 655,938. 4 Claims. (Cl. 110—12.)

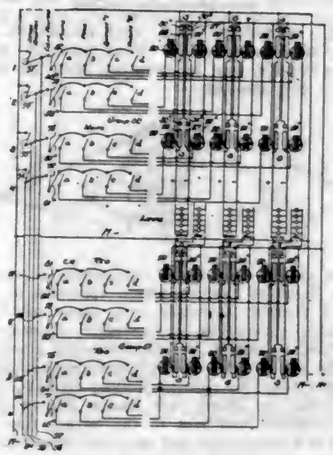


3. In an incinerator structure, a housing, a garbage storage bin having an inclined floor, an inclined oscillating garbage drying hearth, a burning grate disposed at the lower end of said hearth, a preheater, an arched structure having one of its end walls provided with a plurality of flame and smoke flues, said housing, hearth and arched structure forming, in conjunction with the walls of the housing, a lower combustion chamber, an upper combustion chamber, a rear combustion chamber, an equalizing chamber disposed at opposite ends of said preheater, a hot air chamber disposed below said hearth and a hot air chamber below said burning grate; a forced draft mechanism, an air and gas conduit leading from the storage bin to said forced draft mechanism, a forced hot air conduit leading from the preheater to the hot air chambers under the drying hearth and burning grate and a stack having communication with one of the equalizing chambers.

1,638,772. GASIFIER FOR LIQUID FUEL. FRITZ KRESS, Dresden, Germany. Filed Mar. 15, 1926, Serial No. 94,678, and in Germany Mar. 16, 1926. 2 Claims. (Cl. 158—67.)

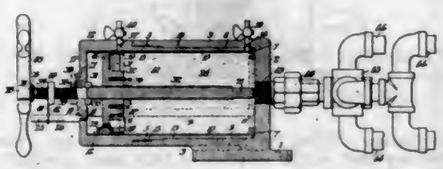
1. In a gasifier for a liquid combustible, a burner tube having a series of radially placed apertures at the forward end thereof, a supply tube associated with the burner tube for supplying a combustible thereto, the said supply tube extending to approximately the forward end of the burner tube, and apertured projections on the said supply tube, the said projections and the apertures therein being so placed that flames issuing from the radially disposed apertures in the burner tube impinge upon the said projections and enter the apertures therein to heat the projections and the said supply tube.

1,638,773. FRICTION COUPLING. FRITZ LOBE, Breslau, Germany. Filed Dec. 23, 1926. Serial No. 156,734. 1 Claim. (Cl. 74—84.)



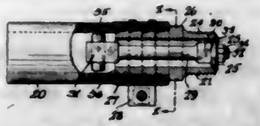
A friction coupling for revolving a shaft at rest, from a driving shaft which revolves at high speed, gradually from the zero speed to the speed of the driving shaft, a housing loosely mounted on said driving shaft, two auxiliary vertical shafts in said housing, a spur wheel keyed on said driving shaft, two transmission spur wheels keyed on one of said auxiliary shafts, two transmission spur wheels keyed on said second mentioned auxiliary shaft, a spur wheel keyed on said driven shaft all these spur wheels being located in said housing and being of different diameters so that at high speed revolving of said driving shaft the upper spur wheel on said auxiliary shafts rotates slowly around said spur wheel keyed on said driven shaft and said housing is slowly rotated on said driving shaft, a casing shiftably mounted on said driven shaft, friction disks shiftably mounted on the hub of said casing, bolts upwardly directed from said housing, and friction disks loosely mounted on said bolts and located one between every two friction disks of said casing for gradually coupling said casing with said housing and consequently said driven shaft with said driving shaft.

1,638,774. SELECTIVE CIRCUIT SYSTEM AND REMOTE CONTROL. ALBERT R. LOCKE, Chicago, Ill. Filed Sept. 1, 1920. Serial No. 407,386. 7 Claims. (Cl. 171—97.)



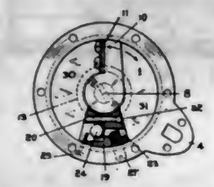
1. An electric current control system having in combination a plurality of current supply circuits; a plurality of electromagnetic switches, one individual to each current supply circuit and each switch having a pair of windings which separately can close a given associated

switch; a plurality of pairs of manual switches, the switches of each pair controlling respectively the energization and deenergization of the two windings of a



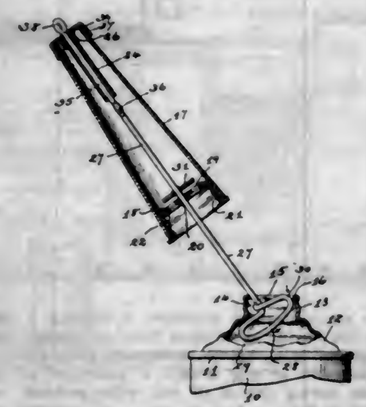
given associate electro-magnetic switch and a master switch to close circuit through like closed manual switches of all of the pairs.

1,638,775. LUBRICATOR. HARLAN M. LUDWICK, Parkesburg, Pa. Filed June 2, 1923. Serial No. 643,059. 4 Claims. (Cl. 184—28.)



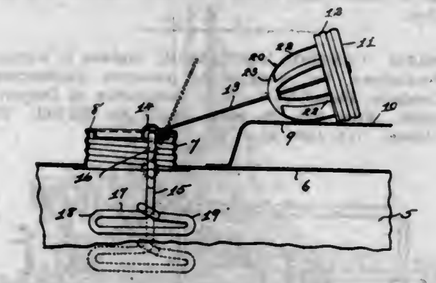
1. In a lubricator, the combination with a casing inclosing a grease chamber; of a piston fitted for axial reciprocation in said chamber; a screw shaft engaging said piston as a nut; means arranged to prevent rotation of said piston when said screw shaft is rotated, including a guide rod, extending through said piston; a removable guide plate fitted in said chamber, against the end of said casing and holding said guide rod, parallel with said screw shaft; whereby rotation of said screw shaft axially shifts said piston in said chamber.

1,638,776. RAW-WATER SYSTEM FOR MAKING ICE. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Sept. 26, 1922. Serial No. 590,585. 6 Claims. (Cl. 284—13.)



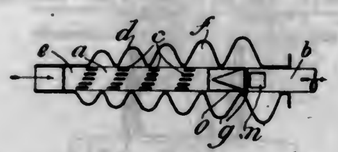
1. In a system for supplying agitating air to ice cans, the combination of an air supply pipe, a valve body therein having an inwardly facing seat at its inner end, a valve in the body, a pipe to which the air is to be supplied, a flexible connection between the valve body and the pipe, a stem for the valve extending through the body and a projection upon the stem engaged by the end of the pipe to open the valve.

1,638,777. HYDRAULIC SHOCK ABSORBER FOR MOTOR VEHICLES. WILLIAM PATRICK MASON, New Mile End, South Australia, Australia, assignor of one-half to Norman Samuel Spencer, Adelaide, Australia. Filed Oct. 23, 1926, Serial No. 143,662, and in Australia June 15, 1926. 3 Claims. (Cl. 188—89.)



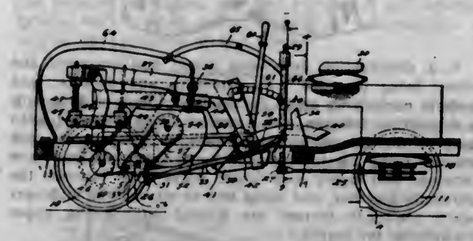
2. An hydraulic shock absorber comprising a circular drum and a spindle mounted within and projecting from the centre of the drum and adapted to oscillate therein, projecting arms rigidly attached to the drum and to the spindle the outer ends of which are adapted to be pivotally attached respectively to the axle or to the spring and to the frame of the vehicle according to the construction thereof and to the position of the device, a block secured within the drum and forming a fixed abutment therein having two through passages the one a comparatively small one of adjustable bore and the other a relatively large one fitted with a valve and with a device whereby it may be wholly or partially closed, and a radial plate secured upon the spindle and forming a radial piston within the cylinder, the block and the plate dividing the interior of the drum into two chambers which vary in relative size as the spindle with the plate oscillates within the drum, substantially as described and for the purpose set forth.

1,638,778. DISPENSING CAN. JOSEPH H. MILLER, Harrisburg, Tex. Filed July 23, 1926. Serial No. 124,336. 2 Claims. (Cl. 221—56.)



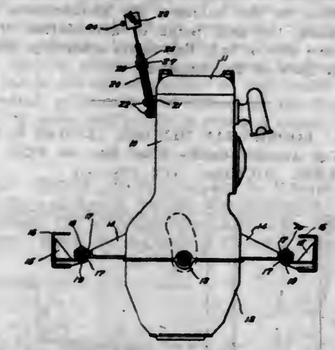
1. In a dispensing can the combination with a can-body having a nozzle-engaging connection, of a nozzle detachably connecting with said body-connection, a stem extending through the nozzle said stem having a pivoted outer end portion to enable said portion to be swung laterally when drawn outwardly from the nozzle and a cap attached to the outer pivoted end of the stem and shaped to cover the nozzle end.

1,638,779. DISPENSING RECEPTACLE. JOSEPH H. MILLER, Harrisburg, Tex. Filed July 31, 1926. Serial No. 126,207. 5 Claims. (Cl. 221—4.)



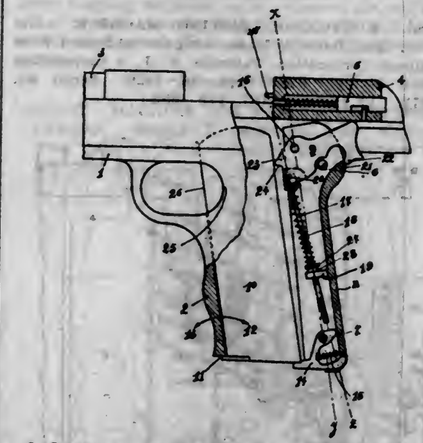
1. The combination with a dispensing receptacle having an outlet in a wall thereof above the bottom, of a closure for said outlet, means attached to the closure and extending into the receptacle for drawing the closure toward said outlet and guide means also attached to and moving with the closure for directing the closure over the edge of the receptacle outlet, said guide means being in addition to the drawing means.

1,638,780. EXHAUST SILENCER FOR INTERNAL-COMBUSTION ENGINES. JAMES NEIL, Anniesland, Glasgow, Scotland. Filed Apr. 24, 1924, Serial No. 708,771, and in Great Britain Oct. 12, 1923. 8 Claims. (Cl. 137—160.)



1. An exhaust silencer for internal combustion engines formed of a perforated inner pipe and an outer casing having a helical corrugation defining a helical chamber around said pipe; one end of said pipe being open to the engine exhaust and the other end of said pipe being open to the atmosphere with a division between said ends substantially as herein set forth.

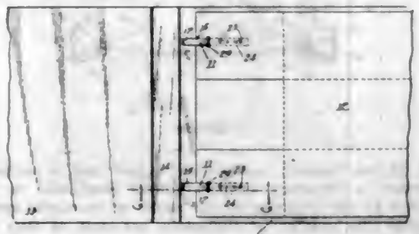
1,638,781. VELOCIPEDE. ISAAC NETTLES, Cleveland, Ohio. Filed Aug. 9, 1924. Serial No. 731,086. 5 Claims. (Cl. 208—33.)



1. In a manually propelled vehicle, operating levers, a crank shaft, members mounted upon the crank portions of the crank shaft, a link connection between each of the pitmen and the co-operating lever, a link and spring connection between each pitman and an operating lever and link, said springs being disposed upon opposite sides of the co-acting pitman.

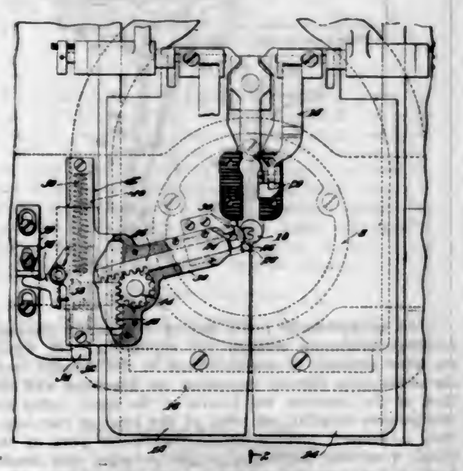
1,638,782. AUTOMOBILE CONSTRUCTION. CLYDE R. PATON, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Jan. 3, 1927. Serial No. 158,675. 10 Claims. (Cl. 123—192.)

1. In an internal combustion engine and a support therefor, a vibratory system therefor positioned to be affected by the vibration of said engine at an engine speed wherein the number of explosions per unit of time in said engine synchronizes with the natural period of vibration of said support, and to be set in motion thereby, and means for frictionally resisting said motion.



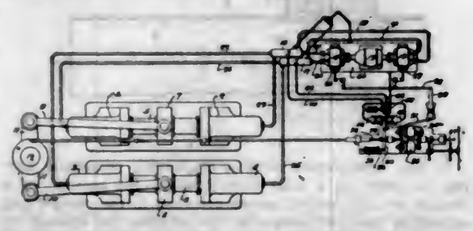
1,638,783. AUTOMATIC PISTOL. EMILE PHILIPPART, Liege, Belgium. Filed Aug. 10, 1926. Serial No. 128,388. 2 Claims. (Cl. 42—3.)

1. In an automatic pistol having a pivotally disposed cartridge magazine through the intermediary of which the hand pressure is communicated to the hammer locking mechanism, thereby provoking the liberation and the blow of the hammer, the handle of the pistol being for this purpose suitably cut away at the front of the magazine, a hammer pivoted within the handle part of the pistol, a suitably perforated projection upon said handle part, a rod suitably guided by one of its extremities within said perforated projection, and articulated by its other extremity to the hammer at a point, which at the cocked position of the hammer is disposed at one side for instance in front of the line passing through the pivot center of the hammer and through the center of the hole within said projection, this cocked position being determined through the contact between the suitably formed hammer head and a shoulder of said handle part a spring



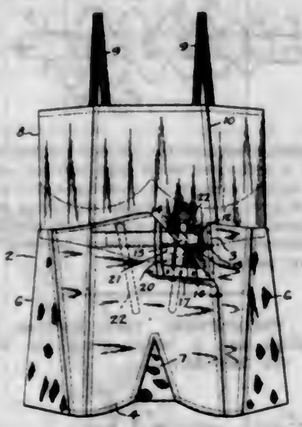
combined with said rod and pressing on the one hand against said projection of said handle part and on the other hand through the intermediary of said rod against the hammer at said point, thereby maintaining the hammer in the cocked position, and a shoulder upon said hammer serving to transmit the angular displacement of the magazine to the hammer, the displacement of the latter causing the said point of articulation to move from the one side of said line to its other side thus provoking the blow of the hammer.

1,638,784. LOOSE-LEAF BINDER. AUGUST B. PLUSHKELL, Los Angeles, Calif. Filed Dec. 10, 1923. Serial No. 679,625. 5 Claims. (Cl. 129—1.)



1. In a device of the character described, the combination with a base, of a leaf-retaining member comprising a ring portion and means to secure it to the base, there being a gap in the bottom of the ring portion adjacent the base, and a member adapted to be secured in place to close said gap.

1,638,785. BUTTONHOLE-SEWING MACHINE. EUGENE J. RAY, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 16, 1920. Serial No. 410,672. 17 Claims. (Cl. 112—252.)

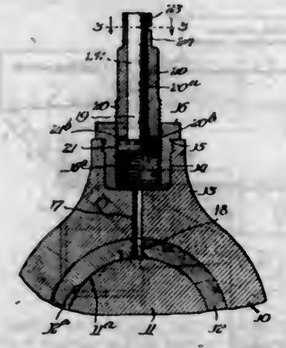


17. A buttonhole sewing machine having, in combination, stitch forming mechanism including upper and under thread mechanisms and means for delivering a stay cord to the under side of the work to be covered by the overseam, a main frame, a travelling work clamp carriage movable with relation to the frame provided with work supporting plates, spring actuated devices on one of the plates for severing the cord and threads between the under thread mechanism and the work, means for setting said devices by the travel of the work carriage during sewing, a retaining latch for said devices, and means for tripping said latch by the travel of the carriage to release said devices after the completion of the sewing.

1,638,786. CONTROL MECHANISM. GEORGE E. SMITH, Jenkintown, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 28, 1924. Serial No. 695,841. 21 Claims. (Cl. 138—23.)

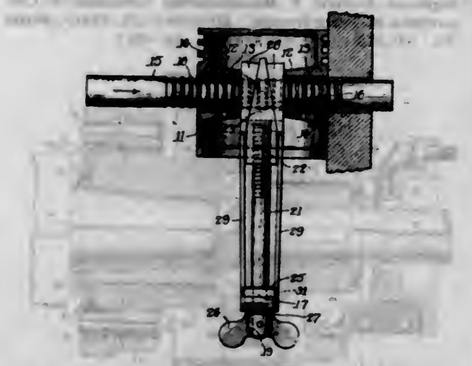
1. The combination of an hydraulic system of a pump; an hydraulic motor actuated by fluid propelled by said pump; floating gear connected between the motor and the pump; and means operative on said floating gear to prevent over-load on the pump when the fluid pressure in the system exceeds a predetermined maximum.

1,638,787. COMBINED DETACHABLE CORSET AND BRASSIÈRE. WILLIAM SOMERS, South Norwalk, Conn. Filed Dec. 5, 1925, Serial No. 73,299. Renewed June 28, 1927. 9 Claims. (Cl. 2—30.)



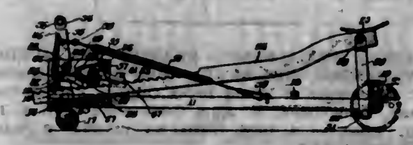
1. A combination detachable corset and brassière, the corset being provided with stiffeners and pockets, said pockets comprising upper pockets and lower pockets with a separation between, the brassière being provided with keepers through which said stiffeners are passed, said keepers being retained on the portions of the stiffeners between said upper and lower pockets to connect the garments together, and being free to slip off the stiffeners when the ends thereof are slipped out of the upper pockets on the corset.

1,638,788. SELF-LOCKING DEVICE. HARRY VISSERING, Kenilworth, Ill. Filed Mar. 26, 1920. Serial No. 369,155. 5 Claims. (Cl. 151—19.)



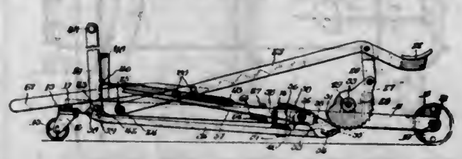
1. In a device of the character described, in combination, a pair of separate elements having complementally threaded portions for simultaneous engagement with an

object, said elements being adapted to operate in unison, said elements also having eccentric alined axes, the elements normally being relatively spaced when locked, one



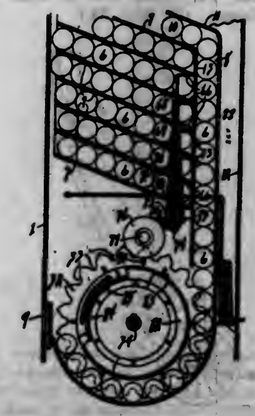
of the elements comprising two separate but relatively immovable parts, the said separate elements being adapted to bind laterally when relatively moved.

1,638,789. PISTON TOOL. GAILARD E. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 19, 1924. Serial No. 700,208. 7 Claims. (Cl. 90—33.)



2. A tool of the character described comprising in combination recessed bracing means adapted to bear against the opposed inner faces of the pair of internal apertured bosses of a piston, and means to contract and expand said bracing means including a member between said boss faces and recessed in register with the recesses of said bracing means, said recesses being adapted to accommodate a tool in the apertures of said bosses.

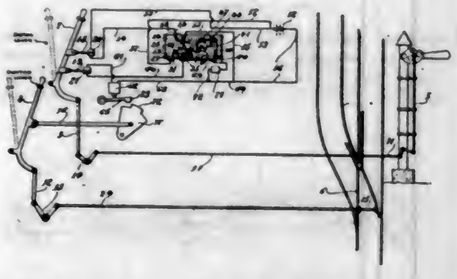
1,638,790. TRUCK JACK. GAILARD E. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Aug. 22, 1925. Serial No. 51,767. 1 Claim. (Cl. 254—2.)



In a truck-jack, the combination of a truck-frame, carrying-wheels therefor, a ratchet-bar, a load-engaging saddle mounted on said ratchet-bar near one end thereof, a link connecting said ratchet-bar near said saddle to said truck-frame, a bearing for the other end portion of said ratchet-bar permitting lengthwise sliding movement of the latter, an operating-handle fulcrumed on said truck-frame, an operating pawl associated with said handle adapted to coact with the teeth of said ratchet-bar, a holding-pawl cooperating with said ratchet-bar teeth, and means connecting said pawls permitting the descent of the saddle, whereby the load may be lifted and lowered step by step by actuation of said operating-handle, said ratchet-bar in the lowest position of said saddle being in a convenient position for movement by the foot of the operator to cause said saddle to rise and engage the load.

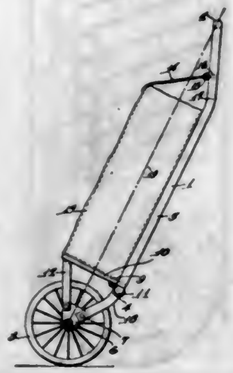
1,638,791. TRUCK JACK. GAILARD E. WEAVER, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Sept. 8, 1925. Serial No. 54,855. 5 Claims. (Cl. 254—2.)

1. In a truck-jack, the combination of a truck-frame, carrying-wheels therefor, a load lifting and lowering lever fulcrumed on said frame and having an extension beyond the fulcrum on that side of the latter opposite the place where the lever assumes the load, a ratchet-member rockingly mounted on said frame, and operative connection between said ratchet-member and lever, an operating-handle fulcrumed on said frame, and means enabling said handle to operate said ratchet-member step by step including pawls coacting with the latter, whereby the operator by means of said extension may quickly rock said lever upwardly to approach the load initially without rocking the handle.



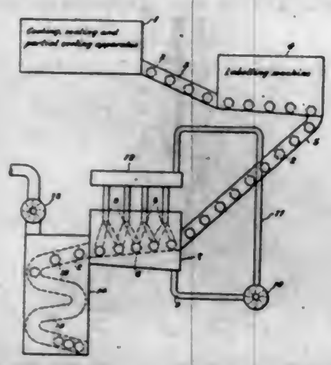
1,638,792. MACHINE FOR VENDING BOTTLED BEVERAGES. ROSIER B. WINGATE, Fort Worth, Tex. Filed Jan. 11, 1926. Serial No. 80,562. 6 Claims. (Cl. 211—8.)

1. A beverage bottle vending machine comprising a casing provided with a discharge door, a storage bin provided with a main discharge chute leading to said door a pair of bottle carrying wheels of different diameters revolubly mounted in said casing, each wheel having a plurality of peripheral cavities and adapted to move the bottles in said main chute for moving the bottles one by



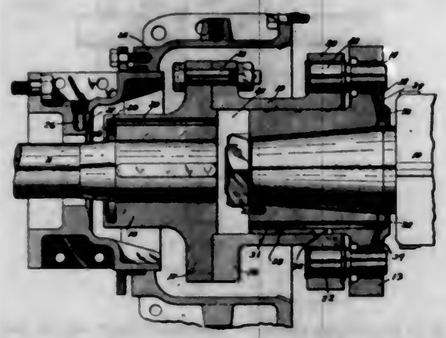
one to said door, means for forcing the bottles through said door, a plurality of storage chutes inclined towards said main chute, means for locking said inclined chutes closed, and means actuated by said bottle carrying wheels for releasing the locking means of said inclined chute.

1,638,793. AUTOMATIC TIME-LIMIT CONTROL MEANS FOR INTERLOCKING LEVERS OF RAILWAY APPLIANCES. CHARLES ADLER, Jr., Baltimore, Md. Filed Feb. 26, 1926. Serial No. 90,733. 4 Claims. (Cl. 246—161.)



1. In a railway signal and switch apparatus the combination with a switch operating mechanism, of a lock including a latch for holding the switch mechanism, a lock-magnet for controlling the latch, a relay magnet having an armature coacting therewith which latter when the relay is de-energized moves beyond the influence of the relay magnet to pick it up, a circuit controlled through the signal mechanism to normally energize the relay-magnet, a motor mechanism with means for moving the armature to a position where the relay magnet may pick it up, and electrical circuits controlled by the signal mechanism when the latter is moved to the danger position for setting the motor mechanism into operation and at a predetermined time releasing the lock to permit the switch mechanism to be moved.

1,638,794. PORTABLE CARRIER. ALINE L. ALDRICH, Merion Station, Pa. Filed Feb. 6, 1926. Serial No. 86,467. 3 Claims. (Cl. 280—58.)

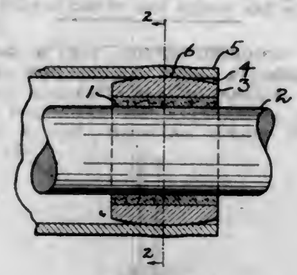


3. A carrier including a yoke-shaped frame having a handle part; arms extending from the handle part and having their ends bent inwardly and forwardly; plates secured to the ends of the arms; a wheel rotatably secured to the plates; a platform; a brace secured to the plates and the platform, and means for attaching the platform to the arms.

1,638,795. LABELING PROCESS. WALTER H. BENTLEY, San Jose, Calif. Filed Apr. 23, 1924. Serial No. 708,456. 6 Claims. (Cl. 216—62.)

1. The process of treating cans which comprises the steps of labeling the cans while hot, spraying the cans to deposit thereon a protecting glossy coating of material, and cooling the sprayed cans.

1,638,796. SHAFT COUPLING. HARRY F. CARES and ROLAND MARSLAND, Essington, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 23, 1921. Serial No. 517,275. 4 Claims. (Cl. 64—89.)

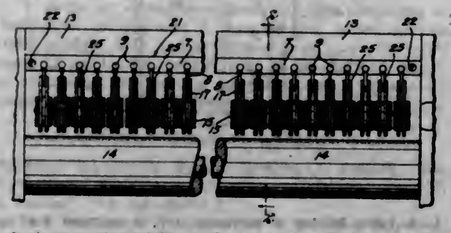


1. In a shaft coupling of the expansion type, in combination, a first coupling member, a second coupling member having a sleeve adapted to engage the first coupling member in axially sliding relation and defining a chamber therewith, torque-transmitting means connecting the first coupling member and the sleeve, centrifugal means including longitudinal ducts whereby lubricant is supplied to the chamber through the second coupling member, means including a spiral groove whereby lubricant is fed between the sleeve and the first coupling member from the chamber, and means including a longitudinal duct through the first coupling member whereby lubricant is fed from the chamber to the torque-transmitting means.

1,638,797. SELF-ALIGNING BEARING AND METHOD OF MAKING THE SAME. CARL CLAUS, Plainfield, N. J., assignor to Bound Brook Oil-Less Bearing Company, Boundbrook, N. J., a Corporation of New Jersey. Filed Oct. 1, 1926. Serial No. 138,894. 6 Claims. (Cl. 29—149.5.)

1. In a self-aligning bearing construction, a bearing device in which the shaft may be journaled, said device having a spherical periphery, and a tube into which

said device is forcibly inserted so as to expand the tube wall and form therein a seat for the spherical periphery of said device.



4. A method of making a self-aligning device having a tube with a bearing seated therein so as to be capable of rocking on its seat under a self-aligning action, which consists in providing a bearing having a spherically shaped periphery and then forcing the same into a tube of smaller bore than the diameter of said periphery of the bearing so as to expand the wall of the tube and form upon its interior a seat for said bearing to rock in.

1,638,798. FRUIT-CORING DEVICE. THOMAS F. COONEY, New Haven, Conn. Filed Apr. 16, 1926. Serial No. 102,426. 4 Claims. (Cl. 146—53.)

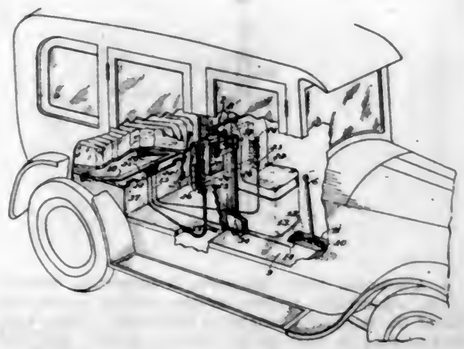
1. A coring device of the character described, comprising a tubular cutter, a handle connected therewith, and a combined core extractor and core compressor within the tubular cutter and operatively connected with the handle.

1,638,799. CAM STOP STRIP FOR KEYBOARD ASSEMBLIES OF MACHINES FOR CASTING LINES OF TYPE. GEORGE LOUIS CUBLE, Minneapolis, Minn. Filed July 6, 1926. Serial No. 120,576. 6 Claims. (Cl. 199—25.)

1. A cam stop strip of the kind described having pins yieldingly mounted for self-centering action.

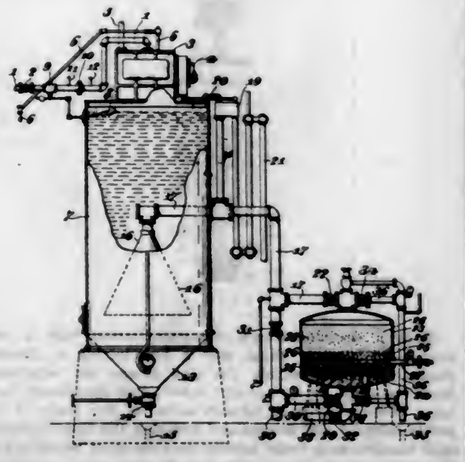
1,638,800. SCOURING IMPLEMENT. JOHN D'ALBORA, Yonkers, N. Y. Filed Mar. 4, 1924. Serial No. 696,753. 3 Claims. (Cl. 15—211.)

1. A scouring device comprising a supporting member, a flat, non-metallic, resilient member carried by the free end of the supporting member, a hollow pad having steel wool secured to part of its exterior surface, said pad being removably secured in substantially enclosing relation to the resilient member.



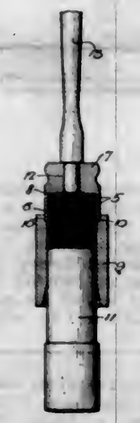
1,638,801. RESILIENT VEHICLE WHEEL. PHILLIP A. DUNKEL, Denver, Colo. Filed Jan. 14, 1926. Serial No. 81,227. 6 Claims. (Cl. 152—28.)

5. In a resilient wheel, the combination with a rim having an annular flange and a hub having a circular flange positioned within the rim flange but separated from the same by an annular space, said rim flange having a circular series of arcuate slots; of flat rings on opposite sides of said flanges and covering the space between said flanges, said rings having arcuate slots which register with the slots in the rim flange, bolts extending through said slots, half elliptic springs which are secured at their central portions to the hub flange and are arranged in alternate order on opposite sides of said flange, their ends being secured to said bolts, circular



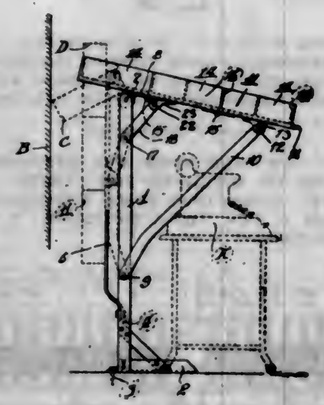
housing plates secured to opposite sides of the hub flange and extending partially over the rim flange, guides on the rim flange which overlap the outer portions of said housing plates, radial arms on said housing plates, and spring pressed abutments on the rim flange which engage the opposite sides of said radial arms.

1,638,802. GEAR-SHIFT-CONTROL APPARATUS. FRANK A. FUCI, Pittsburgh, Pa. Filed July 3, 1926. Serial No. 120,441. 5 Claims. (Cl. 180—82.)



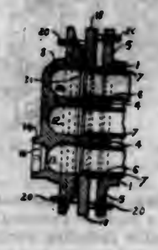
1. A locking device for gear shift levers, comprising a flexible thrust member, a locking bar actuated by said member, means for effecting longitudinal movement of said member in one direction, and means for bending said member at a point intermediate its ends to effect retractive movement of one of said ends.

1,638,803. WATER TREATMENT. GEORGE H. GIBSON, Montclair, N. J., and JOSEPH D. YODER, Philadelphia, Pa., assignors to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 23, 1924. Serial No. 694,468. 18 Claims. (Cl. 210—14.)



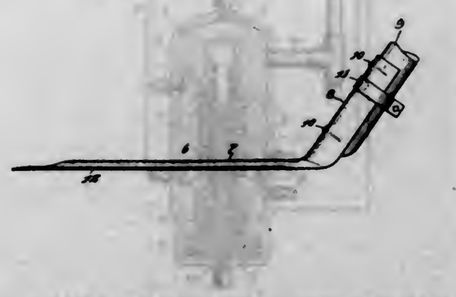
1. The method of treating water, which comprises subjecting the water to a reagent of such character and in such quantity as to produce a precipitate and to leave the water alkaline, and filtering the alkaline water through a medium comprising compound of calcium substantially insoluble in the alkaline water.

1,638,804. SCOURING DEVICE. JOHN W. GOTTSCHALK, Philadelphia, Pa. Filed Jan. 25, 1923. Serial No. 614,788. 1 Claim. (Cl. 15—225.)



The combination, in a utensil, of a cupped body, and a fabric formed of a sinuously looped metal strand having the opposing laps connected together by stitching, said fabric being folded and wound into a cylinder and mounted in the body, the said stitching being located within the body and the looped strands of metal projecting beyond the body to form a scouring portion.

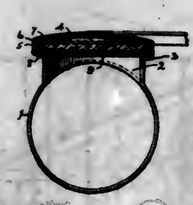
1,638,805. FOLDABLE CHECKING TABLE. WALTER J. HAUSMAN, St. Louis, Mo. Filed Nov. 25, 1921. Serial No. 517,497. 3 Claims. (Cl. 45—6.)



1. A table having a sectional top, a support for upholding one end of said top secured adjacent said end, a member swingable from said support extending to and supporting the opposite end of said top, said top adapted to be travelled over said support, and means forming part of said top for preventing said top from collapsing when said top is being upheld by said support and said swingable member.

1,638,806. CONDENSER. JOHN J. HILLIARD, Fort Worth, Tex., assignor to Baker Ice Machine Company of Texas, Fort Worth, Tex., a Corporation of Texas. Filed Feb. 4, 1927. Serial No. 165,863. 7 Claims. (Cl. 257—240.)

1. In a condenser of the specified class, an outer tube having a terminal head, a plurality of inner tubes projecting through the terminal head, an outer head having passages therein for intercommunication with the inner tubes, and means including an intermediate head for adjusting the inner tubes to the outer head.



1,638,807. DOUBLE-CUTTING-EDGE GOLF SICKLE OR SCYTHE. CHARLES A. HOPWOOD, St. Louis County, Mo. Filed Sept. 4, 1925, Serial No. 54,423. Renewed Apr. 28, 1927. 3 Claims. (Cl. 30—11.)

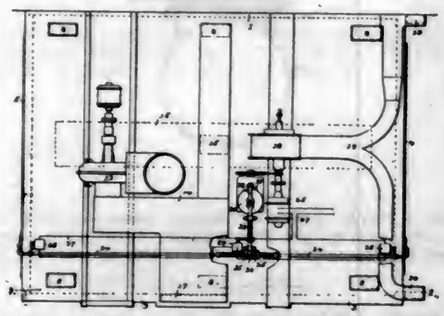
1. A sickle or scythe comprising a blade consisting of a horizontal portion and a semi-circular socket portion formed integral with and extending at an angle from the horizontal portion, the entire edge of the horizontal portion sharpened for cutting purposes, and a clamp for holding a handle in the socket portion.

1,638,808. TAMPION PAD. EDWARD J. GULICK, Elkhart, Ind. Filed Apr. 12, 1926. Serial No. 101,327. 3 Claims. (Cl. 84—385.)

1. In a wind musical instrument of the class described, the combination of a pad-cup provided with a peripheral depending flange, and a key pad assembly mounted within said pad-cup, said pad assembly comprising an annular pad carrier provided with an annular outwardly extending peripheral flange, a pad arranged within said carrier,

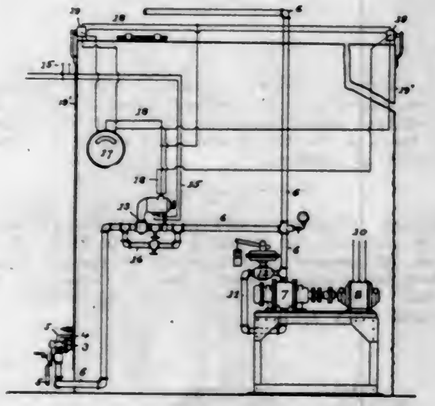
and a flexible pad cover secured about said pad and carrier, said key pad assembly being fitted tightly within said pad-cup and retained therein wholly by said tight fit.

1,638,809. NECKTIE SUPPORTER. JOHN H. JOHNSON, Astoria, N. Y. Filed Oct. 27, 1926. Serial No. 144,444. 4 Claims. (Cl. 24—57.)



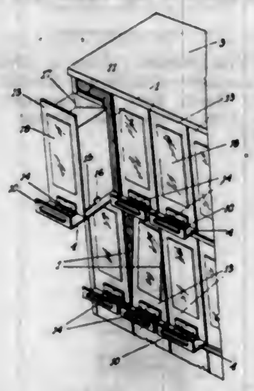
1. A neck-tie supporter comprising a sheet metal plate having opposed arms terminating in raised circular pads, an outbowed central member perpendicular to said wings, and means on the point of said bowed member to engage an article of neckwear.

1,638,810. CUSHION TIRE STRUCTURE AND METHOD OF APPLYING TO WHEELS. FRED R. KLAUS, Warren, Ohio, assignor to The American Welding and Manufacturing Company, Warren, Ohio, a Corporation of Ohio. Filed Dec. 16, 1922. Serial No. 607,461. 2 Claims. (Cl. 152—1.)



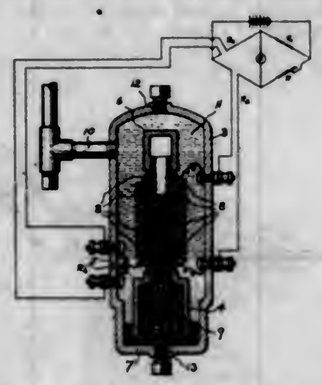
1. A vehicle wheel structure comprising a pair of spaced annular side sections, a ring interposed between said side sections and interlocking with them, said ring having its inside diameter less than said side sections and having its inside edges rounded whereby forcing such tire structure upon the fixed rim of a wheel body causes said ring to be expanded.

1,638,811. METHOD OF AND APPARATUS FOR DRYING AND ENAMELING. ARTHUR MAEHLER and KARL SIEGELE, Chicago, Ill., said Siegele assignor to said Maehler. Filed Aug. 5, 1926. Serial No. 127,276. 15 Claims. (Cl. 34—19.)



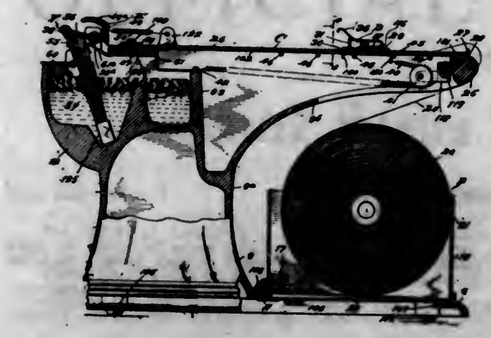
1. The herein described method of operating drying and enameling ovens of the exhaust ventilation type, the same comprising the forcing of a supplemental supply of air through the oven chamber during the initial portion of the operation of the oven, controlling the period of such supply by a timing means, and controlling said timing means in turn by the closed and the open condition of the oven doors.

1,638,812. DRYING AND ENAMELING OVEN. ARTHUR MAEHLER and HERMAN THATE, Chicago, Ill., said Thate assignor to said Maehler. Filed Aug. 5, 1926. Serial No. 127,278. 1 Claim. (Cl. 34—9.)



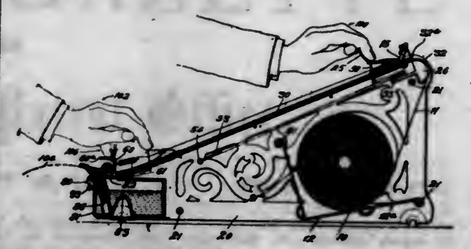
In an automatic temperature control system for drying and enameling ovens of the indirectly heated gaseous fuel type, and in which a thermostatically controlled electric mechanism has controlling connection with a motor actuated valve in the fuel supply to the oven burners, the combination of an electric circuit embracing said instrument, a circuit reversing switch arranged in said circuit, and an operating connection between said switch and an oven door, adapted to operate said switch to one position in an opening of said door, and operate the switch to the reverse position as said door is moved to a closed condition.

1,638,813. SALES-INDICATING CONTAINER. JOSEPH S. COCHRAN, Stockton, Calif. Filed Dec. 7, 1925. Serial No. 73,691. 3 Claims. (Cl. 211—8.)



1. In a self-selling sales apparatus, a container, supporting means for a package provided with the container, said supporting means including vertical plates insulated from each other and between which the package fits, a horizontal flange at the bottom of one plate and a horizontal extension on the other plate above and overhanging the flange and means acting to tilt the plate having the extension toward the other plate to cause the extension and flange to engage, and functioning only when the container is empty.

1,638,814. ELECTRICAL PRESSURE GAUGE. HIRSCH EPSTEIN, Chicago, Ill., assignor to Hyperbo-Electric Flow Meter Co., Chicago, Ill., a Corporation of Delaware. Filed July 3, 1922. Serial No. 572,486. 3 Claims. (Cl. 177—351.)



1. In a pressure measuring device, the combination of a closed gas chamber having a gas trapped therein, a pressure chamber enveloping said gas chamber and connected therewith, means for imposing the pressure to be measured upon the gas trapped in said gas chamber, and means including a first resistance responsive to the volume of the trapped gas and a second resistance disposed in the enveloping pressure chamber and varying with the temperature of the trapped gas and electrically connected with said first resistance for electrically determining the pressure to be measured as a combined mathematical function of the temperature and volume of the trapped gas.

1,638,815. TAPE-SERVING DEVICE. THEODORE H. KRUEGER, New York, N. Y. Filed Sept. 6, 1923. Serial No. 661,168. 20 Claims. (Cl. 91—14.5.)

1. In combination, a device for applying moisture to tape, including capillary moisture feeding means and self-adjusting means for holding the tape in contact with the moistening surface of said moisture feeding means.

1,638,816. TAPE-SERVING DEVICE WITH INCLINED GUIDE. THEODORE H. KRUEGER, New York, N. Y. Filed Mar. 4, 1924. Serial No. 696,907. 9 Claims. (Cl 94—14.5.)

1. In a strip server of the type described including a severing device and a moistener, the combination of a roll holder, a straight inclined flattened tubular strip guide having a slot through the upper and lower walls thereof, a hand-actuated strip feeder movable in a fixed path along the outside of said guide, and means on said strip feeder to project into said slots to feed the strip through said guide.

Patents Nos. 1,638,817 to 1,639,642.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 361—No. 3. TUESDAY, AUGUST 16, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimer.

1,302,606.—*Gideon Sundback*, Meadville, Pa. SEPARABLE-FASTENER SLIDER. Patent dated May 6, 1919. Disclaimer filed August 4, 1927, by the assignee, *Hookless Fastener Company*.

Hereby disclaims from the scope of claim 4 of said Letters Patent, any sliders except those wherein the channels diverge between the wings and have opposite surfaces between which both ends of the interlocking members are guided in entering and leaving the wings, and wherein the wings are connected independently of the stiffening means, and the stiffening means is made separately from and assembled with the connected wings.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,392,060, James and De Camp, Control system, decided April 18, 1927, claim 9.

Pat. 1,421,180, R. De Camp, System of control, decided April 18, 1927, claim 5.

Pat. 1,573,148, W. S. Edsall, Electrical generating and distributing systems and apparatus therefor, decided June 7, 1927, claim 2.

Pat. 1,593,272, C. S. Smith, Machine for correcting splined shafts, decided July 6, 1927, claims 8 and 9.

A final decision in interference has been rendered against the following trade-mark:

T. M. 122,001. Dyes combined with soap. Sunbeam Chemical Company, Chicago, Ill. Registered October 1, 1918. Decided July 7, 1927.

Adjudicated Patents.

(C. C. A. Ohio.) The Smith patent, No. 1,262,860, for egg-hatching method and apparatus, claims 1, 2, and 3 *Held* not infringed. *Buckeye Incubator Co.* v. *Petersime*, 19 F. (2d) 731.

(D. C. Mass.) The Winchell patent, No. 1,447,001, for metal shoe shank, claims 1, 2, and 3 *Held* invalid. *Sheppard* v. *Geo. J. Kelly, Inc.*, 19 F. (2d) 791.

Drawings.

RULE 88.

88. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals, (preferably the latter.)

RULE 52—ENGRAVE.

(f) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the close and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letters refers to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall appear perfectly distinct and separate from the work. If the same part of an invention appear in more than one view of the drawing it must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

Ex parte Herrmann.

Decided August 9, 1926.

1. Patentability — Invention — Process of Patching Holes in Sheets of Leather.

Where it was established that at first leather manufacturers generally condemned applicant's process of patching holes in sheets of leather and that the commercial saving and advantage incident to this process are very marked, *Held* that the process was not obvious and involved invention.

2. Same—Claims Defining Article Merely by Process of Making—Unpatentable.

Claims to the article resulting from the process *Held* unpatentable, since a sheet of leather having a patch therein would obviously not be patentable, and otherwise these claims define the article merely by the process of making it.

[Note.—This application has resulted in Patent No. 1,610,519, December 14, 1926.]

Appeal from Examiners in Chief.

Mr. P. W. Pomeroy and *Messrs. Bacon & Thomas* for the applicant.

Kinnan, *First Assistant Commissioner.*

Applicant has appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 2 to 7, inclusive. The Examiner also denied patentability to claim 1, but the Examiners in Chief regarded such claim as allowable. Of the claims here to be reviewed claims 2 to 5 are for a process, while claims 6 and 7 are for the article. Claim 4 will serve for illustrative purposes and is as follows:

4. The process of patching holes in leather and like materials which consists in removing a portion of the material about the hole to form a tapered seat of a predetermined area and contour, in preparing a patch from a body of similar material having a complemental tapered edge and of substantially the same general area and contour as the seat formed in the material to be patched, and in finally applying and uniting the patch to the material and presenting an outer surface substantially flush with that of the patched material.

The references cited by the Primary Examiner are: "Art of Boot and Shoe Making," by J. B. Leno, page 118, third paragraph; "How to Repair Shoes," by Frank L. West, published by the Institute Press, Tuskegee Institute, Ala., 1912, pages 51 to 54, inclusive, chapter entitled "Putting on a cement patch;" "Home Book to Learn Expert Shoe Repairing," by J. M. Levinson, 725 West 54th Street, Los Angeles, Calif., pages 16 and 17, chapter entitled "How to prepare a patch on a sole," first paragraph.

The Examiners in Chief did not find the Leno or the Levinson publications pertinent, but did find the West publication anticipated the claims here under review.

The specification discloses that many sheets of leather are found to contain holes or cuts which prevent the use of such sheets in upholstering seats of various kinds, more especially automobile seats. Some of these holes exist in the hide when it is removed from the animal, and these the applicant refers to as grub holes, while other holes may be present as a result of subsequent operations upon the leather. In order to overcome these defects, it has been customary, heretofore, to either discard these sheets where a large surface is to be covered or cut from such sheets a strip including the hole and sew the cut edges together, and use the sheet thus sewed in such manner that the seam will fall in an obscure place.

The evidence submitted in support of the appeal fairly establishes the existence of the foregoing conditions. Confronted by them, the applicant devised his process of filling in the holes by cutting away a portion of the leather surrounding the holes so as to form a seat having a long tapering surface and preparing a patch of similar leather and of complemental form to the seat formed in the sheet of leather and cementing the patch in place in such a way as to preserve the uniformity of thickness of the sheet and prevent the patch being observable when it is in place. Applicant states that with this process there is no evidence visible on the right side of the patch of the leather having been patched, and that the patched portion is just as flexible as other portions.

[1] There is evidence submitted which fairly establishes that when the idea of patching the leather in the manner specified in this application was suggested to leather manufacturers it was at once and positively condemned. There is evidence also that by using applicant's process the great waste incident to the previous practice of discarding many sheets of leather entirely or cutting out the defective portions and sewing the good portions together has been eliminated. It is established that almost all sheets of leather which are otherwise suitable for upholstery work in connection with automobile seats can be used by the application of this patching process and the leather can be bought according to specifications, as is customary in purchasing other materials, the number of permissible patches in a given area being specified in the purchasing order. It seems the commercial saving and advantage incident to applicant's process are very marked. Under these conditions it would seem what applicant has done was not obvious and required some exercise of inventive skill.

The claims have been rejected in view of the description of a method of patching shoes in which it is stated both the patch and the leather are skived and the patch cemented in place. It is to be noted there is no definite statement that the skiving is done so as to form the relatively extensive tapering seat from the hole outwardly. Furthermore, the lower end of the patch on the shoe is to be sewed to the sole although, as noted by the Examiners in Chief, it is probable that if the patch were located farther away from the sole it would not be thus sewed to the latter. It has been common practice among cobblers for many years, as is well understood, to cement on shoes the so-

called "blind" patches, and it has also been common to skive the ends of leather strips where two pieces are to be sewed together, so that the strip or strap will be of the same thickness where the joint is made. Trunk straps and parts of harness furnish illustrations of this practice. It is not believed, however, in view of the facts presented here that these former practices suggest applicant's process.

[2] The article claims are not deemed to be patentable. A sheet of leather having a patch therein would obviously not be patentable, and otherwise these claims define the article merely by the process of making it.

The Examiners in Chief allowed claim 1 because it included the step of forming holes of a predetermined area and contour in the leather. From this decision it is apparent that they interpreted this language as meaning that holes were cut through the leather which were subsequently filled in by a portion of the patch, the remaining portions of which rested on the tapered seat.

It is not believed applicant should be limited to so specific a definition of his process. It would seem to be immaterial whether the hole already in the leather is filled in or whether it is made larger and then filled in. The appealed process claims are not deemed to clearly bring out the difference between what applicant has done and the patching of the shoes described in the article of record.

The following claim is deemed to be allowable, and if presented by amendment within 40 days from the date of this decision the Examiner is authorized to enter and allow such claim in the absence of better references:

The process of filling in holes in a sheet of leather, consisting in removing a portion of the leather surrounding the hole in such a manner as to form a seat tapering outwardly from the outline of the hole on one side of the sheet and of large area as compared with the area of the hole, preparing from similiar leather a patch of the same area and contour as the seat formed in the leather and having its under surface complemental thereto and cementing the patch to the seat, whereby the outer surface of the patch is flush with the surface of the surrounding portion of the sheet of leather, and the patched portion is of the same thickness as the surrounding unpatched portion.

The decision of the Examiners in Chief on the appealed claims is affirmed.

Court of Appeals of the District of Columbia.

IN RE BALLMAN AND EVERS.

No. 1,909. Decided March 7, 1927.

REISSUES.—CLAIMS NOT PATENTABLE.

Where the grounds of rejection were, first, a requirement for cancellation of one of two sets of claims, each set being specific to a different form of invention; second, that certain claims were unpatentable over the patent to W., and, third, that certain of the claims failed to sufficiently define patentable structure, *Held* that all three grounds of rejection were well founded.

[For Commissioner's decision see 361 O. G. 3.]

APPEAL from the Commissioner of Patents. Affirmed.

Mr. J. T. Bassoches, Mr. Paul Carpenter, Mr. B. J. McCann, and *Mr. J. H. McCann* for Ballman et al.

Mr. T. A. Hostetler for Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.:*

This appeal grows out of an application filed by the appellants for the reissue of their Patent No. 1,275,120, granted August 6, 1918. The application was filed within two years after the patent was granted, and there is no question of delay in the case. The application as amended contains 45 claims, of which the first 29 are taken from the original patent. Claims 30 and 31, and 36 to 45 inclusive have been rejected by concurring decisions in the Patent Office; hence this appeal.

The invention relates to projecting apparatus having improved redecting means. It provides by various arrangements for light source, with one or more reflectors arranged to concentrate light upon an image-carrying plate or film in order to project an image of the object upon a suitable projection screen. Several modifications are disclosed, among them Fig. 9 discloses a compound arrangement of an ellipsoidal reflector and a plurality of sectional spherical reflectors; whereas Fig. 13 discloses an electric light bulb which is silvered to form a reflecting surface, while a circular portion is left clear, the light being located at a specific focus with direct and reflected rays passing through the clear portion, through the slide and the projecting lens.

Claims 30 and 36 are copied for illustration.

30. A projecting apparatus comprising a source of light, an object, a reflector arranged to receive part of the rays emitted by said source, and means for reflecting another part of the rays emitted by said source upon said reflector, said redector being constructed and arranged to concentrate on said object the rays received by it, and means for projecting an image of said object on a screen.

36. A projecting apparatus comprising an electric light bulb having part of its surface formed as a reflector and constructed and arranged to receive and concentrate the rays emanating from the filament on an object.

Three grounds of rejection of the appealed claims were sustained by each of the tribunals of the Patent Office. The first was that the applicants were claiming two separate specific forms of invention by claims 30 and 31 as compared with claims 36 to 45, the former claims being illustrated in Fig. 9, the latter in Fig. 13. Hence it was required that applicants cancel either claims 30 and 31 or 36 to 45 inclusive, which was not done. The second ground of rejection was that claims 36, 37, 41 and 42 should be rejected on the patent to Welsh, No. 290,855, June 3, 1884. The third ground was that claims 36, 37, 41 and 42 should be rejected as failing sufficiently to define patentable structure, being functional only.

The record discloses that these grounds for rejection were carefully considered by each of the lower tribunals, and are fully set out in their respective opinions. We are convinced that their conclusions were correct, and we think it unnecessary to repeat the reasons set out in their opinions in support thereof. We content ourselves therefore with approving and affirming the decision of the Commissioner of Patents herein appealed from.

Affirmed.

Court of Appeals of the District of Columbia.

DEVINE *v.* PFAU.

No. 1,925. Decided March 7, 1927.

APPEAL from the Patent Office. Affirmed.

Mr. Jos. L. Norris, Mr. C. A. Bateman, and *Mr. William Abbe* for Devine.

Mr. G. F. De Wein for Pfau.

Before MARTIN, Chief Justice, ROBB, Justice, and GRAHAM, Presiding Judge U. S. Court of Customs Appeals.

ROBB, *J.:*

Appeal from concurrent decisions of the tribunals of the Patent Office in an interference proceeding in which priority was awarded Pfau, who was first to conceive and first to reduce to practice.

For the reasons fully stated by the Patent Office, we affirm the decision.

Affirmed.

My Florist

Particular description of goods.—Fresh Cut Flowers and Plants.
Claims use since September, 1925.

Ser. No. 248,938. E. L. SMITH & Co., Barre, Vt. Filed May 12, 1927.

Exclusive use of the words "Smith," "Barre," and "Granite" is claimed only when associated with the mark as shown in the drawing.
Particular description of goods.—Blocks of Granite Not Prepared for Building Purposes.
Claims use since Apr. 11, 1927.

Ser. No. 250,432. W. H. BOLTON BRISTLE COMPANY, Wilmington, Del. Filed June 13, 1927.

Applicant disclaims the exclusive use of the word "Brand" apart from the mark shown in the drawing.
Particular description of goods.—Bristles.
Claims use since January, 1926.

Ser. No. 250,483. WHITE BROTHERS, Scotts, Mich. Filed June 13, 1927.

The word "Coal" is disclaimed.
Particular description of goods.—Coal and Coke.
Claims use since September, 1923.

Ser. No. 250,517. NATIONAL SANITARY RAG CO., San Francisco, Calif. Filed June 14, 1927.

EAGLE BRAND

No claim is made for the word "Brand" apart from the mark shown in the drawings.
Particular description of goods.—Rags and Old Newspapers.
Claims use since Feb. 1, 1926.

Ser. No. 250,928. THE MASTELLER COAL COMPANY, Keyser, W. Va. Filed June 22, 1927.

Reham

Particular description of goods.—Coal.
Claims use since Mar. 18, 1911.

CLASS 2. RECEPTACLES.

Ser. No. 250,306. CHAS. W. HALL & CO., INC., Valparaiso, Ind. Filed June 10, 1927.

"SPIRIT OF ST. LOUIS"

Particular description of goods.—Containers Made of Wood, Thin Sheet Metal, and Heavy Cardboard and Simulating an Aeroplane for the Reception of Various Kinds of Merchandise.
Claims use since May 31, 1927.

Ser. No. 250,713. ROYAL RIVER MANUFACTURING & POWER COMPANY, Boston, Mass. Filed June 17, 1927.

ROYAL RIVER

Particular description of goods.—Seamless Cotton Bags.
Claims use since 1878.

Ser. No. 250,714. ROYAL RIVER MANUFACTURING & POWER COMPANY, Boston, Mass. Filed June 17, 1927.

Particular description of goods.—Seamless Cotton Bags.
Claims use since Mar. 12, 1927.

CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.

Ser. No. 251,219. HARVEY BOWMAN, North Philadelphia, Pa. Filed June 28, 1927.

ALWEAR

Particular description of goods.—Leather Preservative.
Claims use since about June 6, 1927.

CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.

Ser. No. 233,647. HIRAM L. KEZAR, Durand, Wis., assignor to Fred A. Brown and Henry William Randall, both of Durand, Wis. Filed June 23, 1926.

KEZAR'S MAGIC SALVE

Applicant disclaims the right to the exclusive use of the words "Salve" and "Kezar's" apart from the mark shown.

Particular description of goods.—Brick.
Claims use since January, 1926.

231,460. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) CORLIS SEABROOK PAINT COMPANY, Memphis, Tenn. Filed June 10, 1927. Serial No. 250,298.

CORLIS-SEABROOK

Titanic White

Particular description of goods.—Paints, Dry, Paste, and Ready-Mixed, and Paint Enamels.
Claims use since Jan. 1, 1926.

231,461. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) WESTERN COAL & COKE CO., Milwaukee, Wis. Filed May 26, 1927. Serial No. 249,627.

OAK CREEK

Particular description of goods.—Coal.
Claims use since May 1, 1923.

231,462. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) HUDSON BROOM WORKS, Brooklyn, N. Y. Filed May 14, 1927. Serial No. 249,006.

GOLD MEDAL

Particular description of goods.—Brooms.
Claims use since Apr. 4, 1921.

231,463. (CLASS 31. FILTERS AND REFRIGERATORS.) MITYCOLD CORPORATION, Jacksonville, Fla. Filed Apr. 18, 1927. Serial No. 247,627.

MITYCOLD

Particular description of goods.—Electric Refrigerating Machines.
Claims use since Oct. 1, 1925.

231,464. (CLASS 12. CONSTRUCTION MATERIALS.) GLADDING, MCBEAN AND CO., Los Angeles, Calif. Filed Apr. 15, 1927. Serial No. 247,470.

FLORENTINE

Particular description of goods.—Brick and Tile.
Claims use since May 1, 1926.

231,465. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) SEARS, ROEBUCK AND CO., doing business as Clinton Cartridge Company, Chicago, Ill. Filed Apr. 2, 1927. Serial No. 246,851.

Mallard

Particular description of goods.—Shotgun Shells.
Claims use since 1910.

231,466. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) CARL REESE, Hillsboro, Tex. Filed Mar. 28, 1927. Serial No. 246,505.

REESE
DROUTH RESISTER

Particular description of goods.—Seed Corn.
Claims use since Jan. 1, 1917.

231,467. (CLASS 45. BEVERAGES, NONALCOHOLIC.) OXNARD SODA & DISTILLED WATER CO., Oxnard, Calif. Filed Mar. 23, 1927. Serial No. 246,220.

SUGAR CITY

The vertical lining of the drawing is intended to denote the color red.
Particular description of goods.—Nonalcoholic, Malt-less Beverages Sold as Soft Drinks.
Claims use since Sept. 1, 1924.

LABELS

REGISTERED AUGUST 16, 1927.

32,573.—*Title:* PLEAZALL. For Candy. ALBERTA CANDY CO. INC., San Francisco, Calif. Published December 1, 1926.

32,574.—*Title:* FOUR LEAF BRAND. For Clover Honey. EARL M. ALEXANDER, New Paris, Ohio. Published January 1, 1927.

32,575.—*Title:* CHUCKLES. For Candy. FRED W. AMEND CO., Chicago, Ill. Published May 3, 1927.

32,576.—*Title:* A CHEST FULL OF GINGER SNAPS. For Ginger Snaps. BISHOP AND COMPANY, Los Angeles, Calif. Published May 24, 1927.

32,577.—*Title:* HARRIET CLARK'S MADE-AT-HOME CHOCOLATES. For Candy. E. J. BRACH & SONS, doing business as Harriet Clark Candies. Chicago, Ill. Published February 1, 1927.

32,578.—*Title:* SPUTA FUOCO. For Grapes. CALIFORNIA GRAPE PRODUCTS CO., Ukiah, Calif., and New York, N. Y. Published May 19, 1927.

32,579.—*Title:* CANADIAN CLUB. For Ginger Ale. CANADIAN CLUB CORPORATION, Boston, Mass. Published June 21, 1927.

32,580.—*Title:* JANE FAIR. For Infant Wear, Knitted Sweaters Made of Wool. CLAWSON & WILSON COMPANY, Buffalo, N. Y. Published June 1, 1927.

32,581.—*Title:* TUF-TEX. For Shirts. THE CROWN OVERALL MFG. CO., Cincinnati, Ohio. Published November 1, 1926.

32,582.—*Title:* CERALENE. For Floor Polish. DAJAN CHEMICAL COMPANY, Boston, Mass. Published May 2, 1927.

32,583.—*Title:* ECONOMY PAINT. For Paint. Geneva, Nebr. Published May 1, 1927.

32,584.—*Title:* TOPAZ HOSIERY. For Hosiery. THE JOHN M. GIVEN COMPANY, New York, N. Y.; Chicago, Ill.; and Pittsburgh, Pa. Published May 14, 1927.

32,585.—*Title:* COLLEGIATE. For Pyjamas. GREENEBAUM BROS. & COMPANY, Philadelphia, Pa. Published June 21, 1927.

32,586.—*Title:* COLLEGIATE. For Shirts. GREENEBAUM BROS. & COMPANY, Philadelphia, Pa. Published June 21, 1927.

32,587.—*Title:* PURITAN. For Boys' Blouses. GREENEBAUM BROS. & COMPANY, Philadelphia, Pa. Published June 21, 1927.

32,588.—*Title:* PINE-O-CIDE. For Disinfectant. HILLYARD CHEMICAL COMPANY, St. Joseph, Mo. Published July 5, 1927.

32,589.—*Title:* SOAP-MEAL. For Powdered Soap. THE INSTO COMPANY, Los Angeles, Calif. Published June 1, 1927.

32,590.—*Title:* KASKO. For Malt Sirup. SAMUEL KASSER, Philadelphia, Pa. Published May 28, 1927.

32,591.—*Title:* RADIANT. For Silver and Metal Polish. MIDWAY CHEMICAL COMPANY, Chicago, Ill. Published June 1, 1927.

32,592.—*Title:* COLLIE. For Paper Products. THE MILLER BROTHERS CO., Newark, N. J. Published June 17, 1927.

32,593.—*Title:* THE MILLER BROTHERS CO. For Paper Products. THE MILLER BROTHERS CO., Newark, N. J. Published June 17, 1927.

32,594.—*Title:* COLLIE BRAND. For Paper Products. THE MILLER BROTHERS CO., Newark, N. J. Published June 17, 1927.

32,595.—*Title:* DX-TESTED. For Radiotubes. PACIFIC WHOLESALE, INC., Los Angeles, Calif. Published May 1, 1927.

32,596.—*Title:* DR. BROWN'S WILD CHERRY CARBONATED BEVERAGE. For Carbonated Beverage. SCHONEBERGER & NOBLE, INC., New York, N. Y. Published January 17, 1927.

32,597.—*Title:* DR. BROWN'S PALE DRY GINGER ALE. For Ginger Ale. SCHONEBERGER & NOBLE, INC., New York, N. Y. Published January 17, 1927.

32,598.—*Title:* DR. BROWN'S CELERY A PURE CARBONATED BEVERAGE. For Celery Compound. SCHONEBERGER & NOBLE, INC., New York, N. Y. Published January 17, 1927.

32,599.—*Title:* DR. BROWN'S MINERAL WATER. For Mineral Water. SCHONEBERGER & NOBLE, INC., New York, N. Y. Published January 17, 1927.

32,600.—*Title:* VIG. For Beverage Sirup. S. ALLEN TUCKER, Philadelphia, Pa. Published May 7, 1927.

32,601.—*Title:* VEGEX VIMS YEAST VITAMIN CANDY. For Candy. VITAMIN FOOD CO. INC., New York, N. Y. Published May 3, 1927.

32,602.—*Title:* WESTERN CARTRIDGES. For Cartridges. WESTERN CARTRIDGE COMPANY, East Alton, Ill. Published April 1, 1927.

32,603.—*Title:* WESTERN RIM FIRE CARTRIDGES. For Cartridges. WESTERN CARTRIDGE COMPANY, East Alton, Ill. Published April 20, 1927.

32,604.—*Title:* SPRING-FLOAT PENETRATING OIL. For Penetrating Oil. WESTERN UTILITIES COMPANY, Los Angeles, Calif. Published June 1, 1927.

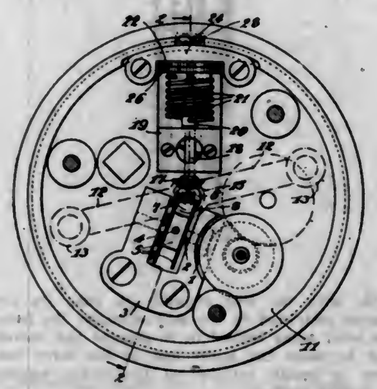
PRINTS

REGISTERED AUGUST 16, 1927.

10,113.—*Title:* THEY SEE THE BOX FIRST. For Boxes. HOAGUE-SPRAGUE CORPORATION, Lynn, Mass. Published June 14, 1927.

10,114.—*Title:* EASY TO HANDLE, CHANDLER MOTOR CARS. For Chandler Automobiles. CHARLES C. ILLERS, Westerleigh, N. Y. Published June 1, 1927.

10,115.—*Title:* HAVE MORE SILK DRESSES. For Silk Dresses. JAHRAUS-BRAUN CO., Buffalo, N. Y. Published June 29, 1927.



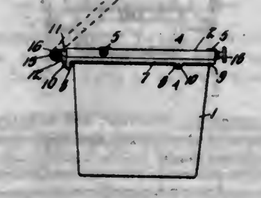
10,116.—*Title:* THE SALT WITHOUT A FAULT. For Table, Dairy, and Common Salt. MICHIGAN SALT WORKS, Marine City, Mich. Published May 27, 1927.

10,117.—*Title:* YOUR LEGS WILL THANK YOU! YOUR WAIST WILL THANK YOU! YOUR SHOULDERS WILL THANK YOU! For Garters, Belts, and Suspenders. PIONEER SUSPENDER COMPANY, Philadelphia, Pa. Published February 26, 1927.

REISSUES

AUGUST 16, 1927.

16,703. CLOCKWORK FOR MECHANICAL FUSES FOR ARTILLERY PROJECTILES. ANDRÉ VARAUD, Geneva, Switzerland. Filed July 7, 1927. Serial No. 204,046. Original No. 1,577,391, dated Mar. 16, 1926, Serial No. 27,121, filed May 1, 1925. 10 Claims. (Cl. 102—36.)



1. In a clockwork for mechanical fuses for artillery projectiles, a balance, a cylindrical spiral so placed that the axis thereof is transverse of the fuse and perpendicular to the axis of rotation of the projectile, a supporting member upon which said spiral momentarily rests at the time of the departure of the projectile upon being fired, and a dead-beat escapement whereby oscillations of relatively large amplitude are given to the balance.

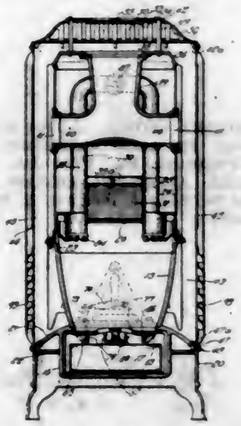
16,704. WIRE CLAMP. WILLIAM JAMES CARLEY, Culpeper, Va., assignor to Marie Bessiers, Culpeper, Va. Filed Apr. 10, 1922. Serial No. 551,361. Original No. 1,382,620, dated June 28, 1921, Serial No. 355,384, filed Jan. 31, 1920. 10 Claims. (Cl. 191—43.)

1. A suspension device comprising a support; a pair of clamping members engaged thereon and adapted for movement in unison relative to the support; a compression member carried directly by the support in adjustable relation to engage and move the clamping members into mutual clamping relation; an enclosing means carried by the compression member; and retaining members carried by the clamping members and receivable within said enclosing means whereby the clamping members are retained upon the support.

16,705. SANITARY COVER. JULIUS KIM, Pittsburgh, Pa., assignor, by mesne assignments, to Theodore Lenchner, Pittsburgh, Pa. Filed Jan. 13, 1926. Serial No. 81,111. Original No. 1,503,190, dated July 29, 1924, Serial No. 550,115, filed Apr. 6, 1922. 6 Claims. (Cl. 220—32.)

1. In a cover device for receptacles, a frame, a cover fitting over said frame, ears attached to said frame and cover, means for pivotally connecting the ears together, and means for setting up continuing frictional engagement between said ears while the cover is being raised to open position.

16,706. VEHICLE BUMPER. ALFRED WEILAND, Neshanic, N. J., assignor to Pneumatic Appliances Corporation, New York, N. Y., a Corporation of Delaware. Filed June 28, 1927. Serial No. 202,151. Original No. 1,579,186, dated Mar. 30, 1926, Serial No. 42,705, filed July 10, 1925. 12 Claims. (Cl. 293—55.)



10. An automobile bumper comprising an impact member and a support member, and a rubber block forming means for securing said members together.

16,707. HEATER. BERTRAND B. KAHN, Cincinnati, Ohio, assignor to The Estate Stove Company, Hamilton, Ohio, a Corporation of Ohio. Filed May 25, 1925. Serial No. 32,852. Original No. 1,457,078, dated May 29, 1923, Serial No. 501,100, filed Sept. 16, 1921. 10 Claims. (Cl. 126—67.)

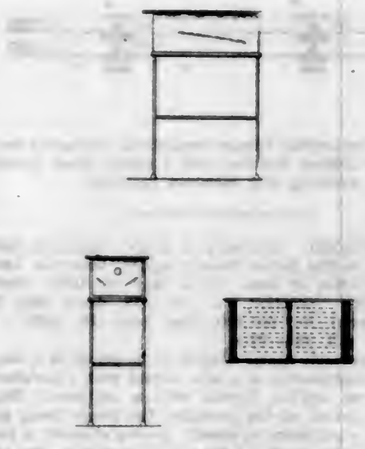
1. In a portable heater adapted to be placed in a living room, the combination of a base formed with a peripheral shoulder; an ash-box formed with a peripheral flange removably seated on the shoulder, the flange being provided with a peripheral upwardly opening channel; a combustion chamber having a fire-pot supported on the ash-box; a casing having its lower edge loosely seated in said channel and laterally enclosing and spaced from the com-

bustion chamber and fire-pot, the casing being formed with air inlet openings surrounding and directly opposite the fire-pot; and a dome secured to and spaced above the

top of the combustion chamber and slidably contacting with the surface of the casing, the dome being encircled with air escape openings.

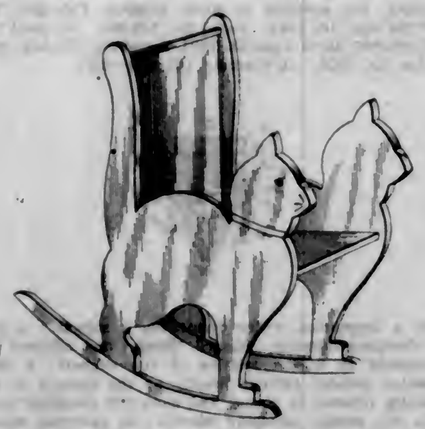
16,708. SAND PUMP. GEORGE J. ARMSTRONG, Burkburnett, Tex. Filed June 3, 1927. Serial No. 196,362. Original No. 1,547,285, dated July 28, 1925, Serial No. 723,416, filed June 30, 1924. 7 Claims. (Cl. 166—19.)

1. In a sand pump in combination with a working barrel and plunger; a slotted cylindrical member rigid upon the lower extremity of the said barrel; a valved cutting member having projections spaced around the periphery thereof and arranged to be inserted within the slots of said cylindrical member and having a stop shoulder; a spring pressed auxiliary locking lever on said cutting member having an upwardly extending finger en-



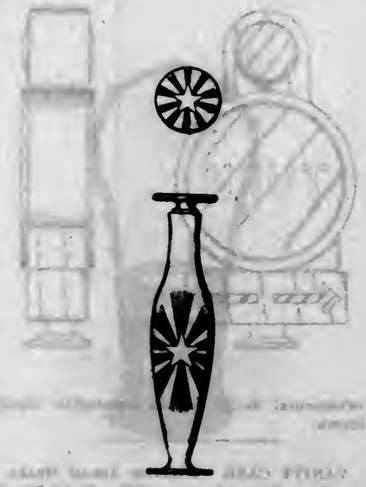
gageable with the stop shoulder to have its outward movement restricted by the said shoulder, the lower end of the lever being formed to be gripped and moved outwardly to move the upper end of the lever inwardly thereby, to permit rotation of the locked members to effect release thereof.

DESIGNS



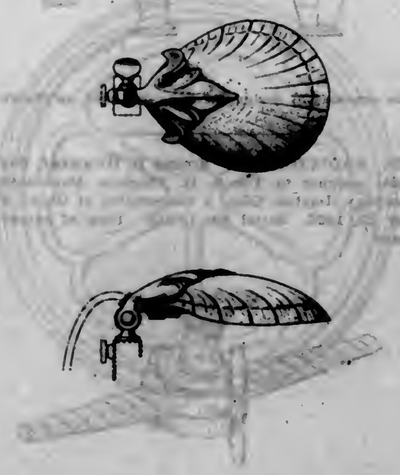
AUGUST 16, 1927.

73,248. CHURCH CONTRIBUTION CHEST. RUBEN ANSON, Truxton, Mo., assignor of one-half to William A. Femmer, Truxton, Mo. Filed Apr. 30, 1927. Serial No. 21,812. Term of patent 14 years.



The ornamental design for a church contribution chest, as shown.

73,249. CHAIR. FLOYD BRAUGHLER, Butler, Pa. Filed May 12, 1926. Serial No. 17,664. Term of patent 14 years.

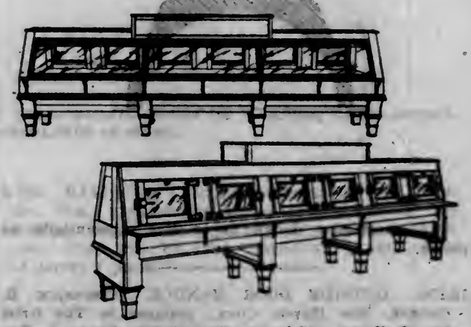


The ornamental design for a chair as shown.

73,250. FLACON. RUBY T. BREWSTER, New York, N. Y. Filed Apr. 22, 1927. Serial No. 21,680. Term of patent 3½ years.

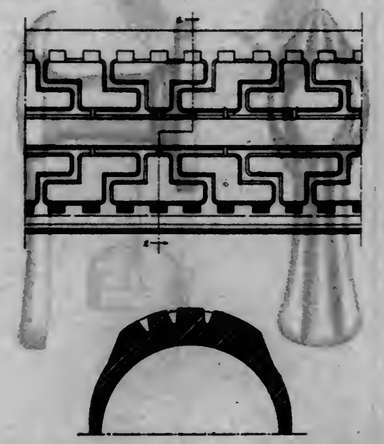
The ornamental design for a flacon, as shown.

73,251. REFLECTOR. ANGELO DE LUGO, Englewood, N. J., and JOHN W. ROSSARSON, Tuckahoe, N. Y. Filed Apr. 12, 1927. Serial No. 21,567. Term of patent 7 years.



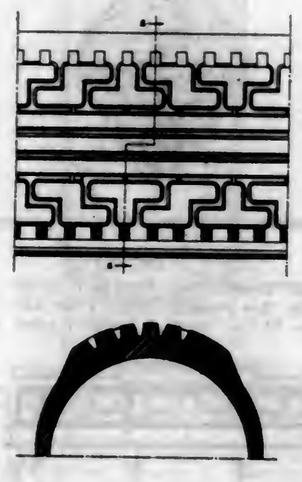
The ornamental design for a reflector substantially as shown.

73,252. RADIO DIAL ESCUTCHEON PLATE. DAVID H. ENGELSON, Brooklyn, N. Y. Filed May 11, 1927. Serial No. 21,933. Term of patent 3½ years.



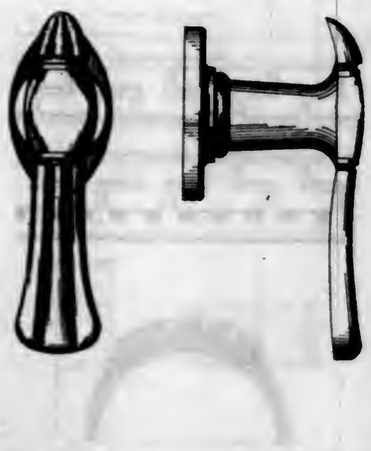
The ornamental design for a radio dial escutcheon plate as shown.

73,253. REFRIGERATOR DISPLAY CASE. EDWARD FRIEDRICH, San Antonio, Tex. Filed Apr. 28, 1927. Serial No. 21,773. Term of patent 7 years.



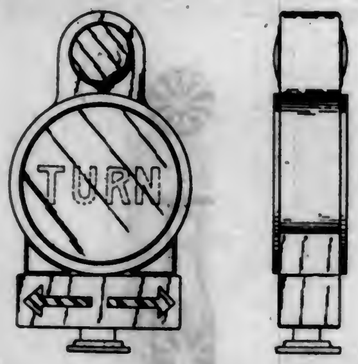
The ornamental design for a refrigerator display case substantially as shown.

73,254. TIRE. WILLIAM C. GARRIGUES, Akron, Ohio, assignor to The Williams Foundry and Machine Company, Akron, Ohio, a Corporation of Ohio. Filed July 10, 1926. Serial No. 18,294. Term of patent 14 years.



The ornamental design for a tire substantially as shown.

73,255. TIRE. WILLIAM C. GARRIGUES, Akron, Ohio, assignor to The Williams Foundry and Machine Company, Akron, Ohio, a Corporation of Ohio. Filed July 10, 1926. Serial No. 18,295. Term of patent 14 years.



The ornamental design for a tire substantially as shown.

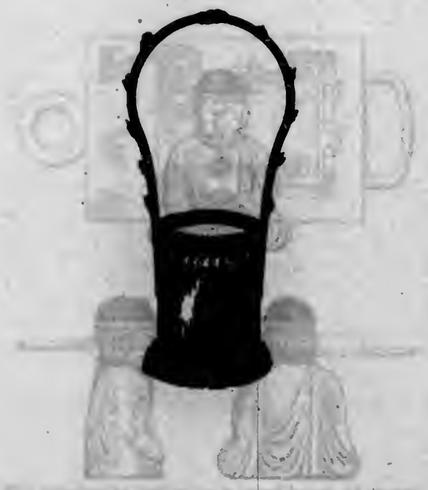
73,256. OUTSIDE DOOR HANDLE. FREDERICK E. GREENE, New Haven, Conn., assignor to The Grist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed May 21, 1927. Serial No. 22,125. Term of patent 7 years.

The ornamental design for an outside door handle substantially as shown.

73,257. AUTOMOBILE SIGNAL CASING. JOHN WALTER GUNN, Jersey City, N. J. Filed Apr. 19, 1927. Serial No. 21,644. Term of patent 14 years.

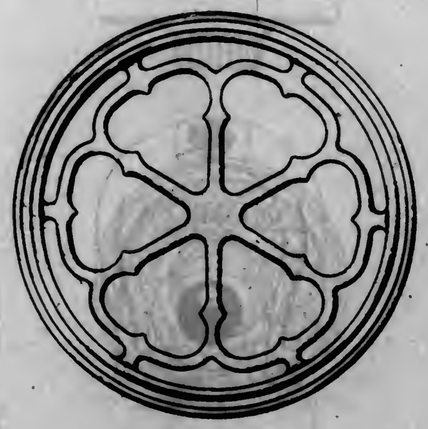
The ornamental design for an automobile signal casing as shown.

73,258. VANITY CASE. WILLIAM ABRAM HEARD, Jacksonville, Fla. Filed Mar. 14, 1927. Serial No. 21,148. Term of patent 14 years.



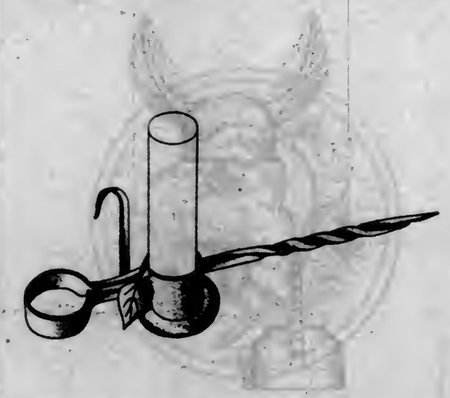
The ornamental design for a vanity case, as shown.

73,259. RADIATOR CAP. ROBERT H. HUMMERT, Dayton, Ohio, assignor to The S. H. Thomson Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 29, 1926. Serial No. 17,515. Term of patent 3½ years.



The ornamental design for a radiator cap, as shown.

73,260. BASKET. ANNA LEE KELLEY, Pyriton, Ala. Filed Jan. 15, 1927. Serial No. 20,899. Term of patent 7 years.

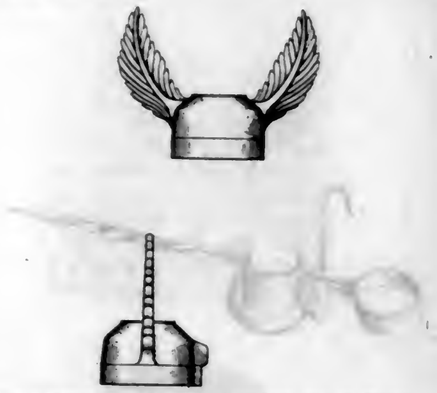


The ornamental design for a basket as shown and described.

73,261. GRILLE FRONT FOR RADIO LOUD SPEAKERS. RUSSELL T. KINGSFORD, Wyncote, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 3, 1927. Serial No. 22,314. Term of patent 7 years.

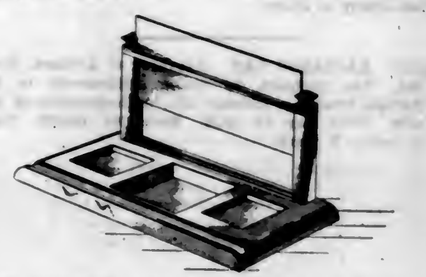
The ornamental design for a grille front for radio loud speakers, as shown.

73,262. LIGHTING-FIXTURE SUPPORT. EDWARD LARSON, Los Angeles, Calif., assignor of one-half to Dorothy B. Hoffman, Los Angeles, Calif. Filed June 29, 1925. Serial No. 18,037. Term of patent 7 years.



The ornamental design for a lighting fixture support, substantially as shown.

73,263. RADIATOR CAP. ALOYSIUS C. LIPPERT, Kenosha, Wis., assignor, by mesne assignments, to The Norlipp Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1926. Serial No. 16,981. Term of patent 7 years.



The ornamental design for a radiator cap as shown.

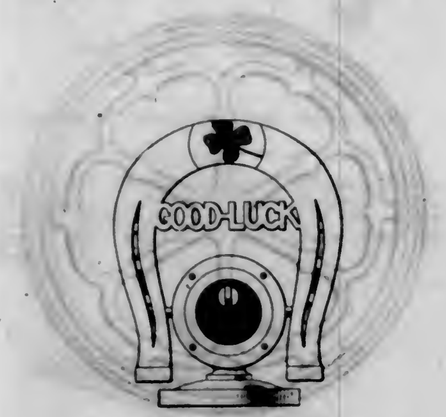
73,264. RADIATOR CAP. ALOYSIUS C. LIPPERT, Kenosha, Wis., assignor, by mesne assignments, to The Norlipp Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1926. Serial No. 16,982. Term of patent 7 years.

The ornamental design for a radiator cap as shown.

73,265. INKSTAND. JOHN C. PEARSON, Tuscaloosa, Ala. Filed Apr. 5, 1926. Serial No. 17,194. Term of patent 3½ years.

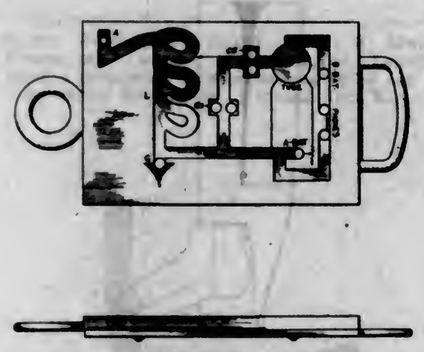
The ornamental design for an inkstand as shown.

73,266. CHANDELIER OR THE LIKE. MAX PEINLICH, White Plains, N. Y., assignor to Columbia Lighting Fixture Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 12, 1927. Serial No. 21,120. Term of patent 3½ years.



The ornamental design for a chandelier or the like, as shown and described.

73,267. BOTTLE OR SIMILAR CONTAINER. JACK I. POSNER, New York, N. Y., assignor to A. A. Vantine & Co. Inc., New York, N. Y., a Corporation of New York. Filed Mar. 25, 1927. Serial No. 21,347. Term of patent 3½ years.



The ornamental design for a bottle or similar container, substantially as shown.

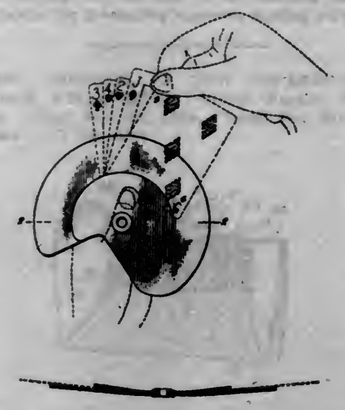
73,268. MOTOR METER. DOROTHY H. PULLEY, Charlotte, N. C. Filed Apr. 5, 1927. Serial No. 21,459. Term of patent 14 years.

The ornamental design for a motor meter, as shown.

73,269. GAME BOARD. LEON L. RUSSELL, Livermore Falls, Me. Filed June 14, 1927. Serial No. 22,422. Term of patent 3½ years.

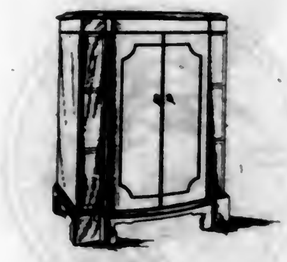
The ornamental design for a game board, as shown.

73,270. LIGHTING FIXTURE. HARRY SHARDLOW, Los Angeles, Calif., assignor to Solar Lighting Fixture Co., Los Angeles, Calif., a Corporation of California. Filed June 17, 1927. Serial No. 22,466. Term of patent 3½ years.



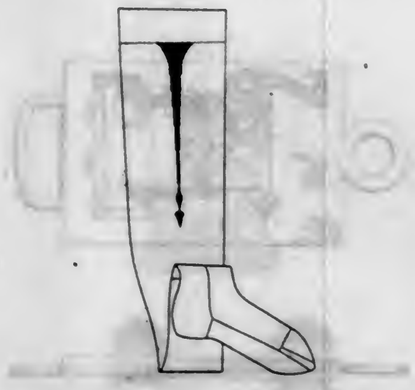
The ornamental design for a lighting fixture as shown.

73,271. LUNCHEON MAT FOR HOT PLATES. MELVILLE TANNENHOLZ, Brooklyn, N. Y. Filed Apr. 6, 1927. Serial No. 21,457. Term of patent 3½ years.



The ornamental design for a luncheon mat for hot plates, as shown.

73,272. PLAYING-CARD HOLDER. VALENTIN CONSTANT TENREAU, Pelham, N. Y. Filed Mar. 7, 1927. Serial No. 20,998. Term of patent 14 years.

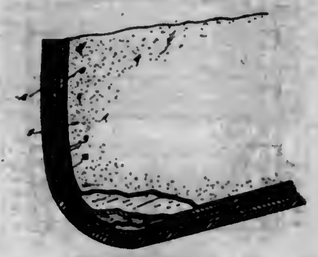


The ornamental design for playing card holder, as shown and described.

73,273. PHONOGRAPH CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Mar. 16, 1927. Serial No. 21,160. Term of patent 7 years.

The ornamental design for a phonograph cabinet, substantially as shown.

73,274. STOCKING. WALTER B. ZANDER, Philadelphia, Pa., assignor to Schletter & Zander, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 6, 1927. Serial No. 20,288. Term of patent 14 years.

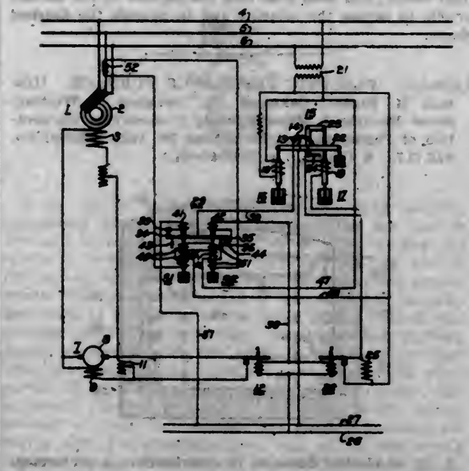


The ornamental design for a stocking, as shown.

PATENTS

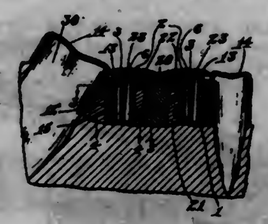
GRANTED AUGUST 16, 1927.

1,638,817. SUBMARINE CRAFT. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923. Serial No. 658,949. 7 Claims. (Cl. 9—6.)



1. A marine craft hull having its walls integrally formed and comprising body plies of a material possessing a limited degree of flexibility, yieldability, and resiliency, plies of vulcanized material bonding the first mentioned plies together, and a facing of vulcanized material covering the exterior surface of the hull and constituting a cushioning medium.

1,638,818. METHOD OF FORMING SUBMARINE HULLS. HARRY N. ATWOOD, Monson, Mass., assignor to Rubwood, Inc., Lawrence, Mass., a Corporation of Massachusetts. Filed Aug. 23, 1923. Serial No. 658,950. 1 Claim. (Cl. 9—6.)

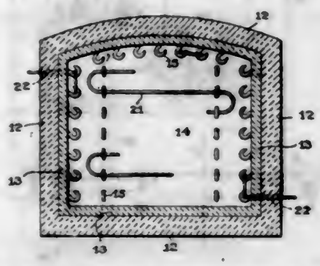


The method of producing a composite marine craft hull which comprises providing a hollow mold of an internal contour conforming to the external contour of the hull, placing alternate layers of rubber and thin wood within the mold, the first and last layers being rubber and the wooden layers being shaped to conform to contour of the hull, closing the mold, introducing steam to vulcanize the rubber and effect union thereof with the wooden layers and form a hull of a unitary construction, and bodily remove the hull from the mold.

1,638,819. OVERLOAD PROTECTIVE DEVICE. JOHN H. ASHBAUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 28, 1925. Serial No. 53,073. 12 Claims. (Cl. 171—119.)

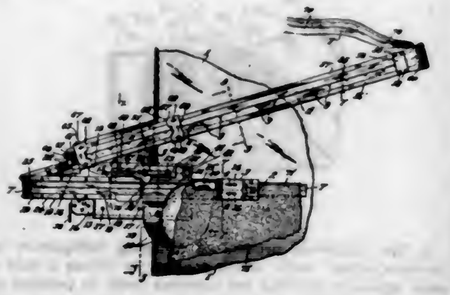
1. In a regulator system, a dynamo-electric machine having a field winding, means comprising a regulator for controlling the excitation of said field winding, current-limiting means for said machine for preventing excessive leading current, and current-limiting means for said machine for preventing excessive lagging current.

1,638,820. METHOD OF AND APPARATUS FOR BRIDGE ATTACHMENT. DAVID BARATT, Roxbury, Mass. Filed Jan. 23, 1924. Serial No. 687,900. 8 Claims. (Cl. 32—12.)



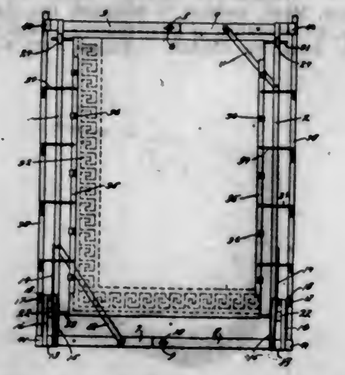
1. The improved process of applying bridgework between abutting teeth, which consists in fitting a pair of male members adjacent the abutting teeth in parallel upright relationship, then applying a bridge thereto, said bridge being fitted with interlocking female members, and thereupon applying removable expanding threaded means to rigidly secure the bridge in position.

1,638,821. PLASTIC PROCESS. GEORGE BENTLEY BERGEN, Sr., Milwaukee, Wis. Filed Dec. 2, 1925. Serial No. 72,837. 4 Claims. (Cl. 18—48.8.)



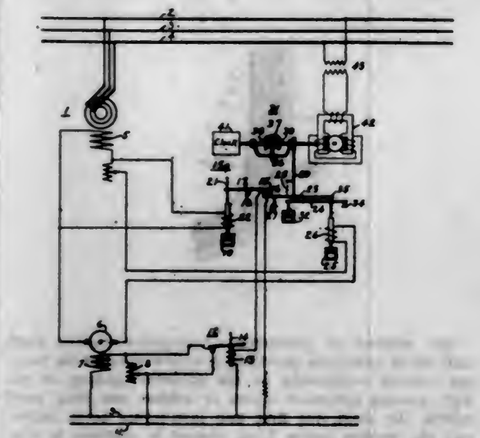
1. The method of making articles from a plastic compound consisting of combining a calcined and powdered metallic oxide and a metallic chloride solution to produce a fluid, then allowing a period of time to elapse for the initial setting, then dividing the compound into parts and adding a pigment to each separate part; then adding chloride solution to each part sufficient to maintain fluidity; then allowing time to elapse during which further setting takes place; then combining the differently colored portions into one mass; then allowing a period of time to elapse during which final setting takes place; then, before hardening takes place, kneading and working the mass to intermingle the colors and remove air or gas cavities; then molding the mass into a semblance to the final shape; and then removing the surface of the molded article to expose the coloring and to provide the finished shape.

1,638,822. ELECTRIC RESISTANCE FURNACE. HERMAN M. BIEBEL, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1923. Serial No. 648,717. 6 Claims. (Cl. 204—64.)



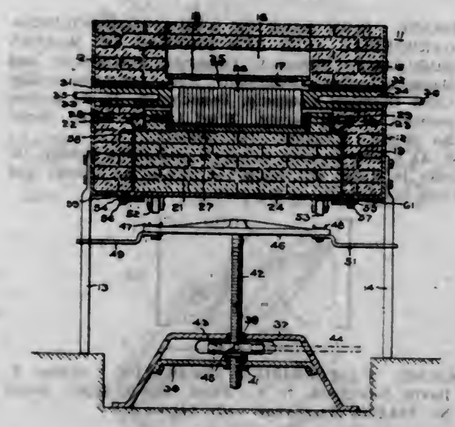
1. In an electric furnace, in combination, a preformed, relatively heavy resistor member comprising a plurality of end-connected substantially parallel-extending straight convolutions, and a plurality of spaced hook members removably mounted in and interlocked with a wall of said furnace for supporting said resistor member.

1,638,823. TAPE REVERSING AND FEEDING ATTACHMENT FOR SEWING MACHINES. GLENN BOODONOFF, New York, N. Y., assignor of one-half to R. K. M. Mfg. Co., Newark, N. J., a Corporation of New Jersey, and one-half to Alberts Mfg. Co., Inc., Hackensack, N. J., a Corporation of New Jersey. Filed Sept. 20, 1922. Serial No. 589,300. 22 Claims. (Cl. 112—152.)



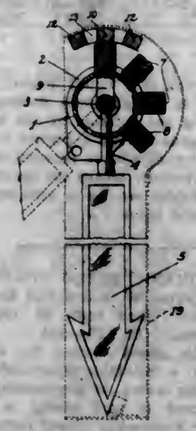
1. A guiding means for sewing machines for sewing fastener provided tape to garments, comprising a plurality of guide-members for receiving and guiding the tape to the sewing machine needles, and means interposed between the said guide-members for reversing the tape as it passes from one guide-member to the other guide-member, combined with a feed-plate, said plate being formed with a fastener-receiving channel.

1,638,824. CURTAIN STRETCHER. LEON N. BOURDEAU, Rock Island, Ill. Filed Dec. 3, 1923, Serial No. 678,327 Renewed Nov. 17, 1926. 6 Claims. (Cl. 45—24.)



2. A device of the class described, comprising a rectangular frame, formed of a pair of spaced-apart side-pieces, connected by foldable braces; foldable feet for said side-pieces, and foldable braces therefor; rod supporting arms supported horizontally on the upper parts of said side-pieces, and capable of a sliding adjustment thereon; clamping frames supported on said feet; and rod-holding bars, secured horizontally in said clamping-frames, so as to be capable of a limited adjustment therein, vertically, and in alignment with said rod-supporting arms.

1,638,825. REGULATOR SYSTEM. WILLIAM M. BRADSHAW and JOHN H. ASHBAUGH, Wilkinsburg, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 28, 1925. Serial No. 53,044. 10 Claims. (Cl. 171—229.)

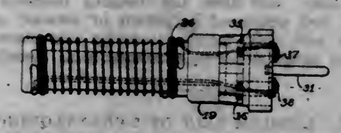


1. In combination, a dynamo-electric machine having a field winding, means for regulating the excitation of said field winding comprising two cooperating contact members, means for actuating one of said contact members in accordance with the voltage impressed on said field winding, and means for actuating the other of said contact members in accordance with the current flowing through said field winding.

1,638,826. REMOVABLE FURNACE HEATING UNIT. EDWARD J. BRANNIGAN, Buffalo, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 29, 1924. Serial No. 709,730. 2 Claims. (Cl. 204—64.)

1. In an electric furnace, the combination with an open-bottom refractory furnace structure, and a plurality of terminal electrodes mounted therein, of a refractory closure member for said structure movable into its operative position in a substantially vertical direction, and a resistor member mounted on said closure member and engageable by said electrodes when said closure member is in its proper operative position.

1,638,827. SIGNAL-OPERATING MECHANISM. EMMETT J. CAIN, Lodi, Calif. Filed Apr. 1, 1926. Serial No. 98,948. 1 Claim. (Cl. 177—327.)



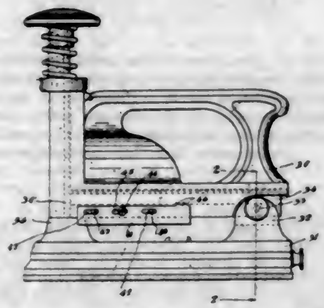
An operating mechanism for a signal comprising a shaft on which to mount the signal, an armature mounted in connection with the shaft and projecting from one side thereof, a plurality of relatively fixed magnets to attract the armature, said magnets being disposed between the shaft and armature and arranged in spaced relation to each other and concentric with the shaft, another armature on the shaft between said shaft and the magnets and radially alined with the first named armature, an additional armature disposed to one side of the first named armature, and means for mounting said additional armature in non-magnetic connection with the shaft.

1,638,828. ELECTRIC SNAP SWITCH. ARTHUR CARLING, Hartford, Conn., assignor, by mesne assignments, to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed Apr. 26, 1926. Serial No. 104,819. 2 Claims. (Cl. 200—67.)

1. An electric switch including a supporting member, comprising spaced sides and a connecting top portion provided with an opening, one of the sides at one end having a laterally projecting terminal stop lug and at the opposite end having a substantially segmental shaped recess, the sides each having a lug extending laterally therefrom at the center of the lower portion thereof and forming pivots, an oscillatory switch member approximately U-shaped with the sides of the same at their inner portions directed outwardly, resulting in the outer portion of the switch member being reduced in width, said outwardly directed portions of said arms of the switch member at their free ends having bearing openings engaging over the aforesaid pivot lugs of the supporting member, one of the arms of the switch member having an inwardly directed element projecting into the aforesaid segmental shaped recess in one side of the supporting member for cooperation with one end of said segmental recess to limit swinging movement of said switch member in one direction and the aforesaid stop lug on one side of the supporting member limiting the movement of the switch member in the opposite direction, an operating lever pivoted between the sides of the supporting member and a spring connection between the switch member and the operating lever, the aforesaid inwardly directed element projecting from one of the arms of the switch member extending into the path of the operating lever to provide a positive "kick-off" for the switch member.

1,638,829. ELECTRIC-HEATER UNIT. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1924. Serial No. 711,589. 3 Claims. (Cl. 219—19.)

1. An electric heating unit for a reflector having an axial opening therein, said heating unit being adapted to be located in said opening and rearwardly removable therefrom and comprising a single tubular refractory member having a front portion of reduced diameter for receiving and supporting a resistor member, an intermediate portion having a diameter larger than said



front portion, and a rear portion having a diameter larger than that of said intermediate portion and having terminal pins operatively secured against the rear face thereof.

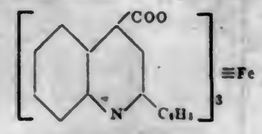
1,638,830. TOOTH FACING. GEORGES COUTIF, Paris, France. Filed Jan. 14, 1927, Serial No. 161,114, and in France Mar. 5, 1926. 5 Claims. (Cl. 32—9.)

1. A porcelain tooth-facing comprising an outer front wall progressively reduced in thickness from its crown to its mouth for merging with the gingival face, a rearward crown extension of said wall, a hollow recess delineated by said front wall and rearward extension, and a dovetailed groove formed in the back face of said front wall and having a depth gradually decreasing, as the thickness of said wall and a width decreasing in the opposite direction.

1,638,831. STAPLER. JOHN B. CADFOOT, Chicago, Ill. Original application filed May 7, 1925, Serial No. 28,545. Divided and this application filed Oct. 19, 1925. Serial No. 63,241. 2 Claims. (Cl. 1—2.3.)

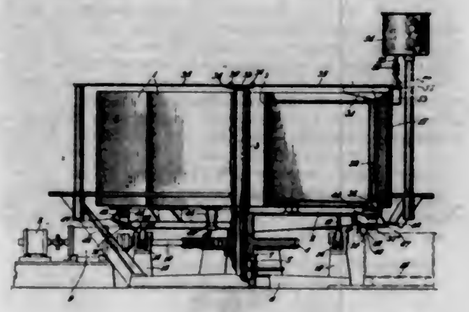
2 A stapler comprising a base and a stapling body removably mounted thereon; two gauge plates mounted on opposite sides of said body to overlap the sides of said base, said plates being provided with slots adjacent the upper edges thereof; and securing members passing through said slots and adjustably securing said plates to said body, said slots and securing members being arranged and positioned to permit of reversal of said plates on said body, thereby rendering said plates inoperative as gauge members, substantially as described.

1,638,832. LITHIUM SALT OF 2-PHENYLQUINOLINE-4-CARBOXYLIC ACID AND PROCESS OF MAKING THE SAME. MOSES L. CROSSLEY, Boundbrook, and MAURICE L. DOLT, Somerville, N. J., assignors to The Calco Chemical Company, Boundbrook, N. J., a Corporation of New Jersey. Filed June 9, 1925. Serial No. 36,010. 5 Claims. (Cl. 260—39.)



1. As a new product, the lithium salt of 2-phenylquinoline-4-carboxylic acid.

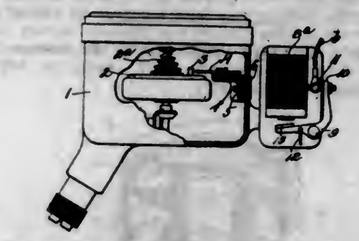
1,638,833. MERCURY SALT OF 2-PHENYLQUINOLINE-4-CARBOXYLIC ACID AND PROCESS OF PRODUCING THE SAME. MOSES L. CROSSLEY, Boundbrook, and MAURICE L. DOLT, Somerville, N. J., assignors to The Calco Chemical Company, Boundbrook, N. J., a Corporation of New Jersey. Filed June 9, 1925. Serial No. 36,011. 6 Claims. (Cl. 260—13.)



2. As a new product, a yellowish white, non-crystalline organic salt, insoluble in water and in all ordinary organic solvents such as ethyl and methyl alcohols, acetone and benzene and corresponding to the formula $(C_{15}H_{10}N.CO_2)_2Hg$.

1,638,834. IRON SALT OF 2-PHENYLQUINOLINE-4-CARBOXYLIC ACID AND PROCESS OF MAKING THE SAME. MOSES L. CROSSLEY, Boundbrook, and MAURICE L. DOLT, Somerville, N. J., assignors to The Calco Chemical Company, Boundbrook, N. J., a Corporation of New Jersey. Filed June 9, 1925. Serial No. 36,012. 8 Claims. (Cl. 260—11.)

2. As a new product, a brown amorphous powder, insoluble in water, but soluble in alcohol or acetone and having the formula as follows:

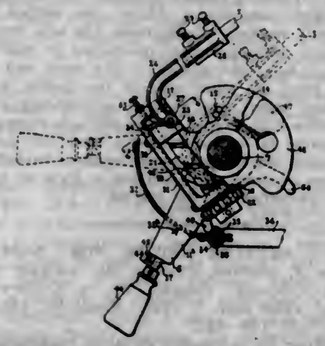


1,638,835. PASTEURIZING APPARATUS. ALBERT J. DAVIS, New York, N. Y. Filed June 9, 1926. Serial No. 114,639. 11 Claims. (Cl. 141—1.)

1. The combination of a liquid holder, means for supporting the same in upright fluid holding position, and means for washing the interior of the holder while so supported, said means having a control valve, means for producing a relative movement between said holder and said valve, and automatic means for opening said control valve when said holder reaches a predetermined position with respect to said valve.

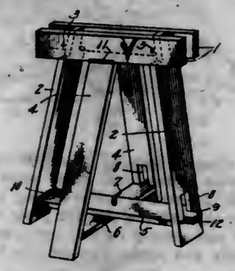
1,638,836. AUTOMATIC SPEED CONTROL FOR MOTOR CARS. LESLIE W. DAVIS and EDMUND S. BURSLEY, Dexter, Me. Filed Sept. 22, 1924. Serial No. 739,001. 1 Claim. (Cl. 175—355.)

In an automatic speed control for motor cars, the combination with a rotatable speed-indicating member and its surrounding casing, of a circumferentially adjustable bracket secured to said casing, a motor ignition circuit containing a normally closed switch, a shunt circuit including an electro-magnet arranged, when energized, to open said switch, a spring-actuated lever pivotally mounted on said adjustable bracket and adjustable therewith circumferentially of the speed-indicating member, said lever being also arranged to be engaged in its different positions of adjustment by said indicating member and forming a normally open contact member mov-



able to circuit-closing position by engagement with said speed-indicating member at predetermined speed-indicating positions thereof, substantially as described.

1,638,837. TRAVELING CASE. ALAN B. DEITSCH, New York, N. Y., assignor to Deitsch Brothers, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1925. Serial No. 78,543. 1 Claim. (Cl. 190—41.)

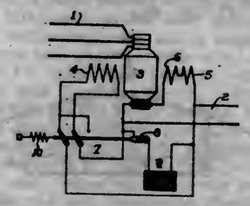


A traveling case comprising a main member having a bottom wall, a top wall, end walls and a rigid side wall extending beyond the bottom wall, that portion of each end wall below the bottom wall being of substantially triangular form, a cover member having top and bottom walls, a side wall and end walls, the last named bottom wall being enlarged and the end walls being enlarged at their base to form substantially triangular extensions.

1,638,838. OPERATING MECHANISM FOR ELECTRIC CONTROLLERS. CLARENCE T. EVANS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 21, 1923. Serial No. 663,974. 9 Claims. (Cl. 175—312.)

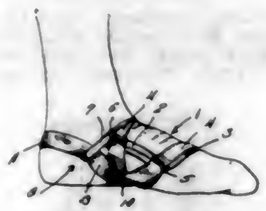
1. The combination with a plurality of rheostats, of a master operating member therefor and adjustable operative connections between said rheostats and said member providing for simultaneous operation of the former by the latter at the same speed or at preselected relative speeds.

1,638,839. TABLE SUPPORT. CHARLES K. FARMER, Grand Rapids, Mich., assignor of one-half to Fred Z. Pantlind, Grand Rapids, Mich. Filed May 31, 1924. Serial No. 717,050. 2 Claims. (Cl. 304—5.)



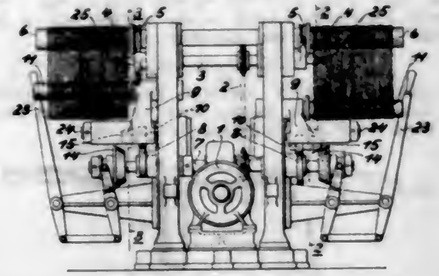
1. In a horse for temporarily supporting banquet table tops, top girts located parallel with each other, legs pivotally mounted at one end between said girts so their lower ends may be adjusted longitudinally of said girts, legs pivotally mounted upon the sides of the girts so their lower ends may be adjusted sidewise of the girts, cross braces pivotally mounted upon two of said legs near their lower ends, the opposite ends of said cross braces temporarily secured to the opposite legs of the horse to prevent lateral movement of said legs.

1,638,840. SAFETY DEVICE FOR AEROPLANES. ARTHUR E. FIXEL, Detroit, Mich. Filed Nov. 9, 1925. Serial No. 67,809. 5 Claims. (Cl. 244—21.)



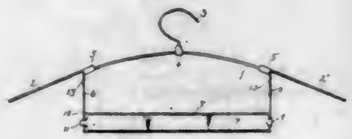
1. A parachute comprising a cover, a plurality of elastic ribs therefor secured to said cover and hinged to a common central member in such manner as to permit lateral movement, and spring means associated with the ribs and tending to move them to radial arrangement.

1,638,841. AUTOMATIC SYNCHRONOUS-CONVERTER SYSTEM. JULIUS E. FOSTER, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 28, 1923. Serial No. 677,558. 4 Claims. (Cl. 171—123.)



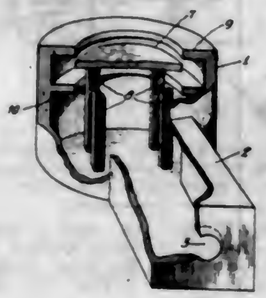
1. The combination with a supply circuit, a distribution circuit, and an electrical translating device connected therebetween, of rectifying means connected across the terminals of the translating device, and means so connected in series with the rectifying means as to be energized only when the polarity of the translating device is incorrect for effecting reversal of said polarity.

1,638,842. MULTIPLE-ARCH SLING. ELLWYN DE L. GEORGE, Canon City, Colo. Filed Sept. 4, 1924. Serial No. 735,874. 2 Claims. (Cl. 128—166.)



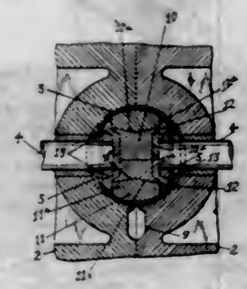
1. A foot sling comprising a saddle fashioned to fit upon the dorsum of the foot, guide loops at the corners of said saddle, an elastic strap having its intermediate portion passed through the opposed guide loop at one end of the saddle and having its end portions crossing each other diagonally and passed through the remaining guide loops.

1,638,843. MACHINE FOR STRETCHING HANKS OR SKEINS. WILHELM GERBER, Krefeld, Germany. Filed Mar. 28, 1927, Serial No. 178,904, and in Germany Oct. 30, 1926. 12 Claims. (Cl. 28—58.)



1. In a hank stretching machine, a rotary driving roller, a rotary and vibratory beating roller, and means for periodically rotating the driving roller when the beating roller is not vibrating and is at the limit of its distance from the driving roller, and for vibrating the vibrating roller when the driving roller is not rotating.

1,638,844. GARMENT HANGER. HARRY GIBSON, Los Angeles, Calif. Filed May 24, 1924. Serial No. 715,543. 5 Claims. (Cl. 223—62.)



1. In a device of the class described, in combination, a top member, end pieces depending therefrom, a lower member positioned between said end pieces and embraced thereby, said end pieces being provided with cut-away portions functioning to support the loops of a garment, and a hook pivotally mounted upon said top member, the pivot of said hook being at right angles thereto, whereby said hook may be swung above said top member, when the device is in use, and below said top member and between said end pieces, when the device is out of use.

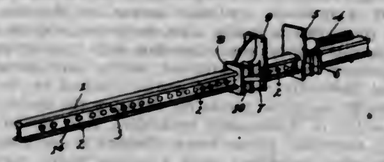
1,638,845. VARNISH FIRE. DAVID E. GOGGIN, New York, N. Y. Filed Jan. 24, 1927. Serial No. 162,955. 8 Claims. (Cl. 263—14.)

1. A varnish treating fire embodying an imperforate slab of refractory material, and means for directing a flame against said slab and entirely around the same for the purpose of heating the same to a substantially incandescent state, whereby the slab is adapted to radiate heat for the purpose of heating a varnish kettle.

1,638,846. MULTIPART CORE. MARIUS GUIOT, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 29, 1924. Serial No. 695,902. 5 Claims. (Cl. 22—168.)

1. A new and improved multipart core, for a cup shaped casting having an inwardly directed circumferentially extending flange adjacent to the open end thereof which comprises a center core section having longitudinally recessed side surfaces, the said recesses of two opposite sides gradually decreasing in width from the inner ends of the section to the outer end thereof and also from the outer side of the section inwardly thereof, and outer core sections surrounding the said center section and having raised portions corresponding to and seating in the said recesses when the core parts are assembled, the assembled core sections having an annular recess in their outer surfaces to form an inwardly extending projection on the casting.

1,638,847. SHUTTER COVER FOR RADIATORS. FRANCIS F. HANSEN, Chicago, Ill., assignor to Star Shutter Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 7, 1926. Serial No. 133,935. 4 Claims. (Cl. 180—61.)

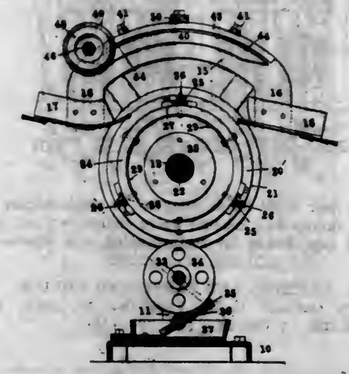


1. A shutter for automobile radiators comprising a thin sheet metal plate having a plurality of elongated slots therein and a laterally offset outer edge adapted to be

secured against the radiator, a second sheet metal plate between said first named plate and the radiator and slidably secured to said first named plate, said first named plate having an in-struck apertured portion adjacent the center thereof whereby the central portion thereof may be directly secured to the radiator front, said second plate

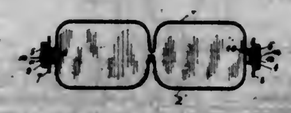
having elongated slots therein adapted to be moved into and out of alignment with said first named slots by sliding said second plate, and said second plate having an opening therethrough elongated in the direction in which said second plate slides, and receiving the said in-struck apertured portion on said first named plate.

1,638,848. CLAMP. JOHN M. HARGRAVE, Cincinnati, Ohio. Filed Apr. 23, 1925. Serial No. 25,444. 1 Claim. (Cl. 144—303.)



A metallic clamp comprising a straight I shaped bar having interspaced notches died out in the median lengthwise portion thereof, a clamping member having a pawl for engaging the notches, said member fitting the I shaped bar and being adjustable longitudinally of said bar, and a co-operating clamping member shaped so as to also engage the bar, said clamping member provided with means for the gradual adjustment thereof with relation to said first mentioned clamping member and both clamping members having thin clamping portions extending clear of the plane of the supporting bar.

1,638,849. METHOD OF MAKING RESISTOR ELEMENTS. EARL J. HAVERSTICK, Oakmont, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1923. Serial No. 637,376. 11 Claims. (Cl. 201—76.)

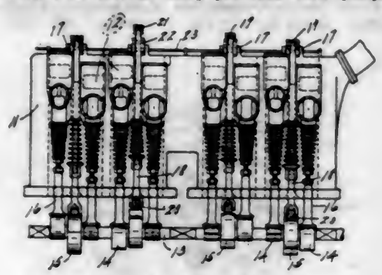


10. A method of making resistors which comprises making a mixture of materials calculated to give the proper resistivity, adding a small amount of a water glass solution thereto, forming the resistor, strengthening the same by immersing the resistor in a water glass solution, washing the same in hot water and then drying at a temperature of 150°–200° C.

1,638,850. CAN-PRINTING MACHINE. WILLIAM F. HERRANK, Highland, Ill., assignor to Pet Milk Company, St. Louis, Mo., a Corporation of Delaware. Filed June 1, 1926. Serial No. 112,775. 7 Claims. (Cl. 101—40.)

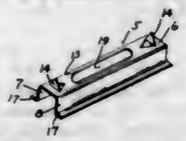
1. In a device of the class described, the combination with a rotary member, of an impression device carried thereby, an arcuate spring presser bar cooperating with the article to be marked when the impression device co-operates therewith, and means for forcing the article between the rotary member and presser bar, said means comprising a feed wheel having a resilient tread.

1,638,851. EYE PROTECTOR. EUGEN HEENTSCH, Frauenfeld, Switzerland. Filed Feb. 27, 1926. Serial No. 91,057, and in Switzerland Mar. 14, 1925. 1 Claim. (Cl. 2—10.)



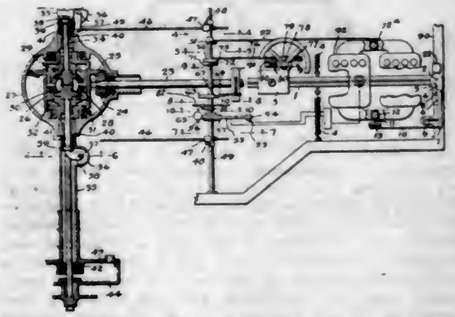
An eye protector for attachment to a head covering, comprising in combination, a goggle frame, temple members extending from said frame in extended U-shape and of spring character, and the extremities of each U-member bent outwardly, a guide member for each temple member designed for attachment to the head covering and each comprising a supporting plate, and a sheath presenting lateral apertures near the inner ends of its narrow longitudinal walls for cooperation with the outwardly bent extremities of said U-springs in the outermost position of the U-members relative to the sheaths, the shanks of said U-spring members slidably guided in said sheaths, and each sheath mounted on its supporting plate for swinging movement in a plane parallel to that of supporting plate, and snap-spring means for relatively locking the sheaths and their supporting plates in the operative position of the goggle frame.

1,638,852. CYLINDER FOR GASOLINE ENGINES. WILLIAM B. HILGER, Riverton, Iowa. Filed Mar. 31, 1924. Serial No. 703,014. 3 Claims. (Cl. 123—78.)



1. In a device of the kind described embodying in conjunction with the cylinder block of a combustion engine,

sleeves engaging the inner periphery of the cylinders of said block, said sleeves being provided with peripheral

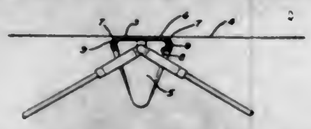


apertures near their heads adapted to communicate with staggered intake and exhaust valve chambers; and a cam shaft and cam means for reciprocating said sleeves.

1,638,853. FURRING AND FASTENING DEVICE. LEON HOMMEL, Oakland, Calif. Filed Dec. 29, 1923. Serial No. 683,350. 2 Claims. (Cl. 72—118.)

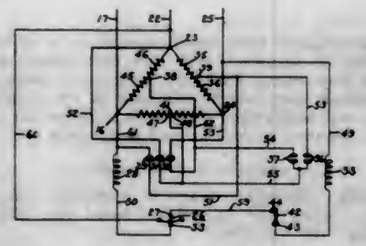
1. A device for holding plaster netting in spaced relation to a wall surface, comprising an elongated member having a base portion arranged to set against said surface, and flanges extending angularly from said base and arranged to engage said netting, said base portion having an elongated opening therein extending longitudinally thereof and between said flanges.

1,638,854. MOTOR VEHICLE. GUSTAF EMANUEL JOHANSON, Sundsvall, Sweden. Filed Sept. 17, 1925. Serial No. 56,907, and in Sweden Jan. 2, 1923. 20 Claims. (Cl. 180—82.)



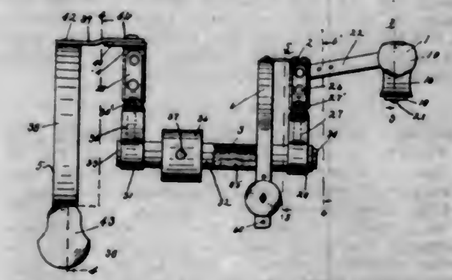
1. In combination, a motor vehicle, a motor for said vehicle, a fuel supply for said motor and means responsive to the developing of centrifugal force by change of course of said vehicle to control said fuel supply.

1,638,855. ALLOY. LOUIS JORDAN and GEORGE WILLARD QUICK, Washington, D. C., assignors to The United States of America, represented by the Secretary of Commerce. Filed Dec. 27, 1926. Serial No. 157,433. 3 Claims. (Cl. 75—1.) (Granted under the act of Mar. 3, 1883, 22 Stat L., 625.)



1. An iron alloy containing from approximately 2 to approximately 4 per cent carbon, and from approximately 10 to approximately 15 per cent vanadium.

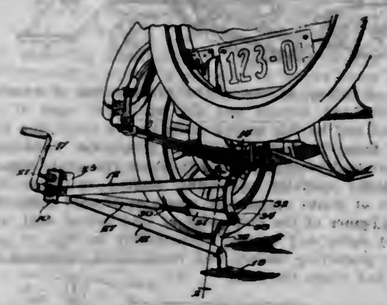
1,638,856. PANTOGRAPH TROLLEY SHOE. OSMUND M. JORSTAD, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1923. Serial No. 681,755. 5 Claims. (Cl. 191—55.)



1. A current collector of the pantograph type comprising a conductor member having its trailing tip of relatively high resistance.

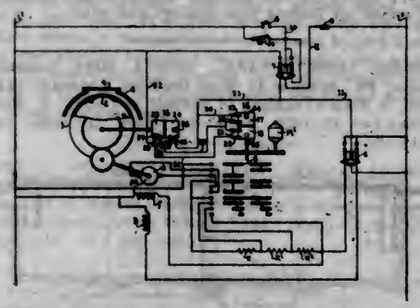
1,638,857. ELECTRIC FURNACE. ALVIN D. KERNS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 14, 1925. Serial No. 69,033. 10 Claims. (Cl. 204—64.)

1. In combination, in an electric furnace, a plurality of resistors uniformly distributed, initially connected in delta, and adapted for energization by a polyphase power supply, a thermally controlled means for changing said delta connection to double delta connection and for maintaining said double delta connection until a predetermined temperature has been attained within said furnace, a second thermally controlled means actuated by the first thermally controlled means for changing the double delta connection to double star connection, said second thermally controlled means being effective to maintain the double star connection until a second higher predetermined temperature has been attained and to change said double star connection to single delta connection and to maintain last named connection until the higher temperature has been lowered to the first predetermined temperature.



1,638,858. PIANO PRACTICE EXERCISER. EVA KELLER, Pasadena, Calif. Filed Oct. 27, 1925. Serial No. 65,118. 20 Claims. (Cl. 84—468.)

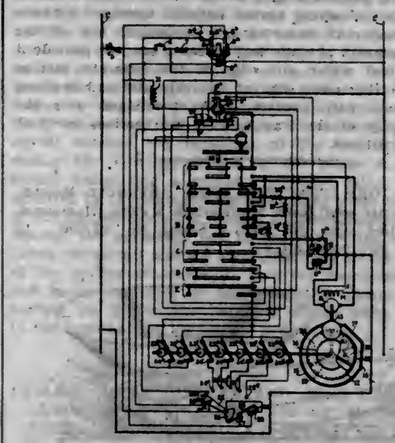
1. A piano practice exerciser comprising in combination a hand weight to be attached to the back of a person's hand, an arm piece having means to secure same to a



person's forearm, an elbow oscillating weight suspended from the forearm, adjacent the elbow and a weighted wrist piece adapted to engage the wrist, having a resilient strip with a weight depending below the wrist.

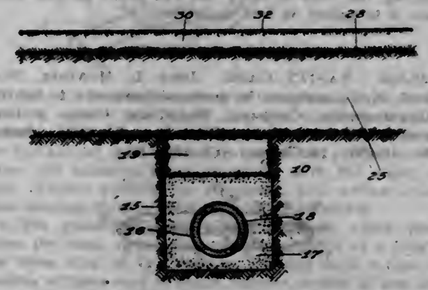
1,638,859. JACK. WILLIAM L. KNOWLES, Fostoria, Ohio. Filed Dec. 21, 1925. Serial No. 76,755. 3 Claims. (Cl. 254—126.)

3. A lifting jack comprising a head provided with trunnions at opposite sides, bars mounted at one end on the trunnions and having their opposite ends bent laterally in opposite directions toggle links connecting the laterally bent ends of the bars, a rod pivoted at one end to the toggle links, a shaft mounted in the head, a member coupled to the shaft and having screw thread connection with the other end of the said rod, and a second shaft mounted in the head and geared to the first mentioned shaft to admit of power being applied directly or indirectly thereto as required.



1,638,860. CONTROLLER FOR MOTOR-DRIVEN APPARATUS. RALPH G. LOCKETT, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 31, 1921, Serial No. 473,997. Renewed Jan. 9, 1926. 12 Claims. (Cl. 192—148.)

1. In a controller for motor driven apparatus, in combination, means to direct stopping of the driving motor and means tending to render the former means ineffective for stopping pending given positioning of a part of the driven apparatus and concurrent operation of the driving motor at a given speed.



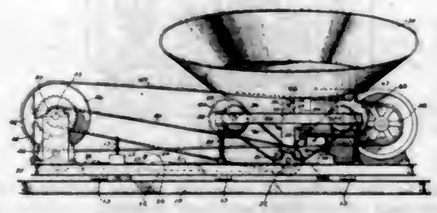
1,638,861. CONTROLLER FOR MOTOR-DRIVEN DEVICES. RALPH G. LOCKETT, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 31, 1924. Serial No. 689,609. Renewed Jan. 7, 1927. 17 Claims. (Cl. 192—148.)

1. In a motor controller adapted to effect periodic reversal of operation of the driven device, the combination with means to pre-set the controller for stopping and for pre-selecting individually a plurality of positions for stop-

ping of the device, of associated means providing for subsequent automatically positioned stopping of the device in preselected position.

1,638,862. GOLF GREEN. LOUIS J. P. LOTT, Dayton, Ohio. Filed June 18, 1923. Serial No. 646,113. 1 Claim. (Cl. 47—1.)

A golf green of the character described, in which specially prepared grass bearing material is spread upon the prepared surface of the ground, consisting of a germinating layer composed of an admixture of shredded peat moss, soil, and bone meal; a nourishing layer consisting of shredded peat moss, soil, cow manure, bone meal, and sand; a long lived fertilizing layer consisting of crushed chicken bone; a deep rooting layer consisting of manure, soil, shredded peat moss, and sand; and means for draining away the excess moisture passing downwardly through the said layers.



1,638,863. KNOCKDOWN SHOW CASE. PARIS M. MABE, Muskogee, Okla. Filed June 26, 1925. Serial No. 39,759. 1 Claim. (Cl. 45—71.)

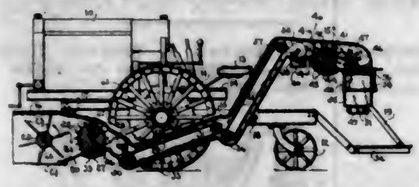
A collapsible case to be fitted over the upturned edge of a supporting tray, said case including inwardly foldable end sections, inwardly foldable side sections, a rectangular

frame to which the side and end sections are pivotally connected, a pair of hinged covers for the case, each of the sections embodying spaced metallic members between which transparent members are supported, one of the metallic members of each section being bent to provide a flange against which one edge of the adjacent section moves, and the lower edge of the side and end sections being formed with grooves to be positioned over the upturned edge of the tray to hold the sections in their extended positions.

1,638,864. ORE CONCENTRATOR. Kennedy Monthfeed Mathe and John Monthfeed Mathe, Hammond, Ind. Filed Apr. 30, 1925. Serial No. 27,000. 12 Claims. (Cl. 209—146.)

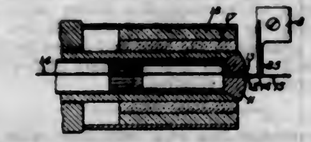
1. In an ore concentrator, a frame, a lever fulcrumed on the frame, a pan pivotally connected to the lever, eccentrics mounted on substantially horizontal axes and supporting the pan near the ends thereof, and means for swinging the lever to move the pan in an arcuate path while it is guided on said eccentrics.

1,638,865. VANITY CASE. John L. McAtree, New York, N. Y., assignor, by mesne assignments, to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed June 30, 1925. Serial No. 40,480. 14 Claims. (Cl. 132—83.)



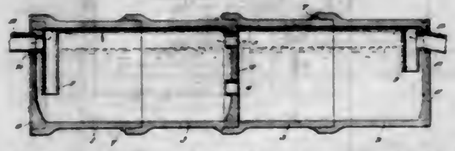
1. In a vanity box, the combination of a body having an inturned peripheral flange, an outer cover for the body, and a hinge pivotally uniting these parts, which hinge lies under the flange of the body and is entirely concealed thereby when the box is closed.

1,638,866. SCARIFIER AND ROAD PLANER. Francis A. McDonna, Englevale, and Roger E. Lloyd, Valley City, N. Dak. Filed Nov. 27, 1925. Serial No. 71,713. 2 Claims. (Cl. 262—8.)



2. In a device of the character described, a main frame, toothed bars extending across the frame and meeting at an approximately central point, the bars being at an obtuse angle with reference to each other, means for varying the elevation of the bars, said means including links connected respectively with the bars, an arm with which the links are connected, said arm including an off-set toothed element rotatable about a horizontal axis, a threaded element meshing with the teeth, the threaded element being rotatable about a vertical axis, and means for effecting such rotation.

1,638,867. COTTON HARVESTER AND CLEANER. Pink M. Melton, Memphis, Tex. Filed Dec. 27, 1922. Serial No. 609,234. 8 Claims. (Cl. 56—35.)

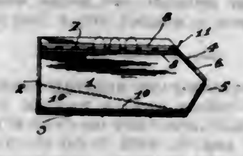


1. In a cotton harvester, the combination of a housing having top, bottom and side walls and open at its front end and having spaced guide fingers projecting forwardly from its bottom wall, a transverse horizontal roller rotatably mounted directly above the guide fingers and having radially projecting fingers to draw the branches of stalks rearwardly, the axis of said roller being in advance of the front edge of said botton wall, and a spiked roller and concave immediately in rear of said radially projecting fingers and cooperating therewith to detach and crush the bolls.

1,638,868. APPARATUS FOR FORMING TUNGSTEN FILAMENTS. William L. Miller, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 14, 1923. Serial No. 651,590. 4 Claims. (Cl. 153—67.)

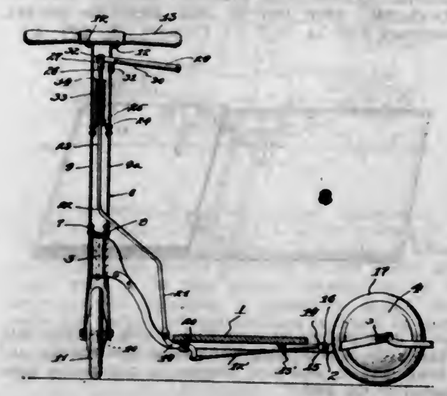
1. A device for forming wire filaments comprising a head-stock and a tail-stock mounted upon a suitable support, a spring collet having a central opening adapted to receive a mandrel and an eccentric opening to receive a wire to be wound, said collet being secured in said head-stock, a suport for said mandrel secured to said tail-stock and means for heating said mandrel and wire.

1,638,869. SEPTIC TANK. Fred J. Moss, Conneaut Lake, Pa., assignor to Moss Brothers, Conneaut Lake, Pa., a Firm consisting of himself and Enos T. Moss. Filed Dec. 15, 1925. Serial No. 75,593. 1 Claim. (Cl. 210—6.)



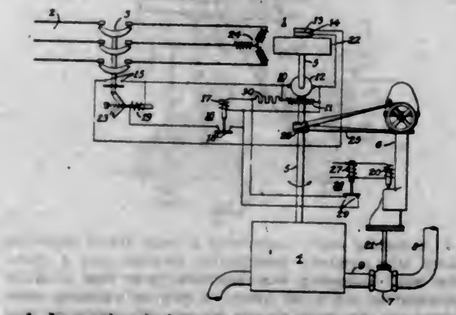
A septic tank comprising a plurality of lengths of stock pipe arranged end to end, and intermediate and terminal lengths having inset end walls of cement, the intermediate length having upper and lower openings in its end wall in which short pieces of pipe are set, and branch stock pipe having the branches set into the top portion of the end walls and having the upper end terminating a slight distance from the top of the tank and the lower end a short distance from the bottom of the tank.

1,638,870. DEVICE FOR CANDLING EGGS. Edward H. Mueller, Pittston, Pa. Filed Jan. 27, 1923. Serial No. 615,309. 1 Claim. (Cl. 99—6.)



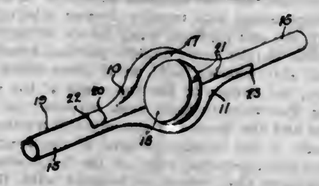
A candling device for eggs comprising a bottom, back and two end sections, a front section extending the length

of the device consisting of an upper and lower portion joined together at an outwardly extending acute angle, the upper front section being provided with an elongated



slot extending substantially the length of the device, the top section having a plurality of spaced holes therein for seating eggs with their long axes perpendicular.

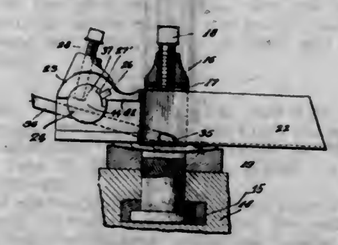
1,638,871. SCOOTER. Frank A. Nauts, Toledo, Ohio, assignor to Gendron Wheel Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 19, 1926. Serial No. 103,029. 4 Claims. (Cl. 188—20.)



1. In a child's vehicle, the combination with a frame, a steering post pivotally mounted on said frame, a wheel carried by said steering post, and a second wheel carried by said frame, of a brake shoe engageable with one of said wheels, a rod operatively connected to said brake shoe and slidably supported on said steering post and a lever fulcrumed on said steering post and pivotally connected to said rod in alignment with the pivotal mounting of said steering post.

1,638,872. AUTOMATIC STATION. William L. Newmeyer, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1924. Serial No. 693,575. 3 Claims. (Cl. 290—40.)

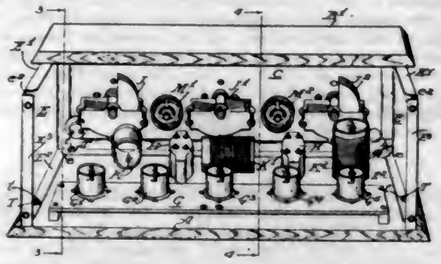
1. In an electrical translating station, the combination with a circuit, a main generator for supplying energy thereto, connecting means between the main generator and the circuit, an operating coil for the connecting means, a prime mover for driving the main generator, a source of energy for the prime mover, a field-magnet winding for the main generator, and an exciter generator driven by the prime mover and adapted to supply energy to the field-magnet winding of the main generator, of means for admitting energy to the prime mover from the source in response to predetermined conditions to start the prime mover from rest, means for connecting only one circuit between the terminals of the exciter generator during the starting period of the prime mover, said circuit comprising a voltage-responsive relay, a switch actuated by the voltage-responsive relay when the voltage of the exciter generator attains a predetermined value to connect the operating coil of the connecting means between the circuit and the main generator to the terminals of the exciter generator to close the connecting means, and means actuated by the connecting means for connecting the field-magnet winding of the main generator to the terminals of the exciter generator.



1,638,873. AXLE HOUSING AND GEAR CASING FOR AUTOMOBILES AND METHOD OF MAKING THE SAME. Frederick Palm, Shorewood, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed May 20, 1926. Serial No. 110,370. 14 Claims. (Cl. 29—153.)

1. An axle housing composed of two pressed sheet metal members each of less length than that of the housing as a whole, each such member having a tubular portion at one end and an open channel or trough-like portion at the other, the members being assembled with the edges of their channel portions in alignment, and welded along their meeting lines to form an integral structure.

7. The process of making axle housings, which comprises the steps of blanking two metal strips of a length less than that of the housing, drawing such strips to produce sections each having a tubular portion at one end and a channel portion at the other, assembling the sections one in reverse relation to the other with the edges of the channel portions in alignment and the outer ends of the channel portions abutting the inner ends of the tubular portions upon the other, and welding the sections at their meeting lines to constitute an integral tubular structure.



1,638,874. TOOL HOLDER FOR LATHES. John M. Palmer, Chicago, Ill., assignor of one-half to James D. O'Neil, Chicago, Ill. Filed May 4, 1925. Serial No. 27,631. 14 Claims. (Cl. 29—96.)

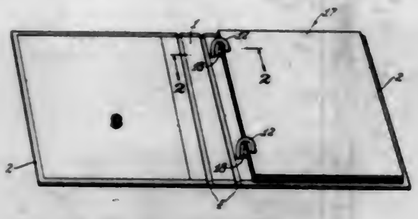
2. In a device of the class described, a supporting shank, a head having a circular bore in the same, a rocker member pivotally supported in said bore, said head

and said rocker member having a plurality of recesses extending into said head and said rocker member transversely to said bore, for the purpose of holding tools in various positions, and means for rocking said rocker member in said bore to clamp a tool in any recess.

1,638,875. RADIOCABINET. LEONARD E. PARKER, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 9, 1925. Serial No. 42,388. 3 Claims. (Cl. 45—52.)

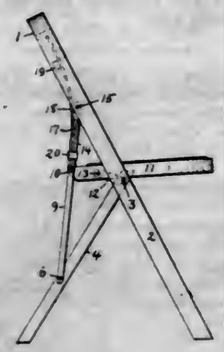
1. A structure for the purpose indicated having ends and one longitudinal side member formed integrally of a metal sheet, the end portions being folded at right angles to the middle portion, said middle portion forming said longitudinal side member, said metal sheet being flanged at all edges, the flanges at the top edges of the end portions being shortened to form gaps between the ends of said flanges and the flanges of the adjacent vertical edges of said ends; a top member secured at one longitudinal edge to the corresponding edge of the longitudinal side member opposite that which is integral with the ends, said longitudinal side being dimensioned as to thickness for entering said gaps and sliding down inside the vertical flanges of said end members to lodge said top member upon the top flanges of the ends.

1,638,876. FEEDING DEVICE FOR CABLE-DRILLING TOOLS. JOHN PENROD, Okmulgee, Okla., assignor of one-half to Robert D. Thompson, Okmulgee, Okla. Filed Mar. 25, 1926. Serial No. 97,294. 3 Claims. (Cl. 255—15.)



1. A hydraulic feeding device for wire lines comprising inner and outer communicating cylinders adapted for the reception of compressible and non-compressible fluids, a piston in one of the cylinders and having a rod adapted for connection with a wire line, a sleeve valve having ports adapted to establish communication between the inner and outer cylinders, and means whereby one of the cylinders may be supplied with a fluid under a high pressure.

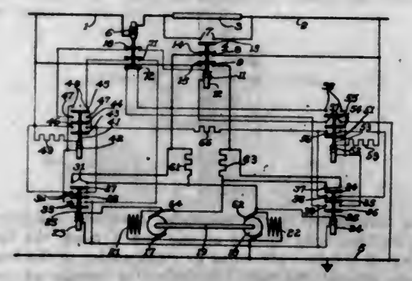
1,638,877. STUFFING OF CHROME-TANNED HEAVY LEATHER. ROBERT HOWSON PICKARD, DOROTHY JORDAN LLOYD, and ALBERT EDWARD CAUNCE, London, England. Filed Aug. 22, 1925, Serial No. 51,875, and in Great Britain Aug. 27, 1924. 4 Claims. (Cl. 149—5.)



1. The manufacture of stuffed leather by steeping chrome tanned leather in the wet blue state in a bath of acetone until the water content of the leather is reduced to from 14 to 20%; removing the acetone from the leather, and then treating the latter with a suitable stuffing material.

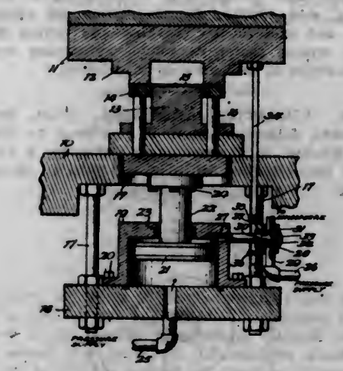
1,638,878. LOOSE-LEAF BINDER. JOHN J. POTT, St. Louis, Mo. Filed May 24, 1922, Serial No. 563,281. Renewed Apr. 14, 1927. 7 Claims. (Cl. 129—1.)

2. A loose leaf binder comprising a back provided with a base strip, a detachable leaf-holding arch thereon and a filing post on said base adapted to hold leaves upon removal of the arch.



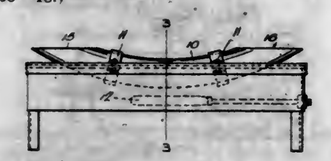
1,638,879. FOLDING CHAIR. WILLIAM C. RASTETTER, Fort Wayne, Ind. Filed July 2, 1926. Serial No. 120,049. 5 Claims. (Cl. 155—142.)

4. A folding chair comprising a main frame including spaced side members, constituting forelegs, and a transverse rod connecting said members; rear legs pivotally connected in the main frame; a pair of swinging arms pivoted in the main frame; a pair of sustaining bars pivoted respectively on the rear legs and having limited longitudinal sliding relation with the corresponding



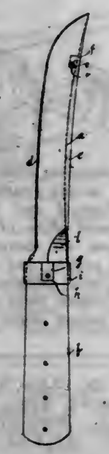
swinging arms; a seat having pivotal connection at its rear end with said sustaining bars; and links pivoted respectively at their rear ends to the seat at points thereon spaced from its rear end the opposite ends of said links having pivotal connection in the main frame.

1,638,880. AUTOMATIC RECLOSING-CIRCUIT INTERRUPTER. MAURICE E. REAGAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 20, 1923. Serial No. 675,834. 6 Claims. (Cl. 175—294.)



1. In combination, a direct-current transmission line having a plurality of sections, a circuit interrupter for connecting certain of said sections, a plurality of dynamo-electric machines, means controlled by said circuit interrupter when in its open position whereby one of said dynamo-electric machines is caused to operate as a motor and another of said machines is caused to operate as a generator in accordance with the section of said transmission line that is de-energized by the opening of said circuit interrupter.

1,638,881. DRAWING PRESS. FREDRICH J. RODE, Chicago, Ill., assignor to Marquette Tool & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 9, 1924. Serial No. 691,653. 6 Claims. (Cl. 113—46.)

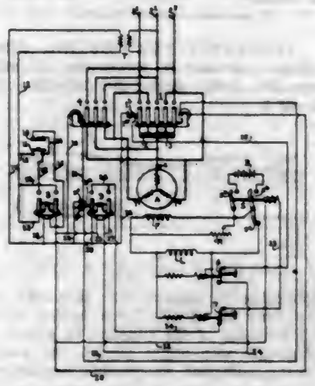


1. A drawing press including a plunger, a blank holder co-operating therewith to clamp the work, and fluid pressure cushioning means for the blank holder, said cushioning means including a cylinder and piston relatively movable one with relation to the other, means for supplying fluid pressure to the cylinder on one side of the piston, and means for directing the fluid to the opposite side of the piston, the opposite faces of the piston being of different areas.

1,638,882. APPARATUS FOR COATING ZINC BARS WITH LEAD. ADOLPH H. ROSSBACH, Columbus, Ohio. Filed June 28, 1926. Serial No. 119,055. 2 Claims. (Cl. 263—48.)

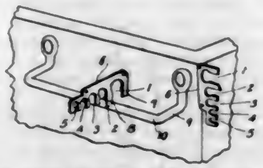
1. An apparatus for coating zinc bars with lead, consisting of a tank in tubular form having a degree of curvature permitting of the passage of a zinc bar endwise therethrough with slight flexure, the curvature of the tank being sufficient to provide upwardly opening ends with horizontal edges to form boxes for the reception of a flux at one end and a dissolvent at the other end upon the surfaces of molten lead within the tank.

1,638,883. SKINNING KNIFE. FRITZ SCHULZ, Konigsberg, Germany. Filed Mar. 13, 1926. Serial No. 94,365. 5 Claims. (Cl. 17—21.)



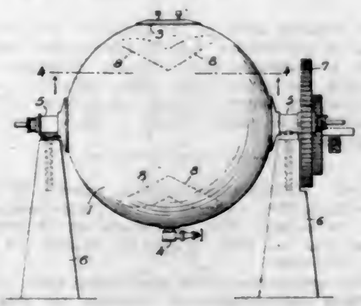
1. A skinning knife of the character set forth, comprising in combination with a conventional blade and handle, a detachable safety member, adapted to cover practically the entire blade surface with the exception of a relatively narrow cutting edge portion, and means for holding said safety member in place near its two extremities.

1,638,884. MOTOR CONTROLLER. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed June 30, 1922. Serial No. 571,927. 3 Claims. (Cl. 172—289.)



1. The combination with a synchronous motor, of means comprising electro-responsive switches for establishing starting and running power connections therefor, control means for said switches insuring establishment of said starting connections prior to establishment of said running connections and establishment of running connec-

tions upon interruption of starting connections, said means including a normally closed electroresponsive relay to be included in the field circuit of said motor and a



reactance to be included in the field circuit of said motor to render said relay responsive to a given voltage which is a function of the speed of said motor.

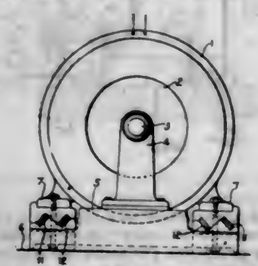
1,638,885. SAFETY-APPLIANCE GAUGE. WILLIAM B. SHEA, Kansas City, Mo. Filed Jan. 15, 1925. Serial No. 2,571. 1 Claim. (Cl. 33—168.)

In a caliper gauge comprising a flat metallic body having a plurality of teeth having aligned ends formed on a portion of one edge thereof and progressively spaced thereon, the inner opposed edges of said teeth forming external diameter gauges, an elongated tooth on said edge adjacent the said portion and a tooth on the end of said edge opposite said elongated tooth, the inner edges of said two last named teeth forming an external gauge and the outer opposed edges thereof constituting an internal gauge.

1,638,886. METHOD OF BLEACHING WOOD PULP. FREDERICK G. SHERBONDY, Akron, Ohio, and MAX E. BOEHM, Appleton, Wis. Filed Feb. 21, 1925. Serial No. 10,811. 5 Claims. (Cl. 8—2.)

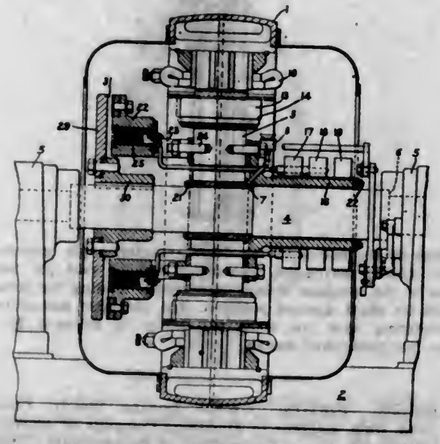
1. The method of bleaching pulp which consists in enclosing a mixture of pulp and bleaching liquor within a sealed spherical container, and agitating the mixture by subjecting it to alternate spreading and concentrating flow action.

1,638,887. INSTRUMENT FOR MEASURING RE-ENTRANT ANGLES. GEORGE S. STROKMAN, Denver, Colo. Filed Oct. 21, 1924. Serial No. 744,965. 1 Claim. (Cl. 33—169.)



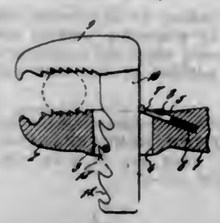
An instrument of the character described comprising an elongated body having at one end a head, the head having an end face extending at right angles to the longitudinal axis of the body and projecting equally on both sides from said longitudinal axis, the body being longitudinally grooved coincidently with the axis of the body, a slide mounted in said groove and constituting a bisector normally projecting beyond the head and being formed with a pointed extremity, the face of the body on each side of said groove having scales and the slide having pointers coacting with said scales, one of said scales indicating the angle formed by the axis of the slide with relation to lines connecting the extremity of the slide with the outer corners of the head.

1,638,888. RESISTOR MATERIAL. JOSEPH SLEPIAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1923. Serial No. 637,147. 7 Claims. (Cl. 201—76.)



4. The method of making solid composite resistors which comprises mixing conducting ingredients, insulating ingredients and water glass solution, forming the mixture into a resistor, hardening the resistor by evaporating the water contained in the water glass solution, subjecting said resistor to the action of ammonium chloride, and subsequently washing and drying the resistor to remove therefrom soluble substances resulting from the action of said ammonium chloride.

1,638,889. VIBRATION ABSORBER. CARL RICHARD SODERBERG, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1924. Serial No. 725,382. 2 Claims. (Cl. 248—16.)

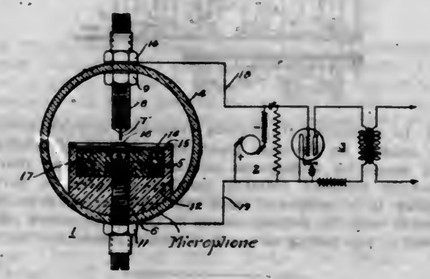


1. The combination with a dynamo-electric machine having a stator and a rotor, said stator being exposed to pulsating torsional forces, of a foundation, rotor-supporting bearings rigidly supported upon said foundation, and a spring mounting constituting the sole support of said stator upon said foundation and comprising non-diametrically disposed stator legs and beam springs secured to said legs and said foundation at spaced points, respectively, said springs being disposed parallel to the stator axis and having a rectangular cross section of which two sides are disposed in a substantially radial direction with respect to the center of the machine and are longer than the other sides.

1,638,890. DYNAMO-ELECTRIC MACHINE. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 25, 1924. Serial No. 708,896. 2 Claims. (Cl. 172—280.)

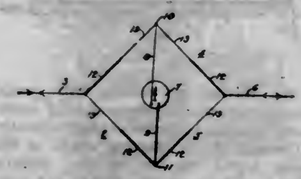
1. A dynamo-electric machine comprising a shaft member, a rotor member mounted loosely upon said shaft member for free rotary and axial movement, a stator member surrounding said rotor member, and means for so axially moving said rotor member for providing a torque transmitting engagement between said rotor member and said shaft as to bring said rotor member out of electrical alinement with said stator member.

1,638,891. WRENCH. WILLIAM M. STOVALL, Port Angeles, Wash. Filed Sept. 11, 1925. Serial No. 55,775. 1 Claim. (Cl. 81—110.)



A wrench including a handle having a jaw end and having a longitudinal opening at its juncture with the said jaw, a pin passing transversely through the opening, a second jaw having a right-angular shank whose outer edge is notched and which shank is designed to be received through the opening and one of the notches thereof designed to receive therein the pin, the inner wall provided by the opening having an angularly arranged passage which enters the handle, a spring in the passage, a notched plunger in the passage contacted by the spring and forced into engagement with the inner edge of the shank, and a pin passing through the passage and received in the notch of the plunger, and said pin providing both a bearing and a retaining element for the plunger.

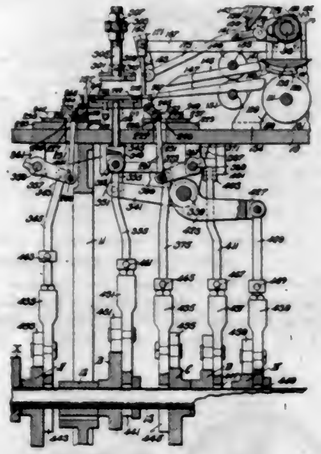
1,638,892. METHOD OF ARC WELDING. RICHARD STRESAU, Wauwatosa, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Dec. 8, 1922. Serial No. 605,590. 1 Claim. (Cl. 219—10.)



The method of attaching sputs in position which consists in providing an opening in a metal sheet with an upstanding ring, forming a sput with an annular rib on the face thereof, said ring and rib having substantially the same gauge to present equal thermal conditions, arranged the sput in the opening with the edges of the ring and rib aligned to form a welding surface, and fusing the ring and rib by means of an electric arc to unite the parts into an integral structure.

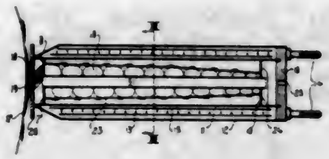
1,638,893. GLOW-DISCHARGE MICROPHONE. PHILLIPS THOMAS, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 24, 1924. Serial No. 701,293. 13 Claims. (Cl. 179—121.)

1. In combination, a pair of spaced electrodes respectively positive and negative, means for establishing a glow-discharge therebetween, a chamber enclosing said positive electrode and sound resonance preventing means in said chamber.



1,638,894. THERMOAMMETER. VICTOR H. TODD, Summit, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1924. Serial No. 693,577. 2 Claims. (Cl. 171—95.)

1. In combination, a Wheatstone bridge including two parallel alternating-current branches each embodying two series-related arms of the bridge and each arm comprising a thermo couple, said branches being connected at the ends thereof by elements of opposite material of the adjacent couples and the mid point of each branch constituting a position of joinder between elements of similar material of couples on opposite sides thereof but of material opposite to that on opposite sides of the mid



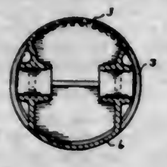
point of the other branch, a direct-current responsive device, and a pair of conductors of different material each corresponding to the material adjacent to one of said mid points and each connected between the point of corresponding material and said device.

1,638,895. ENVELOPE-MAKING MACHINE. JOSEPH M. TOWNSEND, Worcester, Mass., assignor, by direct and mesne assignments, to Townsend Envelope Machine Company, a Corporation of Massachusetts. Filed May 15, 1924. Serial No. 713,635. 23 Claims. (Cl. 93—66.)

1. In a machine for making envelopes, movable means for holding an envelope blank at a station of folding, and means for folding the said blank comprising short, pivotally mounted creasing members adapted to move rapidly in a relatively small arc and arranged to cooperate with the holding means as the latter moves relatively to the folding means to fold and crease the blank.

1,638,896. HAIR WAVING OR CURLING DEVICE. LOUIS HENRI GUILLAUME VAN DIJK, The Hague, Netherlands. Filed May 5, 1926, Serial No. 106,851, and in the Netherlands Aug. 25, 1925. 2 Claims. (Cl. 132—36.)

1. Means for waving or curling hair comprising a curler having a lenticular cross-section of uniform size and continuous oppositely-disposed longitudinally-extending corners throughout the effective length of the curler, and a heating sleeve, having an oval internal cross section, adapted to fit over the curler and spaced uniformly therefrom.



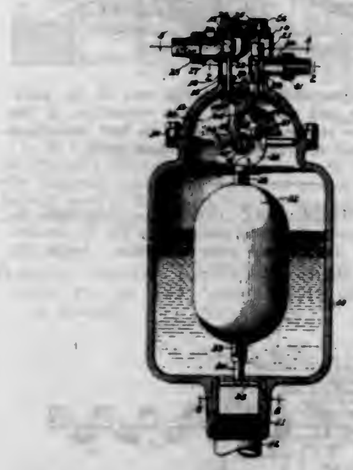
1,638,897. WINDOW-OPERATING DEVICE. WILLIAM VAUGHAN, Salem, Ohio. Filed May 23, 1925. Serial No. 32,471. 3 Claims. (Cl. 121—40.)

2. In combination, means for sliding a window sash, including a rotatable shaft, a sprocket fixed thereon and provided with a circumferential series of spaced openings, spaced cylinders, weighted pistons operating in said cylinders, a chain trained over said sprocket and having its terminals connected with said pistons, means for creating a vacuum below the piston in either one of the cylinders, means for equalizing the air pressure on both

sides of the piston in the other cylinder, a pin mounted for sliding movement, means for moving said pin into one of the openings of said sprocket for holding the latter and its shaft against rotation, and yieldable means for retracting said pin when the latter is released from the last mentioned means.

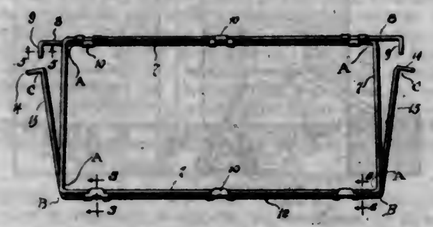
1,638,898. PISTON. GEORGE DONALD WELTY, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Aug. 2, 1924, Serial No. 729,683½. Divided and this application filed June 26, 1925. Serial No. 39,076. 3 Claims. (Cl. 74—108.)

1. A piston casting for an internal combustion engine characterized by possessing internal unrelieved strains in the skirt thereof which are capable of causing outward movement of portions of the skirt when the skirt is split.



1,638,899. STITCH REMOVER. CLAUDE F. WILBER, Tulsa, Okla. Filed Aug. 27, 1924. Serial No. 734,486. 1 Claim. (Cl. 12—17.)

In a stitch remover, a cylindrical body, a plurality of teeth projecting radially over the outer surface of the body at one end thereof, arranged in equal spaced relation, and extending obliquely relative to the outer surface of the body, said teeth comprising a curved face on

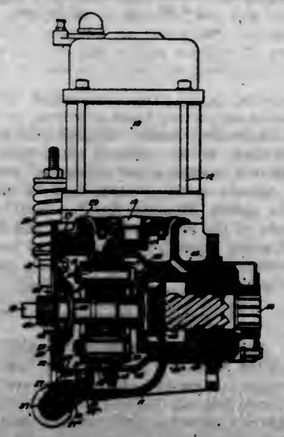


the inner surface, and a narrow shallow part adjacent the cylindrical body, the curved part acting as a cutter, a friction wheel, and a thread puller, the shallow part allowing the pulled or cut threads a means of exit.

1,638,900. DIRECT-RETURN TRAP. EDGAR C. WILEY, Lynchburg, Va., assignor to Simplex Heating Specialty Company Inc., Lynchburg, Va., a Corporation of Virginia. Filed Aug. 21, 1925. Serial No. 51,709. 3 Claims. (Cl. 137—101.)

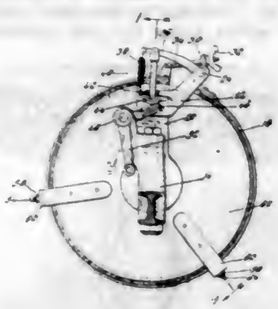
1. In a trap of the character described, the combination of a receiver, a weight pivotally mounted within the receiver so as to swing back and forth above its pivot, a float for controlling the movement of the weight, two passageways connected to the upper end of the receiver, a reciprocating plunger valve for each passageway, a depending pivoted tappet adjacent said weight, projections on said weight at opposite sides of said tappet to engage and swing the tappet only after said weight has passed beyond dead center position, means operable by said tappet in swinging to open one valve and permit the other to close, and frictional means holding the tappet to sustain either valve in open position until the weight is positively shifted to open the other valve.

1,638,901. ADJUSTABLE AWNING FRAME FOR MOTOR VEHICLES. LOUIS S. WILLIAMSON and BERT A. DE BORD, Temple, Tex. Filed Aug. 17, 1926. Serial No. 129,855. 5 Claims. (Cl. 156—15.)



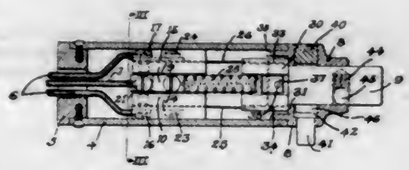
1. An awning for motor vehicles comprising a rectangular frame, a covering therefor, said frame formed from a single resilient rod, said rod doubled at one side of the frame with the two end portions of the rod lying next and paralleling one another and extending beyond the plane of the frame, the extreme ends of the rod bent to form lugs; said paralleled portions including clamp members to hold the parts together and to permit the end portions lateral movement; said paralleled portions constituting the upper side of the frame when the frame is in position; and a rod formed of U-shape pivotally clamped to the lower side of the frame, said U-shaped rod forming various angles with the rectangular frame when in use.

1,638,902. METHOD OF MAKING HOUSEHOLD ARTICLES. RICHARD WITTLINGER, Goppingen, Germany. Filed Jan. 15, 1926, Serial No. 81,581, and in Germany Oct. 10, 1924. 2 Claims. (Cl. 76—104.)



2. The method of making spoons and forks consisting in hot forging from a one-piece bar of copper alloy the bowl or prong portion in one operation, and forging the remainder and finish forging the portion already forged in the next operation, the whole being accomplished with but a single heating.

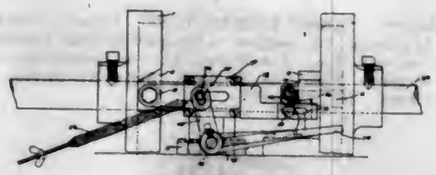
1,638,903. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 3, 1923. Serial No. 636,462. 6 Claims. (Cl. 74—7.)



1. A starter for hydrocarbon engines, comprising in combination, an electric motor, a pinion adapted to drive a gear on the engine, and an epicyclic reduction gearing between said motor and pinion including a yieldingly mounted normally stationary gear adapted to yield under excessive loads.

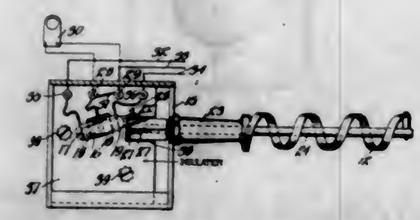
1,638,904. BRAKE. JOSEPH ZUBATY, Flint, Mich. Filed Nov. 1, 1923. Serial No. 672,192. 5 Claims. (Cl. 188—194.)

1. A front wheel brake comprising, in combination, a front axle having a steering knuckle swiveled thereto, a wheel journaled on the knuckle having a brake drum, an expansible and contractible band supported by the knuckle in position to engage the exterior of the drum, and means for operating the band including a plunger supported by the knuckle and a lever supported by the axle having convex generally spherical surfaces slidably engaging each other substantially in the axis about which the knuckle swivels.



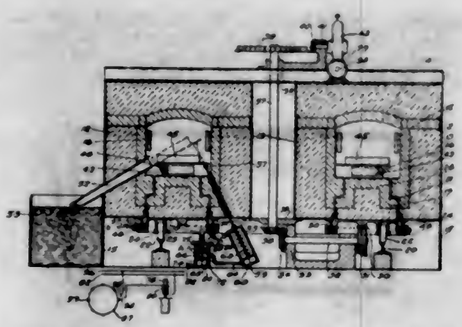
1,638,905. ELECTRIC SWITCH. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 25, 1921. Serial No. 510,351. 1 Claim. (Cl. 200—159.)

In an electric switch, the combination with an insulating terminal-supporting block provided, at its opposite sides, with stationary contact members, of an insulating plunger provided, at its opposite sides, with a pair of movable contact members in alinement with the said stationary contact members and adapted to co-operate therewith, a spring disposed between and engaging the adjacent ends of the block and plunger, and a conducting member extending through the plunger and insulated from the said spring for securing the movable contact members to the plunger.



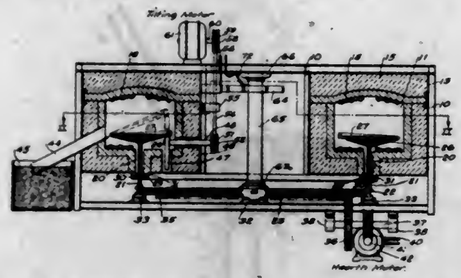
1,638,906. AUTOMATIC RELEASING AND BRAKING DEVICE FOR NAILING MACHINES. EMILE ALIBERT, Paris, France. Filed Dec. 12, 1925, Serial No. 75,092, and in France Dec. 12, 1924. 2 Claims. (Cl. 192—144.)

1. A combined releasing and braking device for nailing machines, comprising a drum mounted on the driving shaft, a notch formed in said drum, a second drum mounted on said shaft, brake shoes disposed in the second drum and pivoting on a support mounted on the nailing machine, a shaft having a flat end disposed between the free portions of the said shoes and pivoted on a support of the machine, a lever with a roller controlling the said shaft, a ramp coacting with said roller, a guide carrying the said ramp, means for adjusting the said ramp upon its guide, a supporting element of the machine forming a guideway for the said



guide, a roller mounted at the other end of the guide from the ramp and adapted at each revolution of the driving shaft to engage the notch in the first mentioned drum, and means for controlling the said guide.

1,638,907. THERMOSTAT CONTROL. ARTHUR R. BAKER, Indianapolis, Ind., assignor to Ira T. Swartz, Indianapolis, Ind. Filed June 10, 1926. Serial No. 115,120. 5 Claims. (Cl. 236—15.)



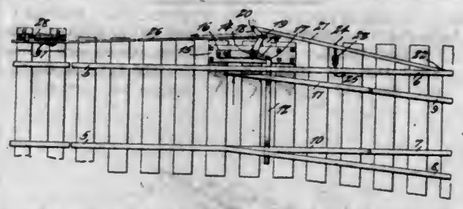
1. The combination with a refractory furnace lining, a door for said refractory lining, a closure for the door, a window for said closure, and a thermostat mounted in front of said window, substantially as set forth.

1,638,908. FURNACE. JOHN F. BAKER, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1926. Serial No. 125,142. 5 Claims. (Cl. 263—7.)

1. In a furnace, the combination with an annular hearth, a plurality of trays on said hearth, and means for effecting movement of said hearth, of a pneumatic ram the operation of which is initiated by the movement of the hearth for successively tilting said trays.

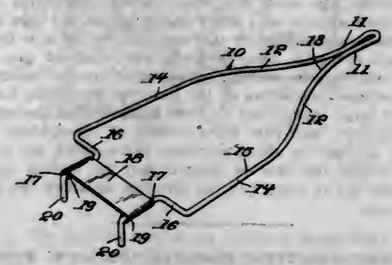
1,638,909. ROTARY FURNACE. JOHN F. BAKER, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 27, 1926. Serial No. 125,143. 4 Claims. (Cl. 263—7.)

1. In a furnace, in combination, a conveyor, means for driving said conveyor, a hearth tray pivotally mounted on the conveyor, and rotatable means positioned below the normal level of the hearth tray for engaging said tray to effect the discharge of material therefrom.



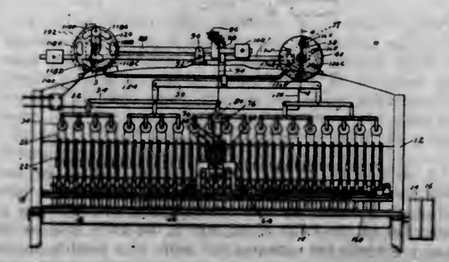
1,638,910. FIGURE TOY. GIUSTO BOGOTO, Royalton, Ill. Filed Feb. 25, 1927. Serial No. 170,999. 3 Claims. (Cl. 46—40.)

1. A toy of the character described comprising a staff, a handle secured to its lower end, a pair of arms secured upon diametrically opposite sides of said staff, apertured ears included in said arms, a body pivotally secured to said arms, a head formed on said body and including a bill, a metallic member secured in said bill, a plate fixed to said staff in the path of the metallic member, a drum journaled between the apertured ear and means for rotating said drum and causing reciprocatory movement of said body in a manner whereby the metallic member will intermittently engage the plate for the purpose specified.



1,638,911. RAILWAY SWITCH. DOCTOR C. BOOND and JOHN T. BURKETT, Welch, W. Va., assignors, by direct and mesne assignments, of one-fourth to said Burkett, one-half to Rosa Q. Taylor, and one-fourth to W. C. Mitchell and John C. Hurt, Welch, W. Va. Filed Oct. 25, 1926. Serial No. 144,081. 2 Claims. (Cl. 246—285.)

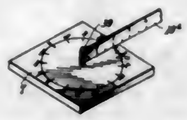
1. In a railway track, a main track and branch tracks therefor, switch rails operatively connected to the rails of one of the tracks and having their switch points in operative relation to the rails of the main track, means for connecting the switch rails whereby they are operated in unison, a bell crank pivotally connected to said means, a link pivotally connected to the bell crank, a spring bar having one end bearing against an abutment and to the



opposite end of which the link is pivotally connected, means for producing a tension on the spring bar whereby the pivot of the link is pressed toward the pivot of the bell crank, a thrust rod operatively connected to the pivot between the bell crank and the link, and means for operating the thrust rod.

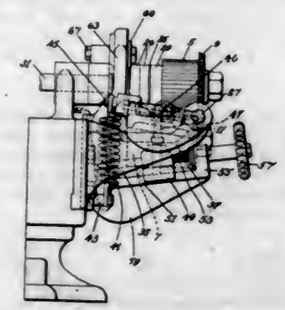
1,638,912. BEDCLOTHES HOLDER. AUGUST WILLIAM BRATER, New York, N. Y. Filed Dec. 6, 1926. Serial No. 152,981. 1 Claim. (Cl. 72.5.)

A bed clothes holder comprising a single length of resilient spring wire bent midway between its ends to provide a pair of co-acting jaws, spaced legs defining an enlarged mouth portion for the insertion of the bed clothes, said legs being curved to provide a V-shaped restricted portion communicating with said enlarged mouth portion and said jaws for guiding the bed clothes into said jaws after insertion of the same through the enlarged mouth portion, and a hook member for engagement with the bed springs of a bed for anchoring the holder thereto.



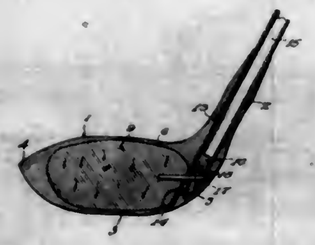
1,638,913. MACHINE FOR MEASURING SHEET MATERIAL. JOHN J. BROPHY, Salem, and GEORGE E. MCLAUGHLIN, Brookline, Mass., assignors to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Aug. 29, 1925. Serial No. 53,368. 15 Claims. (Cl. 33—124.)

1. In a machine for measuring pieces of leather, a work support, a member adapted to be moved by work on the support, a plurality of lamps each arranged to illumi-



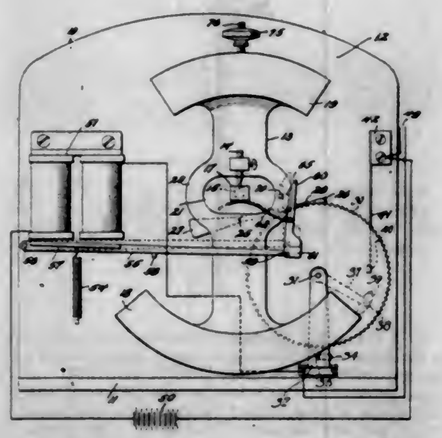
nate a character or symbol for indicating a certain thickness dimension in a given range of thicknesses, and electrical means arranged to be controlled by said member whereby the lamps are lighted selectively upon movement of said member to indicate thickness dimensions of the work.

1,638,914. DIRECTION AND DISTANCE MEASURING INSTRUMENT. ABBOTT P. BRUSH, Greenwich, Conn. Filed Dec. 20, 1926. Serial No. 155,811. 4 Claims. (Cl. 33—76.)



1. In an instrument of the character disclosed, a base carrying compass indications, means on said base for positioning the same with the compass indications centered over a point on a chart and a flexible flat tape having distance markings for said chart on the flat side thereof, said flat tape being pivotally connected at one end with said base in position to swivel about the center of the compass indications on the base, the base being heavy and of large enough size to form a substantial anchorage for the tape, said base being formed of transparent material so that the chart markings surrounding the point over which the base is located may be viewed therethrough and in respect to the direction in which the tape is drawn.

1,638,915. SPLITTING MACHINE. DARIUS W. BUNKER, Quincy, and ROY W. CUMMINGS, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 26, 1925. Serial No. 58,900. 15 Claims. (Cl. 69—14.)

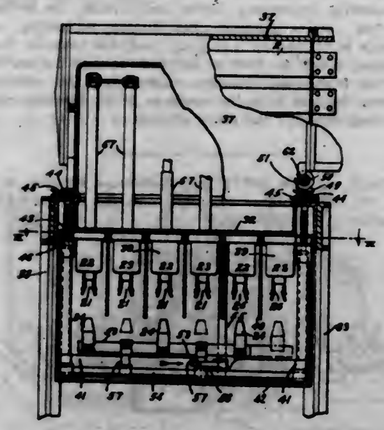


1. A machine of the class described having, in combination, a pair of feed members for advancing a piece of stock, a knife, an axis substantially perpendicular to the edge of the knife about which the knife may swing, and a support for engaging the knife at a locality spaced from the axis, said support being adjustable toward and from the axis whereby adjustment of the support varies the angular position of the knife.

1,638,916. GOLF CLUB. CUTHBERT S. BUTCHART, Rye, N. Y. Filed June 4, 1926. Serial No. 113,818. 5 Claims. (Cl. 273—77.)

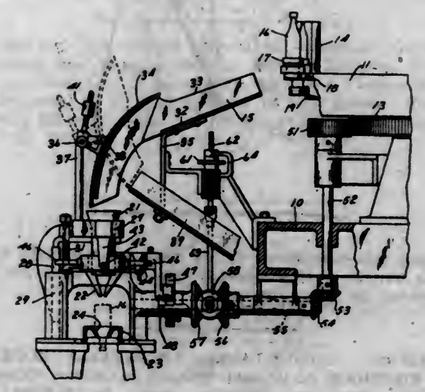
1. A golf club head comprising an integral metallic body having a socket opening through its driving face and provided interiorly with a shoulder extending continuously about the wall of the socket, the said body being recessed beyond the said shoulder to minimize weight of material, and a combined, weighting, balancing and impacting body of wood within the socket having a side marginally abutting the said shoulder.

1,638,917. COMPOUND-PENDULUM CLOCK. THADDEUS STEPHENS CASNER, Plainfield, N. J., assignor to Radio Electric Clock Corporation, New York, N. Y., a Corporation of Delaware. Filed June 17, 1926. Serial No. 116,696. 6 Claims. (Cl. 58—29.)



1. A pendulum operated device comprising, in combination, a compound pendulum pivotally supported at its mid-portion, a push rod carried by said pendulum, a rotatable toothed wheel adapted to be given a step by step movement by said push rod, a contact rotatable with said wheel and adapted to engage a second contact once in each revolution of the wheel, an electro-magnet situated adjacent the pendulum, an armature operated by said magnet, adapted to engage the pendulum when moving in one direction and to drive the pendulum when moving in the other direction, said magnet being energized to move the armature when the toothed wheel has caused the contacts to engage.

1,638,918. WIRE CLAMP. FRED N. CLARK, Hammond, Ind. Filed Sept. 18, 1925. Serial No. 57,245. 1 Claim. (Cl. 81—19.)



In a device of the class described including a barrel, a head member secured at one end of said barrel with bore therein in registry with the bore of the barrel, a hand wheel with threaded bore and reduced neck portion for rotatable positionment at the opposite end of said barrel, a split spindle member positioning within said barrel and having a pin member therethrough for limiting longitudinal movement of said spindle, a screw shank secured to said split spindle for threaded engagement with said hand wheel, and a flexible element secured at the opposite end of said spindle terminating through the bore of the head with means for adjustably securing to said head, substantially as shown.

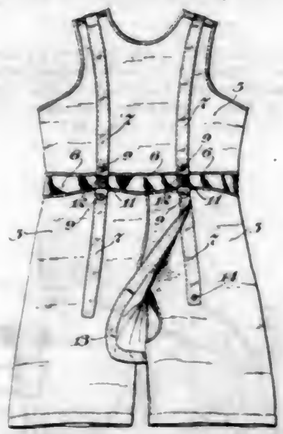
1,638,919. ELECTRICAL SWITCH GEAR. WILLIAM ANSELM COATES, Chorlton-cum-Hardy, and DAVID REGINALD DAVIES, Stretford, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 2, 1921, Serial No. 497,902, and in Great Britain Sept. 28, 1920. 6 Claims. (Cl. 200—16.)

2. Switch mechanism comprising a receptacle, a switch member within the receptacle, a supporting structure for the receptacle, a plurality of switch members mounted thereon, means for relatively moving the receptacle and the supporting structure for operatively connecting the said members, and means for moving one of the switch members for selectively engaging other of the said members.

1,638,920. APPARATUS FOR TRANSFERRING GLASS ARTICLES. ALBERT N. CRAMER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 3, 1924. Serial No. 704,002. 14 Claims. (Cl. 198—22.)

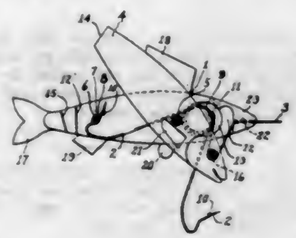
3. The combination of an inclined chute down which articles are impelled by gravity, and an open inverted trough forming a deflector located beyond the lower end of said chute and positioned to deflect and guide the articles after they leave the chute.

1,638,921. SUPPORTING ATTACHMENT FOR TROUSERS. ALFRED JOHN CUMMINGS, Kyabram, Victoria, Australia. Filed Oct. 13, 1926. Serial No. 141,367. 1 Claim. (Cl. 241—9.)



A device of the class described comprising a pair of plates, each having a slot therein, a webbing having its ends passing through the slots and connected with the major portion of the webbing, a row of L-shaped pins carried by each plate and an elongated depression in each plate for widening the space between the plate and the ends of the pins said depression being of greater length than the row of pins.

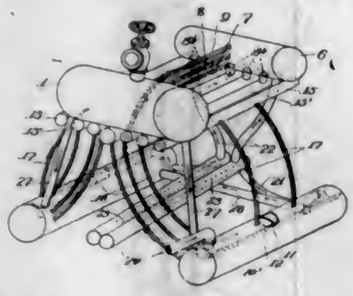
1,638,922. UNDERGARMENT. THOMAS E. CUNNINGHAM and OWEN E. CUNNINGHAM, Minneapolis, Minn. Filed Sept. 27, 1926. Serial No. 137,967. 2 Claims. (Cl. 2—7.8.)



1. A one-piece undergarment having in its back an extensible section, two longitudinally extended reinforcing

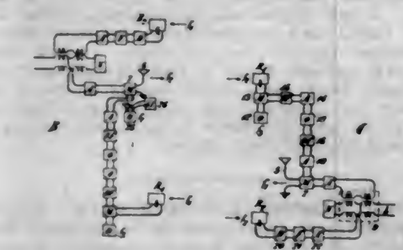
strips attached to the back of the garment and having gaps at said section, said reinforcing strips being folded to form tabs above and below said section, and elastic

links, said tabs having button holes and said links having buttons inserted through said button holes for attaching the links to the tabs.



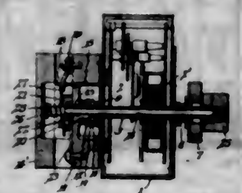
1,638,923. CONCEALABLE RELEASABLY-SECURED FISHHOOK AND BAIT. RUBIN DANIELSON, Chicago, Ill. Filed Oct. 13, 1924. Serial No. 743,338. 1 Claim. (Cl. 43—37.)

In a fish-bait, a life-like body consisting of two portions pivotally secured together intermediate their ends and having a mouth, compound spring actuated hooks within the body, a fish line passing through the mouth and attached to the hooks, said hooks are adapted to be held in concealed position within the body and are also adapted to be expanded out of the body into operative position when the bait is held against the pull of the line, said line is adapted to hold the pivotal portions of the body in a longitudinal alignment when the bait is drawn through water to conceal the hooks when they are in their unexpanded position within the body.



1,638,924. WATER-TUBE BOILER. KOTARO ENDO, Tokyo, Japan. Filed July 23, 1919. Serial No. 312,849. 1 Claim. (Cl. 122—325.)

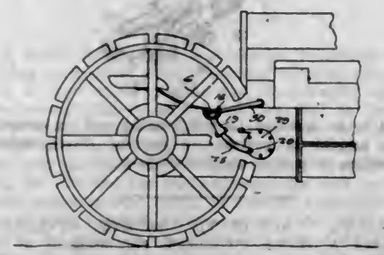
A water tube boiler comprising a pair of steam and water drums 1, 6 each having a steam chamber 3, 3' and a water chamber 4, 4'; pipes 7, 8, 9 connecting the respective chambers of said drums, a pair of water drums 10, 10' arranged at opposite sides of the boiler and below and approximately at right angles to the steam and water drums, pipes 27 each connecting one of the water drums to one of the steam and water drums, headers 15' each connected to one of the steam and water drums and disconnected from the other such drum, tubes 18 connecting the water drums to the headers and arranged in the combustion space of the boiler, steam generating drums 20 also arranged in the said combustion space,



pipes 21 leading from the water drums into, extending longitudinally in and discharging into the steam generating drums, and pipes 22 connecting said steam generating drums to the steam and water drums.

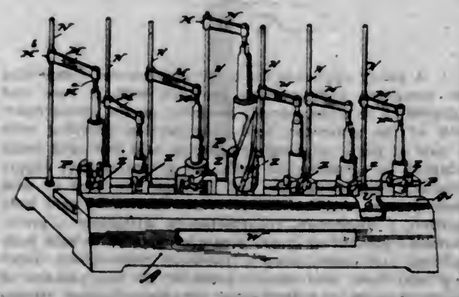
1,638,925. HIGH-FREQUENCY SIGNALING SYSTEM. LLOYD ESPENSCHIED, Hollis, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 16, 1922. Serial No. 582,256. 14 Claims. (Cl. 250—9.)

1. In a high frequency signaling system involving a pair of intercommunicating stations, each having a receiver and a transmitter but including no means for independently generating carrier oscillations, the method of deriving carrier currents for duplex signalling, which consists in setting up a singing condition between the two stations, whereby carrier oscillations are automatically emitted from each station, modulating the oscillations at each station with the message to be transmitted and detecting these at the other station.



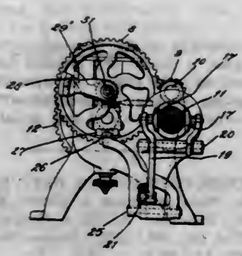
1,638,926. TIME SWITCH. NICHOLAS FEINEN, Buffalo, N. Y. Filed June 25, 1921. Serial No. 480,412. 2 Claims. (Cl. 200—33.)

1. A switch comprising a casing, an insulating block secured to the rear of said casing and being formed with inner and outer recesses, a hollow shaft passing through



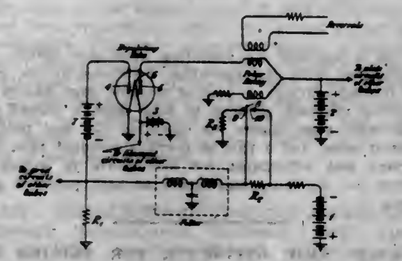
said casing and having one end arranged in the inner recess, a stub shaft arranged in the block and extending into said recesses, means of connection between the hollow shaft and stub shaft respectively, a ratchet ring arranged in the outer recess, a projection extending inwardly from the ratchet ring and securing the latter to the stub shaft, a solid shaft passing through the hollow shaft and stub shaft, a member having a square part secured to the solid shaft, a switch blade secured to the square part and resiliently retained engaged in the teeth of the ratchet ring, and a contact member arranged in the path of the switch blade which is movable upon rotation of the solid shaft.

1,638,927. PEDAL ATTACHMENT. WILLIAM CLARK FULKERSON, Buechel, Ky. Filed Nov. 19, 1926. Serial No. 149,513. 2 Claims. (Cl. 74—61.)



2. An attachment of the class described including, in combination, a member having means incorporated therein whereby the same may be attached to a pedal, a frame comprising a body, a pair of arcuate arms at each end thereof, bars connecting the respective arms of the two pairs of arms, said bars being situated above the member, a bar extending laterally from the frame and terminating in a slotted head having a ratchet therein, a pair of pins projecting from the last-mentioned bar remote from the head, rollers journaled on the pins, a shank extending through the slotted head and between the rollers, means for pivotally mounting the shank at one end, said shank being provided on one edge with a plurality of ratchet teeth to cooperate with the first-mentioned ratchet tooth.

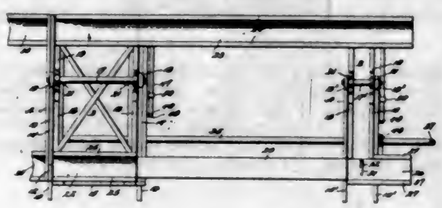
1,638,928. DEVICE FOR EXHIBITING TOOLS. EMIL GAIRING, Detroit, Mich., assignor to Gairing Tool Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 8, 1927. Serial No. 158,518. 8 Claims. (Cl. 35—16.)



1. In a device of the character described, a supporting frame; a prime mover housed in the supporting frame; a driving shaft actuated by the prime mover; a plurality of gears mounted in spaced relation on the driving shaft; a plurality of vertical spindles suitably journalled fitted with gears respectively in mesh with the gears on the driving shaft; a plurality of cutting tools supported in axial alignment with the spindles adapted to rotate therewith but held against longitudinal movement, whereby they may simulate the cutting operation of a plurality of tools under actual working conditions; and means adapted to provide a driving connection between the gears and spindles but which is also adapted upon manually holding any of the tools against rotation to automatically release the corresponding operating spindle of the tool from rotation by the driving shaft, whereby the remaining spindles may continue to operate without interference.

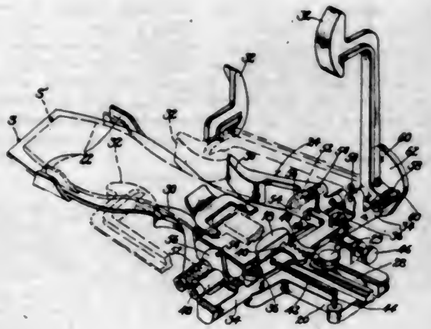
1,638,929. SPLITTING MACHINE. JOSEPH GOULDBOURN and WILFRID THOMAS MINETT, Leicester, England, assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 22, 1924, Serial No. 715,169, and in Great Britain June 19, 1923. 11 Claims. (Cl. 69—13.)

1. A machine of the class described, having in combination, a tool, means for feeding a piece of work to the tool, said means being constructed and arranged to occupy two predetermined positions in one of which it is adapted when operated to start the feeding of the work immediately and in the other to start the feeding only after an interval, and operator-controlled means for causing the feeding means to occupy either position as may be desired.



1,638,930. VOLTAGE REGULATOR FOR VACUUM TUBES. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 26, 1923. Serial No. 677,156. 4 Claims. (Cl. 250—27.)

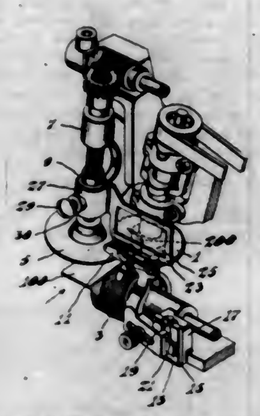
1. Means for automatically regulating the common grid voltage of vacuum tubes having a common source of plate voltage and a common source of grid voltage, comprising, in association with the common sources of



voltages, a regulating vacuum tube and means controlled by said regulating tube for changing the common grid voltage in response to changes in the common plate voltage.

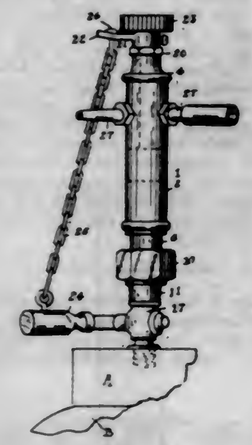
1,638,931. APPARATUS FOR TILTING AUTOMOBILES. JOLLY ROY HOLCOMBE, Columbia, S. C., and FRANCIS FICKLING DUNBAR, Augusta, Ga. Filed July 19, 1926. Serial No. 123,487. 11 Claims. (Cl. 214—1.)

1. In an automobile cradle, in combination, a relatively stationary frame, a cradle bed pivoted for partial rotation in respect to said frame, an arm pivoted to said frame and having sliding engagement with said cradle, and toggle means to rotate said arm about its pivot.



1,638,932. WORK-POSITIONING DEVICE. CHARLES E. HOOD, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 20, 1926. Serial No. 142,986. 17 Claims. (Cl. 12—17.)

4. In a machine for operating upon sole blanks, the combination with the operating instrumentalities, of a sole feeding carriage, a pair of movable gage fingers for centering the heel portions of long soles, a second pair of movable gage fingers for centering the heel portions of short soles, and a pair of carriers mounted upon said carriage and articulated for movements in unison to control the centering movements of both pairs of gage fingers.



1,638,933. CHIP DEFLECTOR FOR SKIVING MACHINES. LESTER B. HOOPER, Columbus, Ohio, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 14, 1925. Serial No. 62,479. 2 Claims. (Cl. 69—16.)

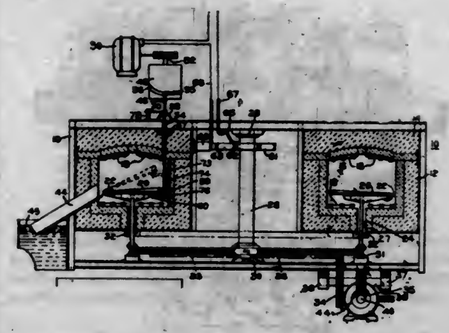
1. For a skiving machine having a rotary knife, a feed roll and a feed disk for advancing the work to the knife, a presser-foot for holding the work on the roll, a rotary shaft upon which the feed disk is mounted and a bearing for said shaft, a chip deflector having a stem

adapted to be fastened to said bearing and an operative portion located in position to prevent waste skivings from curling back over the presser-foot.

1,638,934. AUTOMATIC SAFETY APPLIANCE. CHARLES A. HOWE, Pittsburgh, Pa., assignor of one-half to W. Bruce Glotfelty, Sharpsburg, Pa. Filed Oct. 9, 1926. Serial No. 140,530. 3 Claims. (Cl. 122—504.)

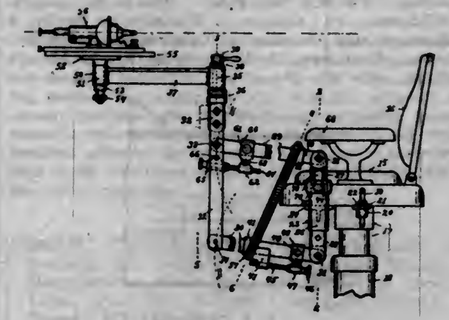
1. A safety appliance for a steam generator comprising an elongated body portion provided with a bore and adapted to be communicably mounted on the steam reservoir of the generator, said body portion provided with a pair of ports communicating with said bore and being adapted to communicate with the generator fuel supply conduit for passing the fuel through the bore of said body portion, a diaphragm constructed to withstand a predetermined amount of steam pressure mounted in said body portion and constituting a partition transversely dividing said bore, and means actuated by the passage of steam through said diaphragm for simultaneously closing said pair of ports to shut off said fuel and for closing said control valve to shut off the steam from said body portion.

1,638,935. DOUBLE LAMP SOCKET. WILLIAM ILE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed May 9, 1925. Serial No. 29,146. 2 Claims. (Cl. 173—335.)



1. A double lamp socket including an insulating body consisting of a single piece of molded material and comprising a solid upper portion and downwardly diverging hollow cylindrical sockets and provided at the top walls of the said sockets with arcuate ribs and having studs spaced from the ribs, shell contacts arranged in the sockets and provided with flanges having apertures receiving the ribs and the studs whereby the shell contacts are interlocked against rotary movement, a straight vertical terminal conductor bar having its lower portion embedded in the solid portion of the body and provided with a horizontal yoke also embedded in the body at the solid portion thereof and having its terminals projecting at the top walls of the sockets, center contacts secured to the ends of the yoke, insulating disks interposed between the center contacts and the flanges of the shell contacts, a terminal conductor bar having a straight vertical upper portion, an angularly related intermediate portion and lower portion embedded in the solid top portion of the body, the angularly related lower portion being exposed at one of the said sockets and contacting with the flange of the contact shell thereof.

1,638,936. PHOTOGRAPHIC-PRINTING FRAME. PAUL F. KAHLER, Chicago, Ill. Filed Mar. 1, 1926. Serial No. 91,545. 2 Claims. (Cl. 95—77.)

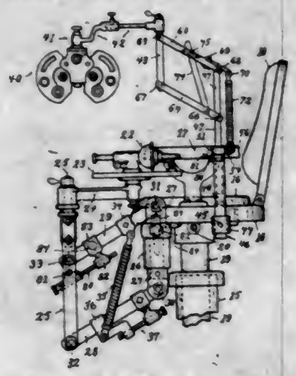


1. A photographic printing frame provided with channel side walls, resilient fingers struck from the body of the back of said frame in staggered relation, substantially as shown, said channel side walls having inwardly turned edges for the accommodation therebetween, of a pressure plate, separating sheet, glass plate, and the photographic print and negative.

1,638,937. FURNACE. ALVIN D. KEENE, West Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 12, 1926. Serial No. 147,871. 10 Claims. (Cl. 263—7.)

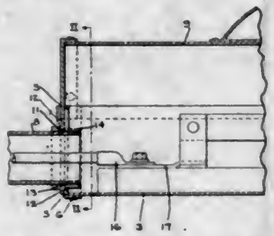
1. In a furnace, the combination with a movable hearth, of means for jarring said hearth.

1,638,938. INSTRUMENT SUPPORTING AND ADJUSTING APPARATUS. FREDERICK KOENIGKRAMER, Cincinnati, Ohio. Filed Apr. 7, 1923. Serial No. 630,632. 8 Claims. (Cl. 248—3.)



1. An instrument supporting apparatus comprising a base member, a vertically disposed journal member journaled upon a vertical axis intermediate of its ends relative to said base member, a pair of horizontally disposed arms spaced apart and pivotally mounted at one end upon and near opposite ends of said journal member outside of its pivotal support, a vertically adjustable standard carried by and pivotally attached near its opposite ends to the opposite ends of said horizontally disposed arms respectively, supporting means carried by said vertically adjustable standard, means to rigidly lock said supporting means to said vertically adjustable standard, means to rigidly lock said journal member in its adjusted positions relative to said base member, and means to counterbalance the weight of said supporting means and members carried thereby upon and relative to said base member.

1,638,939. INSTRUMENT-SUPPORTING APPARATUS. FREDERICK KOENIGKRAMER, Cincinnati, Ohio. Filed Aug. 20, 1923. Serial No. 658,375. 4 Claims. (Cl. 248—3.)



1. An instrument supporting apparatus comprising a base member, a substantially vertical shaft rotatably mounted upon said base, a plurality of substantially parallel link members spaced apart and pivotally attached one above the other to the upper end of said shaft above

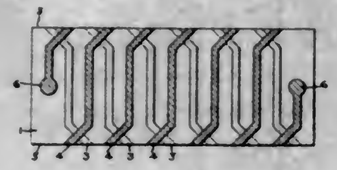
said base member, a substantially vertical standard at one side of said shaft and to which the opposite ends of said link members are pivotally attached one above the other, an instrument supporting arm rotatably supported upon said standard and adjustable therewith vertically,

relative to said shaft and rotatably with said shaft, means to independently rigidly lock said supporting arm, standard, and link members relative to said shaft, and adjustable means to substantially counterbalance the weight of said instrument standard and link members upon and relative to said shaft.

1,638,940. SWITCH HOUSING. HUBERT K. KRANTZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1922. Serial No. 590,178. 1 Claim. (Cl. 247—25.)

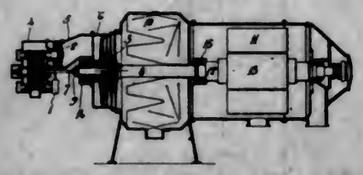
The combination with a housing for an electrical device having an end wall provided with an opening extending inwardly from its outer edge, a movable cover and a conduit extending through the openings, of a closure plate secured to and removable with the conduit, and having its outer edge offset for providing a space between the plate and the end wall for receiving a portion of the cover.

1,638,941. LUBRICATOR. CHARLES LEA, Boston, Mass., assignor, by mesne assignments, to Frederick C. Blanchard, Dorchester, Mass. Filed Oct. 17, 1921. Serial No. 508,124. 11 Claims. (Cl. 184—88.)



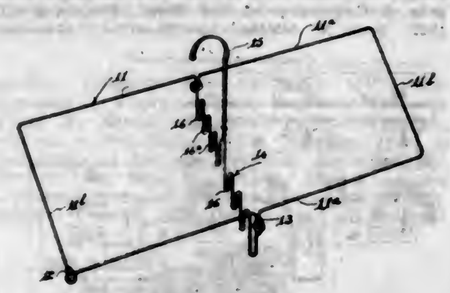
1. A lubricating device having a reservoir, an inlet for the introduction of oil into said reservoir, an outlet for the escape of oil from said reservoir to the part to be lubricated, means presenting a passage affording a rapid feeding communication between said reservoir and said outlet, permeable means normally restricting said passage and permitting a normal slow feeding of oil from said reservoir to said outlet, and a spring above said permeable means normally maintaining said permeable means in a slow feeding position but adapted to yield and permit rapid feeding.

1,638,942. AMPLIFIER OR ENUNCIATOR. ROBERT LINN, Chicago, Ill., assignor to William A. Darrah. Filed Nov. 20, 1922. Serial No. 602,058. 1 Claim. (Cl. 181—27.)



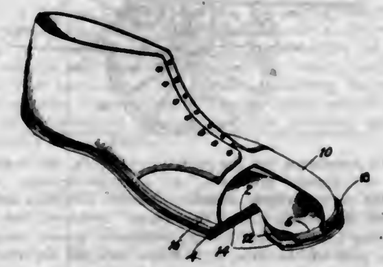
An integral porcelain loud speaker horn having a base and a bridge delimiting a resonant chamber.

1,638,943. THERMOELECTRIC CELL AND METHOD OF MAKING THE SAME. GEORGE M. LITTLE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 27, 1922. Serial No. 590,754. 12 Claims. (Cl. 136—4.)



1. A thermoelectric cell comprising an insulating base, continuous strips of a plurality of metals integral therewith, said strips making overlapping contact members at the edges of said base.

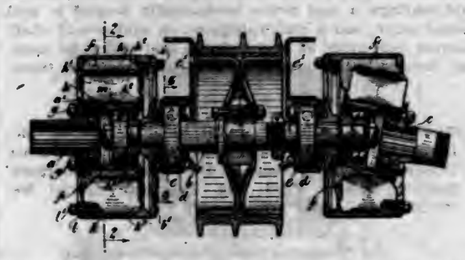
1,638,944. TURBINE AGGREGATE. FREDRIK LJUNGSTRÖM, Lidingo-Brevik, Sweden, assignor to Aktiebolaget Ljungströms Ångturbin, Lidingo-Brevik, Sweden, a Corporation. Filed Mar. 25, 1924. Serial No. 701,857, and in Sweden Apr. 3, 1923. 4 Claims. (Cl. 290—52.)



1. A turbine aggregate comprising a turbine, an electrical generator and a condenser arranged between the turbine and the electrical generator, the housing of the electrical generator being directly secured to and supported by the housing of the condenser.

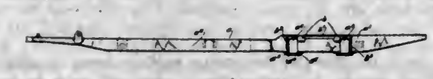
1,638,945. HANGER FOR WARDROBE BAGS. DAVID LONDON, Baltimore, Md. Filed June 4, 1926. Serial No. 113,786. 3 Claims. (Cl. 45—37.)

1. A device for supporting a wardrobe bag and a plurality of garment hangers, comprising a frame consisting of a single piece of wire of rectangular shape and having bends forming eyelets in two opposite sides thereof, and a member consisting of a single piece of wire comprising a hook portion for suspending the device from a support, and oppositely extending garment-hanger supporting members disposed below the plane of said frame so that the wardrobe bag will clear the top thereof when the device is in use, said supporting members being connected loosely with said eyelets.



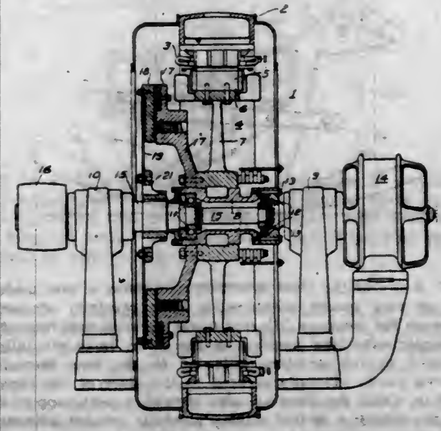
1,638,946. METHOD OF MAKING SHOES AND INNERSOLE THEREFOR. FRED L. MACKENZIE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New York. Filed Sept. 9, 1921. Serial No. 499,459. 9 Claims. (Cl. 12—142.)

2. That improvement in methods of making stitchdown shoes which consists in providing an innersole of uniform thickness, shaping the innersole with an offset uniformly spaced from its edge, the margin being in a plane parallel to the body portion, lasting the upper against the offset on the outside, securing the upper by fastenings passing through the offset, filling the sole inside the offset portion, and attaching an outsole to the margin of the innersole and upper.



1,638,947. UNIVERSAL JOINT. ALFRED F. MASURY and AUGUST H. LEIPERT, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 7, 1922. Serial No 592,942. 4 Claims. (Cl. 64—96.)

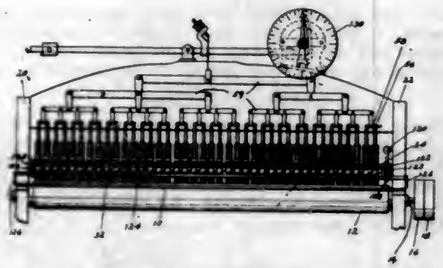
1. In a universal joint the combination with angular shaft sections between which driving torque is to be transmitted, of a connection therebetween comprising an inner cylindrical member of substantial length carried with an end of one shaft section and having outwardly extending radial fins, a spider carried with the proximate end of another shaft section, an outer cylindrical member of substantial length carried with the spider and having inwardly extending radial fins spaced from but disposed in overlapping relationship with the first named fins, seats formed on the opposed surfaces of both of the cylindrical members between the fins, blocks of yielding



non-metallic material interposed between opposed fins and between co-operating seats in the respective cylindrical members and retaining rings secured to the cylindrical members, respectively, to retain the blocks in position.

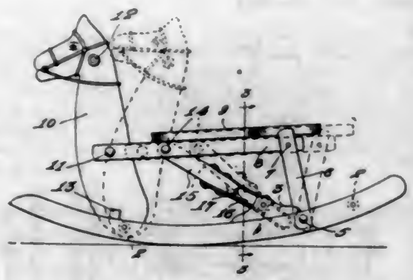
1,638,948. FRAME FOR VEHICLES. ALFRED F. MASURY, New York, and ERVING R. GURNEY, Beechhurst, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 8, 1924. Serial No. 741,309. 6 Claims. (Cl. 280—106.)

1. In a chassis frame for motor vehicles, longitudinal side frame members formed with oppositely disposed cut-out portions respectively, a transversely extending bracing member connecting the side members adjacent the cut-out portions and longitudinally extending bracing members secured at one end respectively to the frame members adjacent the transverse brace, and at their other ends to the side frame members upon the opposite side of the cut-out portions.



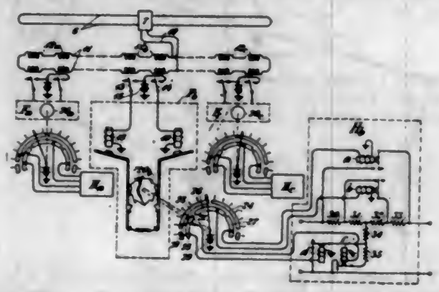
1,638,949. CLUTCH MOTOR. ROY A. MCCARTY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1926. Serial No. 127,874. 4 Claims. (Cl. 172—36.)

1. A clutch motor comprising an electric motor having a stator member and a rotor member, said stator member comprising two bearings, said rotor member compris-



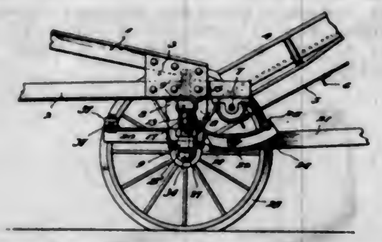
ing a hollow shaft extending through one of said bearings, a load device mounted outside of said bearing on the extending end of said shaft, a second shaft freely rotatable within said hollow shaft and supported by the other of said bearings, a load device mechanically coupled to said second shaft, and a clutch disposed on said second shaft between said other of said bearings and said rotor member, whereby torque may be transmitted thereto, at times.

1,638,950. MEASURING MACHINE. GEORGE E. MCLAUGHLIN, Peabody, Mass., assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Aug. 29, 1925. Serial No. 53,328. 17 Claims. (Cl. 33—124.)



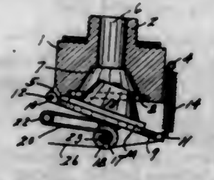
1. In a machine for measuring surface areas of sheet material, means for supporting a piece of work to be measured, a movable measuring member supported for contact with the work, a flexible member arranged to have more or less of it wound on and off the measuring member during movement of the latter to change its effective length, and a totalizing mechanism made up of similar units one of which is connected to the flexible member to be operated thereby during movement of the measuring member.

1,638,951. ROCKING TOY. ERNEST B. NENTWIG, Jefferson City, Mo. Filed Nov. 12, 1926. Serial No. 148,040. 2 Claims. (Cl. 272—53.)



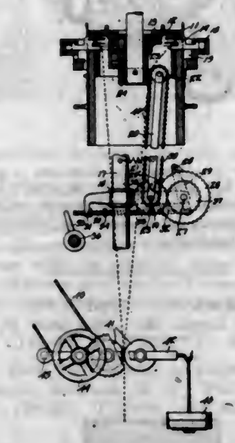
1. A toy of the class described comprising a base made up of two spaced members, a lever pivotally secured between the members adjacent to the forward ends thereof, laterally extending handles on the lever, links pivotally secured to the members adjacent to the rear thereof, spaced plates pivotally secured to the sides of the lever and to which the links are also pivoted, a seat supported on the plates, a slotted pitman pivotally secured between the plates, an element connected to the base members and received through the slotted portion of the pitman secured to the base members and passing through the slot of the pitman.

1,638,952. MEANS FOR REGULATING TRANSMISSION CIRCUITS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug 31, 1922. Serial No. 585,518. 10 Claims. (Cl. 178—44.)



1. In a telephone transmission system, a telephone line, a plurality of repeater stations on said line and means at one station, responsive to variations in the physical condition of the line, for varying the repeater gains at a plurality of the repeater stations.

1,638,953. FRONT-AXLE CONSTRUCTION. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to The New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed June 15, 1926. Serial No. 116,188. 7 Claims. (Cl. 280—103.)

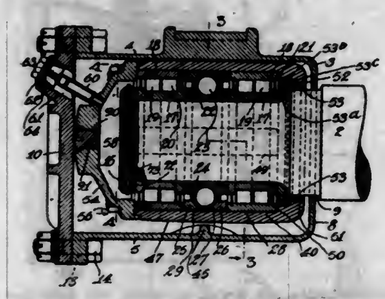


1. In apparatus for the purpose set forth, the combination of frame members, a conveyer-driving shaft mounted on the frame members, hanger members secured to and depending from the frame members, an axle extending between said hanger members, wheels mounted at the ends of the axle, a yieldable support for the axle between the hanger members, draft bars secured to the axle and projecting forwardly therefrom below the conveyer-driving shaft, and means for applying draft to the draft bars.

1,638,954. DRAIN PLUG OR VALVE. HENRY JAMES PEREIRA, Chelsea, Mass. Filed July 15, 1926. Serial No. 122,567. 2 Claims. (Cl. 137—139.)

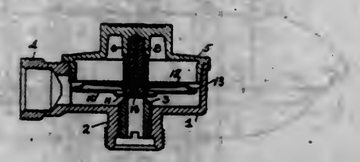
1 A drain plug as described, embodying a body formed with a threaded nipple, said body and nipple being provided with an aperture terminating in a valve seat formed in said body; a finger and hinge lugs on the periphery of said body; a cap formed with an ear hinged in said hinge lugs; a valve on said cap for seating in said valve seat; a coil spring engaging said ear and said finger; standards on said body; a shaft journaled thru said standards; a double torsion spring engaging said shaft and said cap; and means for operating said drain plug from the dash board of an automobile.

1,638,955. TAKE-UP FOR KNITTING MACHINES. NAPOLEON J. PERRY, deceased, Nashville, Tenn., by Julius W. Martin, administrator, Nashville, Tenn., assignor to May Hosiery Mills, Nashville, Tenn., a Corporation of Tennessee. Original application filed Dec. 22, 1919, Serial No. 346,681. Divided and this application filed Aug. 23, 1921. Serial No. 494,631. Renewed June 25, 1926. 20 Claims. (Cl. 66—150.)



18. In a hosiery knitting machine embodying means to knit a tubular fabric with heel and toe pockets, the combination of a take-up acting on the entire width of the fabric, and an auxiliary take-up exerting continuous tension on that segment of the fabric containing the heel and toe pockets said auxiliary take-up being located between the first-named take-up and the knitting point, substantially as set forth.

1,638,956. FRUIT KNIFE. HARRY ARTHUR PINCHBECK and ARTHUR SAMUEL PINCHBECK, London, England. Filed Apr. 21, 1926, Serial No. 103,608, and in Great Britain July 22, 1925. 7 Claims. (Cl. 146—3.)

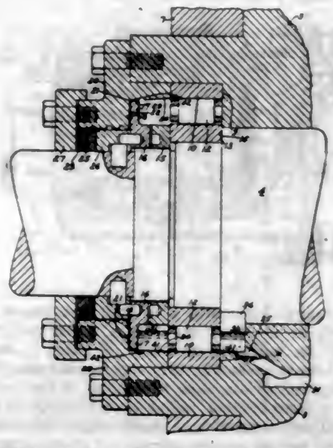


1. A combined fruit cutting and seeding device consisting of a handle, a U-shaped cutting blade curved in profile and provided with re-entrant seeding barbs at the extremities thereof.

1,638,957. JOURNAL BEARING. WILLIAM A. PITT, Montreal, Quebec, Canada, assignor of one-half to George F. Sheppard, Montreal, Canada. Filed Dec. 21, 1925. Serial No. 76,602. 12 Claims. (Cl. 308—180.)

1. The combination with a journal box closed on all sides except at its front and having a centrally located opening in its inner or rear side; a cover closing said front; a journal extending into the journal box through said opening to within close proximity of the cover but short of it; anti-friction radial load bearings encircling the journal and consisting of rings snugly encircling the journal and having grooved peripheral faces constituting inner raceways; means for securing the rings upon the journal consisting of a removable collar on the outer end of the journal; anti-friction devices adapted to run in said raceways, said devices being longitudinally movable in unison with the journal; and outer rings encircling the anti-friction devices and constituting outer raceways therefor, said last-mentioned rings permitting longitudinal movement of the anti-friction devices relatively thereto; and a hollow closed box-like container located within the journal box and enclosing the journal and anti-friction bearings, said container having a convex bearing surface in bearing relation with the journal box and said container and anti-friction bearings being constructed and arranged to be inserted to or withdrawn from position on the journal as a unit.

1,638,958. THERMOSTATIC WAFER. BRUCE B. PRESTON, Cleveland Heights, Ohio, assignor to The Ideal Heating Equipment Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 8, 1926. Serial No. 153,370. 7 Claims. (Cl. 297—9.)

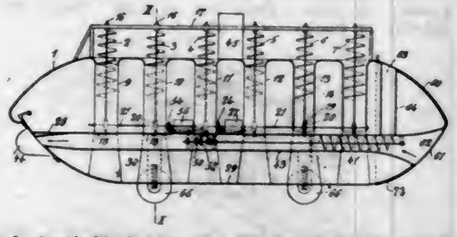


2. In a thermostat wafer, the combination of a rigid nonexpanding disk, having a depressed central valve portion, a flexible disk member sealed to said rigid member to form the wafer, and a mounting and filling plug attached to said flexible member.

1,638,959. ROLLER BEARING FOR CLUTCH MOTORS. RAOUL PRUGNA, East Liberty, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 7, 1926. Serial No. 127,873. 5 Claims. (Cl. 308—187.)

1. The combination with a stationary shaft and a rotor member rotatably mounted thereon, of an oil-lubricated roller bearing comprising inner and outer races supported by said shaft and said rotor member, respectively, and a housing member carried by said rotor member in juxtaposition to said outer race and having a flaring an-

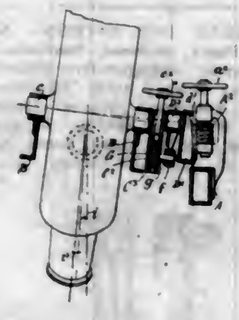
nular cavity opening onto said outer race, the lubricating oil being of such quantity as to be retained, without overflow, in the bottom of the annular chamber provided by said rotor member, said outer race and the cavity of



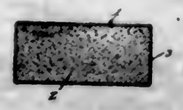
said housing member when the rotor is at rest, the oil being thrown to the outer periphery of said chamber when the rotor is rotating and being maintained in said outer race by the flaring shape of said cavity and the effect of centrifugal force.

1,638,960. TRANSPARENT SEALING WAX. JOSEPH PRIKELMAYER, Valjevo, Yugoslavia. Filed Oct. 17, 1925. Serial No. 63,138. 2 Claims. (Cl. 87—19.)

1. A transparent sealing composition consisting of a mixture of natural orange shellac, Venetian turpentine, colophony water white, and mastic resin.



1,638,961. AIRSHIP. SEVERIN RICHARDSEN, Strommen, Norway. Filed Dec. 29, 1926, Serial No. 157,830, and in Norway Apr. 23, 1926. 6 Claims. (Cl. 244—18.)

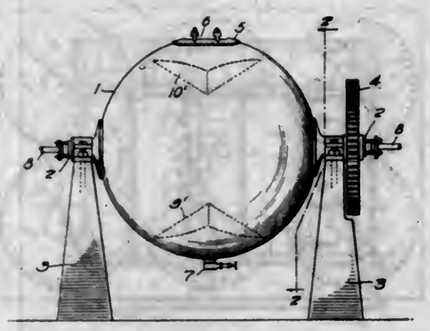


1. An airship heavier than air, comprising a hull, horizontal and vertical channels through the same, air screws in said channels for supporting and moving the airship, said horizontal channels being flattened at their rear end, and a side rudder between the rear ends of said horizontal channels.

1,638,962. APPARATUS FOR GUN MOUNTING, LAYING, AND SIGHTING FOR ARTILLERY ON AEROPLANES. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed June 30, 1923, Serial No. 648,833, and in France May 3, 1923. 9 Claims. (Cl. 33—49.)

9. An aeroplane gun mount comprising, in combination with a gun, means mounting the gun for universal movement, sighting apparatus including a reflecting prism operatively connected with the gun to maintain a proper angle of elevation, supplemental laying means for transversely inclining the gun through an angle of deviation independently of said prism, and means acting through said first named means for transversely inclining said gun and prism simultaneously.

1,638,963. STOCK-FEED COMPOUND. ALLEN B. SCHREIBER, St. Joseph, Mo. Filed Mar. 18, 1926. Serial No. 95,730. 1 Claim. (Cl. 99—11.)



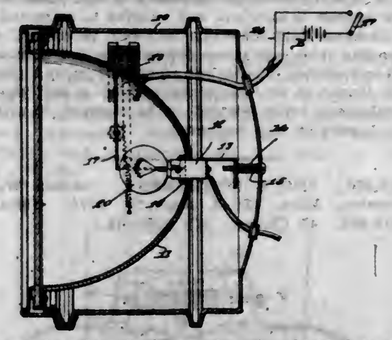
A cattle food of the character described, comprising bodies composed of a mixture of dry feeds and a liquid food, and a coating of food of sufficient density about each of said bodies designed to effect an unbroken seal to maintain the interior of the bodies permanently in a moist condition and to prevent the bodies from adhering.

1,638,964. METHOD FOR PRODUCING ANIMAL FEED. ALLEN B. SHREIBER, St. Joseph, Mo. Original application filed Mar. 18, 1926, Serial No. 95,730. Divided and this application filed Apr. 6, 1927. Serial No. 181,551. 2 Claims. (Cl. 99—11.)

1. A method of producing animal food in the form of small bodies for easy consumption, consisting in mixing a heavy liquid food with a combination of dry feeds, then forming said mixture into numerous small bodies and then coating said bodies with a normally slightly oily feed of sufficient density to seal and permanently maintain the bodies in a moist condition and to prevent the adherence of the bodies, one to another.

1,638,965. APPARATUS FOR BLEACHING WOOD PULP. FREDERICK G. SHERBONDY, Akron, Ohio, and MAX E. BOEHM, Appleton, Wis. Filed Mar. 6, 1926. Serial No. 92,867. 6 Claims. (Cl. 8—18.)

1. In apparatus for bleaching pulp comprising a gas-tight spherical chamber, supported for rotation about a diametral axis, means for subjecting the chamber to pressure, and agitating blades secured to the inner wall of the chamber, adjacent blades being formed to prevent convex and concave surfaces respectively to the pulp and in cooperation with the spherical shape of the container to produce alternate spreading and concentration flow of the material under treatment, as the spherical chamber is rotated.

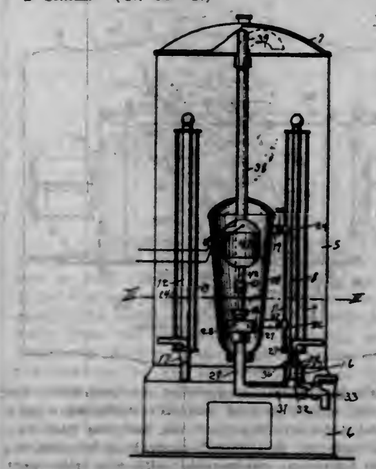


1,638,966. POULTRY-FENCE ATTACHMENT. HARRY STACY SMALL, Seabrook, N. H. Filed Feb. 25, 1927. Serial No. 170,908. 1 Claim. (Cl. 256—25.)

An attachment of the class described, comprising a pair of parallel spaced bars having apertures, a plurality of spacing members extending transversely of the bars and having lateral extensions provided with apertures to register with some of the first-mentioned apertures, U-shaped clips straddling one of the bars and the lateral extensions thereon and having apertures registering with the apertures of said last-mentioned lateral extension and the registering aperture of the last-mentioned bar, a plurality of pickets of an inverted U-shaped formation having their sides slidable through the apertures of the bars and the apertures of the clips and offset ends of the spacing members.

1,638,967. DEFLECTING SHADE FOR HEADLIGHTS. ETHEL D. SMITH, Vidalia, Ga. Filed Feb. 7, 1927. Serial No. 166,554. 1 Claim. (Cl. 240—45.)

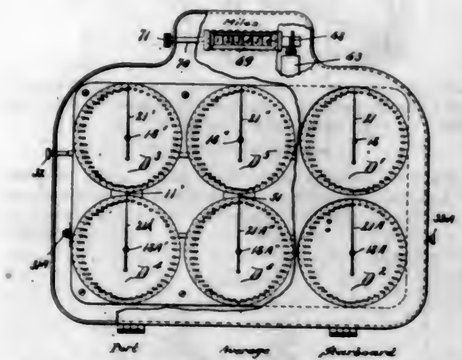
In combination with a lamp casing having a lamp socket therein, arms extending laterally, forwardly and upwardly from opposite sides of the socket, means mounted upon the socket and connecting the inner ends of the arms to support said arms, bearings at the outer ends of the arms, a shield positioned between the arms and having pintles mounted in said bearings, a toothed wheel secured to one of the pintles, a solenoid having a toothed



core engaging the wheel to swing the shield downward when the solenoid is energized and means to move the shield to a normally elevated position.

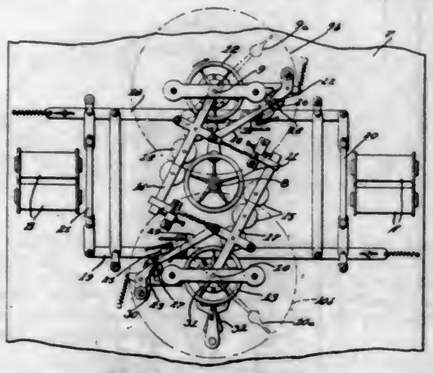
1,638,968. VIBRATION ABSORBER. CARL RICHARD SODERBERG, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,830. 7 Claims. (Cl. 248—16.)

6. A dynamo-electric machine comprising a stator and a rotor having a pulsatory torque, and beam spring supports on opposite sides of the stator and having flat sides disposed substantially radially whereby they are adapted to yield only in substantially tangential directions with respect to the rotor at the points of application of the spring supports.



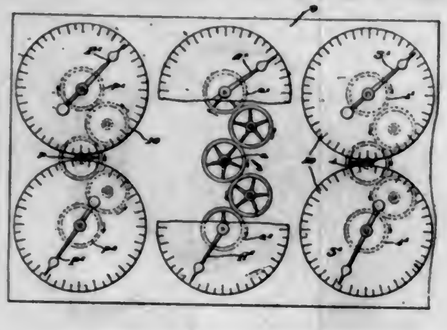
1,638,969. PERCOLATOR. THOMAS G. TINSLEY, Portland, Oreg. Filed Aug. 28, 1926. Serial No. 132,247. 1 Claim. (Cl. 53—3.)

In a coffee percolator attachment, the combination with the percolator having a pair of faucets, a casing resiliently mounted on said percolator and adjacent said



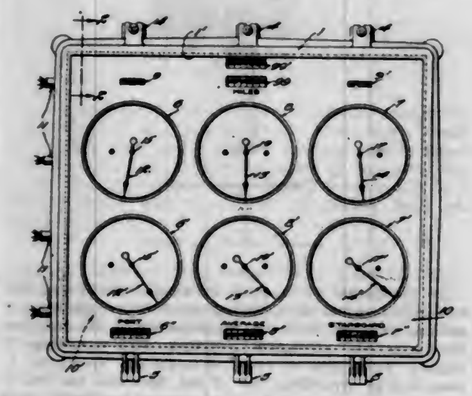
faucets, a motor positioned with said casing, a pump positioned within said casing and adapted to be rotated by said motor, a pipe extending from said pump to a point adjacent the upper extremity of said pump, a goose neck secured to said pipe and adapted to be moved so as to discharge fluid therefrom into said percolator, a pipe extending from said pump downwardly and horizontally, a faucet carried in said last mentioned pipe, a protuberance formed on said horizontal portion of said pipe, said protuberance being adapted to be clamped to either of said faucets of said percolator.

1,638,970. SHIP'S INSTRUMENT. GEORGE WALKER, Newton, Mass. Filed Aug. 23, 1919. Serial No. 319,392. 45 Claims. (Cl. 235—61.)



1. A ship's instrument comprising an indicator, and mechanism for successively advancing said indicator including a stationary part and a movable part, one of the parts having contacts distributed therealong recurrently to engage the other part to actuate said indicator, said contacts being distributed in accordance with the relation between the speed of the propeller, and the velocity of the ship throughout a predetermined range of propeller speeds.

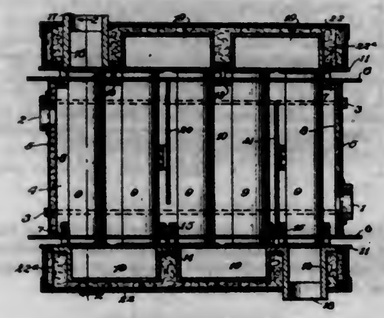
1,638,971. DISTANCE INDICATOR FOR SHIPS, ETC. GEORGE WALKER, Newton Center, Mass. Filed Jan. 25, 1923. Serial No. 614,838. 20 Claims. (Cl. 235—95.)



1. A ship's instrument comprising an indicator, and mechanism for actuating said indicator including a movable part and a cooperating part, the movable part having control elements distributed therealong successively to move into operative relationship with the other part, said control elements being spaced in accordance with the relation between the speed of the propeller and the velocity of the ship throughout a range of propeller speeds.

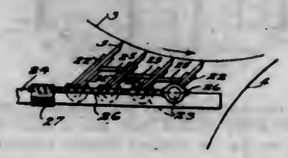
1,638,972. SHIP'S INSTRUMENT. GEORGE WALKER, Newton Center, Mass. Filed Jan. 25, 1923. Serial No. 614,842. 6 Claims. (Cl. 235—104.)

1. A ship's instrument comprising speed-controlled means constantly operated in proportion to the speed of the ship-propelling means, an oscillatory member adjacent said speed controlled means, means including a magnetic clutch for making a driving connection between said member and said speed-controlled means for a predetermined period, means for breaking said connection at the end of said period and holding said member stationary for a second predetermined period, and means for resetting said member to initial position at the end of the second period.



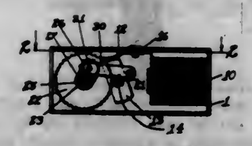
1,638,973. DISTANCE-MEASURING APPARATUS FOR SHIPS, ETC. GEORGE WALKER, Newton Center, Mass. Filed June 28, 1924. Serial No. 722,942. 16 Claims. (Cl. 235—104.)

1. Apparatus for measuring the distance traveled by a body driven by a propeller moving in a fluid medium comprising an indicator, and cam mechanism controlled by the speed of the propeller to advance said indicator in proportion to the distance traveled whether at constant or varying speed.



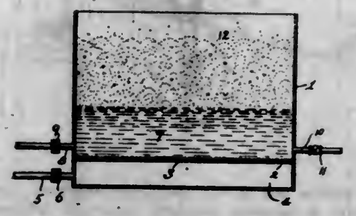
1,638,974. HEATER. LOUIS P. WEBERT, Waterbury, Conn. Filed Aug. 11, 1926. Serial No. 128,637. 2 Claims. (Cl. 257—223.)

1. A heater comprising a casing having an inlet and an outlet, plates at opposite sides of the casing and spaced therefrom, one of the plates being rigidly connected to the casing and the other plate being yieldably connected to the casing, a plurality of pipes extending through the casing and the walls thereof to which the said plates are connected and coupled to the latter, and boxes carried by said plates and connecting the ends of



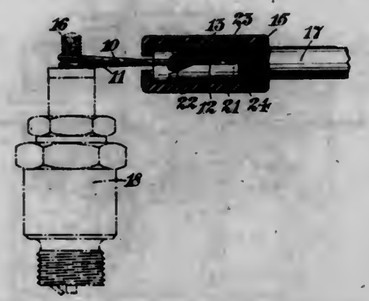
the pipes to provide a passage for the circulation of exhaust through the said pipes for heating the air passing through the casing.

1,638,975. MEANS FOR ELIMINATING WATER FROM THE PULP ON THE WIRE OF PAPER-MAKING MACHINES. VICTOR ANTOINE, Lambermont, near Ensival, Belgium. Filed Aug. 8, 1925. Serial No. 48,938, and in Belgium Aug. 12, 1924. 6 Claims. (Cl. 92—44.)



1. In a paper making machine in combination with the wire and the couch rolls, means for tensioning the wire in advance of the point of squeeze of the couch rolls and wiping means contacting with the tensioned wire whereby the water expressed from the pulp by pressure between the wire and the roll is led away.

1,638,976. WINDSHIELD CLEANER. RALPH G. ABEY, Worcester, Mass., assignor to Worcester Bilt-Rite Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 28, 1923. Serial No. 641,960. 7 Claims. (Cl. 172—36.)



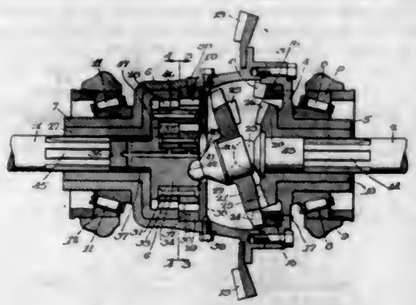
1. In a device of the class described, a casing of conducting material, a shaft rotatably supported therein, a magnet located within said casing, a rotatable armature adapted to be actuated by said magnet for operating said shaft, means controlled by the position of said armature for energizing said magnet and means for holding said armature in a nonenergizing position.

1,638,977. TREATMENT OF LIQUIDS CONTAINING OIL OR FATTY SUBSTANCES AND THE LIKE. JOHN AVERY, Armadale, Australia, assignor to Australian Lanoline Proprietary Limited, Melbourne, Victoria, Australia. Filed Sept. 27, 1923, Serial No. 665,241, and in Australia Oct. 23, 1922. 5 Claims. (Cl. 87—6.)

1. In the treatment of wool scouring liquors containing fatty substances (such as lanoline) subjecting the said liquors to aeration by means of a stream of minute bubbles of air, at a temperature of from about 90° F. to about 100° F. under such conditions that a sufficiently stable froth is formed and removing the froth from the liquid.

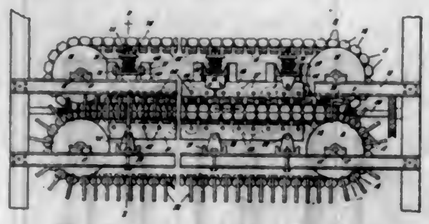
1,638,978. CONNECTING DEVICE. FRANK BOURNE and CEDRIC ADDLEY BOURNE, London, England. Filed Mar. 24, 1926, Serial No. 96,908, and in Great Britain Jan. 25, 1926. 3 Claims. (Cl. 173—269.)

1. A connecting device comprising two connected prongs disposed side-by-side and resiliently movable relative to each other, one of said prongs at least having at its free end a hook lying substantially in a plane containing the prong on which it is provided while extending away from the second prong and being so shaped and positioned relative to said second prong as to enable a bar embraced by the hook to be gripped therein by the resilient pressure of said second prong when the latter lies transversely of the hooked prong pressing the bar against one limb of said hook, the prongs being of such length relative to the thickness of the bar to permit their being resiliently strained apart and the bar to be slipped between the prongs by a relative movement of the device and the bar in the direction of length of the prongs, the device and bar then being capable of relative



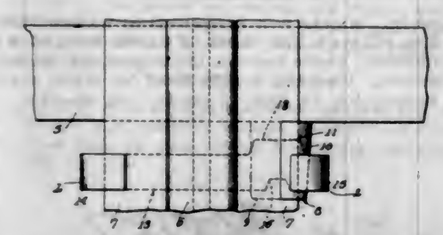
rotation about the longitudinal axis of the device thereby straining the prongs into a position for the hook to face and being engageable with the bar, the latter being gripped resiliently therein by said second prong.

1,638,979. CLOTHESPIN. ADA L. BROKING, West New York, N. J. Filed Dec. 15, 1926. Serial No. 155,065. 2 Claims. (Cl. 24—137.)



2. A clothes pin of the character described, comprising a pair of members pivotally connected intermediate their ends, means for causing said members to be forced together at one end, a portion of one of said members being formed to set up a pair of outwardly pressed semicircular portions and the opposed portion of the end of the other member being relatively straight and terminating in a transversely extending rib designed to position in the lowermost one of the semicircular portions of the opposite member.

1,638,980. DIFFERENTIAL GEARING. GEORGE L. CADMAN, Beloit, Wis. Filed Dec. 3, 1924. Serial No. 753,600. 4 Claims. (Cl. 74—99.)



1. In gearing, the combination of axially alined shaft sections, a rotary casing having end portions sleeved over said shaft sections, a lateral tooth ring gear rigid with said casing, a bevel gear adjacent said ring gear and keyed to one shaft section, a gyratory wabble gear provided with peripheral teeth engaging the ring gear, and with lateral teeth engaging the bevel gear, means axially alined with said one shaft section to form a supporting bearing for said wabble gear at one side thereof, means eccentric to the other shaft section to form a supporting bearing for said wabble gear at the other side thereof, an internal tooth ring gear rigid with said casing and encircling said eccentric bearing, a smaller internal tooth ring gear disposed at one side of said first mentioned internal tooth gear and keyed to said other shaft section, a double pinion mounted on said eccentric bearing and provided with two toothed peripheries of different diameter engaging said internal tooth ring gears, and means for rotating said casing.

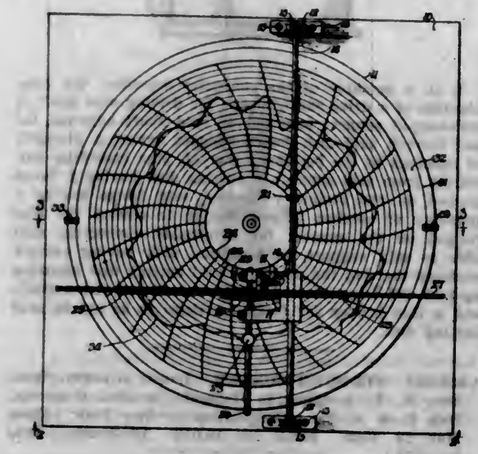
1,638,981. CONTINUOUS PRESS. ANGELO COLUMBO, Stockton, Calif. Filed Mar. 20, 1926. Serial No. 96,175. 13 Claims. (Cl. 100—37.)

1. In a machine of the character described, a pair of chains, a worm engaging the adjacent runs of said chains for driving them, and means carried by the chains for holding the adjacent runs thereof together.

1,638,982. TWO-PIECE RAIL ANCHOR. ADONIRAM J. COOK, Westerlo, N. Y., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1926, Serial No. 115,914. Renewed Jan. 22, 1927. 11 Claims. (Cl. 238—324.)

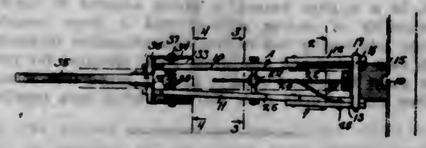
1. The combination in a rail anchoring device, of an anchor bar having hooked ends and a lever, and a wedging device having an inclined surface adapted to engage said lever and twist the bar upon a rail flange and upon the wedging device.

1,638,983. TIRE-DEFLATION INDICATOR. FRANCIS G. CRONE, Buffalo, N. Y. Filed Apr. 6, 1926. Serial No. 100,079. 5 Claims. (Cl. 200—58.)



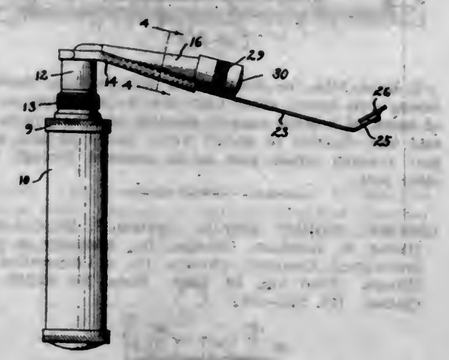
1. An electric switch having a fixed switch contact adapted to be mounted on a support and a movable contact guided on said support for vertical movement into and out of engagement with said fixed contact, and a detector connected wtih said movable contact and capable of longitudinal movement and also a lateral movement

in all directions upon engaging the ground and comprising an upright spring connected at its upper end with said movable contact.



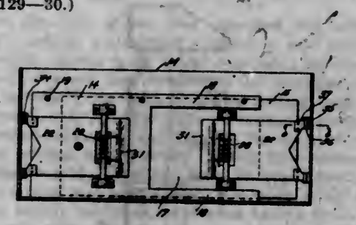
3. An electric switch having a fixed switch contact adapted to be mounted on a support and a movable contact guided on said support for movement into and out of engagement with said fixed contact, and a detector connected with said movable contact and capable of longitudinal and lateral movement upon engaging the ground and comprising an upright coil spring connected at its upper end with said movable contact, a pliable sheath surrounding said spring and having its upper end connected with the upper end of the same, and a shoe connecting the lower ends of said spring and sheath and adapted to engage the ground.

1,638,984. RADIAL AVERAGING PLANIMETER. ARTHUR B. CUNNINGHAM, Chicago, Ill. Filed Aug. 22, 1925. Serial No. 51,735. 17 Claims. (Cl. 32—122.)



1. A measuring instrument having a movable member, an indicator, and a motion changing connection between said movable member and indicator for producing a movement ratio between said member and indicator, said motion changing connection having a motion ratio equal to the reciprocatal of two pi.

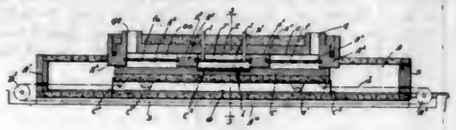
1,638,985. FLOOR-LAYING DEVICE. WILLIE C. DANIEL, Louisa, Va. Filed Apr. 6, 1926. Serial No. 100,185. 4 Claims. (Cl. 254—16.)



1. A device for laying flooring and sheeting comprising a frame including a pair of spaced side plates, off set guide pieces carried by the forward ends of the plate, guideways supported by said guide pieces extending flush with the inner faces of the side plates, a shoe slidably mounted within said guide-ways, a transversely extending connecting bar, means rockably connecting the ends of the connecting bar with the guide pieces for permitting swinging movement of the side plates toward and away from one another, means carried by the side plates for actuating the shoe, and means mounted upon the plates for moving the same toward and away from one another into and out of gripping contact with the joist.

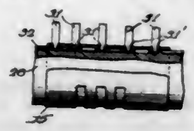
1,638,986. DIAGNOSTIC INSTRUMENT. HENRY L. DE ZENG, Geneva, N. Y., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Mar. 5, 1925. Serial No. 13,235. 2 Claims. (Cl. 128—11.)

1. In a device of the character described, a handle, a head on the handle having an offset arm with a longitudinal slideway thereon, a lamp adjacent the end of the arm, a slide having a condensing lens over the lamp, a resilient sheet stock blade adapted to fit in the slideway on the arm and having a displacement transverse to the slideway, and a mirror adjacent the other end of the blade, the said displacement of the blade being adapted to increase the resilient friction of the blade in the slideway and said lens slide being adapted to be moved with respect to the lamp to focus the light on the mirror.



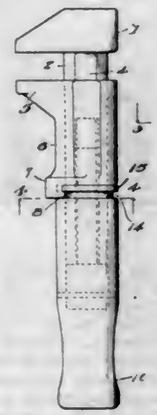
1,638,987. FOLLOWER BLOCK FOR FILING DRAWERS. LYSANDER H. DODGE, Huntington Beach, Calif. Filed July 30, 1925. Serial No. 46,976. 6 Claims. (Cl. 129—30.)

1. In a device of the character described, a block adapted to extend across a file compartment, a pair of gripping arms adapted to extend beyond opposite edges of the block and mounted thereon for pivotal movement about axes which are substantially parallel with the block, springs applied to the arms and adapted to swing them pivotally in opposite directions, and adjustable means acting between said arms and block adapted to limit the extent of pivotal movement of said arms in said directions.



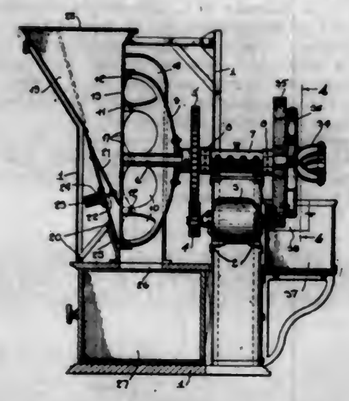
5. A follower block for a filing drawer, embodying a pair of telescopically arranged plates, in and extending transversely of the drawer, releasable means for holding the plates in adjusted telescopic relation, and means on the plates adapted to engage the side walls of the drawer releasably for holding the follower in predetermined position within the drawer.

1,638,988. RECIPROCATING CAR KILN. PHILIP D'HUC DRESSLER, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed Sept. 14, 1925. Serial No. 56,117. 5 Claims. (Cl. 25—142.)



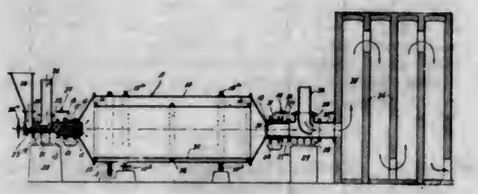
1. In a kiln the combination with a kiln chamber having two spaced apart ports for the inlet and egress of ware, of a ware support movable back and forth in said kiln chamber to permit wares loaded on said support through either port to be removed through the other port.

1,638,989. RIBBON SPOOL. JOSEPH S. DUNCAN and HENRY B. HUBBARD, Chicago, Ill., assignors to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1925. Serial No. 52,503. 8 Claims. (Cl. 242—10.)



5. A ribbon spool formed from a blank of sheet metal having its side margins overlapped, there being openings punched in the under margin and the metal struck up thereby forming prongs, a ribbon received between said margins and held by said prongs, and punch pricks securing the margins and interposed ribbon together.

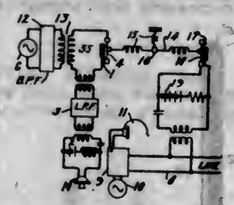
1,638,990. WRENCH. JOHN M. ELLIOTT, Rimini, S. C. Filed May 3, 1926. Serial No. 106,330. 2 Claims. (Cl. 81—170.)



1. The combination with a sliding jaw, an integral stem having a threaded socket, and a non-rotatable guide sleeve on the stem having a fixed jaw, of a tubular handle rotatable on the stem, a screw bar within the handle having a head fixed thereto and operable in the threaded socket, and coupling means between the tubular handle and sleeve.

1,638,991. HOUSEHOLD FOOD CUTTER. SECONDO FREILINO, Leechburg, Pa. Filed Feb. 19, 1926. Serial No. 89,374. 2 Claims. (Cl. 146—115.)

1. In a machine of the character described, the combination of a drive shaft, means for driving said shaft, a dish-shaped support mounted on said shaft adjacent the end thereof, said dish-shaped support having a plurality of openings in the periphery thereof, pins extending outwardly from said support, a cutting disk having a flange formed on the periphery thereof, said flange having a plurality of notches formed therein to receive the pins formed on the support for detachably connecting said disk to said support, said cutting disk having cutting surfaces thereon, the center of said cutting disk abutting against and being pressed by the end of said drive shaft, and a feed hopper for feeding articles to be cut to said cutting disk.



1,638,992. SULPHUR BURNER. LOWRY GILLETT, Syosset, N. Y., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 28, 1925. Serial No. 19,013. 13 Claims. (Cl. 23—279.)

1. In a sulphur burner, a casing adapted to contain a quantity of molten sulphur and a drum mounted within said casing and in free communication therewith, both said casing and said drum being mounted for rotation about horizontal axes to carry a broad film of said molten sulphur upon their surfaces during such rotation.

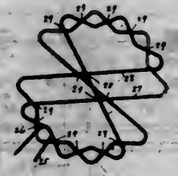
1,638,993. MODULATION SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 22, 1925. Serial No. 24,941. 8 Claims. (Cl. 179—171.)

1. A modulating system comprising a source of waves of signal frequency, a source of waves of carrier frequency, a condenser having a movable and a stationary plate, means for impressing an electric charge corresponding to said wave of signal frequency upon said condenser, means for causing said movable plate to vibrate in accordance with said waves of carrier frequency whereby a charge is produced on said condenser varying at side band frequencies, and means for utilizing said

charge of side band frequencies comprising an electric circuit and a band pass filter adapted to pass said frequencies.

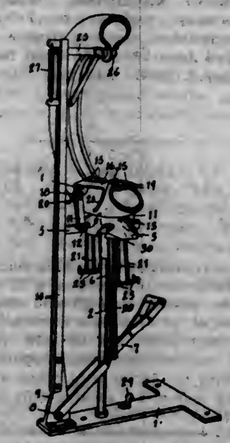
1,638,994. FIRECRACKER. THOMAS G. HITT, Seattle, Wash. Filed Dec. 8, 1925. Serial No. 74,066. 2 Claims. (Cl. 102—22.)

1. A firecracker having a truncated tubular tapered body portion of substantially uniform thickness throughout its length, a charge of explosive matter securely wedged within the tapered body portion at a point between its ends.



1,638,995. DRY-CELL ELECTRODE. HOWARD DOUGLAS HODGE, New York, N. Y., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Mar. 24, 1925. Serial No. 17,858. 3 Claims. (Cl. 136—126.)

1. The method of trimming dry-cell cups which consists in pinching off the excess metal simultaneously with the last re-draw; substantially as described.

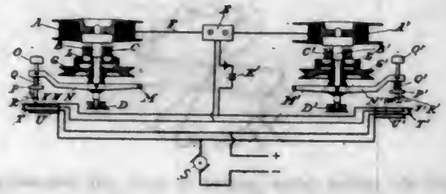


1,638,996. AIR CORE TRANSFORMER. EDWARD E. HOLMAN, Portland, Oreg. Filed May 27, 1925. Serial No. 33,129. 1 Claim. (Cl. 175—359.)

An air core transformer consisting of a plurality of superimposed interwoven coils each of which is substantially in the form of a figure 8 whose outer portions are in alternate wave form and whose inner portions are straight, said coils having the halves thereof wound in opposite directions, the alternate coils having one of their inner portions out of alignment with a corresponding portion in the next adjacent coil but parallel thereto,

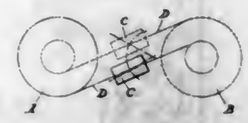
and the second inner portion of each coil intersecting the corresponding portion of the next coil at a small angle; and means for holding said coils in rigid relation to each other.

1,638,997. TIRE SPREADER. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed Sept. 13, 1926. Serial No. 135,272. 13 Claims. (Cl. 154—9.)



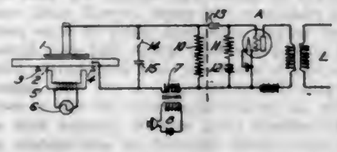
1. In a structure of the class described, the combination of a standard, a crosshead slidable on said standard, a downwardly curved work holder removably mounted on said standard above said crosshead, tire engaging hooks adapted to engage the bead of a tire resting upon said work support and provided with downwardly projecting arms adapted to engage and support the sides of a tire in spaced relation to the beads thereof, links connecting said hooks to said crosshead, pairs of arms pivoted on the under side of said work holder, said work holder being slotted to receive said arms, said arms having hooks slidably mounted thereon to engage a tire when opened upon said holder, an upright disposed at the side of said standard, said crosshead being slidably engaged with said upright, an arm slidably mounted on said upright and provided with a tire supporting roller overhanging said standard, a spring yieldingly supporting said arm, and means for actuating said crosshead.

1,638,998. CONTROLLING DEVICE FOR ELECTRO-MAGNETIC TALKING MACHINES. WILLY HORNAUER, Neukolln, Germany, assignor to Telegraphie-Gesellschaft mit beschränkter Haftung System Stille, Berlin, Germany. Filed June 20, 1925, Serial No. 38,556, and in Germany July 3, 1924. 2 Claims. (Cl. 179—100.2.)



1. An electro-magnetic talking-machine of the character described, comprising a magnet system, an electric circuit for said system, a record wire cooperating with said

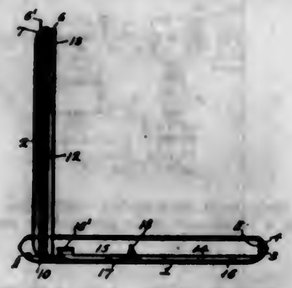
magnet system, spools carrying said wire, rotatable spindles carrying the spools, a driving mechanism for said spindles including a motor, clutch members whereby said spindles are normally coupled to the driving mechanism,



clutch-controlling members, and means whereby either of said clutch controlling members, when actuated for releasing a spindle, causes the magnet circuit to be closed and the motor to be started.

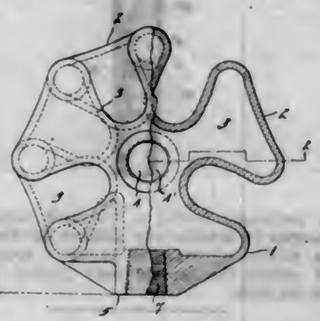
1,638,999. MAGNET CARRIER FOR ELECTROMAGNETIC TALKING MACHINES. WILLY HORNAUER, Neukolln, Germany, assignor to Telegraphie-Gesellschaft mit beschränkter Haftung System Stille, Berlin, Germany. Filed June 20, 1925, Serial No. 38,558, and in Germany July 3, 1924. 2 Claims. (Cl. 179—100.2.)

1. In an electro-magnetic talking-machine of the character described, the combination with a magnet box and a record wire passing through said magnet box from one spool to another, of a traverse mechanism, and means for supporting the magnet box on said traverse mechanism so that it can turn about its supporting point and shift together with the latter in a plane at right angles to the traversing movement, substantially as and for the purpose set forth.



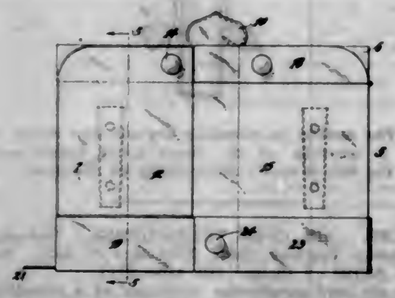
1,639,000. WAVE MODULATION. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1924. Serial No. 684,305. 7 Claims. (Cl. 179—171.)

3. In a transmitting system, a circuit, a source of signal voltage variations therein, a condenser in series with said source, and means for varying the capacity of said condenser at the carrier wave frequency to produce a signal-modulated wave.



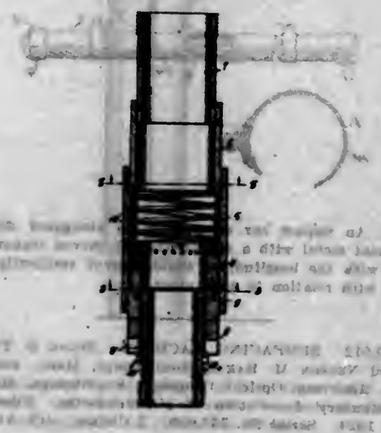
1,639,001. VANITY BOX. JOHN L. MCATEER, New York, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 16, 1926. Serial No. 81,650. 6 Claims. (Cl. 132—83.)

1. In a case of the character described, the combination of a rectangular body having a side wall the upper edges of which are turned in to form a continuous peripheral top flange or rim, a rectangular cover having a depending flange and arranged when closed to fit the



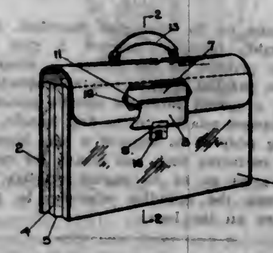
space within the rim, and a pivot uniting the parts frictionally held by the rim and flange so as to be invisible when the box is closed.

1,639,002. WATER-HEATER UNIT. LOUIS R. MENDELSON, Cleveland, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 22, 1926. Serial No. 137,045. 4 Claims. (Cl. 122—20.)



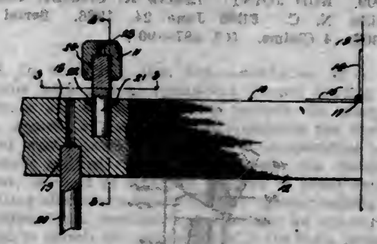
1. A heating unit comprising a pair of hollow spiders, the outer ends of the members of each of said spiders broadened and overlapping those of the other spider, adjacent members, one of each spider, provided with openings in a common face, each remaining member of each spider communicating with two members of the other spider.

1,639,003. VANITY CASE FOR AUTOMOBILES. NINA BRODRICK PRICE, New York, N. Y. Filed Sept. 9, 1926. Serial No. 134,520. 3 Claims. (Cl. 206—1.)



1. A vanity case formed with a shallow rear transverse compartment of the full depth and width of the case, a forwardly opening upper front compartment on one side, an upwardly opening upper front compartment on the other side, an end opening lower compartment on one side and a front opening lower compartment on the other side.

1,639,004. TUBING BLEEDER. LOUIS HARRY RILEY and CLARENCE OSCAR WOOD, Fellows, Calif. Filed June 23, 1925. Serial No. 39,148. 4 Claims. (Cl. 103—221.)

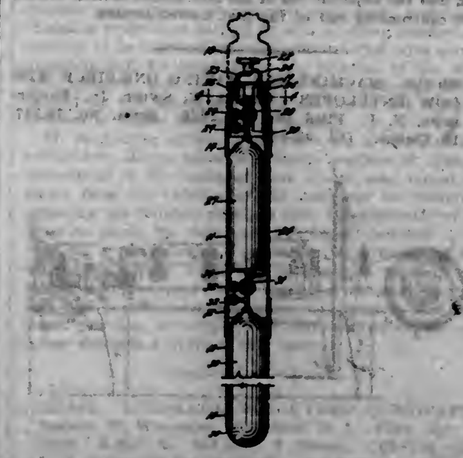


1. A tubing bleeder comprising in combination a main tube section, an auxiliary section secured to the main tube section and adapted to connect the same with a well tubing, a sleeve secured to the lower end of the main tube section having a beveled edge, a valve member mounted on the sleeve movable within the main tube section, a connecting member extending in spaced relation within the sleeve member and secured to the valve member, a spring member positioned between the valve member, the auxiliary section adapted to normally retain valve member firmly seated on the sleeve, the said sleeve being provided with angular slots engageable with lugs provided on the valve connecting member so as to permit elevation of the valve and raise the tube with the valve in its raised position.

1,639,005. BAGLIKE RECEPTACLE. MAX G. SCHEUER, New York, N. Y. Filed Jan. 8, 1927. Serial No. 159,791. 2 Claims. (Cl. 150—1.6.)

1. A bag comprising front and rear sides, intermediate collapsible body and end portions and a covering flap extending from the rear side over the top and downwardly along the front side of the bag, said covering flap being provided with an opening and said front side having secured to it a holding flap adapted to be introduced into and extend through said opening and over the front side of the bag, and releasable interengaging members on the holding flap and front side of the bag for temporarily securing the two together.

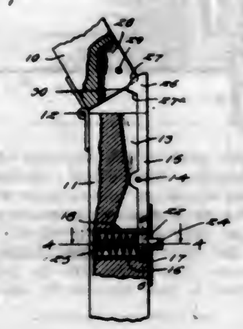
1,639,006. POULTRY ROOST. CLARENCE SCHWAN, Oklahoma City, Okla. Filed July 1, 1926. Serial No. 119,969. 5 Claims. (Cl. 119—25.)



1. A poultry roost of the character described, comprising a supporting arm having a recess in its upper face, a vertical supporting pin received within said arm and surrounded by said recess, a roosting bar provided with a vertical bore designed to receive in the lower part thereof the upper end of said supporting pin, and means to permit a fluid placed in the upper portion of said vertical bore to pass downwardly about said pin.

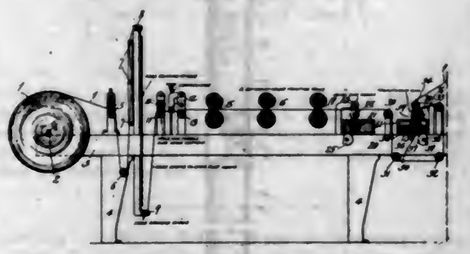
1,639,007. PROCESS OF BUILDING UP SELF-BAKING ELECTRODES. MATHIAS OVROM SEM, Oslo, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri of Norway, Oslo, Norway. Filed Sept. 26, 1925, Serial No. 58,650, and in Norway Oct. 4, 1924. 7 Claims. (Cl. 204—64.)

1. The process of building up selfbaking electrodes which comprises preparing electrode sections of raw electrode mass outside the furnace in which they are to be employed, and connecting said sections to the non-working ends of partly used electrodes.



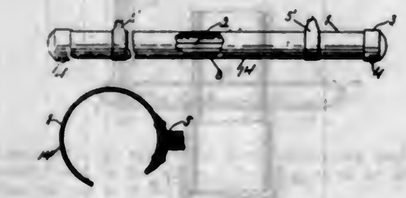
1,639,008. PORTABLE SELF-CONTAINED OIL-WELL HEATER. RICHARD S. SHANNON and PHILIP F. SHANNON, Denver, Colo. Filed Apr. 19, 1926. Serial No. 103,101. 8 Claims. (Cl. 166—17.)

1. An oil well heating device comprising a base tube; a body tube; a radiating tube; an air tank in said base tube; a gas tank in said body tube; a burner arranged



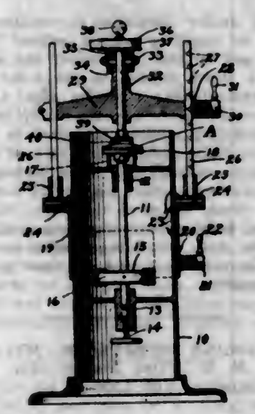
adjacent the lower extremity of said radiating tube and adapted to receive its fuel from said gas tank; and a burner support adapted to support said burner and close said radiating tube from said base tube; said burner support having openings in its sides, said openings being closed by the wall of said radiating tube.

1,639,009. ROD JOINT. LESLIE K. SINGLEY, Hendersonville, N. C. Filed June 24, 1926. Serial No. 118,307. 4 Claims. (Cl. 287—99.)



1. A rod joint comprising two rod sections having abutting ends connected at one side by a hinge, locking means at the opposite side, said locking means comprising a pivoted lever extending longitudinally of one of the sections and having one end thereof projected beyond the end of the section and provided with a head, the other of the sections having a pin, said head having a cam face for engagement by the pin as the sections are moved into aligned relation to thereby shift the head to one side and permit passage of the pin, the head having an inclined shoulder engaging the pin when the ends of the sections are in abutting relation and a spring engaging the opposite end of the lever and urging the head toward the pin whereby said inclined shoulder tends to cam the pin and the adjacent end of the last named section toward the confronting end of the first named section.

1,639,010. MACHINE FOR MAKING ONE-PIECE WINDOW ENVELOPES. GEORGE W. SWIFT, JR., Bordentown, N. J. Filed Dec. 14, 1925. Serial No. 75,317. 18 Claims. (Cl. 93—63.)



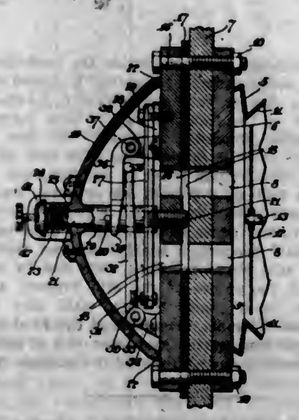
1. In a machine for making one-piece window envelopes, the combination of means for continuously advancing a web of envelope material, means for imprinting spaced patches of transparentizing material upon the running web, and means for forming envelopes from said web, with a drying and curing oven having an envelope conveyor passing through it.

1,639,011. IMPACT BAR FOR AUTOMOBILE BUMPERS. HUSTON TAYLOR, Detroit, Mich. Filed Jan. 31, 1927. Serial No. 164,815. 11 Claims. (Cl. 293—55.)

11. An impact bar comprising an elongated sheet of resilient metal with a section thereof curved transversely and with the longitudinal edges thereof resiliently movable with relation to each other.

1,639,012. SURFACING MACHINE. EDGAR D. TILLYER and NELSON M. BAKER, Southbridge, Mass., assignors to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 3, 1924. Serial No. 753,650. 2 Claims. (Cl. 51—55.)

1. In a device of the character described, a frame, a sleeve adjustably mounted thereon, a pair of spaced parallel arms pivoted to the sleeve, a crossbar firmly connecting the parallel arms, a rotatable spindle mounted in the frame, a second rotatable spindle mounted in the crossbar in opposed relation to the first spindle, one of the spindles being adapted to support a lens block, and the other a lens surfacing tool, and means for reciprocating the parallel arms so as to impart relative oscillatory motion between the spindles whereby to generate a spherical curve on the lens.



1,639,013. LOADING GUN. KINNEY TJOSSEM, Paullina, Iowa. Filed Oct. 25, 1926. Serial No. 143,048. 8 Claims. (Cl. 221—47.5.)

1. In a loading gun, a barrel, an axially mounted threaded rod therein, a piston threaded upon said rod and slidably but non-rotatably mounted in said barrel, and a screw secured to the rod between the piston and the mouth of the barrel, said screw having a greater pitch than that of the threads upon the rod, said rod at a point remote from the screw, having a reduced neck

to be received by the piston at the upper limit of its movement and to allow the screw to continue rotation after movement of the piston has stopped.

1,639,014. MEANS FOR SUPPLYING HEATED AIR TO COMBUSTION CHAMBERS. GERRIT VAN DAAM, Buffalo, N. Y. Filed Jan. 15, 1925. Serial No. 2,594. 4 Claims. (Cl. 110—175.)

1. In combination with a combustion chamber provided with an inlet port in the wall thereof, a chambered body supported within the combustion chamber and in communication with said inlet and provided with a discharge to the combustion space, a post extending from the outer surface of the combustion chamber wall, a bell-shaped member provided with a central sleeve movably mounted on said post and having a periphery adapted to engage said outer surface and to surround said inlet port, and a thermostat mounted upon said outer surface for moving the bell away from said outer surface.

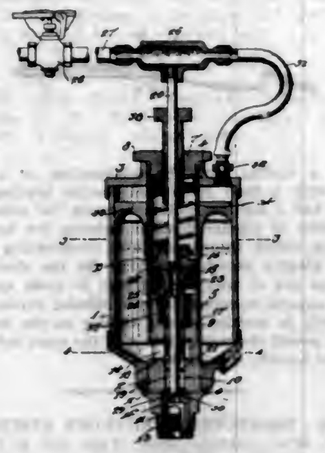
1,639,015. CURLING IRON. AUGUSTUS C. VELTEN, Traverse City, Mich. Filed Dec. 18, 1925. Serial No. 76,222. 3 Claims. (Cl. 219—24.)

1. In a curling iron the combination of a suitable handle with a fixed cylindrical electric heating element thereon and a hub connection between the same, a curling element of tubular form to embrace the heating element and rotate thereon, with a co-operating clamping element pivoted thereto, a spring for the clamping element, one end of which is adapted to press against the heating element to retain the said tubular curling element frictionally in position, and a twirler on the curling element to permit the manipulation of the same independently of the handle, as specified.

1,639,016. PROTECTED CARD-INDEX SYSTEM. RODNEY J. WOOD, Dayton, Ohio. Filed Oct. 6, 1919. Serial No. 328,879. 49 Claims. (Cl. 129—16.)

1. In a filing device, a container for a series of data sheets resting upon their edges, a perforated cover for the container through which access may be had for manually oscillating the sheets but preventing the removal or disarrangement of the sheets.

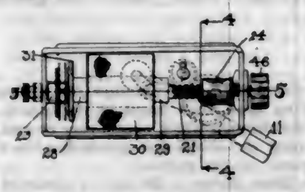
33. In a filing device, a file box, a series of relatively movable file members therein, a reciprocatory selective member also capable of revoluble movement, a series of engaging projections carried by said selective member and adapted to be adjusted into engaging relation with certain predetermined file members by the rotation of the selective member, said file members being adapted to be shifted by the subsequent reciprocation of the selective member to expose the selected member.



37. In a filing device, a container for a series of separable data sheets, movable follower members at opposite extremities of the series of data sheets, and means operable from the exterior of the container for relatively adjusting the follower members each independently of the other to clamp the data sheets in closed relation.

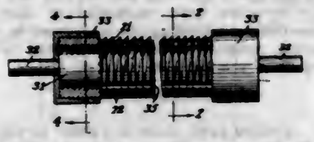
43. In a filing device, a container for a series of separable data sheets, a movable side section for said container, and swinging links connected to said movable side, and partially controlling its movement to and from closed position, whereby access may be had to the container through a vertical side thereof.

1,639,017. AUTOMATIC FORCE-FEED LUBRICATOR. JOSEPH W. WOODRUFF, Elizabeth, N. J. Filed Apr. 21, 1926. Serial No. 103,487. 7 Claims. (Cl. 184—39.)



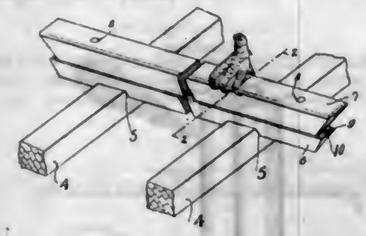
1. A device of the character described, comprising a reservoir for lubricant, an auxiliary discharge chamber communicating with said reservoir and having an outlet,

means for forcing lubricant from said reservoir into said discharge chamber, and a reciprocating valved ejector piston to force lubricant from said discharge chamber



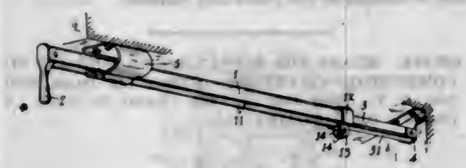
through said outlet, said ejector piston also serving to control said outlet and the movement of lubricant from said reservoir into said discharge chamber.

1,639,018. WINDSHIELD CLEANER. RALPH G. AREY, Worcester, Mass., assignor to Worcester Bilt-Rite Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 3, 1923. Serial No. 678,244. 3 Claims. (Cl. 172—36.)



1. In a device of the class described, a rotatable armature having windings and polar extremities, a nonpolarized stationary yoke of magnetic material disposed around said armature, a cam member carried by said armature, a stationary contact member, a movable contact member, and a second cam member adapted to operate said movable contact member upon being engaged by said first cam member.

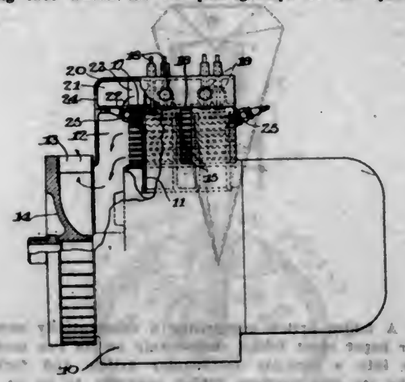
1,639,019. MANDREL. FRANK AUTY, New York, N. Y. Original application filed Mar. 5, 1924. Serial No. 697,063. Divided and this application filed July 25, 1924. Serial No. 728,072. 9 Claims. (Cl. 140—92.2.)



1. A mandrel for use in winding toroidal coils, said mandrel having a notch formation of maximum depth along one element thereof decreasing peripherally about the mandrel progressively to a minimum at the diametrically opposite element.

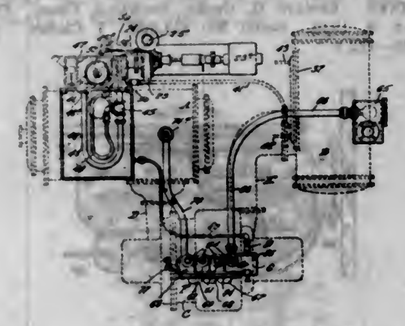
1,639,020. POULTRY PERCH. PETER BAAR, Zeeland, Mich. Filed Aug. 4, 1924. Serial No. 729,867. 2 Claims. (Cl. 119—25.)

1. A poultry perch structure comprising supporting bars having aligned V notches, a strip of triangular cross-section seating in said notches along one of its edges and having a flat side up, said flat side being depressed to form a trough for containing vermicide, a perch bar of generally V-shaped cross-section mounted on said strip to be entirely within said trough, the inclined sides of said perch bar overhanging said trough to be in the path of fumes arising from the vermicide in said trough.



1,639,021. GARMENT CARRIER. CARL T. BATTS, Grand Rapids, Mich. Filed Sept. 24, 1925. Serial No. 58,266. 7 Claims. (Cl. 211—15.)

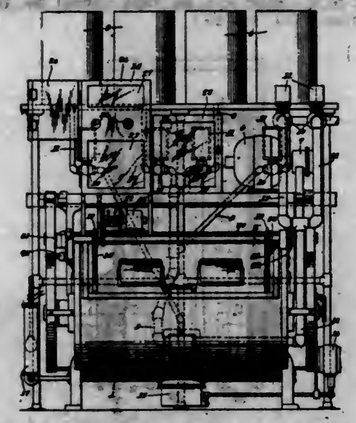
1. In an extension garment carrier the combination of an extensible slide member of inverted U-shaped channel form with the flanges extended inwardly at the under side, a handle at the front thereof, a fixed support for the said member comprising a channel bar open on its upper side and grooved to telescope with said slide and its flanges, an anti-friction roller at the front end thereof on which the said slide travels, an external bracket at the rear of said slide extending downwardly into ears, and an anti-friction roller on a pintle between said ears beneath the said support, a bracket secured within the inner end of said channel shaped slide and in ears depending within the groove of the said support, an anti-friction roller on a pintle between said ears secured thereto, a bracket for the inner end of the fixed support, and a G-shaped bracket for the outer end of said fixed support, all coacting as described for the purpose specified.



1,639,022. AIR-COOLED ENGINE. ANTON FRANK BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Oct. 19, 1922. Serial No. 595,647. 5 Claims. (Cl. 123—171.)

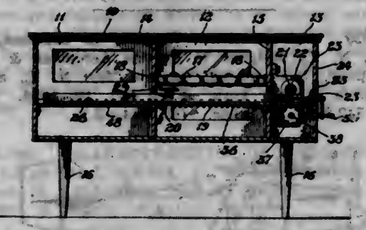
2. In an air cooled engine, a vertical cylinder casting, an integral casing forming a horizontal air conduit across which the cylinder extends, horizontal heat conducting partitions extending across the air conduit and integral with the cylinder and casing and subdividing the air conduit into numerous similar air passageways each containing a portion of the cylinder wall, a removable cylinder head on the cylinder, a casing integral therewith forming a horizontal air conduit across the top of the cylinder head, vertical heat-conducting partitions extending across the air conduit and integral with the cylinder head and the casing and subdividing the air conduit into numerous similar air passageways, intake and exhaust manifolds for the cylinder head crossing the said air passageways, a chamber in the cylinder casing into which the air passageways of the cylinder

casing discharge, a chamber in the cylinder head casing into which the air passageways of the cylinder head casing discharge, there being communicating openings connecting the two chambers, and a blower fan communicating with an opening in the cylinder casing chamber.



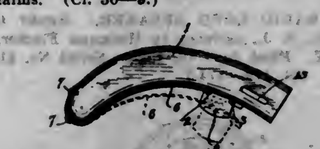
1,639,023. REFRIGERATING SYSTEM. WILLIS H. CARRIER, Essex Fells, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Aug. 7, 1923. Serial No. 656,152. 27 Claims. (Cl. 62—115.)

14. In a refrigerating system, the combination with an evaporator for a volatile liquid refrigerant, a compressor for the vaporized refrigerant, and a condenser for the compressed vapor, of a rectifier to which successive portions of the refrigerant liquid are diverted during the operation of the system, means whereby the heat from the refrigerating medium at a higher temperature than said liquid is utilized for vaporizing the refrigerant in the rectifier to separate impurities therefrom, and means for returning the vapor from the rectifier to the system.



1,639,024. AUTOMATIC WASHING MACHINE. EMIL J. CARROLL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 12, 1922. Serial No. 528,696. 3 Claims. (Cl. 68—18.)

1. An automatic washing machine provided with a door through which the material is introduced to and withdrawn from the machine and with operating means adapted to cause said machine to perform a cycle of

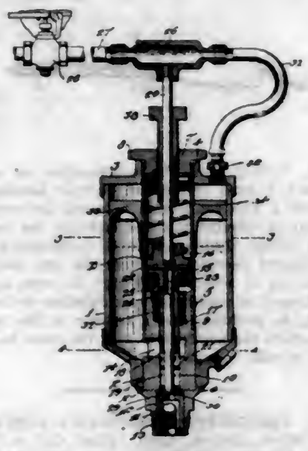


washing steps, and means controlled by closing movement of said door for causing said operating means to produce said cycle.

1,639,025. INCUBATOR. ALBERT HORACE DENAULT, Sault Ste. Marie, Ontario, Canada. Filed Jan. 4, 1926. Serial No. 79,250. 4 Claims. (Cl. 119—44.)

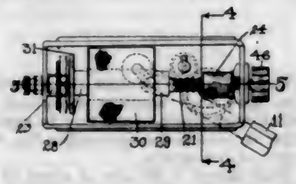
1. In an incubator of the character described and in combination, an egg rack, a slidably mounted shaft beneath the rack, a plate movable in said shaft, a slantwise recess in said plate, an egg-turning member movably mounted in said recess and normally retained in lowered position therein, means for operating the slidable plate whereby on the latter being horizontally moved the egg-turning member engages with the slantwise recess to travel upwardly to contact with the eggs.

1,639,026. STRING-MAKER'S PEG. HARRY L. DIEHL, Chicago, Ill. Filed Sept. 7, 1926. Serial No. 133,748 5 Claims. (Cl. 30—9.)



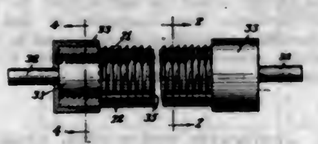
1. A string-maker's peg comprising an arcuate member, a movable branch attached to said arcuate member, and a slitting element carried by said branch.

1,639,027. ANTISCALE MATERIAL FOR BOILERS. ALFRED G. DOE, Quincy, Mass., assignor to American Boiler Life Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 27, 1921. Serial No. 465,018. 2 Claims. (Cl. 87—27.)



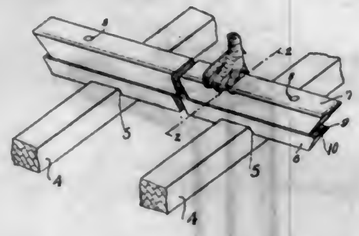
1. An anti-scale material for boilers composed of phosphate rock floats.

means for forcing lubricant from said reservoir into said discharge chamber, and a reciprocating valved ejector piston to force lubricant from said discharge chamber



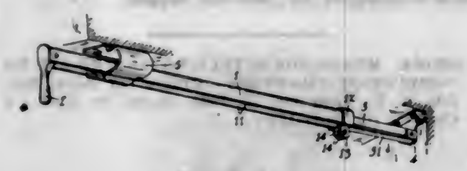
through said outlet, said ejector piston also serving to control said outlet and the movement of lubricant from said reservoir into said discharge chamber.

1,639,018. WINDSHIELD CLEANER. RALPH G. AREY, Worcester, Mass., assignor to Worcester Bilt-Rite Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 3, 1923. Serial No. 678,244. 3 Claims. (Cl. 172—36.)



1. In a device of the class described, a rotatable armature having windings and polar extremities, a nonpolarized stationary yoke of magnetic material disposed around said armature, a cam member carried by said armature, a stationary contact member, a movable contact member, and a second cam member adapted to operate said movable contact member upon being engaged by said first cam member.

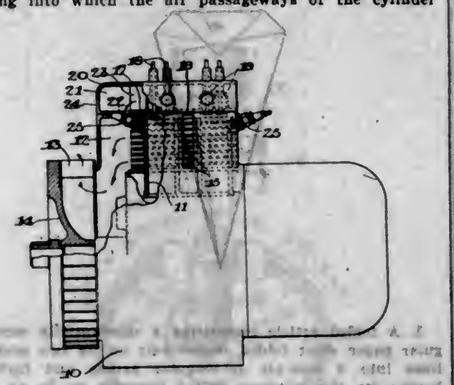
1,639,019. MANDREL. FRANK AUTY, New York, N. Y. Original application filed Mar. 5, 1924, Serial No. 697,063. Divided and this application filed July 25, 1924. Serial No. 728,072. 9 Claims. (Cl. 140—92.2.)



1. A mandrel for use in winding toroidal coils, said mandrel having a notch formation of maximum depth along one element thereof decreasing peripherally about the mandrel progressively to a minimum at the diametrically opposite element.

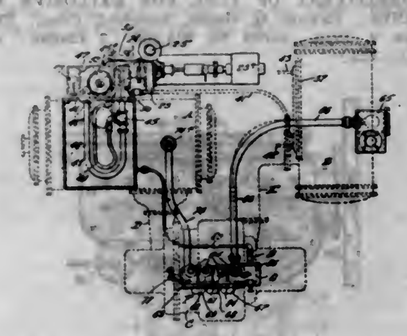
1,639,020. POULTRY PERCH. PETER BAAR, Zeeland, Mich. Filed Aug. 4, 1924. Serial No. 729,867. 2 Claims. (Cl. 119—25.)

1. A poultry perch structure comprising supporting bars having aligned V notches, a strip of triangular cross-section seating in said notches along one of its edges and having a flat side up, said flat side being depressed to form a trough for containing vermicide, a perch bar of generally V-shaped cross-section mounted on said strip to be entirely within said trough, the inclined sides of said perch bar overhanging said trough to be in the path of fumes arising from the vermicide in said trough.



1,639,021. GARMENT CARRIER. CARL T. BATTS, Grand Rapids, Mich. Filed Sept. 24, 1925. Serial No. 58,266. 7 Claims. (Cl. 211—15.)

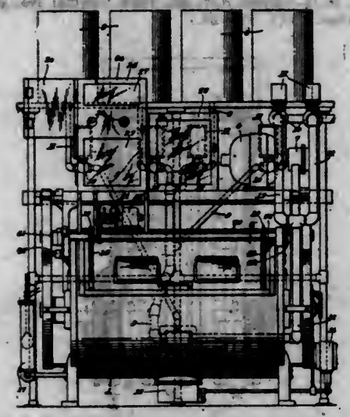
1. In an extension garment carrier the combination of an extensible slide member of inverted U-shaped channel form with the flanges extended inwardly at the under side, a handle at the front thereof, a fixed support for the said member comprising a channel bar open on its upper side and grooved to telescope with said slide and its flanges, an anti-friction roller at the front end thereof on which the said slide travels, an external bracket at the rear of said slide extending downwardly into ears, and an anti-friction roller on a pintle between said ears beneath the said support, a bracket secured within the inner end of said channel shaped slide and in ears depending within the groove of the said support, an anti-friction roller on a pintle between said ears secured thereto, a bracket for the inner end of the fixed support, and a G-shaped bracket for the outer end of said fixed support, all coacting as described for the purpose specified.



1,639,022. AIR-COOLED ENGINE. ANTON FRANK BROTZ, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed Oct. 19, 1922. Serial No. 595,647. 5 Claims. (Cl. 123—171.)

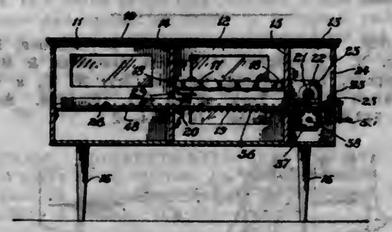
2. In an air cooled engine, a vertical cylinder casting, an integral casing forming a horizontal air conduit across which the cylinder extends, horizontal heat conducting partitions extending across the air conduit and integral with the cylinder and casing and subdividing the air conduit into numerous similar air passageways each containing a portion of the cylinder wall, a removable cylinder head on the cylinder, a casing integral therewith forming a horizontal air conduit across the top of the cylinder head, vertical heat-conducting partitions extending across the air conduit and integral with the cylinder head and the casing and subdividing the air conduit into numerous similar air passageways, intake and exhaust manifolds for the cylinder head crossing the said air passageways, a chamber in the cylinder casing into which the air passageways of the cylinder

casing discharge, a chamber in the cylinder head casing into which the air passageways of the cylinder head casing discharge, there being communicating openings connecting the two chambers, and a blower fan communicating with an opening in the cylinder casing chamber.



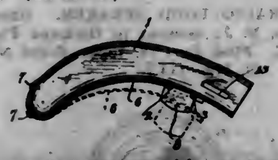
1,639,023. REFRIGERATING SYSTEM. WILLIS H. CARRIER, Essex Fells, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Aug. 7, 1923. Serial No. 656,152. 27 Claims. (Cl. 62—115.)

14. In a refrigerating system, the combination with an evaporator for a volatile liquid refrigerant, a compressor for the vaporized refrigerant, and a condenser for the compressed vapor, of a rectifier to which successive portions of the refrigerant liquid are diverted during the operation of the system, means whereby the heat from the refrigerating medium at a higher temperature than said liquid is utilized for vaporizing the refrigerant in the rectifier to separate impurities therefrom, and means for returning the vapor from the rectifier to the system.



1,639,024. AUTOMATIC WASHING MACHINE. EMIL J. CARROLL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 12, 1922. Serial No. 528,896. 3 Claims. (Cl. 68—18.)

1. An automatic washing machine provided with a door through which the material is introduced to and withdrawn from the machine and with operating means adapted to cause said machine to perform a cycle of

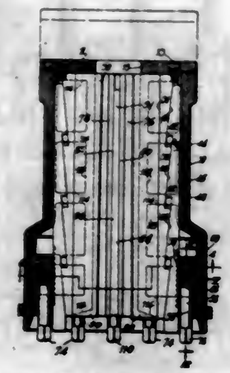


washing steps, and means controlled by closing movement of said door for causing said operating means to produce said cycle.

1,639,025. INCUBATOR. ALBERT HORACE DENAULT, Sault Ste. Marie, Ontario, Canada. Filed Jan. 4, 1926. Serial No. 79,250. 4 Claims. (Cl. 119—44.)

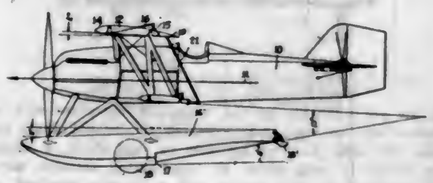
1. In an incubator of the character described and in combination, an egg rack, a slidably mounted shaft beneath the rack, a plate movable in said shaft, a slantwise recess in said plate, an egg-turning member movably mounted in said recess and normally retained in lowered position therein, means for operating the slidable plate whereby on the latter being horizontally moved the egg-turning member engages with the slantwise recess to travel upwardly to contact with the eggs.

1,639,026. STRING-MAKER'S PEG. HARRY L. DIEHL, Chicago, Ill. Filed Sept. 7, 1926. Serial No. 133,748. 5 Claims. (Cl. 30—9.)



1. A string-maker's peg comprising an arcuate member, a movable branch attached to said arcuate member, and a slitting element carried by said branch.

1,639,027. ANTISCALE MATERIAL FOR BOILERS. ALFRED G. DOE, Quincy, Mass., assignor to American Boiler Life Company, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 27, 1921. Serial No. 465,918. 2 Claims. (Cl. 87—27.)



1. An anti-scale material for boilers composed of phosphate rock fleats.

1639,028. CUTTER HEAD. JAMES A. EDEN, Jr., Springfield, Mass., assignor to Walter H. Foster, New York, N. Y. Filed Apr. 25, 1924. Serial No. 708,840. 9 Claims. (Cl. 82—20.)

1. A cutter-head including a plurality of integral skeletonized segments, cutter-blades and guides arranged in pairs seated against said segments and means for exerting a pressure in a direction substantially normal to said blades and guides for securely clamping them against said segments whereby each pair can be secured in position independently because of the integrality of said segments.

1,639,029. AEROPLANE. WILLIAM L. GILMORE, Mineola, N. Y., assignor to Curtiss Aeroplane & Motor Company, Incorporated, Garden City, N. Y., a Corporation of New York. Filed Oct. 10, 1924. Serial No. 742,823. 6 Claims. (Cl. 244—2.)

1. An aeroplane adapted to land, water and air operation, characterized by the fact that the supporting surface and the float are both permanently set, the former at a positive angle and the latter at a negative angle to the line of thrust whereby, in effecting a slow speed landing, a high lift angle may be accorded the wing.

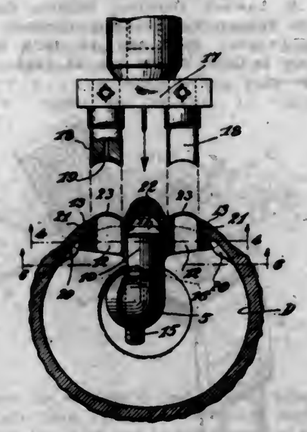
1,639,030. RADIO LOUD SPEAKER. HENRY GREEN, Union Hill, N. J., assignor to Hermann Fischer, New York, N. Y. Filed June 18, 1926. Serial No. 116,957. 5 Claims. (Cl. 179—114.)

1. In a radio loud speaker, an induction spool, a magnet, a vibratory plate supported for vibration by said magnet, a diaphragm, a tongue extending transversely of the diaphragm and connected therewith and a rigid connection between said tongue and the vibratory plate.

1,639,031. FOLDED PAPER NAPKIN. AARON GROFF, St. Paul, Minn. Filed Dec. 21, 1925. Serial No. 76,677. 3 Claims. (Cl. 206—57.)

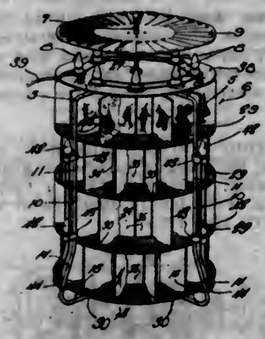
1. A folded article comprising a substantially rectangular paper sheet folded successively on its two median lines into a four-ply rectangular article and further having its side portions folded inwardly to lie at opposite sides of its central portion along lines extending substantially from one folded corner to intermediate points on the sides forming the opposite corner, thus producing an article having a point at the free edges of said plies, said article having the said point folded over on a line, normal to the median line thereof, and disposed between the point occupied by the tip of said point before said point was folded over and the line joining said intermediate points.

1,639,032. TEMPERATURE CONTROL OF THE AIR CONSTITUENT OF FUEL FOR EXPLOSIVE ENGINES. EDWARD H. GROSS, Stamford, Conn. Filed Jan. 9, 1923. Serial No. 611,565. 7 Claims. (Cl. 123—122.)



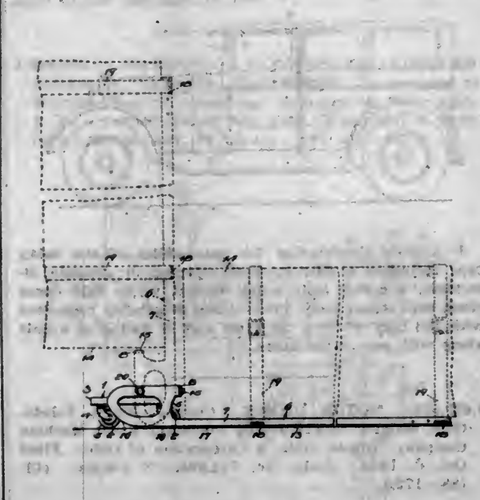
1. The combination with an explosive engine, of a fuel supply passage, a carburetor having an air inlet, means connecting said fuel supply on said carburetor and means for controlling the temperature of the explosive medium supplied by said carburetor to said engine, said controlling means being responsive to the temperature of the supplied air and to the temperature of the engine.

1,639,033. MEANS FOR FORMING EYE OPENINGS IN THE HEADS OF DOLLS AND OTHER FIGURE TOYS. LEO J. GRUBMAN, Belle Harbor, N. Y., assignor to Grubman Engineering & Manufacturing Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed Oct. 12, 1926. Serial No. 141,207. 16 Claims. (Cl. 164—118.)



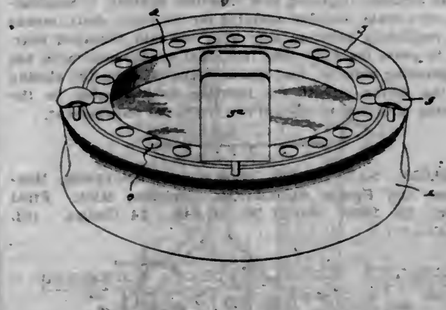
1. Means for forming spaced eye openings through the wall of a doll head including a support having spaced portions adapted to be positioned within the doll head,

means for positioning said portions in definite contacting relation with spaced parts of the doll head wall, and die cutters adapted to cut through said spaced parts of the



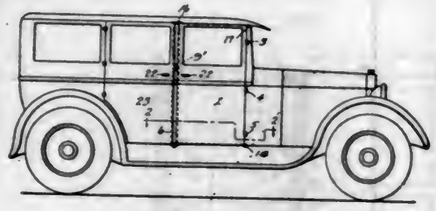
head wall to form the eye openings therethrough in accurate predetermined relation to the other molded features of the head wall.

1,639,034. NOVELTY DEVICE. WILLIAM HAENDEL, West Bend, Wis. Filed Feb. 23, 1926. Serial No. 89,913. 9 Claims. (Cl. 40—39.)



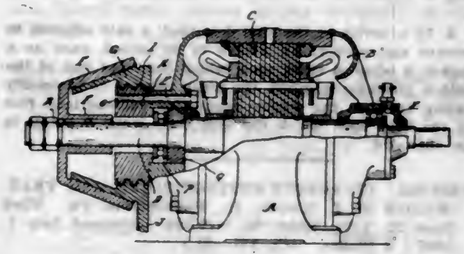
1. A device of the character described, comprising a supporting frame, a shaft, a plurality of spaced horizontal members carried by the shaft, a plurality of vane members mounted between the horizontal members and adapted to carry decorative matter, a stationary member at the frame upper end, a fan wheel fixed to the shaft above the stationary member, heat producing means carried by the stationary member and influencing the fan wheel to rotate the shaft and the members carried thereby, and means permitting the ready collapsing of the device.

1,639,035. COMBINED CASKET, SKID, AND DOLLY. WILLIAM A. HALL, Chicago, Ill. Filed Sept. 21, 1925. Serial No. 57,662. 9 Claims. (Cl. 280—11.)



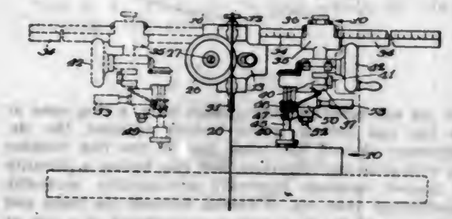
9. In a device of the kind described, a skid adapted to receive and support an article to be moved, such as a casket, a wheeled truck upon which the front end of the skid is pivotally mounted, the truck adapted to be readily swung up upon the pivotal connection substantially free of the floor upon which the skid rests while a casket is on the skid.

1,639,036. CIGARETTE-EXTINGUISHING ASH TRAY. WILLIAM H. J. HIPPLE, Jr., Philadelphia, Pa. Filed June 22, 1921, Serial No. 479,594. Renewed July 1, 1927. 3 Claims. (Cl. 131—51.)



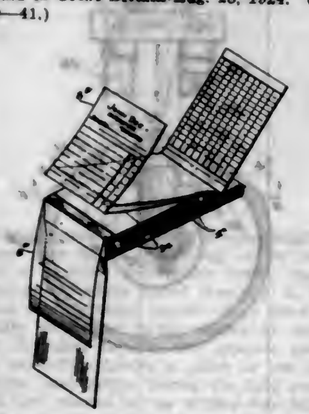
3. An ash receiving tray of dish form, a ring open at the top and bottom seated therein adjacent the circumference thereof, the inner face of the ring forming one wall of an ash receptacle, said ring having a plurality of tapered openings extending substantially vertically therethrough from top to bottom between the inner and outer walls of the ring, said openings being of a size at the top to freely receive a cigarette, while the other ends are small enough to prevent the passage of a cigarette, there being a space between the tray and the bottom of the ring to receive ashes falling through the cigarette receiving openings.

1,639,037. AUTOMOBILE BODY CONSTRUCTION. ARTHUR J. HOLLINGSHEAD, North Olmsted, Ohio. Filed June 17, 1926. Serial No. 116,542. 11 Claims. (Cl. 296—44.)



1. A body construction for automobiles of the sedan type including a pair of doors opening in opposite directions, a center body pillar against which said doors close, said center body pillars being detachably connected with the body whereby the same may be swung as a unit along with one of the doors.

1,639,038. MOTOR BRAKE. CONRAD JOBST, Toledo, Ohio, assignor to The Toledo Automatic Brush Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 6, 1924. Serial No. 741,995. 8 Claims. (Cl. 188—172.)

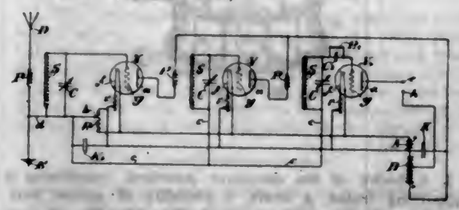


5. The combination with an electric motor, of a threaded bearing mounted on the motor casing, a motor brake member engaging said threaded bearing, a cooperating cone brake member mounted on the rotor shaft, means for resiliently rotating a member on said threaded bearing to press the same into frictional engagement with the cooperating member, and means actuated upon the closing of the motor circuit for rotating said member in the reverse direction to release the frictional engagement.

1,639,039. SAW GUIDE. EDWARD M. KNABUSCH, Monroe, and EDWIN SHOEMAKER, Carleton, Mich. Filed Oct. 10, 1925. Serial No. 61,648. 14 Claims. (Cl. 143—167.)

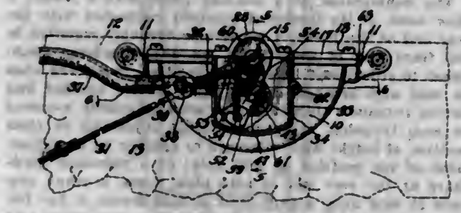
1. A saw guide having means of support therefor adjacent to a band saw, and adjacent to auxiliary devices for controlling the work, having structural provisions to support and permit adjustment of said devices bodily toward and away from the guide, serving to maintain said guide and said devices in fixed parallel relation when viewed from above, and having instrumentalities for engaging the sides and rear edge of the saw to hold the saw in position to perform the required work.

1,639,040. MANUFACTURE OF MANIFOLDING BOOKS. ALBERT R. LAWSON, Hamilton, Ontario, Canada, assignor to Toronto Type Foundry Company, Limited, Toronto, Canada. Filed Aug. 19, 1925, Serial No. 51,257, and in Great Britain Aug. 28, 1924. 6 Claims. (Cl. 270—41.)



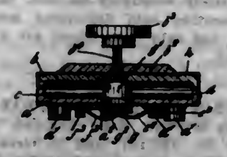
1. In a process of forming manifold books, the steps of folding a web of paper and leaving a single thickness thereof along one margin, and interleaving a transfer web between the folds with one margin of said transfer web overlying the said single thickness margin of the web of paper.

1,639,041. MANUFACTURE OF CORDAGE. WARREN K. LEWIS, Newton, Mass., assignor to Samson Cordage Works, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 20, 1924. Serial No. 738,964. 6 Claims. (Cl. 96—3.)



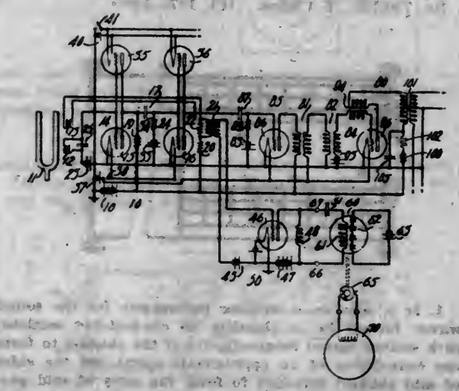
1. The herein described process which consists in fabricating a cord from a plurality of strands of material, at least one of which is loaded with a lubricant, while others are not so loaded, and subsequently diffusing said lubricant substantially through the adjacent strands.

1,639,042. RADIO SYSTEM. WILFORD C. MACFADDEN, Philadelphia, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 14, 1924. Serial No. 686,056. 6 Claims. (Cl. 179—171.)



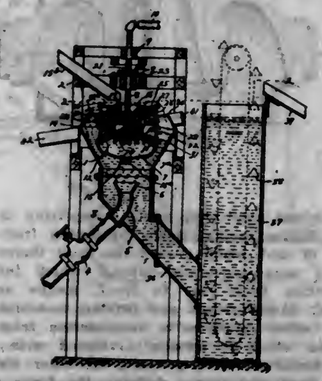
1. A tuned radio frequency amplifier system comprising a three-electrode thermionic amplifier, means for tuning the input circuit thereof, a radio frequency transformer having its primary in the anode circuit of said amplifier, the secondary of said transformer loosely coupled to said primary, said primary and secondary windings being relatively reversed, means for tuning the circuit of said secondary for a range of wave lengths for which the anode circuit of said amplifier is aperiodic and for which said amplifier is unstable when said input and secondary circuits are tuned thereto, and loss-producing means for maintaining said amplifier stable notwithstanding tuning of said input and secondary circuits throughout said wave length range.

1,639,043. AUTOMATIC WINDSHIELD CLEANER. BESHARA I. MALOUF, Brooklyn, N. Y., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Apr. 14, 1924. Serial No. 706,430. 15 Claims. (Cl. 121—97.)



2. A motor for windshield cleaners comprising a casing having a valve seat, a piston in the casing, fluid conduits leading from the valve seat to the interior of the casing on opposite sides of said piston, a valve disk in contact with said seat, a pivot post on said casing pivotally mounting the disk for oscillatory movement to alternately connect the conduits with a source of operating pressure, a stop post mounted on the casing and coacting with the disk for limiting its oscillatory movement, a lever pivoted on one of said posts and having an end engaging a portion of said disk at one side of the pivot thereof, and having another end extending to the opposite side of said pivot, a rock shaft to which the piston is directly connected, said shaft having a part extending therefrom for swinging from one side of the pivot of said disk to the other side of said pivot, a spring connecting said shaft part to the extending end of said lever, said shaft-connected end of said spring being moved thereby from one side of the pivot of the disk to the other side of said pivot, and means operable by and during a movement of the piston for swinging said extending end of the lever after shaft extended end of said spring has been moved to the opposite side of the pivot of said disk.

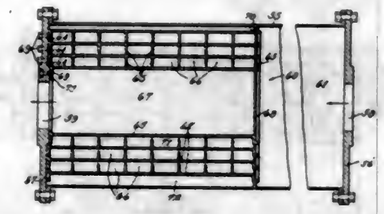
1,639,044. VARIABLE INDUCTANCE. GEORGE FREDERICK MANSBRIDGE, New Barnet, England. Filed Aug. 16, 1924, Serial No. 732,531, and in Great Britain Aug. 27, 1923. 1 Claim. (Cl. 171—242.)



In a variable inductance, an upper disc having a partially circumferential groove, a lower disc having terminals on its underside and an upstanding stop, two substantially kidney-shaped inductance elements in each disc, a bushing in the lower disc, a metal plug carried by the upper disc and passing through the bushing in the lower disc, flexible connections from the inductance elements in the upper disc passing through the said plug to certain of the terminals on the underside of the lower disc, connections from the inductance elements in the lower disc to other of the said terminals, temporary switch members to bridge the said terminals so as to connect the said inductance elements either in series or in parallel at will, the arrangement being such that the said stop abuts against the end of the groove in the upper disc and limits the relative rotary movement of the two discs to 180°.

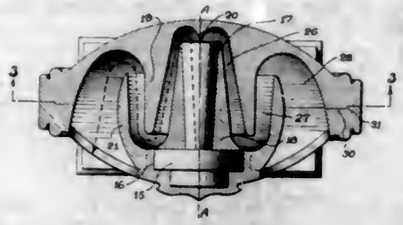
1,639,045. HARMONIC FREQUENCY PRODUCER. WARREN A. MARRISON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 8, 1923. Serial No. 636,364. 5 Claims. (Cl. 172—281.)

1. The combination with a source of electrical oscillations of constant frequency, of a three-electrode space discharge device having an input circuit associated with its grid electrode and an output circuit associated with its plate electrode and a feed back circuit linking said input circuit with said output circuit, and means in said output circuit causing impulsive energy to be fed from said output circuit to said input circuit for producing harmonics.



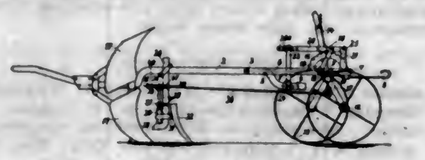
1,639,046. GRAVITY SEPARATOR AND PROCESS OF SEPARATION. EDGAR O. MARTY, Pottsville, Pa. Filed July 24, 1924, Serial No. 727,924. Renewed Jan. 10, 1927. 10 Claims. (Cl. 209—18.)

1. A gravity separator comprising a hopper, means for producing an upward current of liquid within said hopper, a hollow head within said hopper forming an annular passage for said current, said head having an upward discharge opening, means for delivering a mixture of materials differing as to specific gravity upon the central portion of said head, the top of said head being inclined to deflect said materials toward said annular passage,



a pipe supporting said head and means for delivering a fluid through said pipe to the head for discharge through said opening to effect a flotation of a lighter one of said materials preliminary to a separation effected by the current through said annular passage.

1,639,047. SILENCER. HIRAM PERCY MAXIM, Hartford, Conn., assignor to The Maxim Silencer Company, Hartford, Conn., a Corporation of Connecticut. Original application filed Jan. 25, 1923, Serial No. 615,434. Divided and this application filed Aug. 7, 1924. Serial No. 730,758. 5 Claims. (Cl. 137—160.)



1. In a silencer, a winding passageway for the sound waves formed by a plurality of channel-like sections, each section curved longitudinally of the channel to form one convolution of an approximate spiral and the sides of said channel arranged to form the sides of said passageway, the several sections being progressively smaller in size and arranged with the inner extremity of a larger spiral section abutting and overlapping the outer extremity of a next smaller spiral section, and means for rigidly securing said sections in assembled relation.

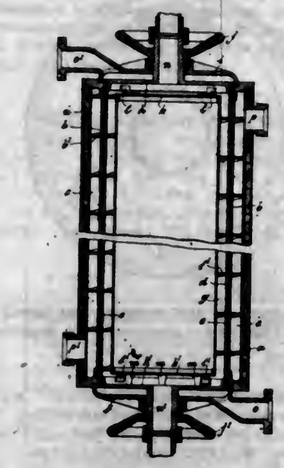
1,639,048. SOUND-AMPLIFYING DEVICE. BENJAMIN F. MIESSNER, South Orange, N. J. Filed June 4, 1923. Serial No. 643,152. 11 Claims. (Cl. 181—27.)

1. A sound amplifying device comprising in combination, a hollow casing, means projecting from the rear portion of said casing toward the front thereof and defining a sound-conveying passage which increases in cross-section from rear to front, means surrounding said first named means and defining a sound-conveying passage which increases in cross-section from front to rear and which is serially connected with said first named sound-conveying passage, the outer wall of said second mentioned means defining the inner wall of a sound-conveying passage serially connected with said second mentioned passage and increasing in cross-section from rear to front, means secured to and supported by the front outer end of said casing for supporting said second mentioned means and permitting the exit of sound waves from the front end of said third named passage, and means for supplying sound waves to the smaller end of said first named passage.

1,639,049. ONE-WAY PLOW. ERICH MORGELIN, Moesen, Germany. Filed Dec. 24, 1926, Serial No. 156,944, and in Germany Oct. 9, 1926. 1 Claim. (Cl. 97—133.)

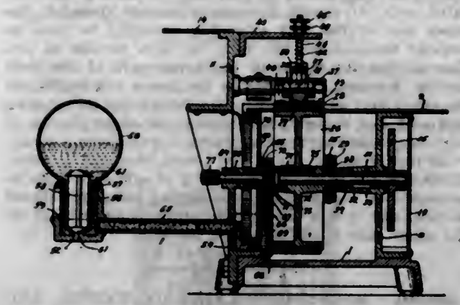
The combination, in a one-way plow, with a frame, a plow beam at its front end pivotally connected with the rear end of the latter, a wheel axle turnably mounted in the front end of said frame, an adjusting-lever mechanism to adjust said axle to any position, two crank ends on said axle arranged at an angle to one another and having trunnions thereon, and a wheel revolubly mounted on each trunnion, said wheels being adjustable in their position of height with reference to another by an adjustment of the position of said axle; of a turn-over plowshare at the rear end of said plow beam, a crank arm fixed to said axle, a fork fixed to said frame, a bar fulcrumed to said fork, a link pivotally connecting said crank arm with said bar, and another link pivotally connecting the free end of said bar with the front end of said plow beam, said plow share being adjusted to a deeper or higher position simultaneously with the adjustment of said wheels.

1,639,050. MINING MACHINE. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Oct. 24, 1921. Serial No. 509,980. 35 Claims. (Cl. 262—8.)



1. In a mining machine, the combination with a base frame adapted to rest on a mine floor, of a roof jack mounted thereon for sliding adjustment along arcuate lines, dislodging mechanism, a supporting frame carrying said dislodging mechanism and connected to said roof jack, means for adjusting the position of said dislodging mechanism by moving said supporting frame and said roof jack arcuately relatively to said base frame, and means for operating said dislodging mechanism while said roof jack and said base frame are anchored to act as an abutment.

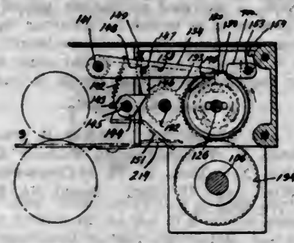
1,639,051. HEAT-EXCHANGE APPARATUS. REGINALD LUTHER MUNDAY, Bath, England. Filed Dec. 21, 1926, Serial No. 156,197, and in Great Britain Dec. 5, 1925. 2 Claims. (Cl. 257—243.)



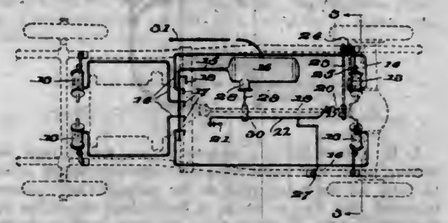
1. A heat-exchanging apparatus for fluids, which comprises, in combination, a cylindrical sleeve, a cylindrical shell fitted closely and coaxially therein, grooves disposed around said shell constituting a shallow spiral conduit between the sleeve and the shell, an outer jacket loosely enclosing said sleeve so as to provide an intermediate annular chamber, spiral baffles constituting a spiral conduit within said chamber, a cylindrical lining disposed coaxially within the cylindrical shell so as to provide a second intermediate annular chamber, and spiral baffles constituting a spiral conduit within said

second chamber, the fluid to be treated being passed in tenuous form through the shallow spiral conduit, and the heating or cooling fluid being passed through both the outer and the inner spiral conduits, contra-current to

the flow of fluid being treated, in continuous heat-conducting external and internal contact with said shallow spiral conduit, the shallow spiral conduit being of different pitch than the other spiral conduits.



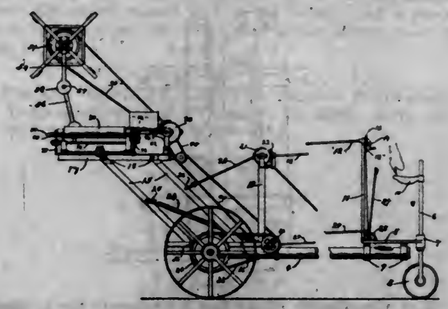
1,639,052. MAILING MACHINE. GEORGE E. NORTHROP, Stamford, Conn., assignor to Red Star Appliances, Inc., Stamford, Conn., a Corporation of Delaware. Filed Dec. 31, 1925. Serial No. 78,524. 8 Claims. (Cl. 91—41.)



1. In a machine of the character described, the combination of a feeding drum by which envelopes are forwarded into the machine, a rotary brush coaxial with said drum and across the face of which the flaps of the envelopes are wiped to moisten the gum thereof, and a driving connection between said drum and said brush to slowly and continuously turn said brush.

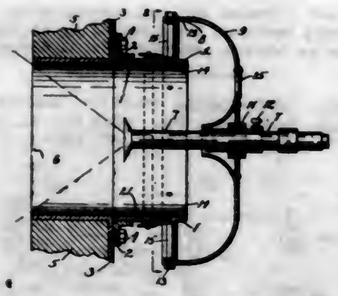
1,639,053. MAILING MACHINE. GEORGE E. NORTHROP, Stamford, Conn., assignor to Red Star Appliances, Inc., Stamford, Conn., a Corporation of Delaware. Original application filed Dec. 31, 1925, Serial No. 78,524. Divided and this application filed Apr. 24, 1926. Serial No. 104,300. 9 Claims. (Cl. 101—235.)

1. In a machine of the character described, the combination of a printing drum, a power driven lower roll cooperating therewith, a driving connection between said roll and said drum, and including a disengageable clutch, a single means initially holding said printing drum against rotation and holding said clutch out of engagement, and a release for said holding means, said release being positioned for actuation by an approaching envelope on which a printed imprint is desired.



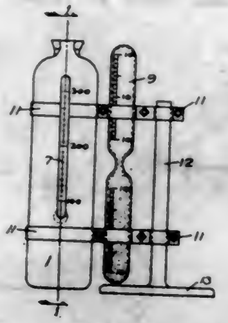
1,639,054. AUTOMOBILE PARKING MEANS. FLOYD PALMER, Jacksonville, Fla. Filed Dec. 21, 1926. Serial No. 156,203. 4 Claims. (Cl. 180—1.)

1. As a means for supporting a motor vehicle for sidewise movement independently of its usual wheels, a plurality of movable ground engaging devices and means for moving all of said devices simultaneously or any one of them alone.



1,639,055. BROOMCORN HARVESTER. ROY G. PATTERSON, Hugoton, Kans., assignor of twenty-five per cent to M. R. Stewart, Wilburton, Kans., and twenty-four per cent to Floyd Beaty, Hutchinson, Kans. Filed Oct. 10, 1924. Serial No. 742,817. 1 Claim. (Cl. 56—55.)

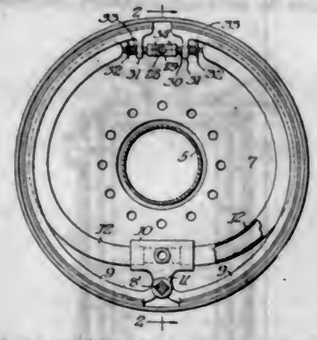
In a broom corn harvester, a machine of the kind described, having parallel bars pivotally connected to the carrying means, a cable attached to said bars, a drum and a crank as actuating means to raise and lower said bars, a counter-balance spring attached to said bars in such a way that the tension thereof is inclined to position said bars vertically counter-balancing the load imposed on the outer ends thereof, a frame on the outer ends of said bars, a reel supported by a jointed arm, said arm attached to said frame, the joint in said arm functions as raising and lowering means for said reel, a sickle in operative position to said reel, a belt conveyor adjacent to said sickle, an oscillating mechanism near



the rear side of said belt, said oscillator adapted to even the head ends of the broom corn, conveyor chains extending longitudinal with said belt and in working relation therewith, a shearing mechanism spaced from said conveyor functioning as means for shearing the butt ends of the broom corn heads to a uniform length, a binding mechanism in operative position to the outer end of said conveyor to bind the broom corn heads in bundles.

1,639,056. AIR REGISTER. ERNEST H. PEABODY, Pelham Manor, N. Y., assignor to Peabody Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 18, 1922. Serial No. 582,702. 3 Claims. (Cl. 158—1.5.)

1. In a fuel burning apparatus, an air register comprising inner and outer ring like members which overlap to form an extended annular air passage, bolts connecting said ring like members to hold them in spaced relation, a plurality of shutter members mounted to oscillate on said bolts, a ring like shutter operating member movably mounted on the inner ring member, and means for moving said operating member.

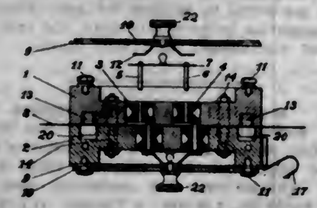


1,639,057. VISCOSIMETER. ERNEST H. PEABODY, Pelham Manor, N. Y., assignor to Peabody Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 23, 1922. Serial No. 602,779. 19 Claims. (Cl. 265—11.)

1. A viscosimeter comprising a receptacle for a liquid which may be filled in one position and emptied in another position, and means automatically brought into operation simultaneously with the change in position of the receptacle for measuring the time consumed by the liquid in flowing out of the receptacle.

1,639,058. HYDRAULIC BRAKE. PIERCE F. RICHARDS, Chicago, Ill., assignor of one-half to L. L. Valentine, Chicago, Ill. Filed June 18, 1926. Serial No. 116,807. 7 Claims. (Cl. 188—152.)

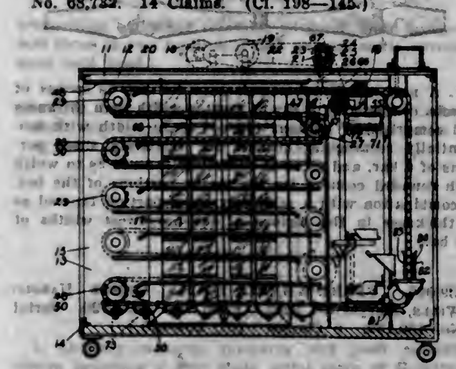
4. In a hydraulic brake, the combination of a rotatable brake drum, a fixed brake support, a braking element mounted on said support and movable into and out of friction contact with said drum, a tubular coupling mounted in said support, a pair of Bourdon tubes con-



nected at one end into said coupling and closed at their other ends, and means for supplying fluid pressure to said coupling.

1,639,059. PRESERVING RECEPTACLE. MARTIN SALOUN, Milwaukee, Wis. Original application filed Feb. 12, 1921, Serial No. 444,363. Divided and this application filed Jan. 20, 1922. Serial No. 530,543. 1 Claim. (Cl. 215—46.)

A bottle, comprising a body portion having an elongated neck of reduced diameter exteriorly threaded, the upper part of the body extending upwardly to form an annular flange concentric with the neck portion to provide an annular recess in the upper part of the body portion, a gasket positioned in the recess and resting on the upper part of the body, a cup shaped cap threaded on said neck and engaging said gasket, the upper portion of said cap extending upwardly inwardly to form a transverse tool receiving slot of less length than the diameter of the cap, the annular recess being of sufficient depth to accommodate the gasket and a sealing compound placed therein, and a disk interposed between and engaged by the upper edge of the neck and the cap.



1,639,060. MAGNETIC TALKING, DICTATING, AND LIKE MACHINE. GUSTAV SCHEEL, Berlin, Germany, assignor to Telegraphie-Gesellschaft mit beschränkter Haftung System Stille, Berlin, Germany. Filed Dec. 4, 1922, Serial No. 604,870, and in Germany Dec. 10, 1921. 4 Claims. (Cl. 274—4.)

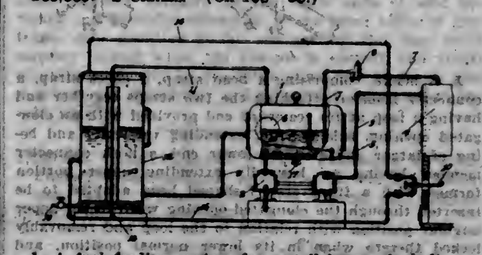
3. In a magnetic talking, dictating or like machine of the character described, the combination with two superposed magnet holders and with magnet coils fitted in said

holders, of magnet cores loosely arranged in said coils, detachable plates connected to the holders so as to cover the magnets, springs connected to said plates so as to bear against the cores and hold them in position, a carrier connected to the machine, and means for securing the magnet holders to said carrier so that both can be detached therefrom together and so that one holder can be removed without disturbing the other one, substantially as and for the purpose set forth.

1,639,061. TRAY-DISCHARGING MECHANISM. SIGMUND SCHUTT, Cincinnati, Ohio, assignor to The J. H. Day Company, Cincinnati, Ohio, a Corporation of Ohio. Original application filed Jan. 21, 1921, Serial No. 439,015, Patent No. 1,575,282, dated Mar. 2, 1926. Divided and this application filed Nov. 12, 1925. Serial No. 68,732. 14 Claims. (Cl. 198—145.)

1. A tray for use in a proofing device and comprising end members, cross bars joining the end members, a flexible bottom mounted upon the cross bars, and spaced partitions disposed intermediate the end members of the tray and supported between the cross bars and spanning the flexible material and forming a plurality of distinct compartments between the end members.

1,639,062. PISTON FOR INTERNAL-COMBUSTION ENGINES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del., a Corporation of Delaware. Filed July 20, 1921. Serial No. 486,181. 11 Claims. (Cl. 123—176.)



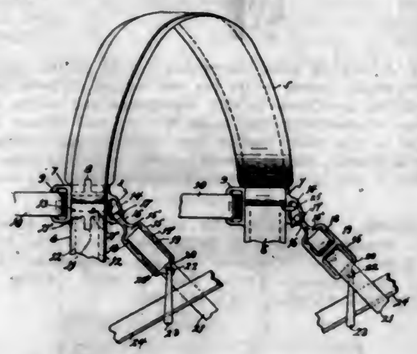
1. The combination with an internal combustion engine, of a hollow piston therefor having sealed therein oil or liquid having similar physical characteristics and means for agitating the circulation of the oil within the piston comprising a rotary propeller fan.

1,639,063. BUILDING BLOCK. LE ROY W. STEVENS, Chicago, Ill. Original application filed Nov. 29, 1920, Serial No. 427,145. Divided and this application filed Aug. 27, 1924. Serial No. 734,521. 2 Claims. (Cl. 72—38.)

1. A building block comprising a body portion having depressions formed in its top and bottom surfaces, integral lugs positioned in said depressions and having surfaces substantially flush with the top and bottom surfaces of the body portion, one of said lugs having a recess therein, and an integral dowel projecting from another of said lugs and disposed coaxially with said recess.

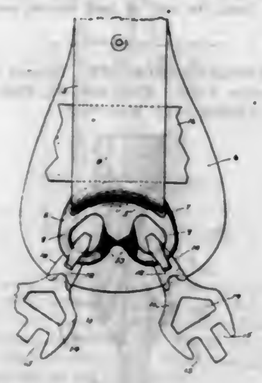
1,639,064. HYDROCARBON OIL BURNER. LACELLE C. STRAIT, Sacramento, Calif., assignor to The Strait Hydro Carbon Oil Burner Company, Sacramento, Calif., a Copartnership. Filed Feb. 4, 1927. Serial No. 165,359. 2 Claims. (Cl. 158—36.)

1. A fuel feeding system for an oil burner including a tank, means for feeding oil into the tank, a steam pipe leading into the tank to bear against and impart heat to the oil therein, another tank, oil passage means between the tanks, a steam pipe leading into the second named tank from the first named tank, a chamber in the second named tank into which the steam pipe therein discharges, said chamber being closed on the bottom and open on top above the oil level, an oil burner, an oil pipe leading from the second named tank to the burner, and a steam pipe leading from the top of said second named tank to the burner.



1,639,065. UNPLUGGABLE BIT. GEORGE F. THAGARD, Home Gardens, Calif. Filed Oct. 27, 1925. Serial No. 65,114. 9 Claims. (Cl. 255—61.)

1. A drill bit having a straight discharge passage therethrough for the discharge of circulation fluid, there being a cavity arranged in the bit communicating with said dis-

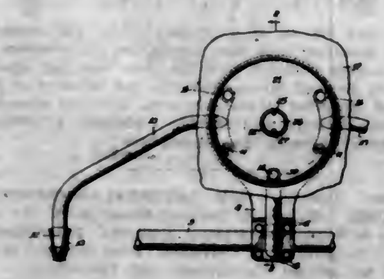


charge passage, and a closure receivable wholly within said cavity capable of moving into said discharge passage so as to prevent or retard upward flow therethrough.

1,639,066. THROAT-STRAP CONNECTER. JAMES M. WALSH, Milwaukee, Wis., assignor to James M. Walsh Co., Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 7, 1925. Serial No. 7,591. 4 Claims. (Cl. 54—6.)

1. A bridle, comprising a head strap, a cheek strap, a connecter member attaching the two straps together and having a loop at its rearward end provided with an elongated opening, said opening extending vertically and being of larger width at its lower end, a hook connecter member having an inwardly extending upper portion formed with a transverse T-shaped head adapted to be inserted through the elongated opening when in an upper angular position with relation to the loop and removably locked thereto when in its lower normal position, and means on said hook connecter for adjustably attaching a throat strap thereto.

1,639,067. MARTINGALE STRAP AND CONNECTER. JAMES M. WALSH, Milwaukee, Wis., assignor to James M. Walsh Co., Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 20, 1925. Serial No. 10,569. Renewed Nov. 25, 1925. 6 Claims. (Cl. 54—1.)

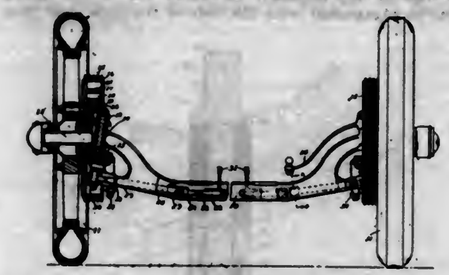


6. A martingale strap and connecter, comprising a martingale strap having a loop, a ring member having an elongated slot curved in a direction at right angles to the curvature of the loop and through which slot a portion of the loop extends and is bent to conform thereto, said ring member also having eyed portions of elongated form which extend divergingly from the slotted portion, the inner adjacent edges of the eyed portion being of less thickness than other portions to form entrances to the eyed portions, hook members having side entrance throats of less size than the thickness of the major parts of the eyed portions but of greater size than the entrance parts thereof to permit connecting the parts removably together, and a guard member connected to the strap loop and extending on one side of the martingale ring and portions of the hook members.

1,639,068. WHEEL-SPOKE BAR. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 19, 1925. Serial No. 3,278. 2 Claims. (Cl. 29—180.)

1. A new article of manufacture for use as spokes of wheels, composed of a bar of greater width than thickness and comprised of sections tapered as to width with substantially rectangular corners for relatively short portions of a bar, and sections oppositely tapered as to width with rounded corners for the major portions of the bar, in combination with a relatively short portion tapered as to thickness in the regions of the narrowest widths of the bar.

1,639,069. SPARE-WHEEL LOCK. CHILDS HAROLD WILLS, Marysville, Mich. Filed Dec. 12, 1920. Serial No. 430,152. 8 Claims. (Cl. 224—29.)



2. In combination, a support for a vehicle wheel, means for fastening the wheel to the support, a member adapted to cover the fastening means, means adapted to lock the cover in place, and means normally urging the cover from locked position.

1,639,070. REMOVAL OF COATINGS. WILLIAM H. ALLEN, Detroit, Mich. Filed Jan. 15, 1926. Serial No. 81,592. 3 Claims. (Cl. 87—5.)

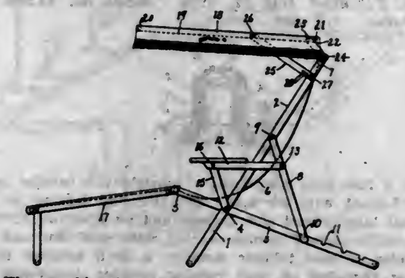
2. The process of removing coatings of enamels, lacquers, and the like from articles which comprises heating said coated articles in a solution of caustic alkali containing poly-sulphides of the alkali being used.

1,639,071. BRAKE-OPERATING MECHANISM. PAUL BASTIEN, Cleveland, Ohio. Filed Aug. 18, 1922. Serial No. 582,682. 6 Claims. (Cl. 188—94.)

1. In a brake mechanism, a brake drum, a pair of complementary brake shoes pivoted within said drum at corresponding extremities, the other extremities of said shoes having bearing surfaces, a spreader positioned between and engaging said bearing surfaces, said spreader having a central aperture in one end thereof and a slot in one side thereof extending transversely to said aperture, a head extending into the aperture in said spreader providing a journal therefor, and a rotatable shaft connected to said head and extending through the slot in said spreader, said spreader being free to swivel with said

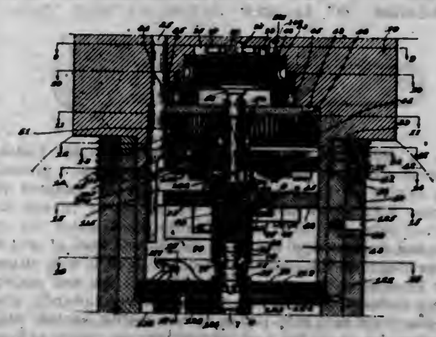
brake shoes and being rotatable with said head to spread said shoes in any position it may assume while swiveling upon said head.

1,639,072. MATERIAL-FASTENING DEVICE. CHARLES BETZ, St. Louis, Mo. Filed Feb. 11, 1926. Serial No. 87,566. 3 Claims. (Cl. 72—118.)



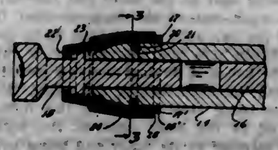
1. Abutting material fastening and joint concealing means including a first sheet metal strip of C-shape in section adapted for disposition flatwise under the abutting material with its flanges presented upwardly and the opening therebetween in approximate alignment with the joint between said abutting material, and a second sheet metal strip of substantially T-shape comprising a web, oppositely disposed flanges presented outwardly from an end of and at an angle to the web, and oppositely disposed clinchable extensions projecting from the opposite end of the web, the second strip being adapted for disposition with its web between said abutting material, its flanges flatwise engaging the upper marginal edge-portions of said abutting material, and its said extensions projecting through the opening and beneath the flanges of the first strip, the two strips being adapted under pressure for interlocking engagement with the extensions of the second strip clinched by the flanges of the first strip, and said abutting material clinched directly between the flanges of the first and second strips.

1,639,073. STIRRUP PAD. HENRY F. BERRAUM, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 73,639. 1 Claim. (Cl. 54—47.)



A stirrup pad of solid rubber including a flange projecting horizontally outwardly all around its body to repose upon the top side of the stirrup frame; an integral flange projecting downwardly from said pad all around its body at the base of the first mentioned flange to engage the edges of the stirrup frame; and two integral lugs projecting horizontally outwardly from opposite sides of the second mentioned flange to engage on the underside of the stirrup frame; the second mentioned flange and said lugs cooperating together to retain said pad in place and being bendable relatively to the body of said pad to provide for the ready application and removal of said pad, substantially as described.

1,639,074. CANOPY FOR CHAIRS AND THE LIKE. CHARLES A. BLACKWOOD, Kalamazoo, Mich. Filed Mar. 13, 1926. Serial No. 94,430. 2 Claims. (Cl. 135—5.)



1. The combination with canopy supporting uprights, of a canopy, a supporting frame therefor comprising side members and front and rear cross members, supporting links pivotally mounted on the upper ends of said uprights and pivotally connected to the inner sides of said frame side members to be engaged by the rear cross member thereof when the canopy is erected, and struts pivotally connected to the inner sides of said frame side members and detachably and adjustably connected to the said uprights.

1,639,075. AERIAL-BOMB FUSE. FREDERICK W. BOLD, Chelsea, Mass., assignor to Charles H. Pearson, Brookline, Mass. Filed Dec. 8, 1923. Serial No. 678,221. 6 Claims. (Cl. 102—36.)

6. In a fuse, the combination of a firing pin, a timing train controlling the operation thereof, a starting mechanism associated with the timing train, means movable longitudinally of the axis of the fuse for controlling the starting of the timing train, means for locking the last said means in inoperative position, and means for releasing the locking means when the fuse is dropped.

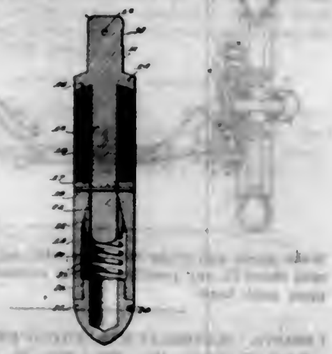
1,639,076. PNEUMATIC HAMMER. EDWARD L. BURTON, Sandwich, Ill. Filed Nov. 16, 1923. Serial No. 675,145. 6 Claims. (Cl. 121—82.)

1. In a pneumatic hammer including a cylinder provided with an annular groove and a rivet-set with a laterally extending portion, a set holder comprising mem-

bers hinged together and having means engaging in said groove and means engaging beneath said lateral portion, and a locking sleeve embracing and threaded on the upper part of said holder to positively retain the rivet-set in said hammer.

1,639,077. FUSE PLUG. LEON J. CAHN, New York, N. Y. Filed July 17, 1925. Serial No. 44,208. 3 Claims. (Cl. 200—130.)

2. A fuse plug comprising a substantially tubular member formed with an inner shoulder and having an external longitudinal slot therein and an aperture through the walls thereof communicating with said slot and the interior of said tubular member, a shell adapted to be screw threaded on said tubular member comprising an end contact plate for closing one end of said tubular member, a plurality of mica discs disposed in superimposed relation within said tubular member and engaging said shoulder for closing the other end of said tubular member, and a fuse wire attached at one end to said contact plate disposed through said aperture intermediate its ends and guided in said longitudinal slot in adjacency with the wall of said shell, said mica discs being restrained from inward movement by frictional engagement with the inner walls of said tubular member and by contact with said fuse wire.

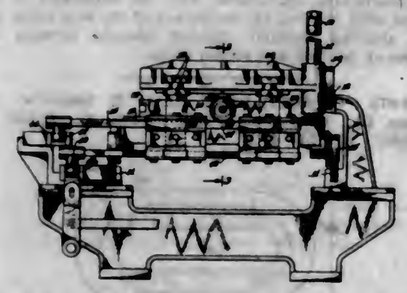


1,639,078. RATCHET WRENCH. JOHN E. COX, Jamestown, N. Y. Filed Mar. 14, 1925. Serial No. 15,663. 6 Claims. (Cl. 81—63.)

1. A reversible ratchet wrench comprising side plates, a wheel carried by and at one end of said plates, a pivoted dog having an apex and two ears, each ear adapted to engage said wheel and permit its movement in one direction only, the direction depending upon which ear of the dog engages the wheel, a spring, one end of which presses against the apex of said dog to hold it with either ear in engagement with said wheel, said dog and spring being enclosed between said plates, tongues inwardly projecting from said side plates, means resting against said tongues for receiving and supporting the other end of said spring, said means being held by said spring against said tongues and out of contact with said dogs.

1,639,079. PLUG FOR OIL WELLS. WILLIAM C. CUSHING, Bristow, Okla. Filed Mar. 6, 1926. Serial No. 92,907. 1 Claim. (Cl. 166—13.)

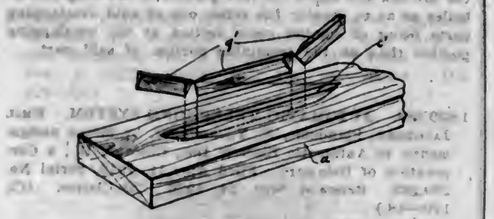
A plug for oil wells comprising a mandrel having a collar and a cylindrical bar projecting from the collar, the inner face of the collar being concaved, a body having a central bore adapted to receive the bar and provided with an annular seat at the inner end thereof, a pin connecting the inner end of the body member through the inner end of the bar, said pin adapted to be sheared when the bar is driven into the hollow body, a rubber gasket embracing the bar and having one end seated in engagement with the concaved face of the collar, the other end of the gasket being received within the annular seat at the inner end of the body member, the hollow portion of the body member at its inner end being provided with a conical face, slips engaging the bar and having inclined faces in engagement with the conical face of the hollow body, a plug screwed into the outer end of the body and provided with an inner shoulder, a spring engaged at one end by the shoulder, the other end of the spring being in engagement with the ends of the slips, said plug



having a recess adapted to receive the free end of the bar of the mandrel when the mandrel is driven into the body member, with the bar moving into the recess in the plug whereby the rubber gasket is compressed and expanded laterally of the mandrel.

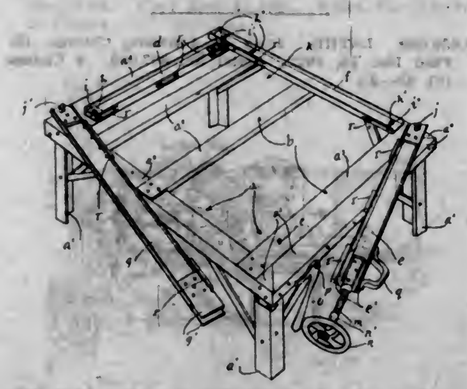
1,639,080. MANUFACTURE OF STENCIL SHEETS. ALEX BROOKING DAVIS, Cincinnati, Ohio, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Original application filed Feb. 5, 1926, Serial No. 86,343. Divided and this application filed Aug. 5, 1926. Serial No. 127,486. 24 Claims. (Cl. 41—38.6.)

1. A type-impressible stencil sheet coating including cellulose acetate and benzoyl butyl tartrate.



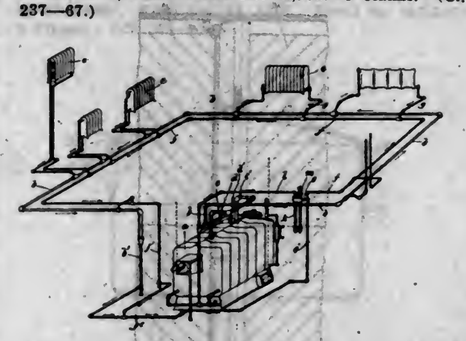
21. A type-impressible stencil sheet coating including an acid substituted hydroxy acid ester and a carbohydrate ester.

1,639,081. DIE-MOLDING APPARATUS FOR MAKING ARTICLES OF PLASTIC MATERIAL. ERNEST DE JOURNO, New York, N. Y., assignor, by mesne assignments, to De Jay Trading Corporation, a Corporation of New York. Filed June 21, 1924. Serial No. 721,390. 13 Claims. (Cl. 18—16.)



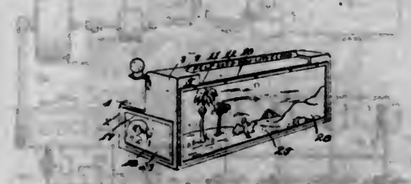
6. A die comprising in combination with a travelling frame or bolster, a die assembly carried thereby for molding articles and comprising a plurality of parts, means for tiltably supporting one of said parts containing a mold cavity upon said travelling bolster, means for tilting said part relatively to said bolster and for imparting a shock thereto to dislodge the article from the mold cavity, means for subsequently restoring the tilted die to normal position and for retaining the same in such position preparatory to receiving a new charge of material.

1,639,082. METHOD OF PATCHING. JOHN C. DE PENNING, Portland, Oreg., assignor to Central Door and Lumber Company, Portland, Oreg., a Corporation. Filed July 19, 1926. Serial No. 123,572. 11 Claims. (Cl. 144—309.)



1. In the art of woodworking, the method of patching a board having a surface imperfection, consisting in cutting away such imperfection by forming an incision extending lengthwise of the grain of said board, and wedge-shaped in cross-section, and placing in the incision thus made a plug comprising a plurality of elongated glued pieces corresponding in grain structure and quality to the remainder of such surface, each of said pieces being correspondingly wedge-shaped in cross-section and of substantially greater width than the depth of such incision, one of said pieces being arranged with one end seated further into the incision than the other so that its longitudinal centerline makes a substantial angle with such surface, and then forcing such latter piece endwise toward the other pieces and towards the base of such incision, whereby all of such pieces are secured in said incision with their ends in abutment, dressing off the excess portion of such plug not fitted into the incision.

1,639,083. PANEL CLAMP. JOHN C. DE PENNING, Portland, Oreg., assignor to Central Door and Lumber Company, Portland, Oreg., a Corporation. Filed Nov. 4, 1926. Serial No. 146,147. 7 Claims. (Cl. 144—291.)

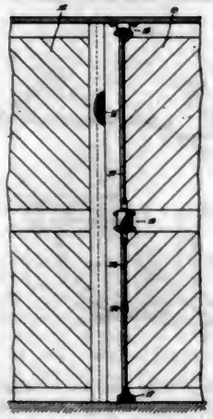


1. A device of the character described comprising a frame having a top portion constituting a bed, pairs of spaced gripping members carried by such frame and mounted at opposite sides of said bed and bounding the latter to define a mouth thereon, one member of each pair of gripping members being pivotally mounted at one end to the frame for relative movement over said bed, and means for drawing such free ends of such gripping members together and gripping an article held in such mouth.

1,639,084. HEATING SYSTEM. RALPH RAY EMERSON, Brooklyn, N. Y., assignor to Hoffman Specialty Company, Waterbury, Conn., a Corporation of Illinois. Filed Dec. 3, 1925. Serial No. 72,964. 5 Claims. (Cl. 237—67.)

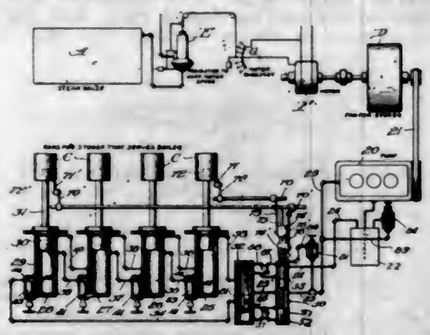
5. In a steam heating system, a boiler, a steam line, a dry return line extending in approximate parallelism with said steam line and with a downward pitch, heating units connected to said steam and return lines, a steam crossover device connected to receive steam from the boiler, and a pipe in connection with the outlet side of said crossover device extending upwardly to connection with the high point of the dry return line and downwardly into connection with the lower part of the return line.

1,639,085. COMBINED ADVERTISING BENCH, WASTE PAPER RECEPTACLE, AND AUTOMAT STAND. MAURICE B. FOHEY, Los Angeles, Calif. Filed Aug. 9, 1926. Serial No. 128,118. 2 Claims. (Cl. 155—191.)



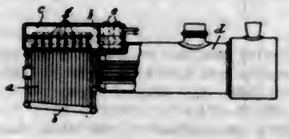
1. A bench structure comprising end walls having a lower part with an arm rest thereon and an upper part, a back wall, a seat and seat back extending between the end walls, a transverse partition extending between the seat back and the back wall, a top connecting the seat back and the ends adjacent the end walls and terminating short of the back wall at the center part, the back wall extending from the bottom of the bench to the top adjacent the end walls and terminating short of the top in the central part, thereby leaving an unobstructed opening in the top of the back and the back of the top wall to allow depositing of waste paper, the main body of the bench having a hollow space to receive such paper and the transverse partition forming a division in the hollow space, and a pivotally mounted apron extending downwardly from the front of said seat to allow removal of paper from the hollow space.

1,639,086. DOOR LOCK. JOSEPH P. FREDRICK, Chicago, Ill., assignor of one-half to August J. Lurie, Chicago, Ill. Filed July 31, 1925. Serial No. 47,231. 8 Claims. (Cl. 70—74.)



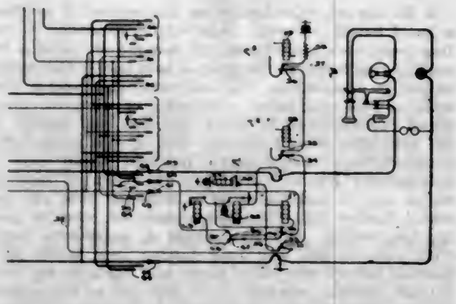
1. In locking mechanism of the class described, the combination of upper and lower locking devices for the upper and lower edges of the door, a housing secured to the rear side of said door, a bar reciprocably sup-

ported in said housing and extending above and below the same, rods connecting said bar to said locking devices, a roller pivoted on said bar, said bar having a



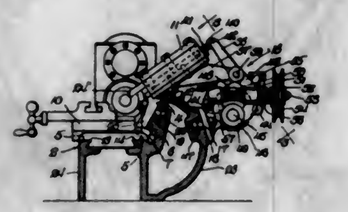
slot therein, a lock released rotary element extending through said slot, and eccentric means on said rotary element for engaging said roller.

1,639,087. DRIVE FOR STOKERS. DALLAS F. GRAHAME, Toronto, Ontario, Canada, assignor, by mesne assignments, to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 20, 1922. Serial No. 545,044. 18 Claims. (Cl. 110—109.)



18. In an underfeed stoker drive, a plurality of rams, an operating cylinder associated with each ram, and fluid pressure connections dependently connecting said cylinders to cause the non-concurrent operation thereof.

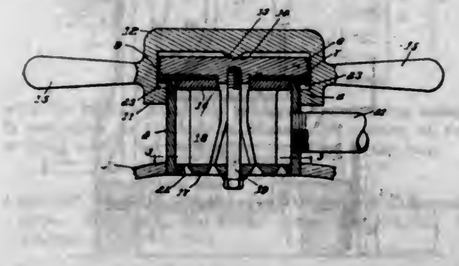
1,639,088. BOILER FOR MOVABLE STEAM-POWER PLANTS. OTTO H. HARTMANN, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed Mar. 23, 1925, Serial No. 17,607, and in Germany Apr. 2, 1924. 4 Claims. (Cl. 122—37.)



1. A boiler for movable steam plants comprising a high pressure portion including a fire box having a drum for water and steam, and a low pressure portion arranged as a longitudinal boiler out of communication with the high pressure portion, the said low pressure boiler communicating with the fire box so as to be directly heated by the combustion products thereof, said steam and water drum projecting forwardly beyond the front of the fire box and above the rear portion of the longitudinal boiler so as to overlap the same, one of said overlapping parts being of smaller cross section at the overlapping portion than on the remaining portion of said part.

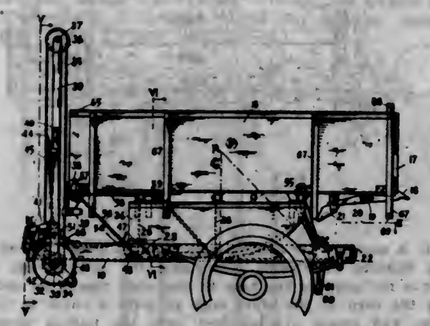
1,639,089. AUTOMATIC TELEPHONE SYSTEM. EMIL JACOBSEN, Plandome, N. Y., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 11, 1919, Serial No. 289,283. Renewed Sept. 24, 1926. 20 Claims. (Cl. 179—18.)

1. In a telephone system, lines, an automatic switch for each line, trunk lines accessible to each of said switches, and means for operating a switch to automatically select one of said trunks when a call is extended for one of said lines and to automatically operate the first idle one of said switches to select one of said trunks when one of said lines is called to complete the connection from the calling subscriber to the line associated with the operated switch.



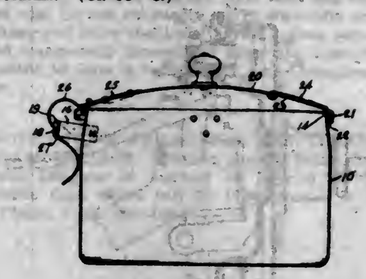
1,639,090. LATHE. JOHN E. JOHNSON, Chicago, Ill. Filed Dec. 18, 1922. Serial No. 607,650. 4 Claims. (Cl. 82—2.)

1. In a lathe, the combination of a lower front lathe bed, an upper track located above the level of and rearward with respect to the lower front lathe bed and having an upwardly and rearwardly inclined guiding surface disposed at an oblique angle with respect to the top face of the lower front lathe bed, a head stock, a tail stock mounted in position to extend over the lower front lathe bed, a tool support movably mounted on said upper track and in sliding engagement with said inclined guiding surface, and means for actuating a tool mounted on said movable tool support, said tool-actuating means comprising a lever pivotally mounted on said tool support



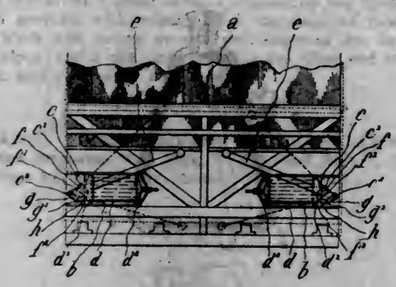
and having forked arms the ends of which are spaced apart, a cam rotatively mounted between and in operative engagement with said forked arms and adapted to reciprocate said lever, and means for operating said cam.

1,639,091. CLOSURE OPERATOR. OSCAR W. JOHNSON, Rockford, Ill., assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Jan. 5, 1925. Serial No. 474. 9 Claims. (Cl. 220—39.)



1. In combination, an externally threaded pipe, a closure cap adapted to seat thereon and equipped with guide means extending into the pipe to cooperate with the internal wall thereof, and a clamp threadedly engaged on said pipe and having means for engaging opposed sides of the closure cap, whereby to clamp the cap against its seat when the clamp is turned in one direction and to withdraw the cap from said seat when turned in the opposite direction, the cap being so closely associated with the clamp that said guide will serve to hold the clamp in operative relation to the pipe threads when entering the clamp onto the pipe.

1,639,092. DUMPING TRUCK. LANDRETH H. KING, Orange, N. J., assignor to King Mechanism and Engineering Company, New York, N. Y., a Corporation of New York. Filed Nov. 4, 1921. Serial No. 512,781. 22 Claims. (Cl. 298—10.)

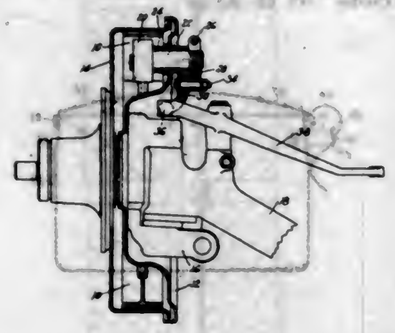


1. A dumping truck comprising a frame embodying trackways, a dumping body supported on dependent rockers formed to bear upon the trackways at points forward of the normal center of gravity of the rockers and body when loaded, securing means for maintaining the body in load-carrying position, brake means checking the movement of the body, and means successively releasing the securing means and the brake means.

1,639,093. COVER INDEXING DEVICE AND FASTENER FOR COOKING UTENSILS. RALPH N. KIRCHER, West Bend, Wis., assignor to West Bend Aluminum Company, West Bend, Wis., a Corporation of Wisconsin. Filed Apr. 13, 1927. Serial No. 183,546. 3 Claims. (Cl. 53—8.)

1. In a cooking utensil, a vessel and a cover therefor, means for securing and indexing the cover in position upon the vessel, such means comprising a handle on the vessel having a notch in the bar thereof, and a spring catch attached to the cover and engaging the handle in the said notch.

1,639,094. COUNTERBALANCING MEANS FOR MOVABLE DEVICES. GEORGES KLEIN, Paris, France. Filed Dec. 28, 1923, Serial No. 683,263, and in Belgium Jan. 2, 1923. 4 Claims. (Cl. 16—200.)



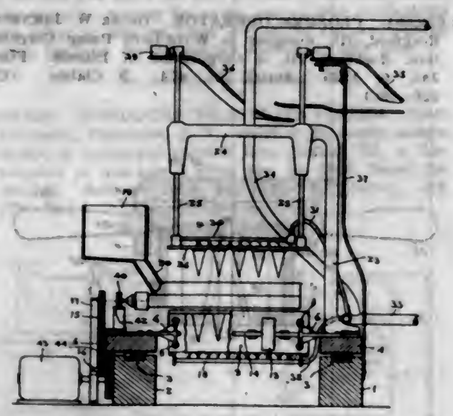
1. In a counterbalancing apparatus, spring means having a movable end, a pivoted bell-crank lever mounted on a spindle below which its arms extend and having one arm thereof connected to said movable end, the other arm of said lever being connected to a link, said link being connected to a pivoted lever mounted on a spindle located below said first-mentioned spindle, said last-mentioned lever being adapted to turn in unison with an arm which is adapted to contact with the body to be counterbalanced.

1,639,095. BRAKE-APPLYING MEANS. LUDGER ELIZE LA BAIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 17, 1925. Serial No. 50,715. 1 Claim. (Cl. 188—194.)

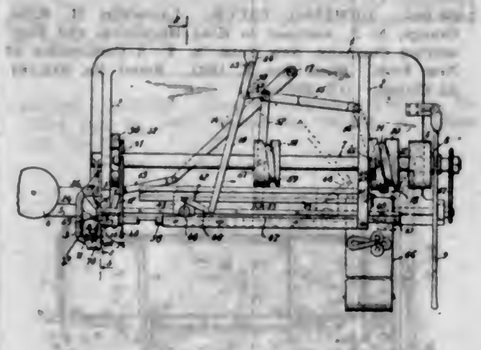
A control for a brake on a swiveled wheel comprising, in combination, a shaft having brake-applying means, two levers on the shaft, one fixed to the shaft and the other movable, the movable lever having a part movable in applying the brake from an idle position spaced from the

swiveling axis to an active position substantially in that axis, means to clamp the two levers together in any desired position of relative angular adjustment, and an

operating lever movable about a vertical axis between its ends and engaging at one end said part of the movable lever.



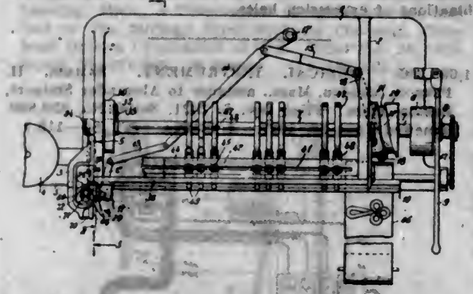
1,639,006. NURSING BOTTLE. GEORGE B. MCMULLEN, Philadelphia, Pa., assignor to Sanitary Nursing Bottle Company, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1924. Serial No. 712,351. 1 Claim. (Cl. 215—11.)



As a new article of manufacture, a glass nursing bottle comprising a body, a glass nipple having a flared outer end formed integrally with said bottle at its apex, a relatively small outlet opening extending centrally through said nipple, and a projection formed on the wall of said bottle intermediate its end and provided with a relatively large stopper receiving opening to permit filling and sterilization of the bottle substantially as described.

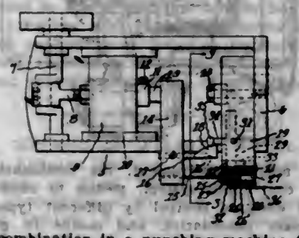
1,639,097. CONE-MAKING MACHINE. DAVID W. MITCHELL, Toronto, and GEORGE O. ROBINSON, Port Dover, Ontario, Canada. Filed May 23, 1921. Serial No. 471,963. 2 Claims. (Cl. 107—58.)

1. A cone making machine, comprising, a pair of concentric circular members rotatably mounted in a horizontal plane, brackets mounted on the circular members supporting paired parallel rods, mould blocks arranged in pairs slidably mounted on said rods, rotatable cam members arranged parallel with an outside of each of said mould blocks, means operatively connecting said rotatable cam members to operate in unison in opposite directions to operate to close said blocks and to move said blocks apart, means arranged in the path of movement of the rotatable members adapted to operate said cam means at predetermined intervals, cores for said moulds, vertical guides for said cores, means for raising the cores at predetermined intervals, means for feeding batter to the moulds while the cores are raised, and means for heating said pairs of moulds individually and continuously.



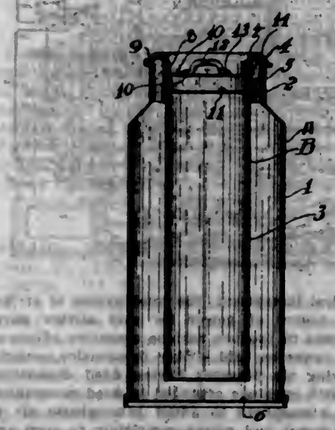
1,639,098. MACHINE FOR MAKING PYJAMA FROGS. LOUIS H. MORIN, New York, N. Y., assignor to A. S. Phillips, New York, N. Y. Filed Aug. 13, 1926. Serial No. 129,075. 22 Claims. (Cl. 223—52.)

1. A machine for making pyjama frogs from tape having slidable edge cords comprising the combination of means for gripping the tape at one edge, means for pulling the cord in the other edge to form a curve in the tape, and means synchronized with the pulling means for releasing the tape from the gripping means when the curve has been made.



1,639,099. MACHINE FOR MAKING PYJAMA FROGS. LOUIS H. MORIN, New York, N. Y., assignor to A. S. Phillips, New York, N. Y. Filed Aug. 18, 1926. Serial No. 129,076. 5 Claims. (Cl. 223—52.)

1. A machine for making pyjama frogs from tape having slidable edge cords comprising the combination of means for gripping the tape at a plurality of points along one edge, means for pulling the cord in the other edge to form a loop in the tape, and means synchronized

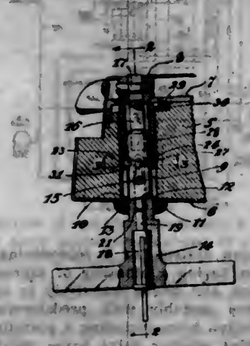


with the pulling means for releasing the gripping means in succession as the loop is formed, the spacing of the gripping means determining the curvature of the loop.

1,639,100. PUNCH PRESS. JOHN J. NEILAN, Cleveland, Ohio. Filed Apr. 21, 1926. Serial No. 103,508. 3 Claims. (Cl. 164—88.)

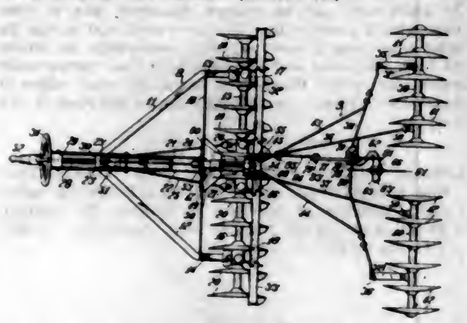
1. The combination in a punching machine for notched work, said machine having a reciprocating punch, a die, and a guide for the work, said guide having a slot extending cross-wise thereof, of a pivoted stop working in said slot and movable sidewise with respect to the guide to engage in a notch in the work, and means actuated by the movement of the punch to operate the stop.

1,639,101. MILK CAN. JOHN O'BRIEN and EDWIN H. KNUDSON, St. Paul, Minn. Filed Mar. 2, 1925. Serial No. 14,089. 1 Claim. (Cl. 220—9.)



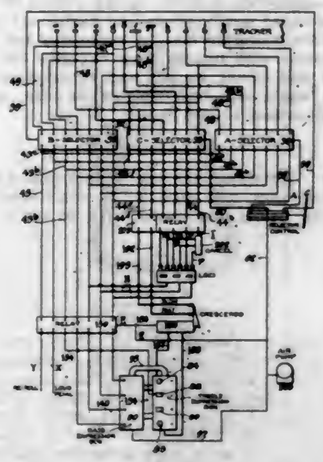
A vacuum insulated container comprising an outer shell having a reduced upper portion, said shell having its upper edge turned inwardly and downwardly the full length of the reduced portion in spaced relation thereto, a cylindrical shell telescopically inserted into the outer shell and having its upper edge turned outwardly and downwardly the full length of the reduced portion of the outer shell and in contact therewith, and a cover telescopically inserted into the inner shell and having its upper edge turned outwardly and downwardly to overlie the inner and outer shells and having a plate hermetically sealed transversely thereof and below the upper edges of the shells to form a hermetically sealed chamber in the cover.

1,639,102. JOINT FOR PISTON AND CONNECTING-ROD MOUNTINGS. VINCENT JOHN O'BRIEN, Smuggler, Colo., assignor of one-half to Edward H. Sackett, Arvada, Colo. Filed July 25, 1922. Serial No. 577,422. 2 Claims. (Cl. 74—108.)



1. In combination, a piston having a wrist pin therein, a block mounted upon said pin and having end faces and part-cylindrical bearing faces, a connecting rod having a head provided with bearing faces engaging the faces of the block and having an end wall engaging one end of the block, and a cap plate engaging the other end of the block and secured to said head.

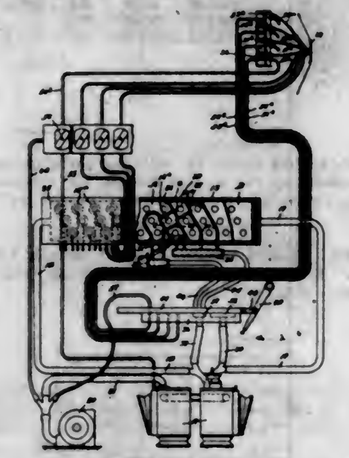
1,639,103. LOCKING MEANS FOR DOOR LATCHES. LEON OTTINGER, New York, N. Y. Filed Sept. 5, 1925. Serial No. 54,645. 14 Claims. (Cl. 70—91.)



1. In combination with a door having an opening therethrough and a latch secured to the door at one end of said opening, an operating handle for said latch having a shank positioned through said opening, relatively fixed keeper means within said opening intermediate the ends thereof, a locking element to cooperate with the shank and the keeper means and lock the handle against rotation, and key actuated means having a part cooperating with said element to move the same to and from its locking position with respect to said keeper means and the handle shank.

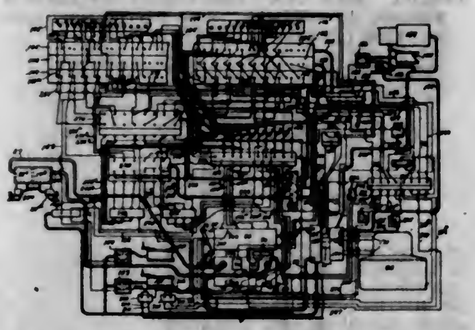
1,639,104. DISK HARROW. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 6, 1926. Serial No. 146,585. 16 Claims. (Cl. 55—83.)

4. A tandem disk harrow comprising front and rear frames connected for relative lateral swinging, angularly adjustable gangs of disks connected with said frames respectively, stabilizing means connected with the rear frame and arranged to penetrate the ground to resist lateral swinging of the latter frame, and means operable to vary the depth of penetration of said stabilizing means.



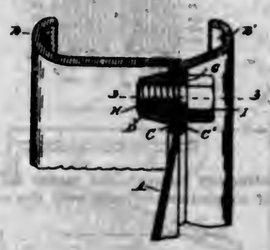
1,639,105. REPRODUCING PIANO. SAMUEL H. PERRON, Mendon, Mass., assignor to Alexander Steinert, Boston, Mass. Filed July 12, 1921. Serial No. 484,257. 13 Claims. (Cl. 84—33.)

5. An expression system for a reproducing piano including a tracker having a plurality of expression holes, expression devices, and means selectively to connect said expression devices operably with predetermined combinations of expression holes including a plurality of pneumatically-controlled selector valve boxes which are connected with all of said expression devices and with predetermined combinations of expression holes, and means to select a specific selector valve box for the control of said expression devices through its combination of expression holes comprising a valve associated with all of said selector valve boxes arranged to select an individual selector valve box for connection to a source of suction pressure and connect all other selector valve boxes to a source of higher pressure.



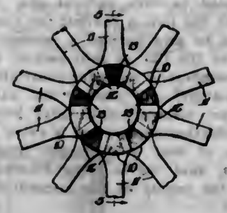
10. An expression system for a reproducing piano including a tracker having, in combination, a plurality of expression holes, expression devices, and manually-controlled means selectively to connect said expression devices operable with any one of several predetermined combinations of expression holes.

1,639,106. MUSICAL INSTRUMENT. SAMUEL H. PERRON, Mendon, Mass., assignor to Alexander Steinert, Boston, Mass. Filed Dec. 8, 1921, Serial No. 520,860. Renewed June 28, 1927. 4 Claims. (Cl. 84—115.)



1. In a musical instrument, the combination of an expression controlling system, means to condition said system for effective control by different types of note sheets, striker pneumatics, and means to group said striker pneumatics in various predetermined combinations for effective control by different types of note sheets.

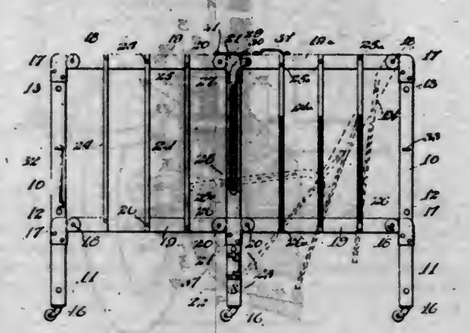
1,639,107. MUSICAL INSTRUMENT. SAMUEL H. PERRON, Mendon, Mass., assignor to Alexander Steinert, Boston, Mass. Filed June 3, 1922. Serial No. 565,527. 32 Claims. (Cl. 84—41.)



1. In a musical instrument, the combination of striker pneumatics, a source of power for said striker pneumatics, and means to produce various operative effects of said source of power on said striker pneumatics comprising means having air passages having fixed dimensions and provided with openings arranged in fixed communication with the atmosphere to admit atmospheric air to said source of power and means completely to open and also completely to close said passages, said means arranged to be held in one or the other of the aforesaid relations for the production of a particular operative effect.

1,639,108. RIM FASTENER FOR VEHICLE WHEELS. ALDEN L. PUTNAM, Detroit, Mich., assignor, by mesne assignments, of one-half to Motor Wheel Corporation, Lansing, Mich., a Corporation of Michigan, and one-half to The Midland Steel Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 28, 1918. Serial No. 219,565. 8 Claims. (Cl. 152—21.)

2. In a wheel, the combination of a rim having an inwardly extending annular flange, a disc with its periphery contacting with said flange, said flange and disc having a plurality of registering openings, a plurality of plates secured to one of said members in line with said registering openings, said plates each having a threaded portion, and a plurality of fastening members extending through said registering openings and each having a screw thread connection with one of said plates.



1,639,109. METHOD OF WELDING METAL SPOKES. ALDEN L. PUTNAM, Dearborn, Mich., assignor, by mesne assignments, to Steel Wheel Corporation, Lansing, Mich., a Corporation of Michigan. Filed Oct. 2, 1926. Serial No. 139,142. 5 Claims. (Cl. 219—10.)

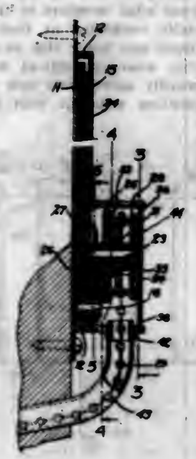
1. The method of producing a spider from separate metal spokes, which consists in forming the spokes with the heads thereof slightly offset from the shanks, assembling the spokes into a spider with the heads of alternate spokes offset in one direction and the heads of intervening spokes offset in the opposite direction, and welding the assembled spokes together in such a way as to leave the heads in different planes.

1,639,110. FOLDING CRIB. ISIDOR RAUTENBERG, Chicago, Ill. Filed Oct. 29, 1926. Serial No. 144,933. 8 Claims. (Cl. 5—99.)

1. In a folding crib having ends, sides and a bed supporting means held in substantially horizontal position thereby, said ends and sides being of substantial height above said bed supporting means to retain a child in said crib, the combination of end legs, pivot supporting brackets offset towards each other and carried by said legs substantially in line with the upper and lower edges of said crib sides, a center post for each crib side, second pivot supporting brackets carried by each of said center posts substantially in line with the upper and lower edges of the corresponding crib side, said second brackets having offset portions extending away from each other in the plane of the corresponding crib side, side bars of substantially half the length of the crib pivotally connected in horizontal position with said brackets to form the upper and lower edge members of the crib sides, vertical slats, pivotally connected at their ends in spaced relation to the upper and lower side bars to form slatted sides for the crib, whereby vertical movement of said center posts upwardly moves said side bars to substantially vertical position adjacent said center posts and

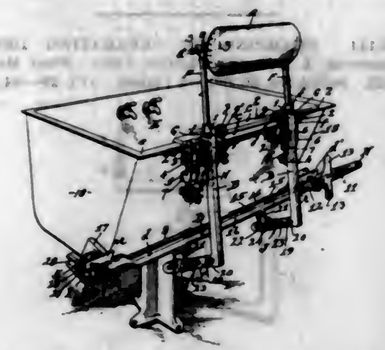
draws said legs together in vertical position adjacent the then vertical side bars, the pivotal connection of one of said upper side bars to the corresponding center post comprising a slotted bar pivotally connected at its upper end with said upper side bar and extending downwardly along said center post, and a clamping bolt extending through the slot in said slotted bar and through the lower portion of said center post, whereby said upper side bar may be lowered with the crib in its open condition to afford a clearance space through one side of the crib.

1,639,111. CLAMPING OR SEPARATING DEVICE. THEODORE A. ROTSCH, Whittier, Calif. Filed May 14, 1925. Serial No. 30,280. 3 Claims. (Cl. 29—84.)



1. In a device of the class described, a U-shaped member, one or more projections on one of the legs of said member, an angular element equipped with a set of screw-threaded portions associated with the other leg of said member, said angular element when rotated being adapted to coact with said projections to form a clamping means or to separate two devices through the action of said threads.

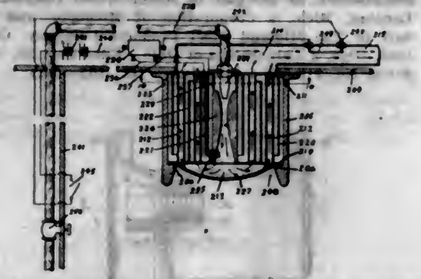
1,639,112. SIGNALING MEANS. FERDINAND SATTERSTROM, Hastings, Minn. Filed Apr. 23, 1924. Serial No. 708,470. 5 Claims. (Cl. 116—41.)



1. Signaling means for vehicles including a support adapted to be mounted upon a vehicle, a signal device pivotally mounted upon the support and adapted to assume an inoperative position and an operative signaling position, an element borne by the device to actuate the same, a rotatable operating member, mechanism connecting said

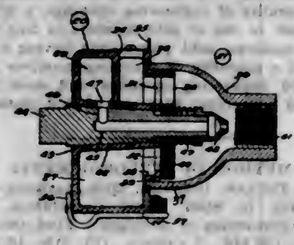
rotatable member and actuating element, the centers of said actuating element, rotatable member and mechanism being adapted to be disposed in alinement when the signal

device is in either of said two positions, and means to retain said centers in alinement against accidental release, said means being yieldable for normal operation.



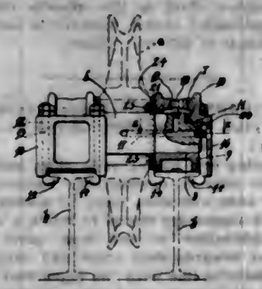
1,639,113. BODY REST FOR WASHTUBS. EDMOND H. SENGER, Los Angeles, Calif. Filed Dec. 13, 1924. Serial No. 755,706. 11 Claims. (Cl. 68—31.)

1. In combination with a basin, separate clamping devices attachable to an upper and a lower portion of said basin, a body rest pivotally and slidably mounted on the upper clamping device, and adjustable guide members attached at their upper ends to said body rest and connected at their lower ends with said lower clamping devices for supporting said body rest at selected angles and elevations.



1,639,114. HEATING APPARATUS. HARRY F. SMITH, Dayton, Ohio, assignor to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Dec. 24, 1921. Serial No. 524,785. 8 Claims. (Cl. 126—92.)

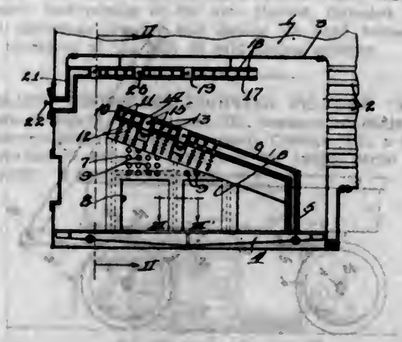
1. Heating apparatus of the character described comprising a combustion chamber, an imperforate refractory element overlying said combustion chamber, means for burning a fuel within said combustion chamber to bring the products of combustion into contact with the inner



side of the refractory element, and means for preventing the passage of convection currents over the outer side of said element.

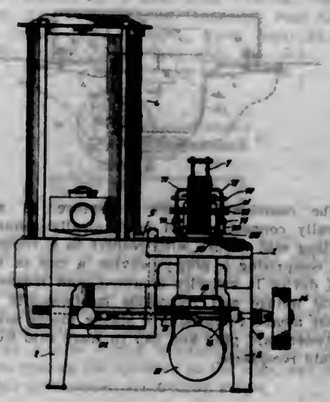
1,639,115. STOVE. HARRY F. SMITH, Dayton, Ohio, assignor to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed July 10, 1924. Serial No. 725,172. 14 Claims. (Cl. 158—105.)

1. In a stove of the character described, a burner element, constructed to burn natural gas, or the like, or producer gas, or the like, a conduit for supplying natural gas or the like to said burner, a conduit for supplying producer gas, or the like to said burner, an air passage opening to atmosphere, a valve for controlling communication of said natural gas conduit and said air passage with said burner element, said valve being constructed to effect an induction action, and a valve for controlling communication of said producer-gas conduit with said burner element, said valves being constructed to selectively control the supply of the respective gases to said burner element.



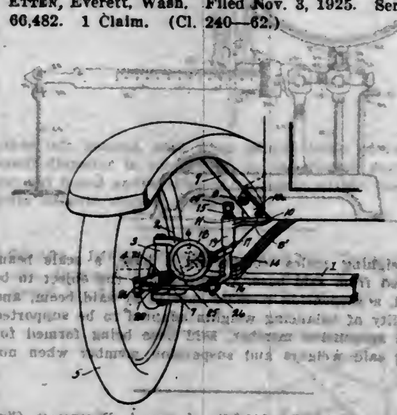
1,639,116. PULLEY SUPPORT FOR CROWN BLOCKS. EDWARD TIMBS, Los Angeles, Calif., assignor to Union Tool Company, Torrance, Calif., a Corporation of California. Filed May 26, 1925. Serial No. 33,038. 8 Claims. (Cl. 308—50.)

1. A pulley support for a crown block, comprising a shaft having recesses in its upper side at its opposite ends, bearings having concave seats for the shaft to rest



in, caps straddling the bearings provided with internal shoulders engaging in the recesses, and means passing through the caps outside of the bearings to secure the caps to beams.

1,639,117. FIRE ARCH. OLOF A. TOFTSTEN, Chicago, Ill. Filed Sept. 30, 1925. Serial No. 59,552. 4 Claims. (Cl. 110—76.)

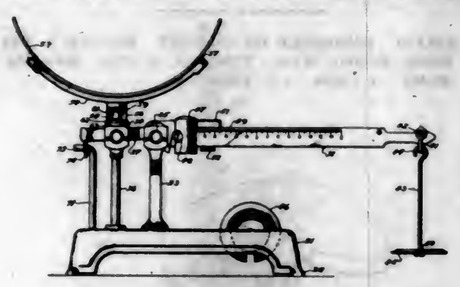


1. The combination with a boiler fire box, of a hollow fire arch mounted therein having air supply apertures and flame escape passageways therein, a fire baffle wall mounted in said fire box above the fire arch, with said baffle wall having air supply apertures and flame escape passageways therein, and means at one end of said fire baffle wall for controlling the passage of air therein.

1,639,118. CAN-END-LINING MACHINE. NELSON TROYER and MERTON L. DODGE, Seattle, Wash. Filed Sept. 24, 1925. Serial No. 58,429. 15 Claims. (Cl. 113—80.)

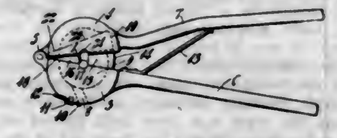
1. In a can-end lining machine, a mounting head, a plurality of sets of rotatable pads carried by the head between which can ends may be held and rotated, a nozzle for each set of pads from which a sealing compound may be discharged onto the can ends and a support for the several nozzles and adjustably fixed to the head and whereby the several nozzles may be adjusted toward or from the axes of the pads for the lining of can ends of different diameters.

1,639,119. DIRIGIBLE HEADLIGHT. WILLIAM V. VAN ETTEN, Everett, Wash. Filed Nov. 3, 1925. Serial No. 66,482. 1 Claim. (Cl. 240—62.)



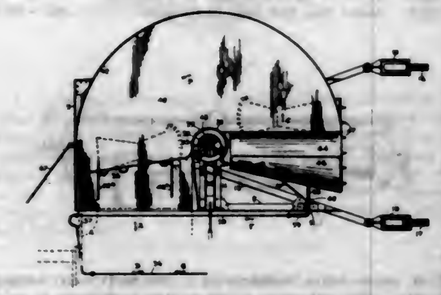
In a vehicle of the class described, a dirigible spotlight attachment comprising a bracket having a vertically disposed base plate provided with apertures for receiving bolts whereby it may be secured to the vehicle frame and having a horizontally turned and laterally directed portion at its lower edge provided with a vertical bearing sleeve, a shaft rotatably mounted in the sleeve and extending from the upper and lower ends thereof and provided with a shoulder engaging the lower end of the sleeve and terminating in a forwardly turned portion at its lower end, a spotlight mounting arm extending from the shaft adjacent the lower end of the sleeve, a coiled spring mounted about the upper end of the shaft and bearing against the upper end of the sleeve, and a nut on the shaft for tensioning the spring to hold the shoulder tightly against the lower end of the sleeve, an arm fixed to the steering knuckle of the vehicle and a link connecting this arm with the arm at the lower end of the shaft, by means of which the shaft will be rotated in accordance with movement of the steering knuckle.

1,639,120. WEIGHING SCALE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1923. Serial No. 670,105. 10 Claims. (Cl. 265—49.)



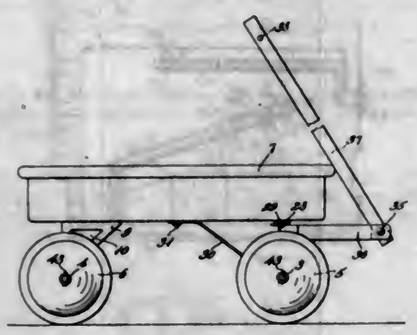
1. A scale beam, comprising a die-cast body having weighing indicia thereon, a knife edge positioned in said body prior to casting and having flattened tapered sides permitting temporary removal of the knife edge from the casting to permit machining, plating and the like and re-insertion thereof effecting tight frictional engagement.

1,639,121. INFANT SCALE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed June 16, 1924. Serial No. 720,229. 13 Claims. (Cl. 265—27.)



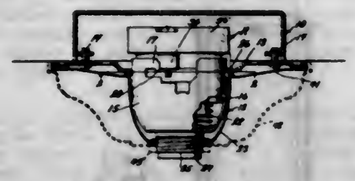
1. Weighing scales, comprising a base, a scale beam supported from said base, a support for the object to be weighed, a suspension member carried by said beam, and a plurality of balancing weights adapted to be supported by said suspension member, said base being formed for housing said weights and suspension member when not in use.

1,639,122. SCRAPER MOLD. LOUIS J. WHITMAN, Cincinnati, Ohio. Filed June 5, 1926. Serial No. 113,958. 7 Claims. (Cl. 107—47.)



3. A scraper-mold comprising a plurality of mold sections, means along the mutually facing surfaces of said sections to form an enclosed mold cavity between said sections upon incomplete approach of said sections to each other, said means permitting complete approach of said sections to each other and said means and said surfaces having, upon said complete approach, an opening to admit a confection handle to said cavity, said mold having an inlet for confection material, and a scraper on said mold, discharging into said inlet.

1,639,123. STOOKING MACHINE. JAMES FARRIS WILLOWS, Dorenlee, Alberta, Canada. Filed Nov. 11, 1924. Serial No. 749,137. 4 Claims. (Cl. 56—417.)

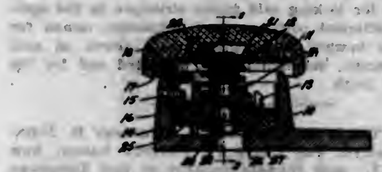


1. In a stooking machine adapted to be attached to a binder, having an inclined platform on which sheaves of grain are received; a rake for carrying said sheaves over said platform and turning the same to their end-for-end position; a converter into which said sheaves are discharged from said platform and means for intermittently actuating said converter from a substantially horizontal position to a substantially vertical discharge position, portions of said converter being composed of hinged doors and means for swinging said doors open when said converter is in its discharged position.

1,639,124. WAGON. ALFRED A. BECKER, Lakewood, Ohio, assignor to The George H. Bowman Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,645. 5 Claims. (Cl. 280—87.5.)

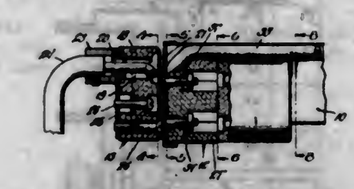
1. An axle bracket structure for toy wagons, comprising a unitary sheet metal member having the end portions thereof bent at substantially ninety degrees to the intermediate portion to provide re-enforcing side flanges, said intermediate portion being provided with spaced axle receiving portions, thereby providing a strong and ornamental structure.

1,639,125. ELECTRICAL CONNECTER DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1921. Serial No. 479,737. 5 Claims. (Cl. 173—330.)



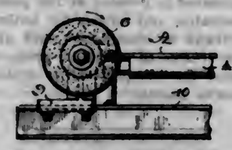
1. The combination with a fixture, of means for electrically connecting and mechanically connecting and supporting said fixture with respect to a receptacle, said means comprising a plug-in device, a cup in which said plug-in device is swivelly mounted, and means for holding said fixture and receptacle mechanically connected, said last means comprising a spring inside said cup acting between said plug and cap to force said fixture away from said receptacle.

1,639,126. SWITCH CONSTRUCTION. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1924. Serial No. 718,042. 7 Claims. (Cl. 200—159.)



1. A tipping switch button, comprising an annular casing member, an insulating base in said casing, a central post mounted on said base, an operating button tiltably

mounted on said central post, a metal anchorage member secured to said insulating base, and a screw extending through the side of the said annular casing



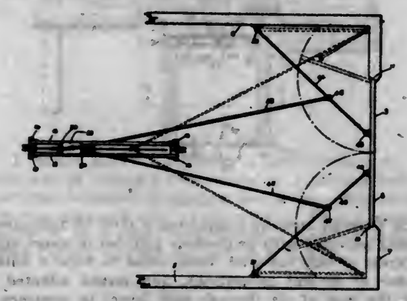
member transversely of the axis thereof, threaded into said anchorage member and having its head accessible for operation at the side of said casing member.

1,639,127. SHOW-CASE LIGHTING FIXTURE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 11, 1925. Serial No. 74,702. 3 Claims. (Cl. 240—6.)

1. A show case lighting fixture comprising an elongated open-sided casing for extending alongside of the show case, two wiring base and contact devices, one secured in each end of each casing, conductor wires extending between and secured to said wiring bases, each wiring base having contacts thereon for quick detachable engagement with the contacts on a lamp receptacle member, a wiring base for the supply wires mounted outside said casing and in alignment therewith, and means for electrically connecting the wiring terminals on the outside wiring base with the wiring terminals on one of the inside wiring bases.

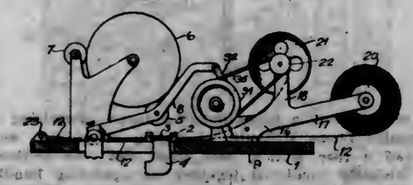
1,639,128. PROCESS OF MANUFACTURING WALL BOARD. SIDNEY C. CLARK, Port Clinton, Ohio, assignor to American Gypsum Company, Port Clinton, Ohio, a Corporation of Ohio. Filed Sept. 23, 1925. Serial No. 57,997. 5 Claims. (Cl. 154—2.)

5. The process of finishing plaster board, initially manufactured with a covered edge formed during the process of manufacture by folding the margins of the covering sheets over the edge of the plaster body and thence into said body between said cover sheets, consisting of advancing the boards lengthwise between rotative grinding wheels acting simultaneously on opposite side edges to remove the covering at the edge, and leaving the imbedded portions as reinforcing strips.



1,639,129. SIGNBOARD. GEORGE BOWEN CLEVELAND, Mobile, Ala. Filed July 8, 1926. Serial No. 121,205. 2 Claims. (Cl. 40—39.)

1. In a device for displaying advertising matter, a bill board consisting of a sheet of material having opposite surfaces for display of advertising matter and having an opening therethrough for a shaft, a shaft extending through the opening and provided with means to restrain the shaft from longitudinal movement in said opening, and wind wheels fixed on the ends of said shaft, one of said wind wheels being right handed and the

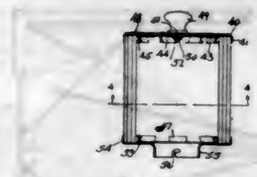


other left handed, said wind wheels being of relatively small diameter in comparison to the display surfaces of the bill board and positioned to rotate within the boundaries of said display surfaces.

1,639,130. DOOR-OPERATING MEANS. THOMAS FLEMING, Ottawa, Ontario, Canada. Filed Nov. 11, 1924. Serial No. 749,168. 3 Claims. (Cl. 268—63.)

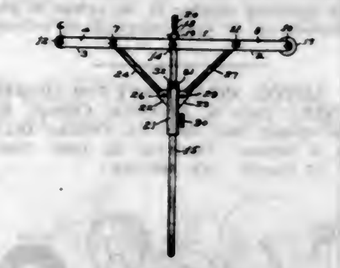
1. The combination with a movable closure, of a guide-way; a reciprocatable crosshead in said guide-way; means connecting said movable closure and crosshead, an electric motor-driven drum; a cable engaged thereby extending longitudinally of said guide-way over the ends thereof, and connected to said crosshead at opposite ends; a switch for controlling said motor; a switch operating member extending longitudinally of said guide-way engaging said switch; and means for engaging said crosshead and switch operating member at the extent of predetermined reciprocation of said crosshead to reverse said switch.

1,639,131. LISTING ATTACHMENT FOR ADDRESSING MACHINES. PAUL A. GOLLNICK, Chicago, Ill., assignor to Spiegel, May, Stern Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1926. Serial No. 83,070. 17 Claims. (Cl. 101—48.)



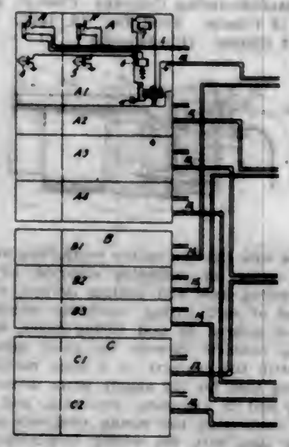
1. A device of the class described comprising a guideway for stencils; means for feeding a record strip in a path transverse to said guideway and in close proximity to the path of the stencils, and mechanism for guiding the strip to cause a portion thereof to double back upon itself at a point adjacent said guideway whereby the doubled-over portions travel in opposite directions past said guideway with one of said portions located in position to receive an impression from the stencil and to protect the other from the impression.

1,639,132. AIR FILTER. OSCAR V. GREENE, Cleveland, Ohio. Filed Apr. 3, 1925. Serial No. 20,400. 16 Claims. (Cl. 183—73.)



1. A filter element consisting of a sheet of screen rolled to form a hollow cylinder and provided with a cover at one end, said filtering cylinder increasing in density from such cover end to the other.

1,639,133. FILTER ELEMENT. OSCAR V. GREENE, Cleveland, Ohio. Filed Jan. 25, 1926. Serial No. 83,448. 16 Claims. (Cl. 183—73.)

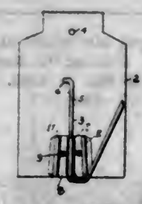


1. A filtering element comprising a strip of foraminous material provided with projections adapted to space apart the layers of said material when rolled to form a hollow cylinder of several revolutions, and means adapted to direct the flow of air through said layers in sequence.

1,639,134. PAPER-HANGING DEVICE. WILLIAM H. HALE, Pittsburgh, Pa., assignor of one-fourth to Claude G. Britton and one-fourth to Sheridan Randall, Pittsburgh, Pa. Filed Apr. 26, 1926. Serial No. 104,618. 1 Claim. (Cl. 216—7.)

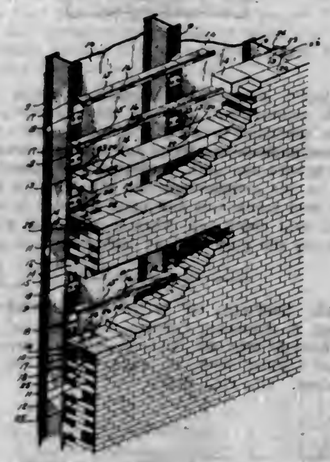
In combination, a paper hanging device comprising a rectangular frame structure consisting of a front section and a rear section, said front and rear sections being hingedly connected together, an operating handle having its upper end pivotally connected with said frame structure, a roller rotatably supported in the outer end of said rear section, an upwardly disposed detachably connected brush attached to the upper end of said operating lever and extending above said frame structure a sleeve slidably mounted on said operating handle, a pair of brace rods pivotally connected with said sleeve and with respective front and rear frame sections, said sleeve shiftable upwardly to dispose said front and rear frame sections in horizontal alignment relatively to each other to position said front and rear sections in the operative position, said sleeve shiftable downwardly to dispose said front and rear frame sections in the collapsed position, means for locking said frame structure in the operative and collapsed positions, and adjustable means for limiting the upward movement of said sleeve on said operating handle, substantially as described and for the purpose set forth.

1,639,135. TELEPHONE SYSTEM. HERBERT B. JOHNSON, Brooklyn, and LLOYD LA FAYETTE EAGON, New York, N. Y.; said Johnson assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York, and said Eagon assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Aug. 9, 1926. Serial No. 128,170. 6 Claims. (Cl. 179—48.)



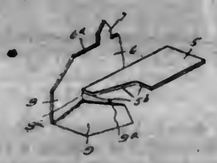
1. An indicating system, comprising a plurality of operators' positions, a plurality of groups of trunks each group terminating in a different operator's position, means for rendering a group of trunks non-available during an operator's absence from her position, means for indicating the idle condition of a trunk in one of said groups effective when an operator is present at the position in which said group terminates, and means for indicating the idle condition of a trunk in another of said groups effective when all of the trunks in the first group are busy and when the operator for the position in which said second group terminates is absent.

1,639,136. CURLING IRON. ADOLF P. KIETZ, Cleveland Heights, Ohio. Filed May 19, 1926. Serial No. 110,092. 4 Claims. (Cl. 132—41.)



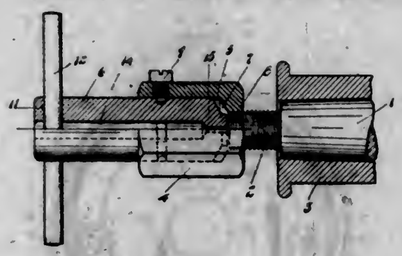
1. A hair curler of the class described having a rigid body portion and having a pair of oppositely disposed trunnions adjacent one end thereof, a retaining clip pivotally secured to said trunnions, the opposite ends of said curler being shaped to provide a tool engaging portion whereby the same may be grasped by a suitable tool for holding or turning the same.

1,639,137. BILL HOOK. CONRAD J. KORTZ, Cleveland, Ohio. Filed Sept. 27, 1926. Serial No. 137,975. 5 Claims. (Cl. 129—21.)



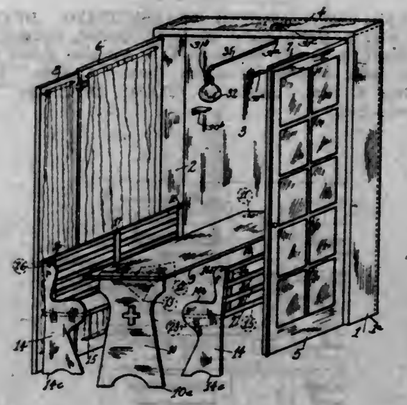
1. A bill hook comprising a card, a plate having a wedge-shaped channel and indentations in the side walls of said channel, and a hook member having a shank with a bent extremity adapted to be wedged within said channel and held in locked engagement with said indentations.

1,639,138. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn. Filed Oct. 30, 1925. Serial No. 65,767. 10 Claims. (Cl. 72—101.)



1. In a wall structure, metallic buckstays, having anchor brackets, plates connecting and interlocked with the brackets, sill blocks supported upon said plates in horizontal vertically spaced rows, and belts of brick-work between the horizontal rows of sill blocks.

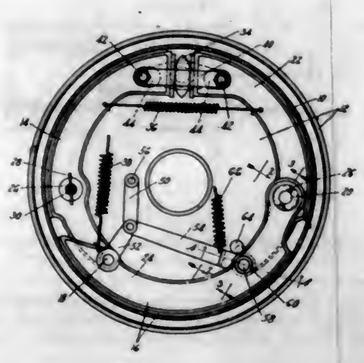
1,639,139. CLAMPING DEVICE. JAMES F. LOUCKS, Cleveland, Ohio, assignor to Holorib, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 18, 1926. Serial No. 142,320. 6 Claims. (Cl. 189—35.)



1. As an article of manufacture, a clamp adapted to fasten a metal sheet to a structural beam, said clamp comprising a base adapted to rest on top of a flange of the said beam, a vertical flange extending from said base and having a top edge adapted to engage the bottom of such sheet and provided with a tongue adapted to be passed through said sheet thereby to secure the same against such edge, the said vertical flange having a vertical extension located beyond one end of the base, said extension being provided with a projection extending beneath and spaced from the adjacent portion of the base thereby to engage the bottom of the beam flange while the base engages the top of the said beam flange.

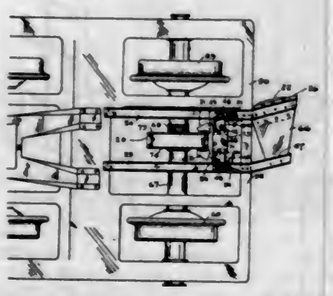
1,639,140. WHEEL PULLER. FRED AUGUST LUTHY, Jackson, Mich. Filed May 2, 1925. Serial No. 27,457. 5 Claims. (Cl. 29—85.)

1. A wheel puller comprising a shell having an enlarged bore or chamber terminating in a tapered bottom, a restricted threaded opening in said bottom and adapted to fit the threaded end of an axle, a driving member mounted in said socket and having a reduced shoulder adapted to butt against the end of said axle.



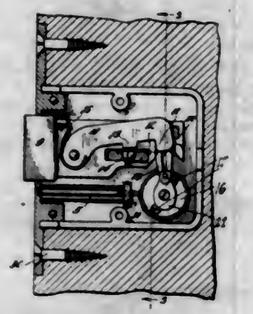
1,639,141. DINING CABINET. EDWARD T. E. MANGELS and ERWIN G. MANGELS, Davenport, Iowa. Filed Apr. 18, 1925. Serial No. 24,021. 1 Claim. (Cl. 155—83.)

In a cabinet of the class described, a bench member having a seat hingedly attached to the inside of the back of said cabinet in such manner that said seat may be folded upwardly against said cabinet back, a seat back hingedly secured to one of the edges of said seat in such manner as to forwardly fold upon said seat, an end seat brace, hingedly secured near the middle of its linear dimension to an end of said seat in such manner as to



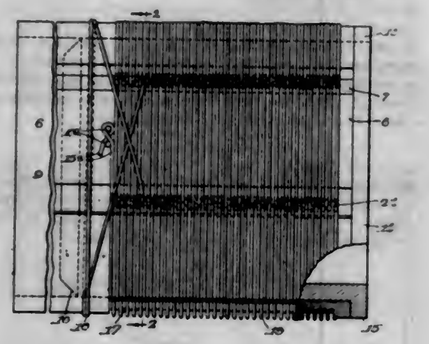
fold outwardly against the bottom of said seat when said seat is raised; hasp fastening means secured upon the outer end of said seat back, an upper end of said seat brace capable of co-operatively securing the said seat back to the said seat brace, other hasp fastening means secured upon said cabinet back and top end of said seat brace capable of co-operatively securing said bench to said cabinet back, said seat end having portions of its front edge and its bottom end cut away to facilitate its use, all for the purposes specified.

1,639,142. BRAKE. MONTGOMERY W. MCCONKEY, Wilmette, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1926. Serial No. 86,708. 25 Claims. (Cl. 188—78.)



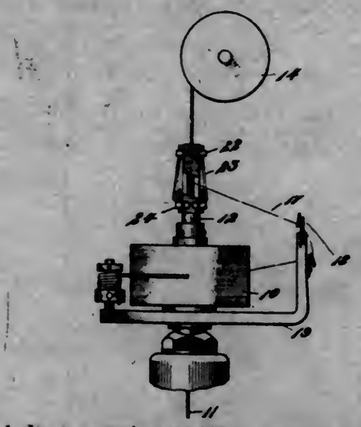
1. A brake comprising, in combination, a plurality of at least three shoes arranged end to end, and applying means connecting the same end of the intermediate shoe to the two shoes at its opposite ends.

1,639,143. POWER-TRANSMITTING DEVICE. CHARLES MCPHERSON, Montreal, Quebec, Canada, assignor, by mesne assignments, to Friction Power Corporation Limited, Montreal, Quebec, Canada. Filed July 9, 1926. Serial No. 121,451. 16 Claims. (Cl. 105—118.)



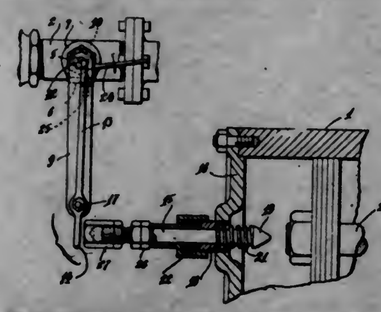
1. In a power transmitting device, a rotatable shaft member, a disk mounted on said shaft, a pair of friction rollers spring held to either side of said disk and having extending shafts, and a bearing member for said rollers having sliding and oscillatory movements, independent of the movements of said shaft member and accounting therefor in the engagement of the friction rollers with said disk.

1,639,144. LOCKING MECHANISM. JAMES A. MUZZIO, Cleveland, Ohio, assignor to Rosa S. Muzzio, Cleveland, Ohio. Filed Jan. 2, 1923. Serial No. 610,202. 4 Claims. (Cl. 70—46.)



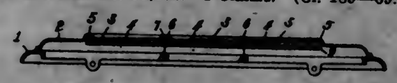
1. Cylinder locking mechanism, comprising relatively rotatable concentrically disposed cylinder and plug members, an operating crank arm rotatable with the plug and spaced endwise therefrom and having a crank pin extending toward the plug, a slotted bolt operating lever pivoted on the cylinder member and lying in the space between said crank arm and plug, the slot of said lever receiving said crank pin, whereby said arm may be removed from the plug without disturbing said lever.

1,639,145. METHOD OF WINDING TRANSFORMERS. GEORGE F. NIEMANN, Chicago, Ill., assignor to Benjamin Electric Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 25, 1926. Serial No. 137,672. 5 Claims. (C. 175—359.)



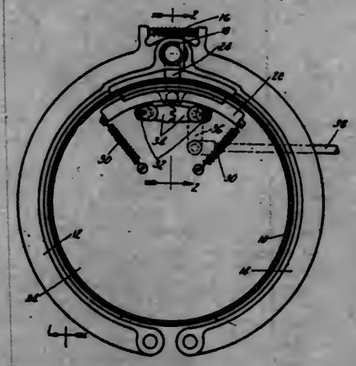
1. The herein described method of forming transformers comprising the steps of first winding a primary coil consisting of the required number of turns upon a forming tool, then winding a portion of wire at a point remote from the primary coil, and then winding the secondary coil with its inner end contiguous to the outer end of the primary coil.

1,639,146. WRAPPING WIRE. WALTER E. PETTENGILL, East Providence, R. I. Filed July 27, 1926. Serial No. 125,296. 10 Claims. (Cl. 117—42.)



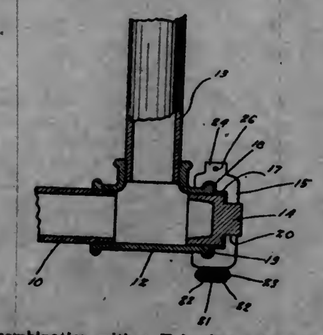
1. In a wrapping machine, a wrapping head comprising a body through which the wire passes, a presser member, and spring means bodily carrying said member and yieldingly moving it into engagement with said wire after it has been covered.

1,639,147. AUTOMATIC SHUT-OFF FOR PUMPS. ARTHUR ALBERT PHILLIPS, Anaheim, and EDWARD CONNELLY, Fullerton, Calif. Filed Nov. 8, 1926. Serial No. 146,874. 8 Claims. (Cl. 103—13.)



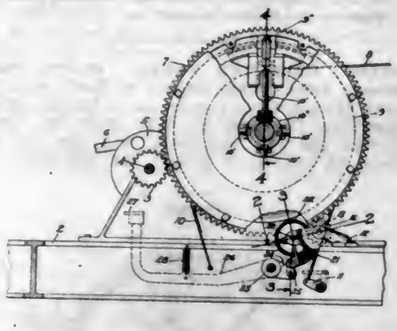
1. In an automatic shut-off for a pump having a cylinder and a reciprocating piston, the combination of a member projecting into the interior of the cylinder and lying beyond the normal path of movement of the piston when the pump is in normal operation, a controlling device for controlling the flow of operating fluid to the pump to drive the piston, and means actuated by said member to actuate the controlling device to shut off flow of the operating fluid when said member is struck by the piston.

1,639,148. WINDOW. WILLIAM D. REDSUP, Huntington, Ind., assignor to The Majestic Company, Huntington, Ind., a Corporation of Indiana. Filed Mar. 29, 1926. Serial No. 98,172. 4 Claims. (Cl. 189—69.)



1. A closure member having an opening therein and a marginal channel around the opening with the edge wall of the free leg of the channel forming a seat for a window pane, a window pane holding frame of angle iron form in cross-section having one flange projecting edgewise into the channel and its other flange adapted to grip a pane in opposition to the free edge wall of the channel, said channel being of a width so as to permit the first named flange of the angle iron frame to be adjusted laterally of the channel, and means for detachably securing the frame to the closure member.

1,639,149. COMPOUND BRAKE. EUGÈNE PROSPER RENAUX, Paris, France, assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 14, 1923, Serial No. 625,072. Divided and this application filed Apr. 15, 1926. Serial No. 102,139. 5 Claims. (Cl. 188—78.)

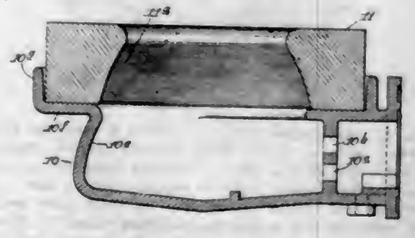


1. A brake comprising, in combination, a rotatable drum, a friction device encircling the drum and having adjacent movable ends formed with yokes, a contracting device embraced by the yokes and having an operating arm extending inside of the circumference of the brake drum, and a servo shoe engageable with the inside surface of the brake drum opposite said yokes and operating said arm to apply the friction device to the outside of the drum.

1,639,150. FASTENING DEVICE FOR GAS-MAIN SWEAT PLUGS. EDWARD SCHNEIDER, St. Paul, Minn. Filed Mar. 13, 1922. Serial No. 543,297. 2 Claims. (Cl. 70—122.)

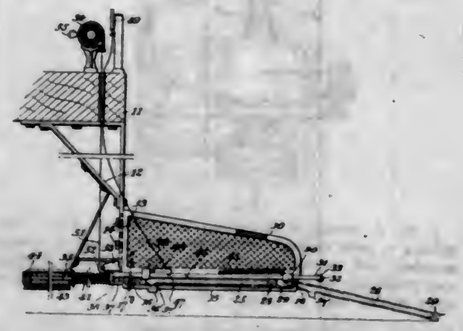
2. In combination with a T having a bead and a plug formed with a square head screwed therein, enclosing means comprising a pair of sections hingedly connected together and formed with an annular portion and a back portion, said sections being open at their sides opposite the back portion, a groove positioned along the interior of said annular portion adapted to engage said bead, and angular notches formed in said back portions through which the head of said plug may be projected and means for securing said sections together.

1,639,151. REVERSING MECHANISM FOR HOISTING DRUMS. WILLIAM SOMMER, St. Paul, Minn., assignor to American Hoist & Derrick Company, a Partnership composed of F. J. Johnson and W. O. Washburn, St. Paul, Minn. Filed June 30, 1924. Serial No. 723,422. 4 Claims. (Cl. 254—187)



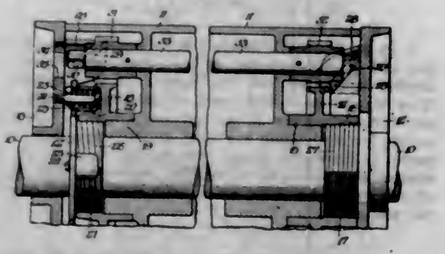
1. A hoisting apparatus comprising a winding drum and cable therefor, said drum having an annular friction surface, means for revolving said drum in one direction to wind the cable thereon, said drum being temporarily disconnected from said revolving means to allow backward movement, and a friction wheel engaging said winding drum friction surface for accelerating its backward movement to hasten the discharge of the cable from the drum, an oscillating element supporting said wheel, a pinion carried by said element and connected to said wheel, and means for oscillating said element and connecting said pinion with said revolving means.

1,639,152. PROCESS OF ELABORATING CORN STALKS INTO PULP FOR USE IN PAPER MAKING AND THE LIKE. ORLAND RUSSELL SWEENEY, Ames, Iowa. Filed Nov. 15, 1926. Serial No. 148,615. 1 Claim. (Cl. 92—5.)



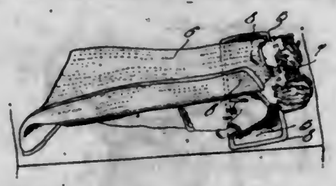
The method of elaborating corn stalks into a pulp for the manufacture of paper, lumber substitute, wall board and the like, which method consists in cooking corn stalks in the presence of soda, lime, sulphite or the like, subjecting the mass to the action of micro-organisms to thereby create a condition under which the corn stalks will be partially disintegrated by the molds, yeast and bacteria which occur under such conditions, and finally subjecting the mass to the action of a mechanical beater.

1,639,153. FIRE POT FOR FUEL BURNERS. HUDSON A. TEDMAN, Galesburg, Ill, assignor to Winslow Boiler & Engineering Co., Galesburg, Ill., a Corporation of Illinois. Filed Nov. 20, 1924. Serial No. 751,007. 2 Claims. (Cl. 158—28.)



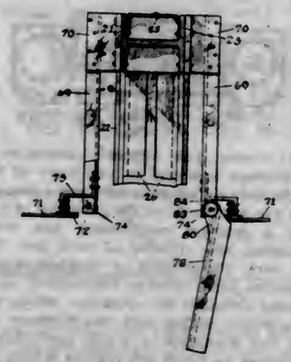
1. A fire pot for fuel burners comprising a metal fire pot shell having an open top portion, and a ring of refractory material the inner end of the bore of which registers with the bore of said open top, said ring being supported wholly above the pot and positioned approximately in the zone of most intense heat normally developed by the burner in operation, the bore of said ring being of approximately the same diameter as the interior of the shell and the surface of said bore forming an approximate continuation of the inner surface of said shell.

1,639,154. SAFETY LIFE-SAVING FENDER FOR CARS. JOHN TUBA, Whiting, Ind. Filed Dec. 14, 1926. Serial No 154,776. 7 Claims. (Cl. 293—24.)



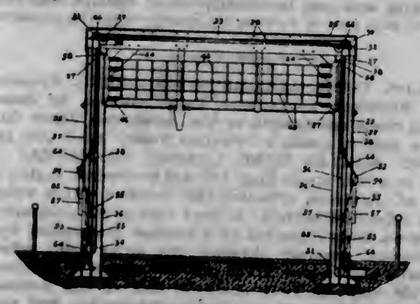
1. In a life saving fender for vehicles, a rigidly supported basket having guide blocks at the sides thereof, a frame slidable in said blocks and comprising side arms and a bumper bar connecting them at the front, an auxiliary basket positioned under the rigid basket, and means controlled by the movements of said frame for releasing said auxiliary basket and for forcing it forwardly for the purpose set forth.

1,639,155. SANDER DRUM. RICHARD A. WILLIAMS and WALTER L. BIGSBY, Beloit, Wis., assignors to Yates-American Machine Company, Beloit, Wis., a Corporation of Delaware. Filed Mar. 6, 1926. Serial No. 92,672. 2 Claims. (Cl. 51—194.)



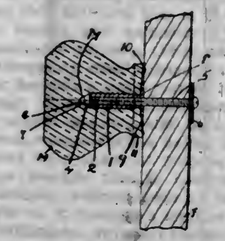
1. A sander drum, comprising a body on which a covering of sand paper or other material is adapted to be spirally wound, a member to which one end of the covering is adapted to be secured, another resiliently yieldable member to which the other end of the covering is adapted to be secured, and means for moving the members spirally in opposite directions with the resiliently yieldable member moving at a greater rate of speed than the other member.

1,639,156. DOUBLE BED COVER. CHARLIE W. WILMERT, Coalinga, Calif. Filed Dec. 30, 1926. Serial No. 157,996. 2 Claims. (Cl. 5—334.)



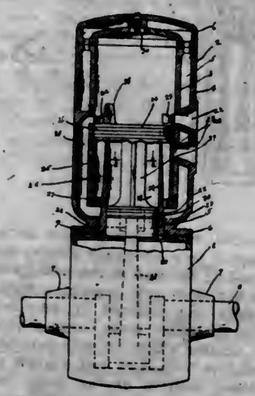
1. A double bed cover comprising a portion upon which the shoulders of two bed occupants may rest, a second portion to cover the occupants' bodies, and a narrow centrally disposed neck portion joining the two aforesaid portions and adapted to pass around the adjacent shoulders of the occupants.

1,639,157. TRAFFIC-GATE STRUCTURE. MELVIN H. ALBERTS, Battle Creek, Mich. Filed Feb. 1, 1926. Serial No. 85,310. 3 Claims. (Cl. 191—36.)



1. A trolley bridge comprising a depending wedge-shaped member positioned in the path of movement of the trolley wheel, and side flanges on said member to form a confining track for the trolley wheel.

1,639,158. TRAFFIC GATE. MELVIN HOWARD ALBERTS, Chicago, Ill. Original application filed Feb. 1, 1926, Serial No. 85,310. Divided and this application filed Mar. 18, 1927. Serial No. 176,412. 2 Claims. (Cl. 39—1.)

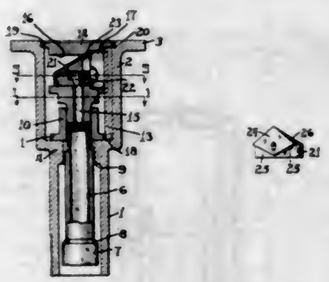


1. In a traffic gate structure, a movable main gate member, a guide for guiding the vertical movements of the gate member, a set of parallel maintaining pulleys and lines connected to the ends of the movable gate member and supported on the guide, a side gate member having a part pivotally connected to the guide, a cable connected to the side gate member, a hook connected to the said cable and engaged by the movable gate member, and means for manipulating the pulleys and lines for raising and lowering the main gate member and the side gate.

1,639,159. FURNITURE KNOB. WILLIAM AUGUST ANDERSON, Huntington Park, Calif., assignor to The Technical Glass Company, Incorporated, Los Angeles, Calif., a Corporation of California. Filed Sept. 26, 1925. Serial No. 58,797. 4 Claims. (Cl. 16—121.)

1. A furniture knob comprising in combination an ornamental head, a base portion on said head, means on said base portion adapted to prevent movement of said head when in position on a piece of furniture, an open-ended tapered sleeve in said head, means on said sleeve for preventing the turning of said head on said sleeve, and a detachable means adapted to be thrust through said furniture and anchored in said sleeve.

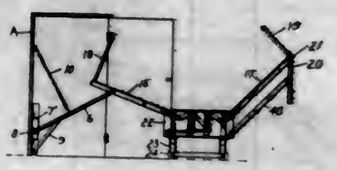
1,639,160. VALVELESS TWO-CYCLE MOTOR. FRANK BALCERZAK, Milwaukee, Wis. Filed May 29, 1922. Serial No. 564,625. 1 Claim. (Cl. 123—74.)



In a two-cycle internal combustion engine having a cylinder and a sleeve within said cylinder in axial alignment therewith and of less diameter than said cylinder, a piston comprising a cylindrical portion adapted to fit said engine cylinder, a second cylindrical portion adapted to fit within said sleeve and being of less diameter than the first mentioned portion co-axial therewith and wholly longitudinally exterior to the first mentioned portion, and a shank portion connecting said cylindrical portions and being of less diameter than the second cylindrical portion, said cylindrical portions and shank being integrally connected, whereby to obviate machining of any portion of said piston within the first mentioned cylindrical portion.

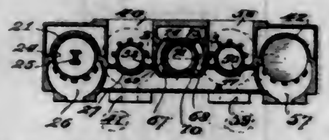
1,639,161. TERMINAL. ERNEST A. BOHLMAN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1921. Serial No. 474,380. 2 Claims. (Cl. 173—259.)

1. A device of the character described including a mounting strip of insulating material, a contact plate adapted to be secured to said mounting strip by integrally formed downwardly extending legs located at opposite ends of said contact plate, upwardly extending arms for said contact plate arranged in pairs on opposite ends and on the sides of said contact plate, a clamped member having integrally formed side pieces bent at right angles to the contact surface of said clamped member, shoulders formed by said side pieces and the contact surface of said clamped member adapted to engage the pairs of arms to prevent the rotation of said clamped member, said side pieces of said clamped member adapted to engage the contact plate to form a channel to permit the insertion of a spiked terminal from two longitudinal directions only, and a screw passing through an orifice in said clamped member and having screw threaded engagement with an orifice in said contact plate to clamp the clamped member in position.



1,639,162. SPRAYING DEVICE. JOHN A. BROOKS, Detroit, Mich. Filed June 12, 1925, Serial No. 36,577. Renewed Mar. 14, 1927. 4 Claims. (Cl. 299—127.)

1. In combination with a spray head having a water discharge passage, a pair of spaced substantially parallel walls on the head at the end of the passage and at substantially right angles to said passage, a wall connecting said pair of walls and disposed at substantially right angles thereto, a reversible spray member having a face formed to seat against either of said pair of walls and having a second face formed to seat against the connecting wall in either position of the spray member, and means extending through the connecting wall and into the spray member for connecting the spray member thereto, said spray member having spray-forming faces of differing configuration presented to the stream issuing from said passage in the said two positions of mounting thereof.

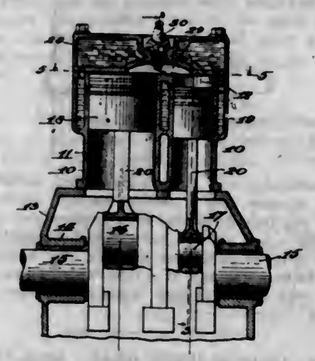


1,639,163. FOLDING BED. WILLIAM A. BURGER, Berkeley, Calif., assignor of one-half to Hans P. Henningsen, Oakland, Calif. Filed July 20, 1925. Serial No. 44,652. 4 Claims. (Cl. 5—152.)

1. A folding bed comprising a support, a head section and a foot section pivoted to said support for foldable movement from horizontal to vertical, a toggle link connected to said foot section and to said support whereby the foot section constitutes one leg of a toggle joint, linkage connecting said head section to the toggle joint for folding movement with the foot section; said linkage

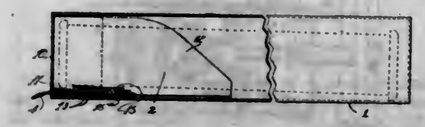
being locked by the toggle joint when the foot section is horizontal; and spring means tending to fold said head section, whereby the bed will be folded by said spring only after folding motion of the foot section has been manually initiated to break the toggle.

1,639,164. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Nov. 23, 1925. Serial No. 70,826. 5 Claims. (Cl. 123—59.)



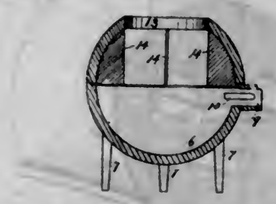
4. In a two stroke cycle internal combustion engine, eight main cylinders arranged in two rows of four cylinders each, the four cylinders in each row being arranged in pairs with the head ends of the members of each pair connected by a common compression and combustion clearance chamber, one cylinder of each pair having a two-diameter bore, the portion of greatest diameter in each two-diameter bore cylinder functioning as a pump chamber, pistons arranged for operation within the eight cylinders, the piston within each two-diameter bore cylinder having two diameters, a crank shaft having four main crank throws to which the pistons within the eight cylinders are separately connected, the crank throws to which the two-diameter pistons are connected being angularly disposed in advance in the direction of crank rotation from the cranks to which the pistons in the cylinders having the straight diameter bores are connected, the two rows of cylinders being arranged 90° apart and with the axes of the cylinders intersecting the axis of the crank shaft, valvular means actuated from the crank shaft for admitting gaseous fuel to the pump chambers of the two-diameter cylinders and gaseous fuel transfer ducts leading from the pump chambers of the two-diameter cylinders in each row to the cylinder of straight diameter one of each pair of combustion chambers in the opposite row.

1,639,165. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Dec. 16, 1925. Serial No. 75,703. 7 Claims. (Cl. 123—53.)



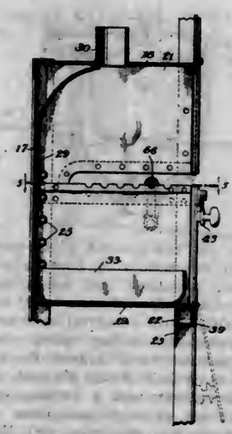
1. In a four stroke cycle internal combustion engine, a pair of combustion cylinders, the chambers within which have different diameters, the head ends of the combustion chambers being connected by a common compression and combustion clearance chamber, the latter being offset laterally with respect to the pair of combustion chambers so that only relatively small portions of said common clearance chamber are in direct communication with said combustion chambers, said common compression and combustion clearance chamber having inlet and exhaust ports, poppet valves controlling said ports, the axes of which

poppet valves are parallel with the axes of the combustion chambers, pistons arranged for operation within the combustion chambers of different diameters, a crank shaft having two crank throws to which the two pistons are



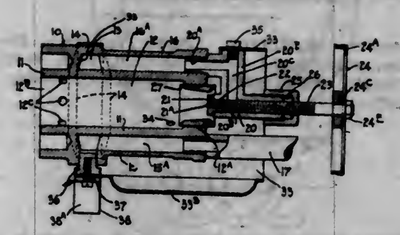
respectively connected and the pin of the crank throw to which the piston within the combustion chamber of least diameter is connected occupying an angular position in advance in the direction of crank shaft rotation from the pin of the other crank.

1,639,166. CONTAINER FOR MUSIC ROLLS AND THE LIKE. CHARLES S. BURTON, Oak Park, Ill. Filed Sept. 7, 1922. Serial No. 586,570. 4 Claims. (Cl. 206—52.)



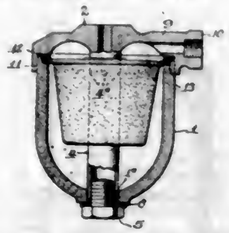
1. A container for music rolls and the like, comprising a tubular box member open at one end; a telescoping closure therefor, an interior metal reinforce at said open end, through which reinforce the closure telescopes into the box; a flexible fabric strip having one end engaged between one side of the reinforce, and the adjacent longitudinal side of the box, and folded back over the inner edge of said side of the reinforce out through the latter and extending in the bottom of the closure secured thereto to the forward edge thereof for hinging the closure to the box.

1,639,167. OIL BURNER. WALTER DEGEN, Fresno, Calif. Filed May 21, 1927. Serial No. 193,103. 2 Claims. (Cl. 158—53.)



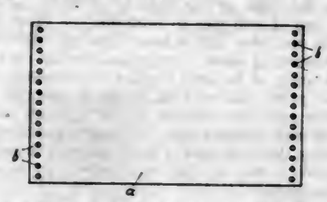
1. An oil burner consisting of a semispherical chamber open at the top and on the diametrical plane, an inlet for fuel and air tangentially to the inside wall of the chamber, a cover for said chamber having an opening at the top, and a plurality of baffles therein adapted to force upwardly the gas passing through the chamber.

1,639,168. ROASTING OVEN. CASIMIR DOROZYNSKI, Chicago, Ill. Filed Sept. 15, 1926. Serial No. 135,513. 5 Claims. (Cl. 126—39.)



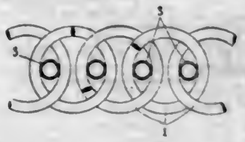
1. An apparatus of the type described comprising a plurality of legs, an integral sheet metal member bent to form the vertical back wall, the horizontal, parallel and spaced top and bottom walls, and the side walls of an oven, said oven attached to the legs, an L-shaped flange formed on the edge of the bottom of the oven and attached to two of said legs to reinforce the same, housing members in the oven and spaced from the side walls to form an insulating space, a drip pan carried on the bottom and bearing at its ends against the housings to hold the pan in place, one of said housings carrying a rack bar, another rack bar carried on the opposite side wall of the oven, said housing and side wall respectively being slotted above the rack bars, a food carrying member supported between and on the rack bars, and means for heating the oven.

1,639,169. TORCH. ERNST F. ENGSTROM, Maywood, and JAMES W. BENES, Hollywood, Ill., assignors to Everhot Manufacturing Company, Maywood, Ill., a Corporation of Illinois. Filed June 20, 1925. Serial No. 38,432. 2 Claims. (Cl. 158—33.)



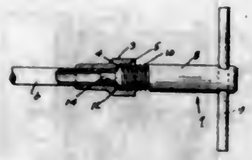
1. In a torch of the character described, and in combination, a burner for said torch adapted to receive fluid fuel under pressure, said burner having a combustion chamber, a shield rigidly supported on said burner and embracing said combustion chamber, said combustion chamber having a fluid fuel outlet, and a priming cup depressed in said shield adapted to receive fluid fuel from said outlet for preheating of said burner and combustion chamber.

1,639,170. GASOLINE FILTER. WILLIAM FELL, Chicago, Ill., assignor to Visible Gasoline Filter Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1920. Serial No. 429,607. 17 Claims. (Cl. 210—165.)



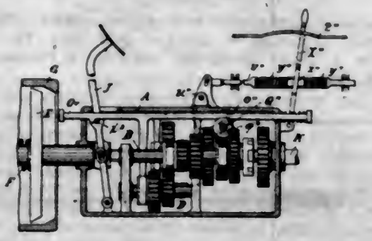
1. In a filter, the combination of a receptacle, having inlet and outlet connections, a filtering unit removably mounted in said receptacle and comprising a skeleton frame, a disc of relatively stiff material at one end of said frame, and provided with a central aperture, a screen of pliable filtering material fitting tightly over said frame with its edges secured inwardly from the margin of said disc to provide a marginal flange adapted to support said unit in said receptacle, and a tubular extension communicating with one of said connections and extending into said receptacle for registering with the aperture in said disc.

1,639,171. PRINTING PLATE AND METHOD OF PRODUCTION THEREOF. FERDINAND FISCHER, Berlin, Germany. Filed Mar. 10, 1926. Serial No. 93,738. 1 Claim. (Cl. 41—41.5.)



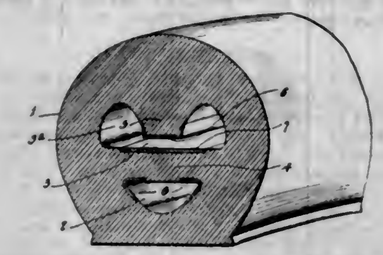
As a new article of manufacture, a small printing plate suitable for lithography comprising a metallic sheet provided with a commercially grained printing surface, and of uniform thinness throughout to both end edges thereof, said sheet being of such thinness as to be successfully tensioned on the cylinder of a duplicating machine by mere pins and holes, the end of said sheet being provided with a series of holes for this purpose extending transversely thereacross.

1,639,172. RADIATOR. PEDRO VILARDELL FORCADA, Barcelona, Spain. Filed Nov. 26, 1924, Serial No. 752,453, and in Spain Jan. 31, 1924. 2 Claims. (Cl. 257—129.)



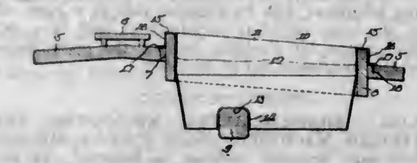
1. A radiator core for use with the cooling system of automobile engines and the like, including a series of substantially parallel interlaced helical tubes in combination with straight tubes passing longitudinally through the lenticular spaces formed by the interlaced helical tubes and lying contiguous to said helical tubes, all of said tubes being adapted to convey water, and the straight tubes functioning to strengthen the interlaced helical tubes.

1,639,173. REFLANGING TOOL. ADOLPH FOUNTAIN, FELICE BALZARINI, and THEODORE THIEL, San Francisco, Calif. Filed June 1, 1926. Serial No. 112,943. 4 Claims. (Cl. 153—79.)



1. A reflanging tool comprising a first unsplit tubular threaded member and a second member having threads engaging the threads on the first member, said first member having a seat therein, said second member extending into the bore of said first member and having a part adapted to flare the end of a tube inserted into said first member over said seat and thereby bind the former to the latter.

1,639,174. CHANGE-SPEED GEAR. GRAF ALFRED VON SODEN-FRAUNHOFEN, Friedrichshafen, Germany, assignor, by mesne assignments, to the Firm: Zahnradfabrik Aktiengesellschaft, Friedrichshafen, Germany. Original application filed June 28, 1920, Serial No. 392,444, and in Germany Sept. 13, 1916. Divided and this application filed Jan. 25, 1922. Serial No. 531,811. 1 Claim. (Cl. 74—38.)



In a change speed gear in combination, a plurality of change speed wheels, striker rods adapted to cooperate with said wheels, means for throwing the said striker rods in and out, respectively, a circular groove in each striker rod, a lock shaft extending across all said striker rods and discs on said shaft, each adapted to engage with the groove in a striker rod and separate means for operating said rotary means.

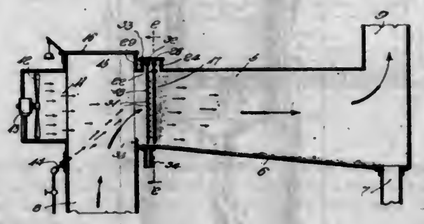
1,639,175. CUSHION TIRE. GEORGE GATIAL, Tarentum, Pa., assignor of one-half to Steve Matiasko, Tarentum, Pa. Filed Jan. 23, 1926. Serial No. 83,238. 2 Claims. (Cl. 152—1.)

1. In a cushion tire, a solid tire body having concentric circumferentially extending pockets separated by an intermediate wall, an inwardly directed rib carried by a wall of the outer pocket to engage the outer face of the intermediate wall when the tire is under load, a channel-shaped wear plate inclosing the free side of the rib with the sides of the channel flush with the sides of the rib, and a wear plate set into the outer side of the intermediate wall and flush with the face thereof and being of greater width than the aforesaid wear plate and terminating adjacent the opposite sides of the outer pocket to maintain contact with the aforesaid wear plate upon lateral movement of the tread portion of the tire when under load.

1,639,176. HOPPER FOR REFRIGERATING CARS. HOWARD A. GLENN and LOY S. DROMGOLD, Chicago, Ill. Filed Feb. 8, 1926. Serial No. 86,822. 3 Claims. (Cl. 105—377.)

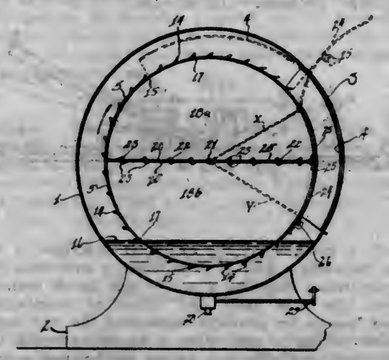
1. The herein described method of constructing a hopper for refrigerating cars, which consists in making the hopper of the proper dimensions and then galvanizing the whole as a unit before mounting it in position.

1,639,177. WRENCH. WILLIAM F. GOURLEY, Good Pine, La. Filed Jan. 15, 1926. Serial No. 81,486. 5 Claims. (Cl. 81—66.)



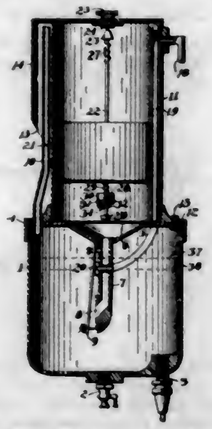
1. A wrench comprising a pair of oppositely extending handle members each having an integrally formed arcuate jaw adapted to engage about an object, and a link permanently connecting said members together, said link being pivotally connected adjacent one end to one of said handle members, and pivotally connected adjacent the other end to the jaw of the other member.

1,639,178. STROBOSCOPE WITH VIBRATING CORD. AMÉDÉE VICTOR JOSEPH GUILLET, Paris, France. Filed Mar. 10, 1924, Serial No. 698,803, and in France Mar. 22, 1923. 7 Claims. (Cl. 88—14.)



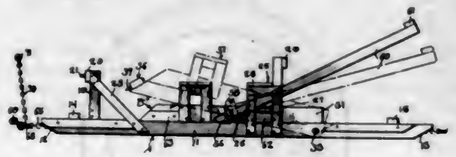
1. A stroboscope, comprising a frame a vibrating cord means for securing said cord at its ends to said frame means controlled by the vibrating cord for producing stroboscopic flashes, electro-magnetic means for sustaining the vibration of said cord and means, controlled by the vibrating cord, for supplying current to said electro-magnetic means.

1,639,179. SMOKE CLEANER. PETER HAMEL, Berlin, N. H. Filed May 3, 1926. Serial No. 106,466. 4 Claims. (Cl. 261—17.)



1. A smoke cleaner comprising a passage extending in a substantially horizontal direction, said passage having an air inlet neck at one end, said neck being in line with and substantially a continuation of said passage, a smoke inlet communicating with said passage at the junction of said air inlet neck and said passage, a smoke outlet at the opposite end of said passage, a blower mounted in said air inlet neck for directing a blast of air longitudinally through said passage to facilitate the passage of the smoke through the latter, liquid spraying means extending across the area of said passage adjacent to said air and smoke inlets, air discharging means extending across the area of said passage between said air and smoke inlets and said liquid spraying means, said air discharging means having a multiplicity of outlets directed toward said liquid spraying means.

1,639,180. WASHING MACHINE. LOUIS WILLIAM HAMILTON, Kenosha, Wis., assignor of one-half to John M. Bleicher, Kenosha, Wis. Filed Dec. 21, 1925. Serial No. 76,918. 2 Claims. (Cl. 68—18.)

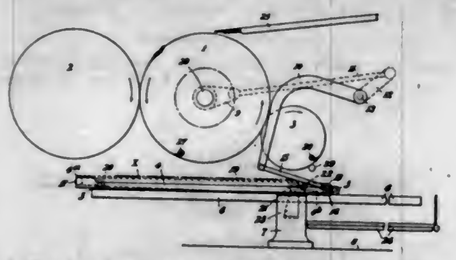


1. A washing machine comprising a casing adapted to hold a washing solution therein, a washing cylinder rotatably mounted in said casing, means for rotating said cylinder, said cylinder having stamped-out portions making openings therein and forming outwardly extending integral arcuate-shaped lugs, a plurality of partitions diametrically disposed in said cylinder for forming compartments, transversely extending partitions having hinged portions disposed in the compartments, and doors for the compartments hingedly mounted upon said cylinder and out of alignment with each other.

1,639,181. VACUUM FUEL-FEED TANK. WILLIAM E. HART, near San Jose, Calif. Filed Nov. 10, 1924. Serial No. 749,076. 4 Claims. (Cl. 158—36.1.)

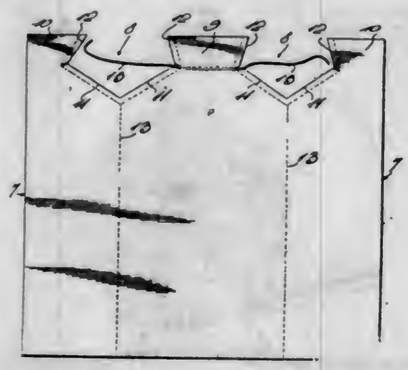
1. A device of the character indicated comprising a fuel discharge chamber, a fuel supply chamber arranged thereover, a conduit communicating with the bottom of said supply chamber and extending into said discharge chamber, an air supply to said discharge chamber, a float operated valve controlled suction outlet from said supply chamber, a conduit extending from the upper portion of said supply chamber to the desired normal liquid level in said discharge chamber and having an opening in its lower end lying in the same plane as the discharge opening in said first mentioned conduit, and a normally open valve operatively positioned with relation to said conduits and actuated to close the same by reduction in air pressure in said second mentioned conduit below the air pressure in said discharge chamber.

1,639,182. LAND-LEVELING MACHINE. JULES L. HENRY, Ysleta, Tex. Filed Aug. 27, 1926. Serial No. 131,957. 4 Claims. (Cl. 37—145.)



1. In a machine of the character described, a main frame including a pair of longitudinally extending skids, a second frame including a pair of side boards positioned between the said skids and extending longitudinally thereof, means for pivotally connecting the rear ends of the said boards to said skids, a handle extending rearwardly and upwardly and having its forward end connected with said boards for raising and lowering the forward ends thereof, blocks carried by said boards and engaging said skids for limiting the downward movement of said boards, a rake carried by and extending between said boards and having a plurality of teeth terminating on a level with the bottom edges thereof, a harrow secured to and between said boards in the rear of said rake and having a plurality of teeth projecting below the bottom edges of said boards, and a planing board secured to and between said boards in the rear of said harrow and having its lower edge even with the bottom edges of said boards.

1,639,183. PLIERS. GEORGE P. INGRAM, San Jose, Calif. Filed Mar. 18, 1926. Serial No. 95,663. 4 Claims. (Cl. 294—44.)

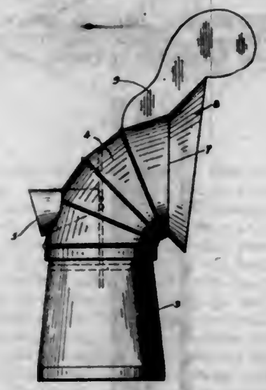


1. A device of the character described, comprising a pair of pivoted and relatively slidable coacting jaws provided with handles, one jaw having a pivot mounted thereon and the other jaw having a slot formed therein to receive said pivot and extending from a point in substantial alignment with its gripping face to a point adjacent the edge extending forwardly of said face, and resilient means for normally holding the pivot seated in the first mentioned end of said slot.

1,639,184. SHEET-DELIVERY MECHANISM FOR PRINTING MACHINES. JOHN WALLACE JAKEMAN, Altrincham, England, assignor to Linotype and Machinery Limited, London, England. Filed May 6, 1926, Serial No. 107,024, and in Great Britain May 15, 1925. 8 Claims. (Cl. 271—78.)

1. Sheet delivery mechanism for printing machines, comprising a reciprocating tape carriage, two sets of tapes both reciprocating with the carriage, one set serving for receiving the printed sheets and transferring them to the other set, the tapes of the latter set being endless and serving to deposit the sheets on the delivery board, and means for rotating the endless tapes during only the inward strokes of the carriage.

1,639,185. EMERGENCY RAINCOAT. OSCAR WALTER JOHNSON and CARL H. JOHNSON, Chicago, Ill. Filed Apr. 11, 1927. Serial No. 182,812. 3 Claims. (Cl. 2—87.)

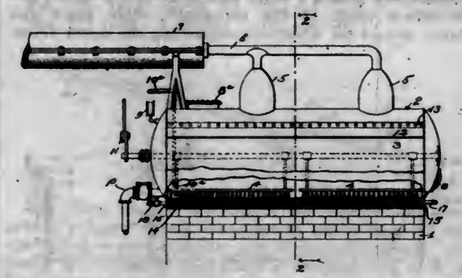


2. An emergency raincoat comprising a sheet having two spaced notches in its upper end, leaving three collar sections at said end, the bottoms of said notches each consisting of two downwardly converging halves, said sheet being folded on vertical lines at the meeting points of said converging halves of the notch bottoms, means securing said halves of each notch bottom together to provide the two shoulders of the coat, and means securing said collar sections together to form a complete collar.

1,639,186. CATALYTIC REDUCTION OF ORGANIC NITRO COMPOUNDS. MYRTIL KAHN, Cologne, and RUDOLF MAYER, Leverkusen, near Cologne-on-the-Rhine, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 14, 1926, Serial No. 129,290, and in Germany Sept. 29, 1924. 9 Claims. (Cl. 260—130.5.)

1. The process of reducing organic nitro compounds which consists in reacting upon same with hydrogen at elevated temperatures in presence of a reduction catalyst comprising silicagel.

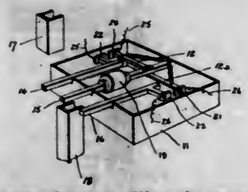
1,639,187. VENTILATOR. FRANK R. KELLEY, Pittsburgh, Pa. Filed Nov. 30, 1923. Serial No. 677,733. 3 Claims. (Cl. 98—70.)



1. In a ventilator of the character described, the combination of a base, a curved cowl rotatably mounted on said base, an injector tube extending into said cowl from the rear and having its outlet directed upwardly towards the mouth of said cowl, and an edged flange for the mouth of said cowl flaring upwardly and outwardly therefrom at an abrupt angle and diminishing downwardly in width, for the purpose of causing air currents traveling over said cowl to bound upwardly to produce an aspirating effect at the mouth of said cowl in the presence of low wind velocities.

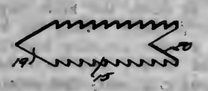
1,639,188. PROCESS FOR THE PRODUCTION OF ELECTRODES. EMIL KLEINSCHMIDT, Frankfort-on-the-Main, Germany. Filed Nov. 21, 1925, Serial No. 70,676, and in Germany Apr. 29, 1924. 5 Claims. (Cl. 176—133.)

1. The process of manufacturing carbon electrodes comprising reducing an aggultinant to an impalpable powder and admixing such powder to the raw material from which the electrodes shall be formed.



1,639,189. STEAM-JACKETED STILL. WILLIAM KNAPP, Chanute, Kans. Filed Apr. 23, 1925. Serial No. 25,319. 4 Claims. (Cl. 196—119.)

4. In a steam jacketed still, the combination with a shell provided with ends, of a split jacket shell secured at its upper horisontal edges only to the sides of said shell and terminating at the ends of said first mentioned shell, said first mentioned shell having its ends unenclosed, said first mentioned shell and jacket shell producing a compartment, end closures around the first mentioned shell and arranged in vertical planes and secured

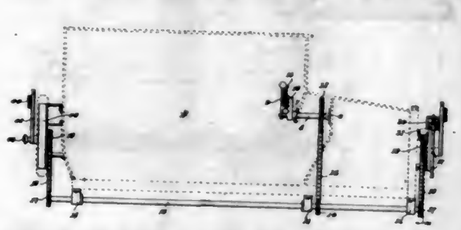


to the ends of the jacket shell for closing said compartment, and means for supplying superheated steam to and allowing said steam to be discharged from said compartment.

1,639,190. APPARATUS FOR THE CONTROL AND OPERATION OF ELECTRIC LIFTS AND THE LIKE. JOHN BERTRAM MORTON KNUTSEN, Potts Point, near Sydney, New South Wales, Australia. Filed Nov. 23, 1925, Serial No. 70,934, and in Australia May 18, 1925. 4 Claims. (Cl. 187—29.)

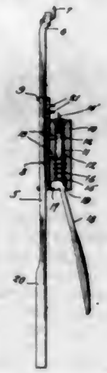
3. In apparatus for controlling the stopping of a lift at the top of floor landings in a well, the combination, an electro-magnet on the lift including a pole piece, additional pole pieces arranged at the sides of the first pole piece, and armatures associated with the second pole pieces and magnetic members arranged in spaced pairs adjacent each of the floor landings in the well and positioned to be received between and in magnetically conductive relation to the first pole piece and one or the other of the second pole pieces, substantially as and for the purposes set forth.

1,639,191. MECHANICAL MOVEMENT. JOSEF KRYSTOFIAK, New York, N. Y., assignor, by mesne assignments, to Emil Willbrandt and Blanche Willbrandt, Copartners, trading as Art Aseptible Furniture Company, St. Louis, Mo. Filed Aug. 8, 1924. Serial No. 730,808. 1 Claim. (Cl. 74—16.)



As a new article of manufacture, a ratchet comprising a sheet having teeth in the parallel edges of said sheet, having a recess at one end, and a projection at the other end, and said sheet having a tubular form with a projection at one end of the sheet entering into the recess at the other end of the sheet.

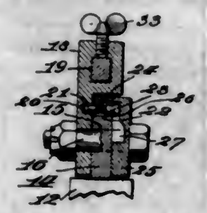
1,639,192. AUTOMOBILE SIGNAL. GEORGE KUCIPAK, Seneca Falls, N. Y. Filed July 9, 1925. Serial No. 42,538. 5 Claims. (Cl. 116—47.)



1. In a device of the class described, the combination with an automobile, of a pivoted signal element at each end of said automobile, power transmission means ex-

tending longitudinally of the automobile, a connection between each signal element and its respective end of said transmission means, a shaft constantly driven by the motor power plant of the automobile, slide gears and clutch devices for selectively connecting the power trans-

mission means with said driven shaft, and a cam ring and control arm adapted to be set by the driver for automatically breaking the last mentioned connection when the signal elements have been moved to the proper signalling positions.

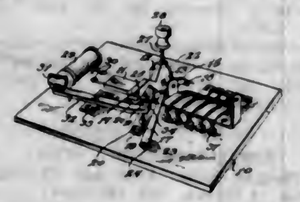


1,639,193. CAN OPENER. WARD DE WITT LAMB, Le Mars, Iowa. Filed Jan. 6, 1926. Serial No. 79,582. 1 Claim. (Cl. 30—3.)

A can opener including an elongated body portion having a prong, a carriage including a length of sheet metal having lateral parallel flanges and having right angled end portions formed with openings to permit the carriage to be positioned on the body portion, pins connecting the lateral flanges, pins connected with the first mentioned pins and extending through the carriage, a knife supporting bar having a knife at one end and and having elongated openings to accommodate the last mentioned pins to guide the knife supporting bar, a coiled spring for normally urging the knife supporting bar rearwardly, a lever pivotally mounted between the laterally extended flanges, said lever having an offset enlargement at one end, said offset enlargement adapted to engage one end of the knife supporting bar, and said enlargement adapted to move the knife supporting bar forwardly when the lever is pressed towards the body portion.

1,639,194. BARBER'S-CHAIR HEADREST. JOHN E. LASATER, Los Angeles, Calif. Filed Feb. 18, 1926. Serial No. 89,023. 2 Claims. (Cl. 155—177)

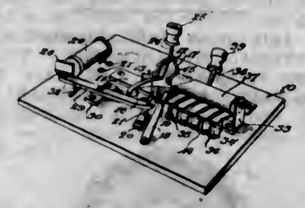
1. The combination with a barber's chair, of a member mounted for vertical adjustment on the upper portion of the back of the chair, a disk carried by the upper end of said vertically adjustable member, a spring pressed pin extending through said disk, a member pivotally connected to said disk and provided in its inner face with a series of recesses that are adapted to receive the point of the spring pressed pin, a short shank projecting from said pivotally mounted member, a head rest adjustably carried by said short shank, a manually operable disk pivotally mounted on the side of the first mentioned



disk opposite from the side on which the shank carrying member is pivotally arranged, the inner face of which pivotally mounted disk is provided with a recess that receives the head of the spring pressed pin and the bottom of which recess is in the form of a cam having different elevations.

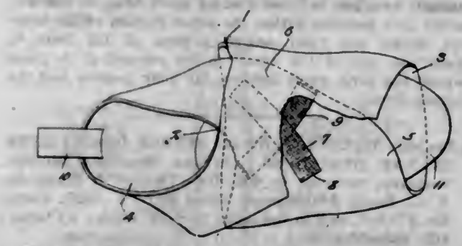
1,639,195. FENCEPOST. JOHN W. MEAKER, Chicago, Ill., and WILLIAM P. GLEASON, Gary, Ind. Filed Feb. 1, 1924. Serial No. 689,976. 3 Claims. (Cl. 256—57.)

1. A metal fence post or the like T-shaped in cross-section and having a flat face and serrations along an edge of the face, said serrations having relatively narrow wire engaging portions and extending to the rear of the face whereby vertical displacement of wire engaging clips is prevented.



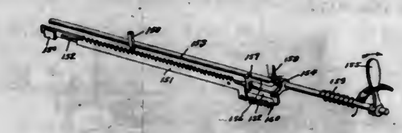
1,639,196. ELECTRIC SWITCH. TRUMAN A. PANGBURN, Camden, N. J. Original application filed Dec. 2, 1921, Serial No. 519,463. Divided and this application filed Dec. 11, 1923. Serial No. 680,021. 3 Claims. (Cl. 200—106.)

3. An electric switch including a base, a contact carried thereby, a bracket upstanding from the base, a switch member pivoted upon the bracket in a plane at substantially a right angle to the base to coact at one



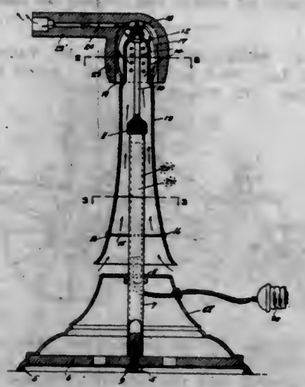
end with said contact, a link journaled at its upper end through said member above the pivotal center thereof and extending downwardly beneath the member, a flat spring fixed at one end to the base and at its opposite end engaging the lower end of the link for pressing downwardly thereon and rocking the switch member in one direction into engagement with said contact or in the opposite direction out of engagement with said contact, the member being provided near one end thereof with an inclined lower edge, and a pivoted lever lying substantially parallel to the base and provided at one end with an upturned cam lug to coact with the inclined edge of said member for tripping the member.

1,639,197. ELECTRIC SWITCH. TRUMAN A. PANGBURN, Camden, N. J. Original application filed Dec. 2, 1921, Serial No. 519,463. Divided and this application filed Dec. 11, 1923. Serial No. 680,022. 2 Claims. (Cl. 200—106.)



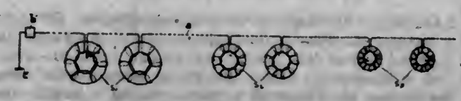
1. An electric switch including a base, a contact carried thereby, a pivoted switch member mounted in a plane at an angle to the base, a link pivotally engaged at its upper end with said switch member at a point above the pivotal center thereof and extending downwardly past said member toward the base, a spring fixed to the base and having its free end engaged with the lower end of said link to press downwardly thereon for rocking the switch member in one direction into engagement with said contact or in the opposite direction out of engagement with said contact, a lever pivoted upon the base to lie substantially parallel thereto and rock in a plane intersecting the plane of the switch member and provided with a hook engageable with said switch member for holding said member in engagement with said contact, and means for swinging the lever and releasing the switch member.

1,639,198. ARCH AND ANKLE SUPPORT. ISAAC MERRICK PEASE, Cincinnati, Ohio. Filed Jan. 22, 1926. Serial No. 83,048. 1 Claim. (Cl. 128—166.)



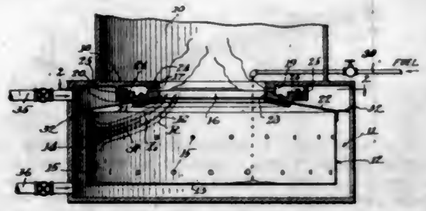
A device of the class described, fashioned from an endless loop-shaped member which is crossed upon itself to define a foot socket and an ankle socket, and to form inner and outer layers at the place of crossing, a flexible element secured at its ends to the inner layer, and a flexible element secured at its ends to the outer layer, both flexible elements being housed between the layers, the flexible elements crossing each other, each flexible element extending between the other flexible element and the layer whereunto said other flexible element is connected.

1,639,199. BACK-SPACING MECHANISM FOR TYPEWRITERS. HENRY PEETERS, Warcoing, Belgium. Filed Feb. 20, 1924, Serial No. 694,079, and in Belgium Dec. 21, 1923. 6 Claims. (Cl. 197—91.)



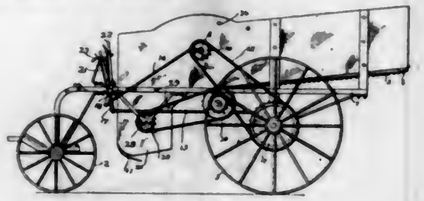
1. A back spacing mechanism for typewriters, comprising a finger rigidly connected to the carriage of the typewriter, a rack normally out of engagement with the finger, an elongated rod slidably carrying the rack, a hand lever operable to move this rod and the rack normally towards the finger until engagement between the finger and the rack is produced, and means carried by the rod for sliding the rack along its rod after said engagement, the displacement of the hand lever being continued.

1,639,200. TOBACCO-PIPE CLEANER. JOHN W. PITTS, Berkeley, Calif. Filed May 4, 1925. Serial No. 27,912. 3 Claims. (Cl. 131—13.)



3. A tobacco pipe cleaner comprising a hollow upright support having one end portion thereof perforated, a plurality of resilient bracket arms disposed around the said perforated end portion and adapted for insertion into the bowl of a pipe and further adapted to frictionally engage the interior of the bowl and thereby provide a clearance between the said perforated end portion of the support and the inner face of the bowl, and an electrically operated heating element disposed in the said body portion.

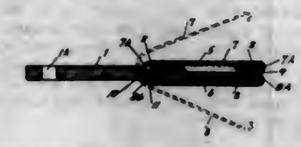
1,639,201. TELEGRAPH CABLE PROVIDED WITH LOADING COIL. HANS SALINGER, Berlin, Germany. Filed Jan. 16, 1926, Serial No. 81,822, and in Germany Jan. 23, 1925. 2 Claims. (Cl. 178—45.)



1. Telegraph cable provided with loading coils the cores of the coils of the loading coils arranged in the proximity of the ends of the cable having a greater cross section than the cores of the coils arranged in the middle of the cable, for the purpose set forth.

1,639,202. PROCESS OF COMBUSTION. BEN VALJEAN, San Diego, Calif., assignor to Valjean Carburetor Company, San Diego, Calif., a Corporation of California. Filed Sept. 5, 1922. Serial No. 586,195. 5 Claims. (Cl. 158—117.5.)

1. The process of combustion that involves forming a substantially quiescent body of gaseous fuel, directing into such body a plurality of air jets in spaced relation, each jet carrying with it a surrounding part of said gaseous fuel to form a stream, the interior portion of which is too thin for ready combustion and the outer portion too rich for ready combustion, maintaining such streams out of interference with each other, whereby no combustible mixture is formed, thereafter positively causing a combustible admixture of the thin and rich portions of each jet stream, and burning the admixture.



1,639,203. SPREADER. SAMUEL W. VARNADO, Baton Rouge, La. Filed Apr. 30, 1926. Serial No. 105,794. 2 Claims. (Cl. 275—3.)

1. A machine for the purpose set forth comprising a vehicle body having a guard wall closing its front end, a cover secured upon the body adjacent and spaced from the guard wall, a conveyer mounted in the body and providing a bottom therefor, a feeding drum arranged within the body under the cover and over the front end of the conveyer, a pair of hoppers depending from the front end of the body in juxtaposition to the guard wall, said hoppers having open bottoms and having walls which are vertical in their lower portions and flared in their upper portions, the upper flared portions of the walls terminating at the conveyer, the sides of the body and the medial longitudinal line of the body respectively, spreader drums mounted in and fitting closely between the vertical portions of the walls of the respective hoppers, means for rotating the feeder drum and spreader drums in opposite directions, and means for simultaneously actuating the conveyer to carry material to and under the feeding drum and deliver it into the hoppers.

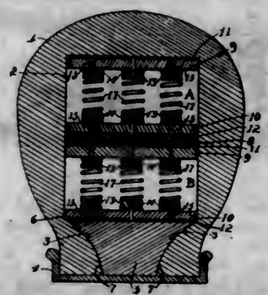
1,639,204. POCKET-KNIFE-SHARPENING DEVICE. HERMAN L. WELCH, Los Angeles, Calif. Filed Aug. 12, 1924. Serial No. 731,581. 3 Claims. (Cl. 51—211.)

3. A sharpening device comprising a supporting member having an elongated portion forming a handle and a substantially annular portion forming a support for abrasive materials having a central aperture therein, said central aperture having inwardly sloping converging upper and lower sides terminating approximately midway of the transverse thickness of the supporting member, substantially disk shaped members arranged in said central aperture so that one of said disks is supported by the upper inwardly sloping side thereof and another of the said disks supported by the lower inwardly sloping side; another aperture adjacent the central aperture in the supporting member having a pin supported cross-

wise therein upon which are hingedly mounted members adapted to cover said disk, the outer ends of said covers being curved inwardly and adapted to engage within a substantially semicircular recess in the outer periphery of said annular portion for holding the covers in position over the substantially disk-shaped members.

1,639,205. SKID-CHAIN LOCK AND ROPE OR FLEXIBLE-MATERIAL MISPLACEMENT. WILLIAM A. WHITAKER, Springfield, Mo. Filed Apr. 18, 1925. Serial No. 24,190. 1 Claim. (Cl. 152—14.)

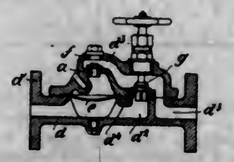
A chain fastening device comprising a body portion formed of a length of wire material bent intermediate its ends to provide spaced resilient arms, said body portion having a right angled intermediate portion, a locking device formed of a length of wire material looped around the right angled portion of the body to provide a substantially straight arm and an inclined arm offset at the point of connection between the lever and body portion, one end of a chain adapted to be passed between the straight arm and inclined arm of the locking device and moved to a position within the offset portion of the lever and within the right angled portion of the body to cause the end of the chain to be secured at a point beyond the pivot point between the body portion and the locking device.



1,639,206. MANUFACTURE OF STABLE DERIVATIVES OF VAT DYESTUFFS. ARTHUR WOLFRAM, Hochst, Germany, assignor to the Firm Durand & Huguenin S. A., Basel, Switzerland. Filed Mar. 11, 1927, Serial No. 174,698, and in Germany Mar. 17, 1926. 2 Claims. (Cl. 260—53.)

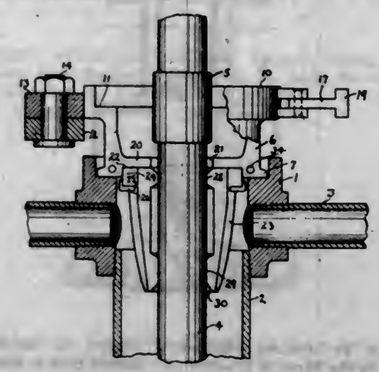
1. A process for the manufacture of stable derivatives of vat dyestuffs soluble in water, consisting in treating a leuco compound of a vat dystuff with aminosulphonic acid in the presence of a tertiary organic base.

1,639,207. VEHICLE-WHEEL TIRE. JOHN AGRILLO and JOSEPH DALY, San Jose, Calif. Filed Jan. 18, 1927. Serial No. 161,826. 2 Claims. (Cl. 152—8.)



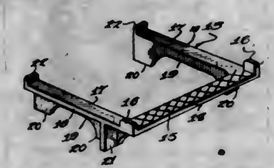
1. In a structure of the character described, a pair of spaced and concentrically arranged flexible bands, a plurality of spaced plates positioned on the outer surface

of one band and the inner surface of the other and extending crosswise thereof, a plurality of pairs of opposed buttons mounted on the opposing surfaces of said bands



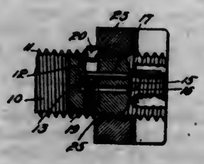
and provided with pins extending through said bands and riveted to said plates, and a helical spring engaging each pair of opposed buttons.

1,639,208. STEAM TRAP. FREDERIK BASENAU, Amsterdam, Netherlands. Filed July 18, 1923, Serial No. 652,284, and in Germany July 21, 1922. 12 Claims. (Cl. 137—103.)



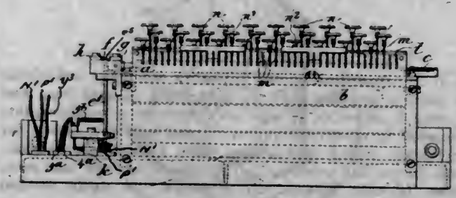
1. A steam trap comprising a casing, a fluid inlet thereto, a fluid discharge therefrom, and means for automatically trapping the steam without employing a valve, comprising a resistance interposed in the path of the flow of the fluid and in the form of a continuously open hollow nozzle of coned form internally so as to converge in the direction of flow of the fluid, the back pressure caused by the resistance of said nozzle to the passage of liquid being greater than the normal pressure difference of the fluid between said inlet and said discharge.

1,639,209. TUBING STRIPPER. IVAN C. BELL, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed Oct. 4, 1924, Serial No. 741,772. Renewed Oct. 4, 1926. 9 Claims. (Cl. 166—16.)



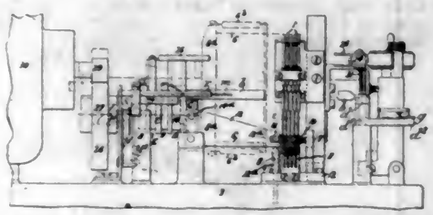
1. In combination with a casing head and a pipe therein, a packer comprising a bushing means to secure said bushing in said casing head, a packing sleeve of compressible material secured to and carried within said bushing and spaced from said casing head, and means to hold said packing sleeve resiliently against said pipe.

1,639,210. MANHOLE STEP. CHALMERS S. BROWN, Lima, Ohio, assignor to Brown and Brown, Inc., Lima, Ohio, a Corporation of Ohio. Filed Nov. 22, 1926. Serial No. 150,053. 1 Claim. (Cl. 228—47.)



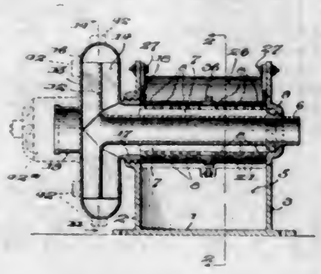
A device of the character described comprising a substantially U-shaped cast metal step having the base portion thereof forming a tread, the arms of said step including upper horizontal flange portions and vertical depending flange portions, each of said depending flange portions including a plurality of downwardly projecting feet.

1,639,211. NUT LOCK. JAMES A. CAMPO, Woodridge, N. J. Filed Oct. 22, 1926. Serial No. 143,432. 6 Claims. (Cl. 151—9.)



1. In a nut lock, a screw-bolt having a transverse bore, a spring-actuated locking pin longitudinally movable in said bore and provided with two shoulders, and limit means inserted longitudinally in the bolt for restricting the movements of the pin, the bolt having a hole at its threaded end which is substantially parallel with the limit means, for receiving a removable hold-back pin and spaced away from the limit means for a distance slightly less than the distance between the shoulders.

1,639,212. TELEGRAPHIC TRANSMITTING APPARATUS. FREDERICK GEORGE CREED, Croydon, England. Filed Oct. 25, 1924, Serial No. 745,934, and in Great Britain Nov. 5, 1923. 12 Claims. (Cl. 178—23.)



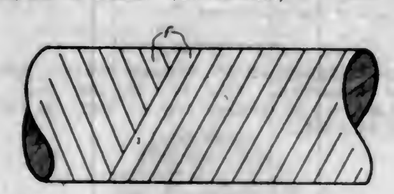
1. In a telegraph transmitter, notched combination bars, key levers adapted, on operation, to hold said bars in a selective manner according to the signal to be transmitted but not to operate said bars, a bar holding and releasing device adapted to hold said bars in normal endways position preparatory to operation of a key lever and afterwards to release said bars, means for actuating said bar holding and releasing means, springs each adapted to move endways a bar not held by a key lever and electric circuit controlling means dependent for operation upon the position of said bars.

1,639,213. TELEGRAPHIC RECEIVING APPARATUS. FREDERICK GEORGE CREED, Croydon, England. Filed Oct. 25, 1924, Serial No. 745,935, and in Great Britain Nov. 5, 1923. 16 Claims. (Cl. 178—34.)

1. In telegraphic receiving apparatus, a series of independently movable control fingers, a finger setter, means for moving said finger setter to and fro past said control fingers, a relay responsive to the separate signals of each group of signals to be received, means under the control of said relay whereby the finger setter will be rendered operative or inoperative on the control finger opposite which it happens to be on the receipt of a signal, according to the character of the signal, and means the action of which is controlled in accordance with the relative setting of the series of control fingers.

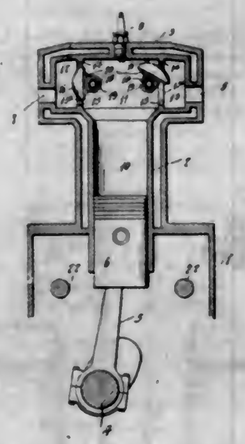
1,639,214. GRINDING AND SEPARATING APPARATUS. PAUL L. CROWE, Baltimore, Md. Filed Oct. 20, 1925. Serial No. 63,742. 16 Claims. (Cl. 83—14.)

1. An apparatus of the character set forth comprising a base, a grinding cylinder journalled on said base and having a plurality of apertures therein, a crusher plate disposed in operative relation to said cylinder, means for yieldingly urging said crusher plate toward said cylinder and means for creating an air draft through the apertures in said cylinder to withdraw the finely divided material therethrough.



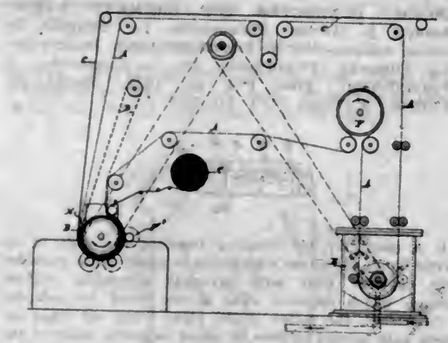
1,639,215. GROUND EXCAVATOR. MARIO DE GRASSI, Philadelphia, Pa. Filed Sept. 16, 1925. Serial No. 56,570. 2 Claims. (Cl. 262—7.)

1. In a tunneling and excavating machine of the class described, a plurality of substantially triangularly shaped blades forming a point at their front meeting ends, a plurality of cutting tools on each of said blades, a disc, a plurality of fingers on said disc, pins on said blades adapted to be engaged by said fingers, a shaft and a hand wheel connected to said disc for spreading said blades, a motor, and means for coupling and uncoupling said



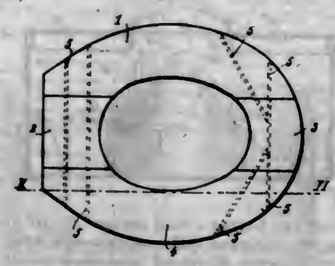
motor from the tool operating means, and a means for disposing of the soil excavated by said tools at the rear of the machine.

1,639,216. SANDING MACHINE. JOHN C. DE PENNING, Portland, Oreg. Filed May 27, 1926. Serial No. 112,064. 2 Claims. (Cl. 51—190.)



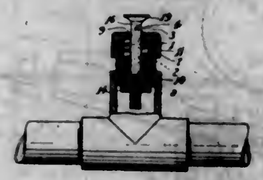
1. In a sander roll of the character described, means for fastening a resilient covering to the drum portion thereof, comprising a relatively narrow strip of adhesive tape wound in a series of laterally adjacent convolutions about such covering, whereby each convolution of tape is adhesively bound to the covering to form a continuous protective sheathing for such covering in which the convolutions individually hold the covering.

1,639,217. INTERNAL-COMBUSTION ENGINE. FREDERICK WILLIAM DUFWA, Mexico, Mexico. Filed May 13, 1926. Serial No. 108,965. 4 Claims. (Cl. 123—81.)



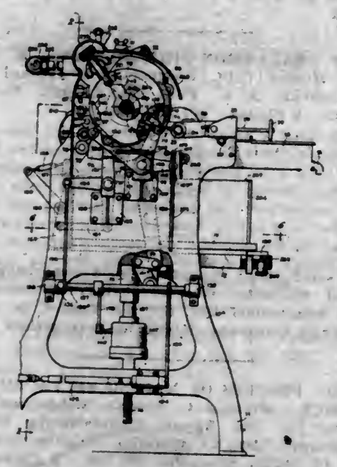
1. In an internal combustion engine, an oscillating valve in the form of a sector of a sphere that is rounded upon its operative side, a spherical valve seat cooperating with the convexed side of the valve and a support for the valve at the concave side thereof.

1,639,218. PROCESS FOR PRINTING UPON TEXTILE FABRICS. EUGÈNE EBERSOL, Mulhouse, France, assignor to Society Freres Koechlin, Mulhouse, Haut-Rhin, France. Filed May 18, 1925, Serial No. 31,104, and in France June 16, 1924. 3 Claims. (Cl. 101—416.)



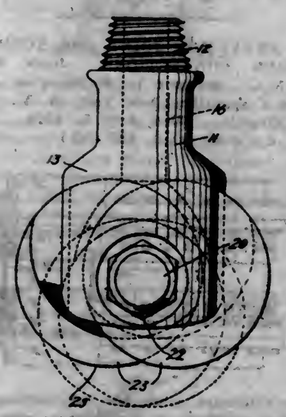
1. In apparatus for printing textile fabrics, a pressure roller and an endless belt of metallic gauze between this pressure roller and the piece of fabric to be printed for absorbing the excess color.

1,639,219. TOILET SEAT. EUGÈNE LÉON ECKERLEIN, Paris, France. Filed Nov. 14, 1923, Serial No. 674,603, and in Great Britain Nov. 18, 1922. 2 Claims. (Cl. 4—237.)



1. In a toilet seat means to assemble the seat, threaded rods threaded in one direction to traverse the seat after assembling from side to side of the same, and similar rods partly starting from a side of the same and finishing in the interior of the seat.

1,639,220. SPRAYING NOZZLE. DONALD ELDER, Onehunga, New Zealand. Filed Feb. 11, 1926, Serial No. 87,631, and in Australia Feb. 28, 1925. 2 Claims. (Cl. 299—18.)



1. A sprayer comprising a nozzle having a bore, and a lateral gap V-shaped in cross section, the said bore terminating in said gap, the wall of said gap opposite the bore being a convex-cylindrical surface and the opposite wall being a concave-cylindrical surface.

1,639,221. SHEET-FEEDING MECHANISM. ELMER E. FAIRCHILD, ALLAN A. ADAMSON, and CHARLES F. MORLEY, Rochester, N. Y., assignors to Alderman, Fairchild Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 12, 1924. Serial No. 749,403. 39 Claims. (Cl. 271—28.)

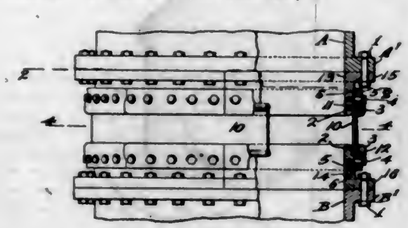
1. A sheet feeding mechanism comprising the combination of a support for a stack of sheets, means for removing the outermost sheet of the stack, means for determining the effective height of the support and therewith the stack of sheets thereon, means for supporting said effective height determining means independently of said stack support and means for moving said stack support to a certain position for effecting co-operation with said height determining means and for moving said stack support to a different position for effecting co-operation with said outermost sheet removing means.

1,639,222. EXPANDING ROTARY BIT. ROY N. FERGUSON, Los Angeles, Calif. Filed Oct. 24, 1923. Serial No. 670,507. 1 Claim. (Cl. 255—76.)

In a rotary bit, the combination of: a body; a pair of spaced legs extending downward from said body, a pair of abutment faces being formed between said legs, and a pair of engagement faces being formed on said body between said legs; a pin secured to said legs; and a pair of cutting discs eccentrically mounted on said pin between said legs in such a manner as to have a re-

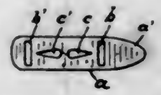
tracted position and an expanded cutting position, the peripheries of said discs being adapted to engage said engagement faces when said discs are in retracted positions and to engage said abutment faces when in expanded positions, the longitudinal axes of said discs being above the axis of said pin when said discs are fully expanded.

1,639,223. EXPANSION SHIELD. JOSEPH K. FISHER, Santa Monica, Calif., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Feb. 6, 1922. Serial No. 534,293. 8 Claims. (Cl 85—2.4.)



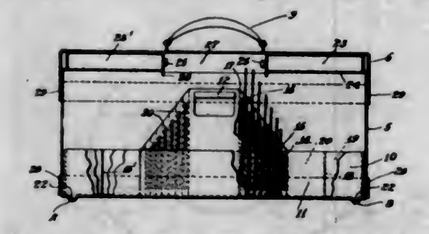
1. A sheet metal expansion shield comprising a plurality of expansible sections having out-turned edges forming longitudinal ribs, the ribs formed by adjacent edges having transverse, interfitting corrugations.

1,639,224. PROCESS OF MAKING SELVAGED-EDGED FABRICS. WILLIAM C. FISHER, Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Aug. 14, 1922. Serial No. 581,848. 2 Claims. (Cl. 154—2.)



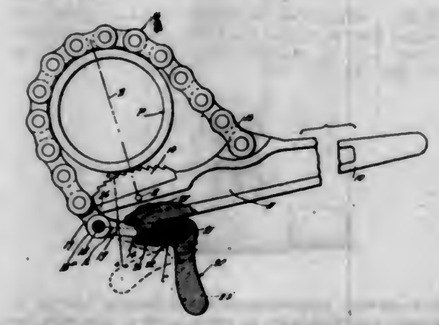
1. A process of making a plurality of endless fabric strips that comprises making a tubular blank piece of fabric having an upper ply, a binder, and a lower ply, dropping the binder threads thereof at spaced intervals to form edge forming portions of the upper and lower plies, cutting away said dropped binder threads, cutting the fabric blank through the edge forming portions to form individual strips and folding each edge portion of the upper and lower plies inwardly to form the selvaged edge and securing the folds and plies together at the edge portions.

1,639,225. EXPANSION JOINT FOR TURBINE AND CONDENSER CONNECTIONS. JOHN F. GRACE, Kearny, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 5, 1924. Serial No. 724,536. 6 Claims. (Cl. 285—90.)



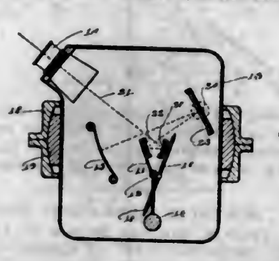
1. In an expansion joint, the combination with two spaced hollow members, of a supporting ring secured to each hollow member, a resilient member overlapping the supporting rings, a head at each end of the resilient member, the supporting rings each being recessed to receive one of the heads, a recessed clamping ring engaging each of the heads, bolts operable from one side of the joint for drawing the clamping rings and supporting rings together to secure the ends of the resilient member, and means operable from the same side of the joint for tensioning the resilient member whereby the resilient member will tend to assume its normal unstretched condition upon the expansion of the parts.

1,639,226. CONNECTER FOR GARMENT BANDS. JOSEPH A. HAINES, Philadelphia, Pa., assignor, by mesne assignments, to Friedberger-Aaron Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 25, 1927. Serial No. 170,788. 5 Claims. (Cl. 24—73.)



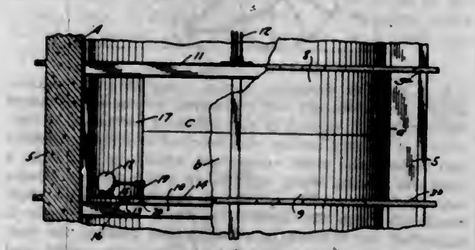
1. A connector for securing together the ends of an elastic band, the same comprising a metal plate provided near opposite ends with laterally extending orifices through which opposite ends of the band are adapted to be passed, the metal of the plate being cut away between said lateral orifices to allow opposite ends of the band to be passed through the plate and to afford edges tapering toward each lateral orifice and adapted to bind the band between them and secure it against accidental disengagement from the holder.

1,639,227. TOOL KIT. CHARLES L. LAWRENCE, New York, N. Y. Filed Jan. 24, 1925. Serial No. 4,408. 11 Claims. (Cl. 206—16.)



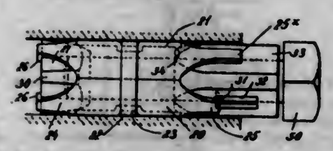
10. A tool box having a base portion divided into compartments, the central of said compartments being further divided into a series of spaced sub-compartments of different depths each sub-compartment adapted to receive vertically therein tools of different length.

1,639,228. TONGS. OLLYN A. LAYNE, Los Angeles, Calif. Filed May 24, 1924. Serial No. 715,523. 6 Claims. (Cl. 81—68.)



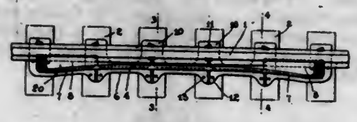
1. A wrench embodying a body member, a jaw, a chain connected at one end with the member, a locking lever connected to and carried by the other end of the chain and adapted to be moved into and out of locking position and into and out of locking engagement with the member, the lever being adapted to provide a handle for drawing the chain about given work before said lever is in engagement with the member, and coacting means on the lever and chain adapted to maintain the lever in locking position during such movement of the chain about said work.

1,639,229. LATITUDE INDICATOR FOR AIRCRAFT. GEORGE P. LUCKEY, Dayton, Ohio. Filed May 8, 1924. Serial No. 711,937. 21 Claims (Cl. 88—2.4.)



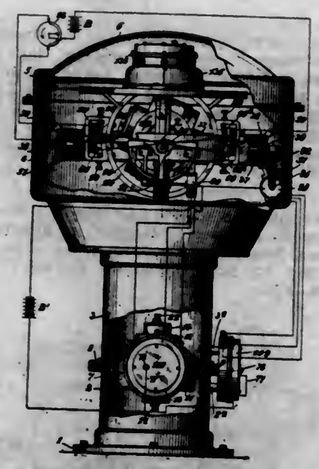
1. In a magnetic dip indicator, a support an established vertical and a magnetic needle mounted on said support, means to indicate the divergence between the needle and the vertical, and a universal mounting for said support.

1,639,230. GARAGE ELEVATOR. KENNETH MACDONALD, Jr., Los Angeles, Calif. Filed Feb. 10, 1926. Serial No. 87,273. 2 Claims. (Cl. 187—1.)



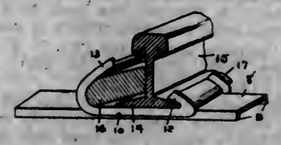
2. In a multiple floor building structure, the combination of a cylindrical hoistway having segmental cylindrical gates completely embracing the hoistway at a floor, and an elevator cage in said hoistway comprising a turntable platform provided with upstanding segmental cylindrical enclosures.

1,639,231. BOLT ANCHOR. JOHN EDWARD OGDEN, Mountainville, N. Y. Filed May 19, 1923. Serial No. 640,097. 15 Claims. (Cl. 85—2.8.)



1. In combination, an expansion shield comprising a plurality of sections, each section having a plurality of longitudinally extending fingers at each end thereof, said fingers being tapered in width, and expanding elements disposed within said fingers.

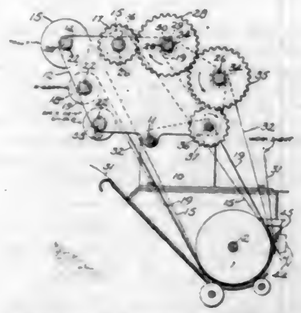
1,639,232. GUARD-RAIL STRUCTURE. EBEN RAY PACKER, New Rochelle, N. Y., assignor to I. & C. Company, New York, N. Y., a Corporation of Maine. Filed Apr. 3, 1925. Serial No. 20,557. 8 Claims. (Cl. 238—19.)



8. A guard rail structure comprising a head member having its end portions inwardly flared, a web portion and a base supporting structure consisting of a base flange having tie plate extensions adapted to underlie the track rail, said web portion, considered in a horizontal plane, being arched inwardly intermediate of the ties and for a distance substantially equal to the normal tie spacing and said arched portions being connected by longitudinally straight portions overlying the respective ties.

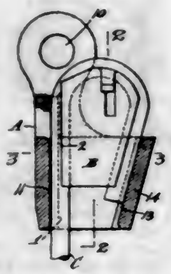
1,639,233. GYROSCOPIC APPARATUS. CLIFFORD M. PAXTON, Brooklyn, N. Y. Filed Oct. 15, 1921. Serial No. 507,969. 1 Claim. (Cl. 74—78.)

An inclinometer comprising a primary and secondary gyro and a universal joint connecting them, the primary gyro being mounted in gimbals universally balanced in neutral equilibrium; and the secondary gyro being supported by and depending from the primary gyro and said universal joint having its center substantially coincident with the center of motion of the gimbal mounting, in combination with means for repeating at a distance the relative angular movements of the gimbal pivots of the primary gyro.



1,639,234. RAILWAY TIE. LEONARD SARGEANT, Fairmont, W. Va. Filed June 19, 1923. Serial No. 646,405. 2 Claims. (Cl. 238—10.)

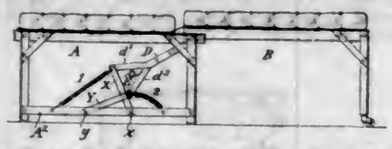
1. A rail tie comprising a tie proper, a clip attached to the tie near one end, said clip extending laterally over the tie and having flanges to embrace the tie, and a bent



over end to embrace the flange on a rail, a loop on the other side of the rail from the clip and a wedge block resting in the loop and against the web of the rail.

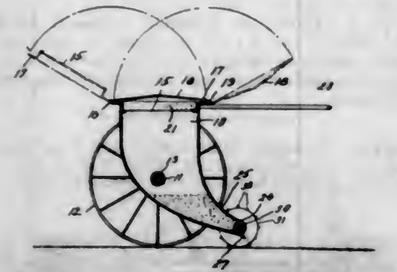
1,639,235. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed July 29, 1924. Serial No. 728,828. 8 Claims. (Cl. 197—132.)

1. In a typewriting machine, the combination of a platen arranged to feed a work-sheet, tally-recording mechanism including individual means for drawing a tally-web, an inking web and a protective web around the platen, and line-spacing mechanism operative to line-space the platen and operatively connected to the tally mechanism to simultaneously effect a joint line-spacing movement of all the webs.



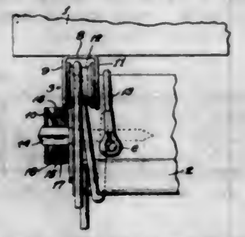
1,639,236. ROPE SOCKET. CHARLES C. SUNDERLAND, Trenton, N. J., assignor to John A. Roebling's Sons Company, Trenton, N. J., a Corporation of New Jersey. Filed Nov. 17, 1926. Serial No. 148,808. 8 Claims. (Cl. 24—126.)

1. A rope socket, consisting of a plurality of members movable relatively to each other and arranged to grip a rope between them, and means for limiting the gripping pressure of said members on a portion of the gripped surface of the rope to distribute the load on different parts of the rope.



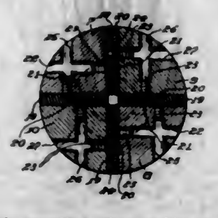
1,639,237. FOLDING BED. GEORGE F. SISSOWER, Flushing, and LOUIS E. PITTONI, New York, N. Y., assignors to Manhattan-Rome Company, Branch of Rome Metallic Bedstead Company, Long Island City, N. Y., a Corporation of New York. Filed Mar. 11, 1921. Serial No. 451,509. 4 Claims. (Cl. 5—22.)

1. A folding bed of the character described comprising a normally stationary section, a relatively movable section having legs to support the outer side thereof, said movable section being provided with a wire fabric mattress, a U-shaped truss bar having its ends pivotally connected to the inner edge of the movable section and to the outer sides of the end bars of said section to resist longitudinal tension of the said mattress fabric, bracket members secured to the inner sides of the ends of said truss bar, said bracket members having depending diverging branches at their lower ends, links pivotally connected to the ends of said branches and also pivotally connected with the stationary section, and springs each connected at one end of the stationary section and having its other end connected to a bracket branch at positions contiguous to the points of pivotal connection between said links and said branches.



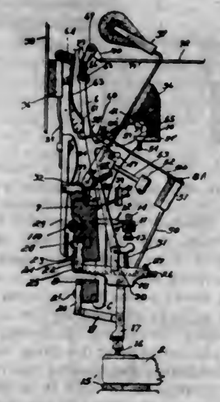
4. A folding bed having two relatively movable frames, wire mattress fabrics on the respective frames and a folding spreader bridging the gap between the two fabrics and secured to them respectively at its edges only.

1,639,238. PORTABLE SPREADING DEVICE. WILLIAM P. TARRANT, Saratoga Springs, N. Y. Filed Dec. 16, 1925. Serial No. 75,667. 2 Claims. (Cl. 275—2.)



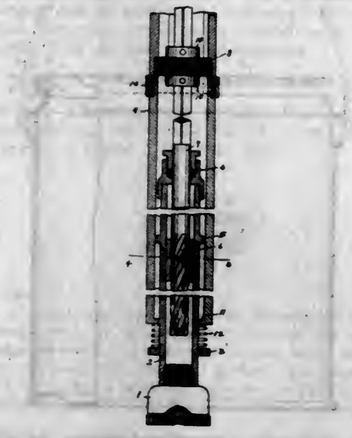
1. A portable spreading device, comprising a receptacle having a downwardly and rearwardly extending discharge outlet, an axle extending through said receptacle at the center of gravity thereof and adapted to tiltably support and balance the same, supporting wheels on said axle, a rotatable feeding shaft disposed in and normally closing said discharge outlet, wheels on the ends of said shaft engageable with the surface on which the receptacle is supported for rotating said shaft and feeding the contents of the receptacle through the discharge outlet, and a pusher handle attached to said receptacle for moving same along said surface and about said axle.

1,639,239. VENETIAN-BLIND TILTING-RAIL FIXTURE. ALPHONS TRINKAUS, South Pasadena, Calif., assignor to Western Blind & Screen Co., Los Angeles, Calif., a Corporation of California. Filed Apr. 12, 1926. Serial No. 101,360. 4 Claims. (Cl. 156—17.)



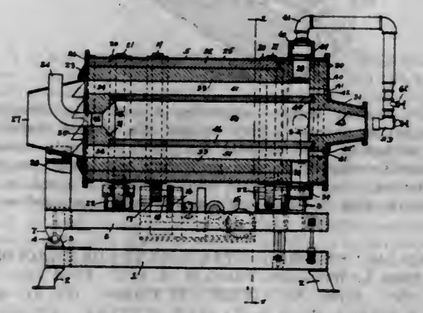
4. A combination with a Venetian blind header bar having a gudgeon fixed thereto; of a header bar support comprising a bracket formed of a single piece of metal bent to provide an attaching flange; and an outer side member bent downwardly at right angles to said flange; a strip integral with and spaced from said side member; an ear formed on said flange and extending parallel to and forwardly of said outer side member; a block disposed between said strip and side member; said gudgeon being non-rotatably mounted in said block; a washer disposed between said block and outer side member for regulating the frictional resistance of said block and a roller having bearings in said ear and outer side member and being disposed forwardly of said side member.

1,639,240. INSULATING FLEXIBLE SHAFT COUPLINGS. HENRY W. VAN LEER, Philadelphia, Pa. Filed Jan. 27, 1927. Serial No. 163,875. 8 Claims. (Cl. 64—91.)



1. In a flexible coupling, the combination with two like coupling heads arranged complemental to each other, each with an axial opening therein to receive an end respectively of one of two substantially alined shafts, the adjacent faces of said heads being each provided with a series of spaced driving lugs, each lug on the face of one of said heads being located in the space between two consecutive lugs on the face of the other head, the adjacent sides of coacting lugs being parallel to each other and to a plane coincident with the axes of said heads, strips of substantially incompressible insulating material fitting into the spaces between each pair of coacting lugs, and removable means to secure each of said strips to the driving lugs in contact therewith on opposite sides thereof to secure said heads together as a unit construction.

1,639,241. CONTINUOUS-TONE PIANO ACTION. JAMES F. VEACO, Oakland, Calif. Filed June 24, 1925. Serial No. 39,184. 3 Claims. (Cl. 84—245.)

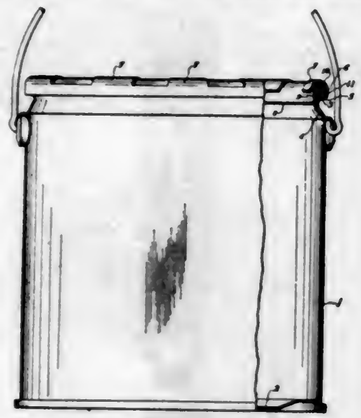


1. In a piano action, a key, wippen, damper lever, hammer and means connecting them for the usual playing operation, and a damper spoon adapted to be moved to bear upon a damper lever, said spoon being bent substantially at a right angle adjacent the damper lever, and bent substantially 180° at its opposite end, to be slidable into a hole in the front end of the wippen, whereby it may be adjusted to the proper position with respect to the damper from the front of the piano, and without removing the wippen therefrom.

1,639,242. ROTARY DRILL. ANTON VERSTEEG, Houston, Tex. Filed Oct. 21, 1922. Serial No. 596,114. 4 Claims. (Cl. 255—1.)

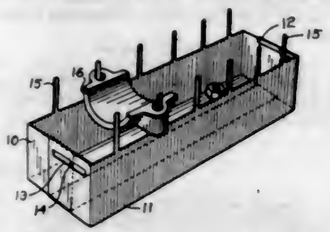
1. A well drilling apparatus including a drill bit, a tubular stem to the lower end of which the bit is attached, a stuffing box carried by said stem, a nut within the stem provided with internal coarse threads, an actuating rod working through said stuffing box and threaded through said nut, a reciprocable barrel to which the rod is attached and means for reciprocating the barrel in a well bore, and a yieldable cushion interposed between the barrel and stem.

1,639,243. ROTARY HEATING FURNACE. JACOB WEINTZ, Cleveland, Ohio. Filed Apr. 10, 1924. Serial No. 705,517. 2 Claims. (Cl. 263—34.)



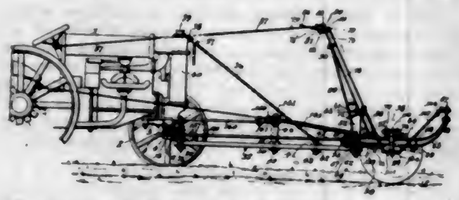
1. In a rotary heating furnace, an inclined rotary shell having a refractory lining, an inner cylinder of refractory material forming a central combustion chamber and an annular heating chamber, a series of beams between said inner cylinder and said lining and dividing said annular chamber into a series of longitudinal chambers, a pivotally-mounted framework for said shell and power means on said framework for rotating said shell.

1,639,244. CLOSURE FOR CONTAINERS. VIRGIL P. WENDLE and MARTIN L. HUNKER, Dover, Ohio, assignors to The Reeves Manufacturing Company, Dover, Ohio, a Corporation of Ohio. Filed Feb. 10, 1926. Serial No. 87,339. 4 Claims. (Cl. 220—59.)



1. A container having a circumferential, inwardly disposed, convex seat adjacent to one end, tongues upon the extreme end of the container, and a cover adapted to

be positioned within the open end of the container, a peripheral flange upon the cover adapted to frictionally fit within said convex seat, a bead upon said flange and

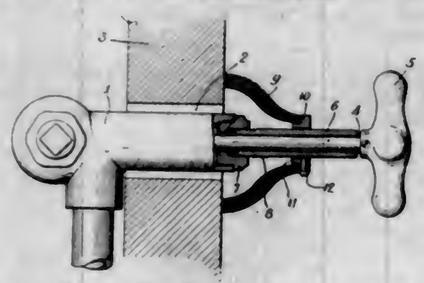


a gasket adapted to be compressed between the seat and bead, said tongue being adapted to be bent inwardly over said flange to retain the cover in position.

1,639,245. BEARING CAP AND WORK HOLDER. LESLIE E. WESTOVER, Denver, Colo. Filed Aug. 14, 1926. Serial No. 129,245. 4 Claims. (Cl. 29—89.)

3. A work holder comprising a container, upwardly projecting tongues formed on one side of said container, a projecting base on said container, an angle member slidably mounted on said projecting base, and upwardly extending tongues on said angle member adapted to cooperate with said first-mentioned tongues to support work.

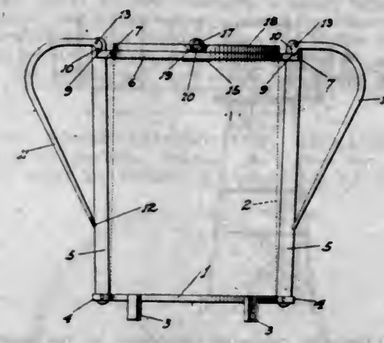
1,639,246. STEERING ATTACHMENT FOR TRACTORS. FRED L. WILLRODT, Pukwana, S. Dak. Filed June 30, 1926. Serial No. 119,656. 17 Claims. (Cl. 97—49.)



1. A steering attachment for tractors comprising a carrier extended forwardly of the tractor, a coupling structure between the rear end of said carrier and the front axle of the tractor and including a vertical and a horizontal pivot, a support secured to the forward end of the carrier, a pivoted guide means connected with said support and adapted to travel in a furrow to guide the tractor, a steering arm operated from the steering mechanism of the tractor and projecting forwardly therefrom, and a spring controlled controlling element for said arm, said element detachably connecting said arm with the carrier.

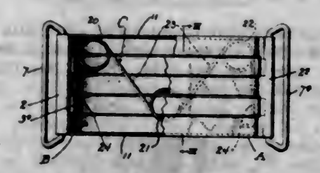
1,639,247. ROTOR BLADING FOR ROTARY ENGINES, PARTICULARLY FOR STEAM TURBINES AND GAS TURBINES. ALFRED ZOELLY and PAUL SPIESS, Zurich, Switzerland. Filed May 27, 1926, Serial No. 112,097, and in Switzerland May 28, 1925. 7 Claims. (Cl. 253—77.)

1. Rotor blading for rotary engines, particularly for steam and gas turbines, comprising at least two forms of blades having different frequencies of natural vibration and means to produce a resultant frequency of the blades which at practically normal speeds has no dangerous effect on the blading.



1,639,248. BATHROOM FIXTURE. JOHN G. ZOLLEIS, Philadelphia, Pa., assignor to Test-Tite Company, a Partnership consisting of Paul Panhorst and John G. Zolleis, Philadelphia, Pa. Filed Aug. 17, 1926. Serial No. 129,729. 6 Claims. (Cl. 137—111.)

1. A bathroom fixture, such as a valve, adapted to extend through an opening in a bathroom wall and capable of use with walls of different thickness to present a wholly smooth, finished and ornamental surface on the bathroom side regardless of the wall thickness, comprising a casing, a valve stem, and a packing means for the stem, the packing means including a smooth surface finished housing sleeve encircling the stem and extending from the casing to near the end of the stem, a substantially frusto-conical escutcheon encircling at its small end the sleeve and adapted at its large end to abut the wall, and a collar fitting the housing sleeve and abutting the end of the escutcheon to hold it in place, the collar having means to clamp the same to the sleeve in adjusted position.



1,639,249. MILK-CAN HOLDER AND CONTENTS DISPENSER. ERNEST ALLEN, Groveland, Calif. Filed Sept. 29, 1926. Serial No. 138,390. 4 Claims. (Cl. 65—61.)

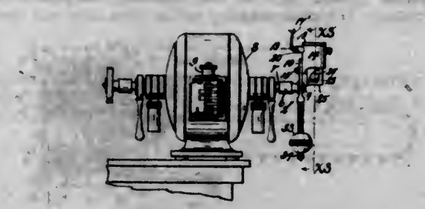
1. A can puncturing and dispensing device comprising a base member to form a support for a can, a plate to rest on the can, opposed spikes on the plate to puncture the top of the can, means between the plate and base for holding the two in frictional engagement with the can, said spikes having passages leading therethrough to the top of the plate, another plate superimposed and

turnably mounted on the spike plate and having openings therethrough to register with the spike openings, and a spout formed with said upper plate and projecting outwardly therefrom; said spout leading from an adjacent opening therein.

1,639,250. EXPANSIBLE BELT CONNECTER. JOSEPH E. ALM, San Francisco, Calif. Filed Dec. 22, 1926. Serial No. 156,272. 2 Claims. (Cl. 24—163.)

1. A device of the character described, comprising first and second-named link members slidable with relation to each other in a longitudinal direction, the first-named link member consisting of a head member and a cross bar connected by a plurality of interspaced front and rear link arms, the second-named link member also consisting of a head member and a cross bar connected by a plurality of interspaced front and rear link arms, the cross bar of the first-named link lying between the link arms of the second-named link and the cross bar of the second-named link lying between the link arms of the first-named link, and a spring member disposed between the link arms of the respective links and engaging the cross bars.

1,639,251. CIRCULATING-TUBE CONNECTION. JAMES F. ARTHUR, Dickson City, Pa. Filed Jan. 12, 1925. Serial No. 2,033. 2 Claims. (Cl. 285—48.)

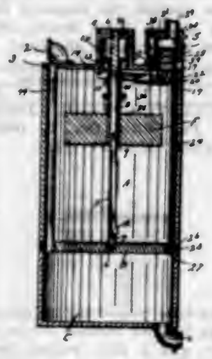


1. A circulating tube for hot water boilers comprising in combination a thin walled tube of uniform wall thickness throughout, provided with an outwardly extending shoulder portion forming an abutment, and a bushing of heavier metal positioned on one end of the tube, said abutment being spaced in from the end of the tube a distance equal to the length of the bushing, the end of the tube being expanded outwardly into engagement with the bushing, the abutment being positioned just beyond the inner end of the bushing and bearing against the extreme inner end of the bushing for holding the bushing in place on the tube, the bushing being exteriorly threaded and provided exteriorly with a portion to which a wrench may be applied, the threaded portion and the wrench receiving portion being located between the expanded end of the tube and the abutment.

1,639,252. CIRCULATING TUBE. JAMES F. ARTHUR, Dickson City, Pa. Filed Oct. 2, 1926. Serial No. 139,200. 4 Claims. (Cl. 137—111.)

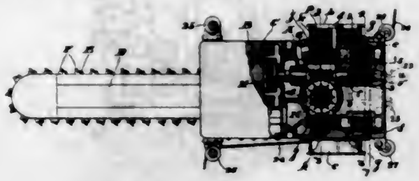
2. A circulating tube comprising an exteriorly threaded bushing having an interior annular recess and an interior annular shoulder, and a thin walled tube, the end of which is inside the bushing against said shoulder and which is provided with an annular outwardly expanded portion in contact with the wall of said annular recess.

1,639,253. CENTRIFUGAL CASTING APPLIANCE. LOREN WILLIAM AYERS, San Bernardino, Calif. Filed Jan. 29, 1924. Serial No. 689,270. 1 Claim. (Cl. 22—65.)



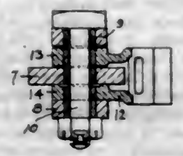
A centrifugal casting appliance set forth comprising a bar having one of its end portions flattened and the other end rounded and threaded, a balance ball threaded on said threaded end, said flattened end having a slot formed therein, a housing adjustably mounted in said slot; an inner housing within said housing and spaced therefrom; electrical coils between said inner and outer housings, a detachable electrical connection to said coils, a crucible casing in said inner housing, a crucible in one end of said crucible casing, a mold cylinder removably mounted in said crucible casing, and means to rotate said bar around an axis.

1,639,254. VACUUM TANK FOR MOTOR VEHICLES. THEODORE BOSSARD, Salt Lake City, Utah, assignor to National Products Incorporated. Filed Feb. 7, 1927. Serial No. 166,466. 2 Claims. (Cl. 103—236.)



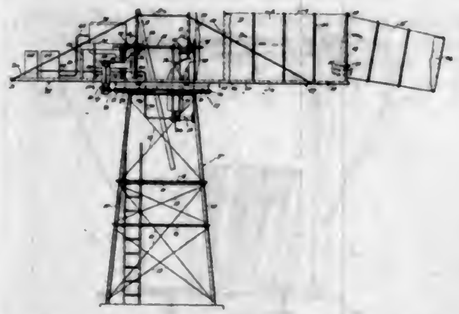
1. In a vacuum tank for automotive vehicles the combination of a casing, having two compartments therein connected by a valve-controlled opening; a float in the top compartment adapted to be raised and lowered by the level of the gasoline in said compartment; a rod on which said float is operated; a spring-operated catch in said rod; a spool carried on said rod above said float; a bifurcated pivoted lever arm having the free ends engaging with the edges of said spool and said lever being actuated by the movement of said spool and indirectly by the movement of said float; a valve in the opening between the two compartments; another lever arm mounted between the arms of the first-mentioned lever arm and pivoted on the same pivot pin, said arm adapted to open and close said valve between the two compartments; an

air valve operated by the other end of said last-mentioned lever arm, adapted to open and close an air port into the interior of said top compartment; and a suction control



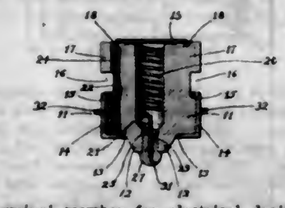
valve operated by said first-mentioned lever arm to control the suction in said upper tank created by the intake manifold of the vehicle.

1,639,255. COAL-CUTTING MACHINE. JOHN C. BRACKETT, New York, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 5, 1926. Serial No. 99,953. 7 Claims. (Cl. 262—30.)



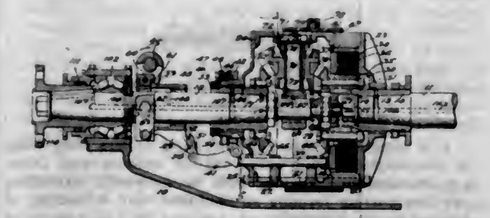
1. A coal cutting machine comprising, the combination of a main casing, a cutting element supported by the main casing, a motor in said casing for driving the cutting element, drums arranged co-axially on opposite sides of the casing, a feeding cable on one of said drums, a retarding cable on the other of said drums, fluid actuated gear motors for rotating the drums, and a fluid pump driven by the motor for supplying fluid under pressure to the gear motors.

1,639,256. BRAKE-HEAD SUPPORT. ARNOLD CHRISTIANSON and CHRISTIAN CHRISTIANSON, Hammond, Ind. Filed Jan. 14, 1926. Serial No. 81,194. 7 Claims. (Cl. 188—230.)



1. The combination with a brake lever and a brake head having a pair of axially spaced wings, of a pivot bolt extending through said lever and said wings, a holding plate supported by said bolt in axially spaced relation to the lever and one wing member, and a spring interposed between said holding plate and said lever for holding the lever in frictional engagement with one of said wings.

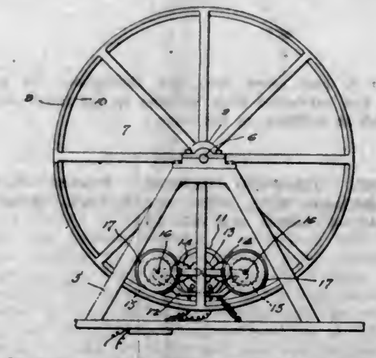
1,639,257. TEMPERATURE REGULATING DEVICE FOR ORCHARDS. EDWARD S. CONE, Los Angeles, Calif. Filed Jan. 3, 1927. Serial No. 158,539. 16 Claims. (Cl. 126—59.5.)



1. Plantation protecting apparatus of the character described, embodying a supporting structure extending to a point above the plantings to be protected, a substantially horizontal director mounted on top the structure and with its inlet orifice opening to the atmosphere, a propeller adjacent the inlet orifice and arranged for rotation about a horizontal axis, and means for driving the propeller; said director being adapted to direct air delivered to it by the propeller outwardly above the plantings to be protected.

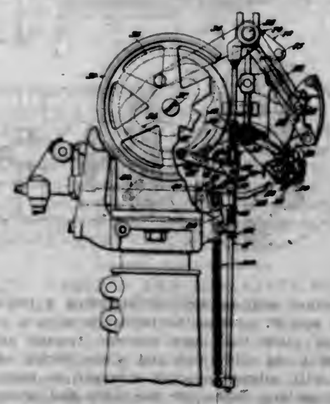
1,639,258. ELECTRICAL DEVICE AND THE MANUFACTURE THEREOF. JOSEPH H. COHEN, Bridgeport, Conn. Filed Aug. 14, 1924. Serial No. 731,970. 6 Claims. (Cl. 219—32.)

6. A terminal member for electrical devices, comprising a metal plug having a wire clearance passage therethrough and adapted to fit within an opening in a body portion of electrical devices, said plug being adapted to be deformed to confine to itself, a wire passing through said wire clearance passage.



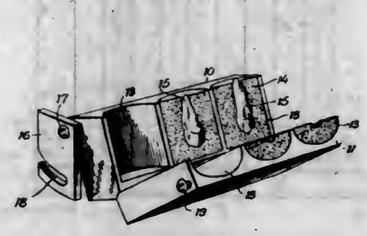
1,639,259. POWER-TRANSMISSION MECHANISM. CHARLES A. CRIQUI and ELWOOD T. LARKIN, Buffalo, N. Y.; said Larkin assignor to said Criqui. Filed Sept. 19, 1925. Serial No. 57,347. 4 Claims. (Cl. 74—34.)

1. A mechanism for transmitting power from a driving shaft to a driven shaft, comprising bearing sleeves secured to the opposing ends of said shafts, a bearing interposed between the front of the driven shaft and said



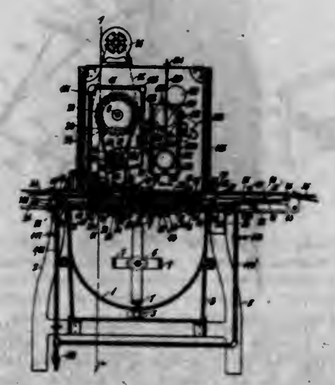
front bearing sleeve, a rotary carrier journaled on said bearing sleeves, a coupling sleeve splined on said front bearing sleeve, driving and driven gear wheels mounted on said coupling sleeve and said rear bearing sleeve, respectively, so as to turn therewith, a rotary carrier journaled on said bearing sleeves, a clutch for connecting and disconnecting said coupling sleeve and carrier, and an intermediate gear pinion pivotally mounted on said carrier and meshing with said driving and driven gear wheels.

1,639,260. POWER-TRANSMITTING MECHANISM. JOSEPH W. DEROCHE, Sanford, Me. Filed Oct. 1, 1926. Serial No. 139,008. 2 Claims. (Cl. 74—26.)



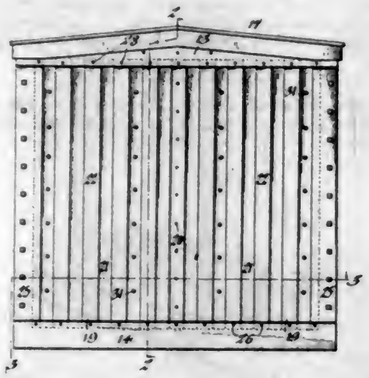
1. In a power transmitting mechanism of the character described, a supporting frame, a shaft mounted for rotation upon the frame, a pair of rims, a hub keyed to the shaft and to which said pair of rims are connected, said rims being in spaced relation to each other, rails provided on the inner faces of the rims, a power embodying means for said rim, said means consisting of an electrical motor, a frame for supporting said electric motor, traction wheels at opposite sides of the motor frame at the front and rear ends thereof in tranctional driving relation with the rails, and driving connections between the traction wheels and the electric motor.

1,639,261. THREAD-HANDLING MACHINE. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 11, 1920. Serial No. 388,199. Renewed Dec. 26, 1924. 14 Claims. (Cl. 112—32.)



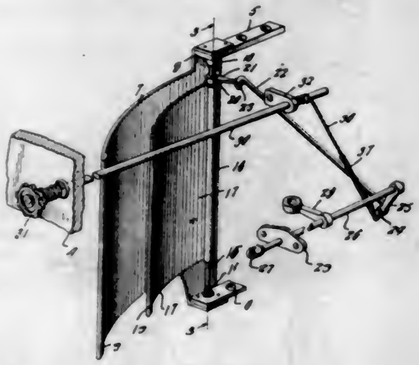
1. A thread handling machine comprising a cam shaft, needle mechanism actuated thereby including a single needle, and means under the control of the operator for operatively connecting the needle mechanism with the cam shaft and for thereafter automatically disconnecting the needle mechanism therefrom at a predetermined point in the cycle of operations with the needle withdrawn from the work to permit the work to be removed from the machine without stopping the operation of the cam shaft.

1,639,262. DENTAL MOLD. JOACHIM LUKS and JAMES MERCER GARNETT, Brooklyn, N. Y. Filed Mar. 26, 1926. Serial No. 97,761. 4 Claims. (Cl. 22—97.)



1. In dental molds, the combination of identical sections having corresponding recesses adapted to form pockets, a bevelled edge to each section and below the recesses, hinged members adjacent the bevelled edges, and a latch adapted to secure the sections together or to support the open mold in an upright position.

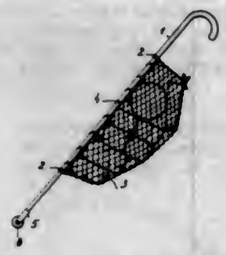
1,639,268. CONFECTIONERY-COATING MACHINE. JOHN MASSABELLA, Cincinnati, Ohio. Filed Apr. 3, 1922. Serial No. 549,151. 10 Claims. (Cl. 91—3.)



1. In a machine of the character described, a coating conveyor section and means for softening the coating material adjacent to this section, a distinct conveyor section removed from the direct influence of said softening means, receiving the confections from the coating section for hardening of the coating material thereon, a shield plate under the conveying portion of said distinct section, means near one end of said plate, against said distinct section, to remove surplus coating material tending to harden thereon, and softening means near said distinct section, within the extent of said plate, to modify the hardening action on the coating of the confections and on the coating material engaged by said removing means.

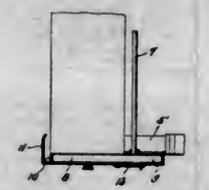
1,639,264. WALL STRUCTURE FOR RAILWAY CARS. JOHN MCMULLEN, Buffalo, N. Y. Filed July 30, 1925. Serial No. 47,036. 2 Claims. (Cl. 105—410.)

1. The combination with the upper and lower rails of a railway car body, of a sheet metal wall therefor including substantially parallel channel-ribs extending from end to end thereof and attached at their opposite ends to the inner sides of said upper and lower body-rails.



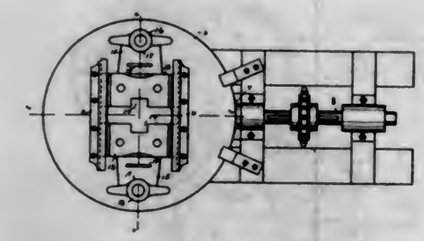
1,639,265. SPEED GOVERNOR. JOHN A. MILLER, Mount Crawford, Va., assignor of one-half to George N. Conrad, Harrisonburg, Va. Filed May 11, 1925. Serial No. 29,445. 14 Claims. (Cl. 264—14.)

1. A control mechanism comprising a fixed curved wing, a movable vane mounted in spaced relation to the fixed wing whereby a current of air between the vane and wing forms an air cushion, the movable vane being of the same general contour as the fixed wing, a control element, a linkage connecting the movable vane to the control element, a spring adapted to regulate the movement of the movable vane and means for increasing or retarding the action of the spring.



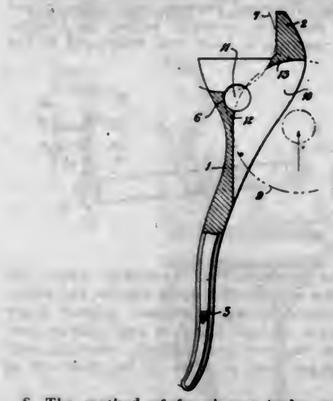
1,639,266. HAND CARRYING DEVICE. KAROLINE MOELLER, Eberswalde, Germany. Filed Mar. 5, 1927, Serial No. 172,948, and in Germany Feb. 5, 1926. 2 Claims. (Cl. 280—58.)

1. A hand carrying device consisting of a stick provided with a handle at its upper end and a roller at its lower end, two separated fittings secured to said stick between its upper and lower ends, a bag of network and a string passed at intervals through said bag and tightly around said stick between said separated fittings and secured to said fittings in such a manner that the bag is



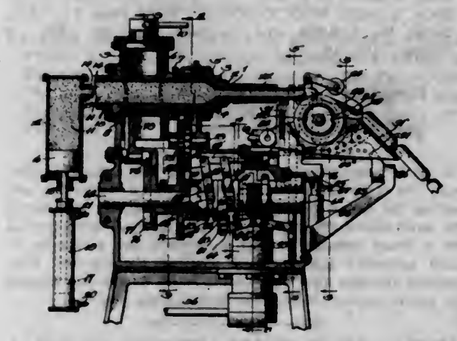
secured to and below the stick throughout its entire length and prevented from slipping to the lower end of the stick or oscillate on the same.

1,639,267. THAWING DEVICE. WARNER PALMER, Meadowlands, Minn. Filed Apr. 3, 1926. Serial No. 99,540. 5 Claims. (Cl. 137—72.)



1. In a thawing device for radiators provided with overflow pipes, a steam pan adapted for arrangement upon the lower side of a radiator and for communication with the overflow pipe of the radiator, the front wall of the pan being provided with steam discharge openings and means for directing the steam upwardly after passing through said openings so that the same may be drawn through the radiator by suction.

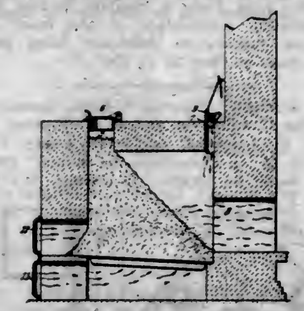
1,639,268. ROTARY. LUTHER PATTERSON, Harris County, Tex., assignor to Howard F. Smith, Harris County, Tex. Filed May 16, 1924. Serial No. 713,826. 2 Claims. (Cl. 255—23.)



1. A rotary drilling machine including a rotary table having a central opening to receive a pipe, a track on said table, plate like jaws movable toward and from each other along said track and whose facing edges are provided with aligned notches arranged to form a pipe receiving opening, posts on the table and space blocks fitted between the respective posts and the corresponding jaws.

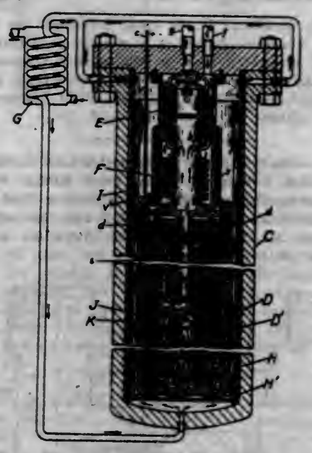
1,639,269. METHOD OF MAKING TOOLS. KARL POTSCHNER, Dover, Ohio. Filed Apr. 26, 1924. Serial No. 709,303. 10 Claims. (Cl. 76—101.)

8. The method of forming a tool part, which consists in providing a blank comprising a frame portion having a jaw formed at one end and a handle formed at the other end thereof, forming a transverse hole in said frame portion at a predetermined point, slotting the frame portion from opposite sides in a plane at substantially right angles to the hole, the cuts substantially meeting or overlapping one another and the transverse hole, and cutting away triangular portions of metal adjacent to the point where the cuts meet and adjacent to the points where the cuts meet the transverse hole.



1,639,270. SAUSAGE-MAKING MACHINE. WILLIAM H. POTTER, Chicago, Ill. Filed Feb. 6, 1925. Serial No. 7,847. 19 Claims. (Cl. 17—34.)

1. The combination with an open ended hollow spindle free to receive a casing thereon and to permit the casing to project and be pulled therefrom; of mechanism for passing material into the spindle and into the projecting portion of the casing; a wheel positioned to be turned by the filled portion of the casing in passing; and intermittently functioning mechanism for successively marking the portion of the casing passing from the spindle and operated by said wheel in turning.

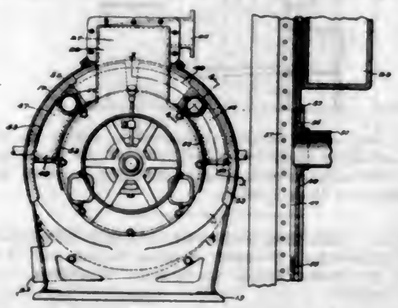


1,639,271. PROCESS AND APPARATUS FOR BURNING CLAY PRODUCTS. JOSEPH ASHBY REAMS, Richmond, Va., assignor to Fulton Brick Works, Richmond, Va., a Corporation of Virginia. Filed Dec. 2, 1926. Serial No. 152,156. 4 Claims. (Cl. 25—151.)

1. A kiln furnace of the type having a fuel-grate, a shovel-stoking-door, and a rear flame-exit leading to the kiln, the top wall of said furnace being provided with a fuel-charging passage, this passage having a closure device adapted to be opened or closed, said fuel-charging passage being located adjacent the front wall of the furnace, a supplemental air-supply passage being provided

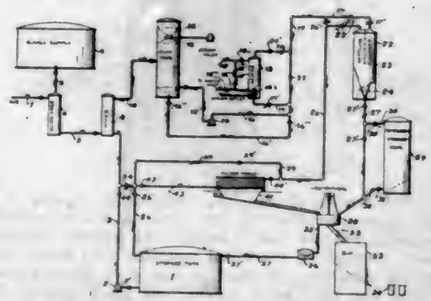
at the rear of the furnace positioned to deliver air into the combustion-chamber at the inlet of the flame passage, this supplemental air-passage being provided with an adjustable closure device.

1,639,272. PROCESS FOR THE DIRECT SYNTHESIS OF AMMONIA. FORREST C. REED, Easton, Pa. Filed Jan. 21, 1926. Serial No. 82,823. 17 Claims. (Cl. 23—199.)



1. The process of producing ammonia by passing at a high temperature (500° C. and under) a gaseous mixture containing nitrogen and hydrogen over suitable catalytic agents arranged in series and removing at a lower temperature ammonia contained in the gases leaving each catalyst and then again passing the gases leaving the last catalyst of the series from which ammonia has been removed over the series of catalysts in like manner while carrying out the process continuously under substantially constant pressure (400 atmospheres and under) and replacing the quantity of ammonia removed from the gases during each passage over the series by a fresh quantity of nitrogen and hydrogen.

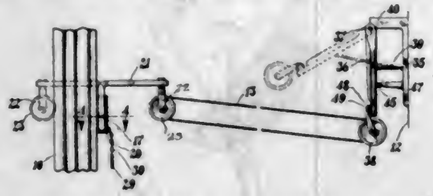
5. The process of producing ammonia by the synthesis of its elements, in the presence of a catalyst, which comprises passing a mixture of nitrogen and hydrogen gas over a suitable catalytic body at an elevated pressure and temperature, said catalytic body being so formed and divided into an inner and an outer body causing the gas to flow from the outer body to the inner body and proportioning the volumes of the two bodies of catalyst in such a manner that the heat generated in the outer body of catalyst, in excess of the heat absorbed by the incoming gases and that radiated and conducted out-



wardly and carried inwardly is less than the total heat generated in, radiated to and conducted to the inner body of catalyst, so that the average operating temperature of the outer body of catalyst is less than the average operating temperature of the inner body of catalyst, this temperature difference being preferably within the range of from 50 to 150° C.

1,639,273. SCREEN. HAROLD J. REED, Nashua, N. H., and CLAUDE L. SPAFFORD, Sherbrooke, Quebec, Canada, assignors to Improved Paper Machinery Company, Nashua, N. H., a Corporation of Maine. Filed Apr. 1, 1925. Serial No. 19,820. 15 Claims. (Cl. 92—34.)

8. In an apparatus of the class described, the combination with a screen drum, of a casing, a tailings space, a vertical elongated slot in the casing communicating with the tailings space, and an adjustable plate overlying the slot and containing a tailings outlet communicating with the tailings space through said slot.



1,639,274. PROCESS OF PREPARING AN ADSORBENT FOR OILS. WIRT D. RIAL and EARLE W. GARD, Wilmington, Calif. Original application filed Sept. 8, 1925, Serial No. 55,007. Divided and this application filed Apr. 26, 1926. Serial No. 104,540. 6 Claims. (Cl. 252—2.)

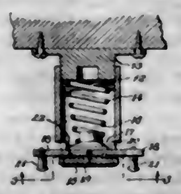
1. The process of preparing an adsorbent for hydrocarbon oils which consists in mixing with petroleum hydrocarbons an alkali dissolved in water in vigorously agitating the mixture of petroleum hydrocarbons and dissolved alkali, in mixing clay with the mixture of petroleum hydrocarbon and the dissolved alkali, in separating from the mixture the excess petroleum hydrocarbon, and in then recovering the treated clay.

1,639,275. CLOTHESLINE SUPPORT. ALBERT RUSSO and JOSEPH RUSSO, Brooklyn, N. Y. Filed Oct. 29, 1924, Serial No. 746,490. Renewed June 23, 1927. 2 Claims. (Cl. 68—3.)

1. A clothesline support comprising a frame, a main hollow arm pivoted to said frame closed at its lower end, a spring having one end fastened to said arm, and the other end to said frame, normally urging said arm to a vertical position, said main arm having a slot therein, a plunger and a plunger rod slidably mounted in said hollow arm, a spring interposed between said plunger and the lower end of said arm, normally urging the plunger and plunger rod upwards, a lever arm fulcrumed to the

main arm having a short beak extending above the plunger and holding said plunger down against the action of said last-mentioned spring, a ratchet toothed finger on said frame and a toothed finger on said plunger rod, projecting through the slot and normally engaging said ratchet toothed finger, and a pulley at the free end of said lever arm.

1,639,276. ROADWAY CONSTRUCTION. AUGUST E. SCHUTTE, Northboro, Mass. Filed July 29, 1922. Serial No. 578,502. 2 Claims. (Cl. 94—23.)

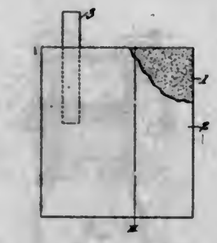


1. That method of uniting a bituminous coating to a concrete roadway surface which consists in applying said coating to said surface and raising it to a temperature approximating its flash point and maintaining it at such temperature for a short period of time whereby a portion of it will penetrate said surface and the remainder will form a protective coating therefor.

1,639,277. REMOVABLE-BARREL MOUNTING FOR AUTOMATIC FIREARMS. CESARE SONCINI, Brescia, Italy, assignor to Societa Italiana Ernesto Breda, Milan, Italy, a Joint Stock Company. Filed June 17, 1926. Serial No. 116,659, and in Italy June 20, 1925. 8 Claims. (Cl. 42—75.)

8. In a removable barrel mounting for automatic firearms, the combination, with a barrel; of a sleeve for connecting the barrel to the fire-arm and wherein the barrel fits, said sleeve having a large longitudinal top opening and a front opening shaped to permit the barrel to be tilted upwardly into inclined position therein and then removed through the top opening; and means for locking the barrel against movement into tilting position.

1,639,278. SHADE-ROLLER FIXTURE. SIDNEY J. WHARTON and DIAL R. PEEVEY, Burkburnett, TEX. Filed Dec. 31, 1926. Serial No. 158,292. 4 Claims. (Cl. 24—115.)



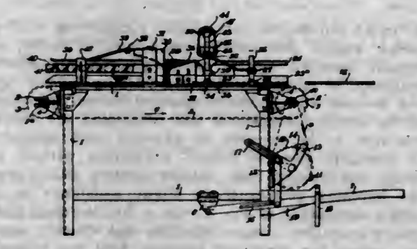
1. A shade roller fixture, comprising a casing, a jaw member within the casing and having portions projecting through and beyond opposite sides thereof and a spring within the casing and normally exerting an outward pressure upon the jaw member.

1,639,279. WEARING RING FOR ROTARY ELEMENTS. GEORGE J. WINKLE, Philadelphia, Pa., assignor to The Frederick Iron and Steel Company, Frederick, Md. Filed May 16, 1923. Serial No. 639,324. 8 Claims. (Cl. 286—7.)

3. In a rotary machine, a bearing, a cylindrical surface co-axial with said bearing, a rotating element comprising a shaft revolubly mounted in said bearing, a cylindrical surface co-axial with said shaft, a ring carried by said last named cylindrical surface having an annular groove eccentric thereto, and means extending into said groove for preventing axial displacement of said ring on said rotating element.

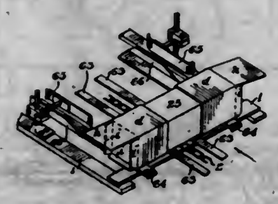
1,639,280. STORAGE CELL AND ELECTRODE THEREFOR. RAYMOND C. BENNER, Bayside, and HARRY F. FRENCH, Flushing, N. Y., assignors to The Prest-O-Lite Company, Inc., a Corporation of New York. Filed Aug. 11, 1922. Serial No. 581,203. 4 Claims. (Cl. 136—36.)

1. Process of making storage batteries, comprising shaping bodies of active material, fitting said bodies in spaced relation into a frame to close the lateral openings therein, applying a metal to the exterior surfaces of the bodies to form a conductive coating impermeable by liquid, and placing electrolyte in the space between the bodies.



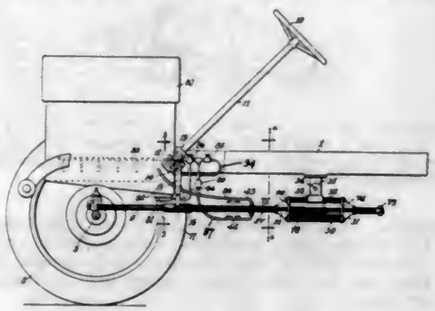
1,639,281. PAPER BOX AND THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Feb. 19, 1926. Serial No. 89,472. 2 Claims. (Cl. 206—44.)

1. A display box including in combination with a body having an open top, a separate pedestal comprising a top, an end and opposite side walls free on bottom and rear edges, attached thereto, the top wall having a joining flap extension for securing the pedestal to the bottom of the box adjacent an end thereof, the pedestal being hinged at the rear of said extended portion and



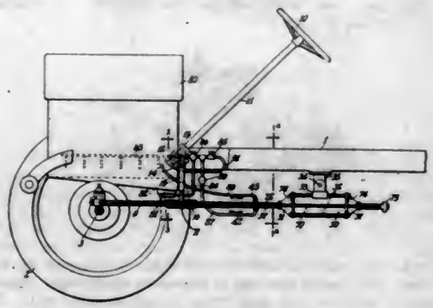
adjustable relative to said end over the top of the box as the box is closed and under said end as the box is opened to support the same at an angle for displaying its contents.

1,639,282. BOX-SEALING MACHINE AND THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed June 21, 1926. Serial No. 117,351. 5 Claims. (Cl. 93—2.)



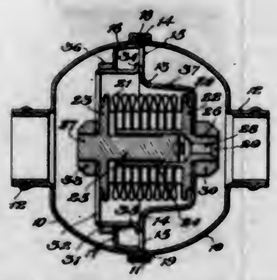
1. A box sealing machine including in combination with means for moving boxes progressively with their lids and sealing flaps raised, devices for rendering the sealing flaps adhesive, guides acting to lower the lids and to direct the sealing flaps to said devices, a guide acting on the lids after the sealing flaps have been rendered adhesive for raising the flaps above the edges of the adjacent sides of the boxes, guides for deflecting said flaps into the plane of the boxes, a guide for fully closing said lids with the sealing flaps inside the boxes, and pressure devices acting on said flaps for sealing the boxes.

1,639,283. BOX-MAKING MACHINE AND THE LIKE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed July 14, 1926. Serial No. 122,293. 3 Claims. (Cl. 93—44.)



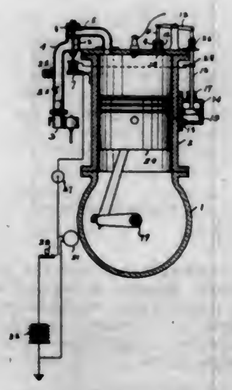
1. A box making machine including a box carrier for moving box blanks through a sequence of forming operations, a series of box supporting forms movable with the box carrier, said forms being adapted to have initially formed box members of sizes adapted to be arranged telescopically one with the other positioned thereon oppositely one of the other with sealing flaps extended, means acting to fold certain of said flaps, in rendering other flaps adhesive and folding the same over the first folded flaps, and pressure means coacting with said forms to effect adhesion between the flaps.

1,639,284. STEERING MECHANISM FOR AUTOMOTIVE VEHICLES. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,271. 15 Claims. (Cl. 180—80.)



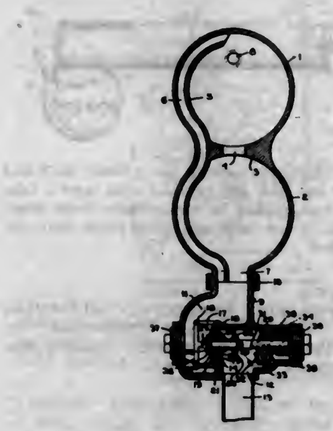
1. In an automotive vehicle, the combination with the steering wheels and steering mechanism therefor, and manually operated control mechanism for said steering mechanism, of oppositely disposed yielding devices interposed between the manually operated control mechanism and the steering mechanism and permitting the steering mechanism to be operated by physical force applied to said manually operated control mechanism without materially compressing said yielding devices under conditions imposing comparatively slight resistance to the steering movements of the wheels, a double acting power actuator operatively connected with said steering mechanism, means for supplying pressure fluid for operating said actuator, a reversing valve mechanism for said actuator, and operative connections from the valve mechanism to the manually operated control mechanism adapted to be brought into operation to effect the operation of the steering mechanism by the actuator when said yielding devices are compressed to a predetermined extent.

1,639,285. POWER ACTUATOR. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Original application filed Nov. 1, 1924, Serial No. 741,271. Divided and this application filed Mar. 3, 1926. Serial No. 92,089. 11 Claims. (Cl. 121—41.)



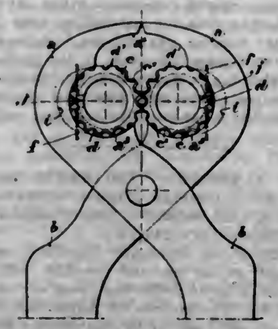
2. In an automotive vehicle provided with an internal combustion engine, and a forced feed lubricating system therefor, including a pump and oil circulating passages connected therewith, of a power actuator including a cylinder and a piston working therein, an actuated part connected with the piston, and reversing valve mechanism, said oil circulating system including a by-pass for returning excess lubricating oil to the pump without passing through the lubricating passages, and provided with a pressure regulating valve interposed between said by-pass and the pump, and connections between said by-pass and the reversing valve mechanism of the actuator for supplying motor liquid therefor, whereby the supply of motor liquid to the actuator will be excess oil beyond the normal requirements of the engine.

1,639,286. TEMPERATURE REGULATOR. WILLIAM W. CARSON, Jr., Knoxville, Tenn., assignor, by mesne assignments, to The Fulton Syphon Company, Knoxville, Tenn., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,344. 15 Claims. (Cl. 236—34.)



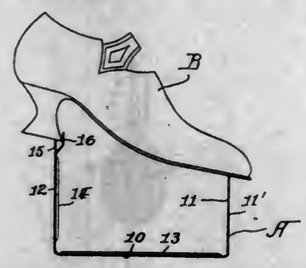
1. In a thermostatically controlled valve mechanism, in combination with a casing, a thermostat support mounted within said casing, a thermostat mounted on said support, a valve member operatively connected to said thermostat and adapted to seat against said support, a member surrounding said valve member, and a second valve member carried by said first valve member and adapted to seat against said surrounding member to prevent flow around said valve members.

1,639,287. INTERNAL-COMBUSTION MOTOR. ZEB W. DAVIS, Houston, Tex. Filed Sept. 8, 1925. Serial No. 55,062. 4 Claims. (Cl. 123—90.)



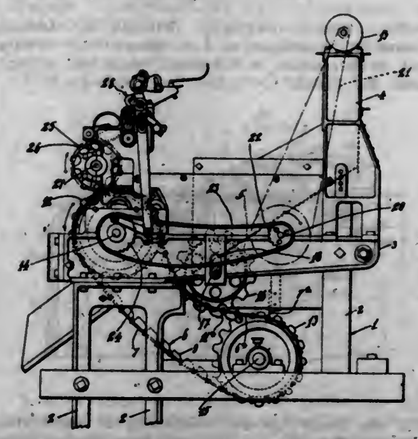
1. An internal combustion motor including a cylinder having an intake and an exhaust manifold, valves controlling said manifolds, means for actuating the exhaust valve, an electromagnet associated with the intake valve and adapted, when energized to hold the same in open position, an electrical circuit into which the magnet is connected and a switch associated with the valve actuating means through which the circuit may be alternately completed and broken.

1,639,288. FLUSHING MECHANISM. LIBORIO G. GIARDINO and JOSEPH F. GIARDINO, Brockton, Mass. Filed Nov. 17, 1924. Serial No. 750,260. 3 Claims. (Cl. 4—26.)



1. A flush tank construction comprising a closed reservoir having rigid walls, an intake for liquid under pressure communicating with said reservoir below the top thereof and a delivery conduit, a valve casing having an inlet chamber communicating with said delivery conduit and an outlet, an air conduit leading from the upper portion of said reservoir to said inlet chamber, a wall separating said inlet chamber from said outlet having a port and a valve for said port and means for actuating the same.

1,639,289. NAIL AND LIKE STRAIGHTENING DEVICE. HENRY WILLIAM HAEGLER, Lyon, France. Filed Aug. 12, 1922, Serial No. 581,424, and in Germany Mar. 29, 1922. 12 Claims. (Cl. 153—39.)

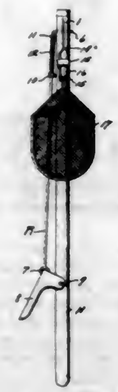


1. A device of the character described comprising a pair of fluted rollers, a pair of operating jaws having cylindrical recesses extending throughout said jaws into which said rollers can be admitted from both sides and in which they can be supported for pressing the rollers to articles inserted between them, and means for retaining the rollers in their respective jaws in various positions of rotary adjustment.

1,639,290. SHOE-DISPLAY STAND. BLAINE H. HARRIS, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Jan. 23, 1924, Serial No. 688,003. Renewed May 18, 1927. 1 Claim. (Cl. 211—24.)

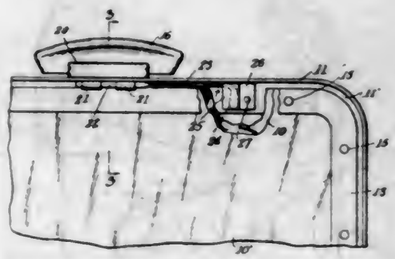
A display support for a shoe, including a support formed of thin sheet material comprising a flat base portion having reinforcing grooves therein, supporting members extending at right angles to said base portion, weakened portions formed between said base portion and said supporting members so as to permit easy bending of said supporting members with reference to said base portion, a heel rest comprising a tongue cut out and bent inwardly from one of said supporting members and the other of said supporting members having a concave edge.

1,639,291. BRANDING MACHINE. FRANK HAYES, El Monte, Calif., assignor to California Walnut Growers Association, Los Angeles, Calif., a Corporation of California. Filed Jan. 27, 1926. Serial No. 84,032. 11 Claims. (Cl. 101—37.)



1. In an apparatus of the class described, the combination of an inclined chute, an oppositely inclined conveyor having a plurality of removable blocks, each of which blocks is provided with a plurality of independent recesses forming nut receiving cups, and a pair of side chains to which the blocks are removably secured, means for driving the conveyor, and a printing mechanism supported in position adjacent the conveyor.

1,639,292. FLY SWATTER. NORTON T. HENDRICKSON and CHARLES ROHOLT, Hoople, N. Dak. Filed Nov. 30, 1926. Serial No. 151,728. 3 Claims. (Cl. 43—135.)



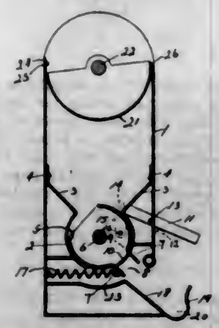
1. A device of the class described comprising an elongated handle member, a plate pivotally engaged with said handle member, a striking element operatively en-

gaged with the plate, said plate having a slot, a rod extending along the handle member and operatively engaged through the slot of the plate whereby movement of the rod in one direction will swing the striking element outwardly and movement in the opposite direction will swing

said striking element inwardly, a hand grip pivotally engaged with the handle member and with which the rod is operatively engaged, and means for constantly urging the rod in a direction to maintain the striking element at the limit of its inward movement.

1,639,293. BAG FASTENER. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed Dec. 2, 1925. Serial No. 72,645. 2 Claims. (Cl. 292—228.)

1. A bag frame fastener comprising in combination with a pair of hinged bag frames of L shaped cross section, an elongated knob pivoted on one of said frames and a stud on the other frame engageable by said knob, flattened loops on said knob extending through the frame, a torsional element having a flattened portion engaged in said loops, said torsional element having a flattened, angularly bent opposite end portion, and a clip anchor secured to said frame to retain the bent end of said torsional element thereagainst.

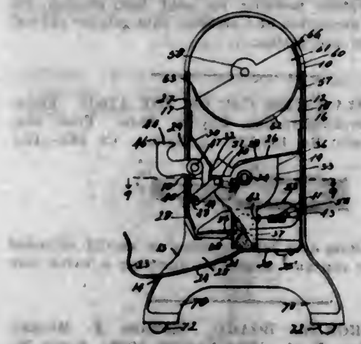


1,639,294. SPRAYER. HERBERT D. HUDSON, Minneapolis, Minn. Filed Jan. 24, 1925. Serial No. 4,440. 2 Claims. (Cl. 299—88.)

1. A sprayer comprising a pump having a piston and cylinder, the cylinder having a head with an orifice therein, a tank having a seat formed in its wall to receive a portion of substantial arcuate extent of the lower side only of the pump cylinder, the under side only of the forward end of the pump cylinder being fitted into the seat and soldered thereto, a drip cup fitting against the side

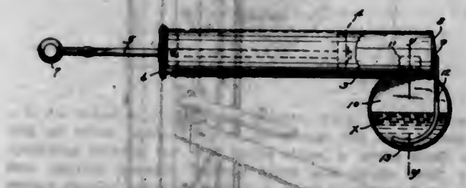
of the tank and the lower half of the cylinder head and fastened to both the tank and cylinder head, and a tube extending from the opening in the cylinder head down through the side of the tank and to a point near the bottom of the tank.

1,639,295. AUTOMATIC CIGARETTE-DELIVERING CONTAINER. CHARLES JESNIG, Philadelphia, Pa. Filed July 1, 1924, Serial No. 723,522. Renewed May 28, 1927. 3 Claims. (Cl. 211—8.)



1. A cigarette delivering device comprising a casing, a cradle housing within the casing provided with inwardly projecting reduced sections, an oscillating cradle mounted in the housing, spaced depending wings carried by the cradle and having slots for registration with the reduced sections of the housing whereby the lowermost cigarette will be separated from the others in the cradle when the latter is oscillated, and means disposed beneath the cradle and fashioned to retain said lowermost cigarette in the space between the wings until the cradle is oscillated.

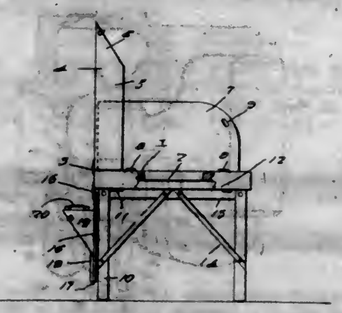
1,639,296. AUTOMATIC CIGARETTE-DELIVERING CONTAINER. CHARLES JESNIG, Philadelphia, Pa. Filed Mar. 6, 1925, Serial No. 13,510. Renewed May 28, 1927. 5 Claims. (Cl. 211—8.)



1. A device of the character described comprising a container open at the top and provided with an outlet at the bottom, a shelf projecting from one of the walls of the container intermediate its height and terminating short of the opposite side of the container, a baffle carried by the opposite wall of the container and projecting toward the shelf terminating short thereof to leave a passageway between said shelf and baffle, a cradle swingingly mounted below the shelf to receive cigarettes passing through the space between said shelf and baffle, an open ended spout depending from said cradle to hold cigarettes in a single vertical stack, means normally closing the lower end of said spout, which means terminates in a tray outside of the container, means to oscillate the cradle whereby the lower end of the spout will be moved away from the means normally closing it to permit a

cigarette to roll therefrom onto the tray, means projecting into the spout to separate the lowermost cigarette from the others in the cradle to prevent said other

cigarettes descending during the oscillation of the cradle, and means tending to hold the cradle in its normal or upright position.



1,639,297. SPRAYER. ANTON W. KEGLER, Minneapolis, Minn. Filed Dec. 6, 1923. Serial No. 678,880. 3 Claims. (Cl. 299—88.)

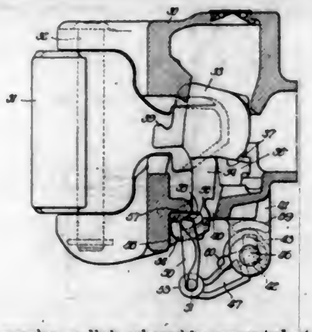
1. A sprayer comprising a pump piston and a cylinder of uniform bore from end to end, the pump cylinder having a cylinder head with a single open orifice near its center, a cylindrical tank with its axis extending transversely of said pump cylinder and having a seat formed in the cylindrical wall of the tank of substantial arcual extent to receive a portion of the head and the lower side of the pump cylinder, the cylindrical wall of the tank extending a substantial distance above the lower portion of the pump cylinder and the head and being in contacting relation with the outer face of said head and soldered to said cylinder and head, a liquid delivery tube extending from near the bottom of the tank upwardly to said orifice and along the outer wall of the pump cylinder head and soldered thereto, the lower end of the tube extending close around the inner wall of the tank, and a substantial distance rearwardly of a line drawn perpendicularly downwardly from the axis of the pump cylinder through the axis of said tank.

3. A sprayer comprising a pump piston and a pump cylinder of uniform bore throughout its length, a head for the cylinder with a single open orifice therein, a cylindrical tank having its axis extended transversely of said pump cylinder and having a hole cut out in the cylindrical wall of the tank to receive a portion of the lower side of the pump cylinder and its head, said hole forming for the pump cylinder and head a seat of substantial arcual extent with the under side and head of the cylinder fitted into the hole with the outer face of the head in abutting relation to the tank wall, said cylinder and head soldered to the cylindrical wall of the tank, a liquid delivery tube extended from near the bottom of the tank upwardly to said orifice along the outer wall of the cylinder head and soldered thereto, the lower end of the tube extending closely to the inner wall of the tank and a substantial distance rearwardly of a line drawn perpendicularly downwardly from the axis of the pump cylinder through the axis of the tank.

1,639,298. FOLDABLE, PORTABLE NURSERY CHAIR. HARVEY A. KEIM, Naponee, Nebr. Filed Mar. 19, 1926. Serial No. 95,945. 3 Claims. (Cl. 155—31.)

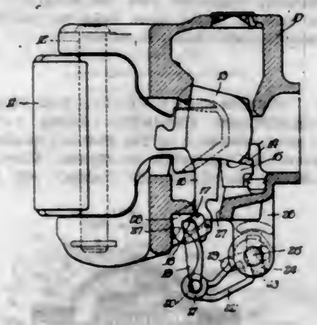
2. A foldable chair comprising a board, a flanged back hingedly connected to the board at the upper surface thereof and at one end thereof, side boards hingedly connected to the first-named board, one at each side thereof at the upper surface thereof and swingable between the flanges of the back, foldable supporting means on the under surface of the first-named board, and closure means hingedly connected with the first-named board at said one end thereof and at the lower surface thereof and adapted to enclose the foldable supporting means and to be detachably connected with the flanges of the back when said back is folded down over the board to hold the side boards folded down thereover.

1,639,299. TEMPERATURE REGULATOR FOR INTERNAL-COMBUSTION ENGINES. JAMES A. KINNARD, Detroit, Mich., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Jan. 22, 1926. Serial No. 83,153. 20 Claims. (Cl. 236—34.)



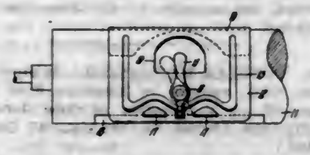
1. In a temperature regulating system for internal combustion engines comprising a hose line between the engine jacket and the radiator, the combination of a casing interposed in the hose line, a thermostat supported thereby in the axis of the hose line, a rectilinearly movable valve operatively connected to said thermostat, and means supprting said thermostat and cooperating with said valve to enclose said thermostat and protect it from the pressure in the hose line when the valve is closed.

1,639,300. COUPLER MECHANISM. EDMUND P. KINNA, Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 27, 1926. Serial No. 137,882. 17 Claims. (Cl. 213—127.)



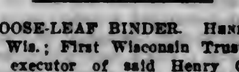
1. In coupler mechanism having a swingable knuckle and a lock for said knuckle, means for transmitting an operative movement to the coupler lock comprising a ro-

tatable member supported by the coupler head, a lifter arm releasably connected to and disconnectable from said rotatable member by a movement at an angle to said



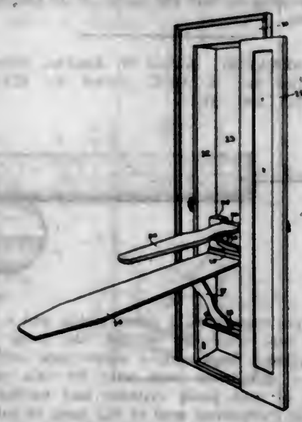
rotatable member, a link releasably connected at its upper end to said coupler lock and at its lower end to said lifter arm, and means for housing one of said latter connections for normally locking both of same against disconnection.

1,639,301. COUPLER MECHANISM. EDMUND P. KINNE, Alliance, Ohio, assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 7, 1926. Serial No. 139,964. 2 Claims. (Cl. 213—167.)



1. In coupler mechanism having a movable lock, the combination of a rotary member for transmitting operating movement to the coupler lock, a bracket, and an operating rod supported by said bracket and extending and connected to said rotary member for rotating the latter for operating the coupler lock, said operating rod having a handle with an offset portion tending the prevent a swinging movement of said rod which would release the coupler anticreep.

1,639,302. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 24, 1925. Serial No. 58,275. 12 Claims. (Cl. 191—136.)



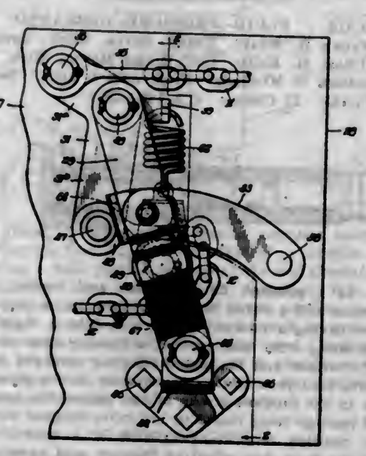
1. A work-piece-holder for a typewriting machine having a removable platen, said holder including a resilient body-portion clasping said platen, a work-piece-gripper extending from said body-portion and normally disposed a short distance from said platen for easy insertion of a work-piece therebetween, a projection on said gripper, and a finger-piece movable on said body-portion for engaging said projection and pressing said gripper against said work-piece and platen.

1,639,303. VALVE-STEM CAP OR THE LIKE. THURMAN H. LAUTENSCHLAGER, Dayton, Ohio. Filed Jan. 3, 1927. Serial No. 158,523. 3 Claims. Cl. 152—12.)

1. A valve stem dust cap including an axially extended portion of the cap and means for carrying a valve core therein.

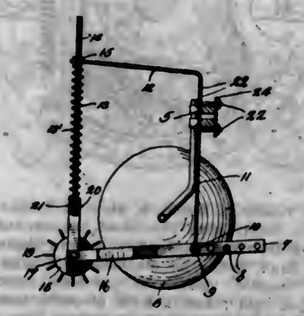
1,639,304. IRONING BOARD. EDWARD T. MICKEY, Winston-Salem, N. C. Filed Dec. 26, 1925. Serial No. 77,706. 1 Claim. (Cl. 68—10.)

A wall cabinet having parallel vertical side portions, vertical slots in the side portions, a cross-member having its ends slidably mounted in the vertical slots, an ironing board fixedly secured to the said cross-member, a second cross-member pivotally secured to the wall portions at a point forward of the vertical plane of the first cross-member, a support secured to the second cross-member, a cross-piece secured to the free end of the support, a guide-way on the lower face of the ironing board in which the cross-piece is adapted to slide, and means for limiting the outward movement of the free end of the support.



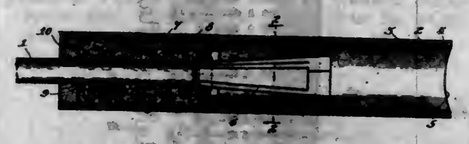
1,639,305. LOOSE-LEAF BINDER. HENRY C. MILLER, Milwaukee, Wis.; First Wisconsin Trust Company of Milwaukee, executor of said Henry C. Miller, deceased. Filed June 29, 1925. Serial No. 40,312. 9 Claims. (Cl. 129—41.)

1. A loose-leaf binder, comprising a pair of binder heads, a flexible post adapted to adjustably connect the heads, one end of the post being secured to one head and its other end portion being free and extensibly passed through the second head and extended thereover at right angles to its portion extended between the heads, an



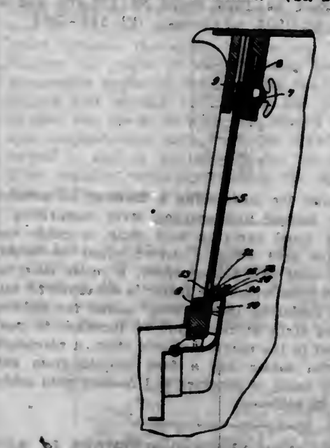
enlargement carried by the free end portion of the post, and a stop fixed to the second head and behind which the post enlargement is lockingly engageable to prevent the retraction of the post.

1,639,306. BRAKE MECHANISM FOR RAILWAY CARS. CHARLES L. MOORMAN, Chicago, Ill. Filed Jan. 29, 1926. Serial No. 84,538. 12 Claims. (Cl. 74—110.)



1. In brake mechanism for railway cars, the combination of brake shoes adapted to engage the car wheels, operating linkage for said brake shoes, a brake staff, a first tension member leading from said brake staff, a second tension member leading to said operating linkage, a main lever, a secondary lever pivoted on said main lever, said tension members being connected to said secondary lever for one ratio of motion transmitting leverage between said tension members, and means responsive to the re-action pressure in one of said tension members for locking one of said tension members to said main lever to establish a different ratio of motion transmitting leverage between said tension members.

1,639,307. CRUST BREAKER. PETER NEU, Bayard, Nebr. Filed Nov. 15, 1926. Serial No. 148,452. 2 Claims. (Cl. 97—178.)

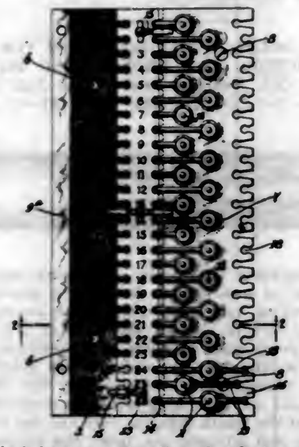


1. In a device of the character described, a frame, said frame including a vertical bar having a plurality of spaced openings, means extending through the openings for securing the bar to a cultivator frame, said bar including a rearwardly extended portion having an opening, a rod extending through the opening, a roller frame supported at the lower end of the rod, a spring surrounding the rod, and positioned between the rearwardly extended end of the bar and roller frame to exert a pressure on the roller frame, and a roller having teeth, operating in the roller frame.

1,639,308. SOUND-MODIFYING MEANS FOR SOUND TRANSMITTING AND REPRODUCING MACHINES. WILLIAM ORR, Memphis, Tenn. Filed Mar. 29, 1924. Serial No. 702,895. 7 Claims. (Cl. 181—27.)

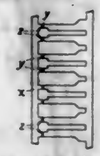
1. A transmitter for speech reproducing devices having a barrel of non-resonant material, a mouth tube, a sound conveying tube with which said mouth tube is connected, a closure between the walls of said tubes, a series of tapered coiled members of nonresonant material nested one within the other and mounted loosely within said mouth engaging tube and projecting into said sound conveying tube, and a packing of fibrous material between the barrel of the mouth engaging tube and the sound conveying tube and adjacent the inner end of said nested tubular members.

1,639,309. COWL VENTILATOR FOR AUTOMOBILES. LEON OTTINGER, New York, N. Y., assignor to Emory Glenn Simpson, Detroit, Mich. Filed July 16, 1926. Serial No. 122,763. 7 Claims. (Cl. 296—94.)



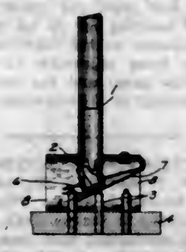
1. In combination with the cowl of a motor vehicle and adjustable windshield panel, means including a manually adjustable member cooperating with the windshield panel in one position thereof to deflect ventilating air entering beneath said panel and direct substantially the entire volume of entering air in an upwardly directed stream closely adjacent to the inner side of the panel, and said member being adjustable to another position with respect to the panel and the cowl to deflect the entering air exclusively in a downwardly directed stream below the cowl.

1,639,310. ELECTRICAL CONNECTING UNIT. HENRY F. RICHARDSON, Brooklyn, N. Y., assignor to Emma Louise Auth, Brooklyn, N. Y. Filed Jan. 7, 1922. Serial No. 527,586. 12 Claims. (Cl. 247—7.)



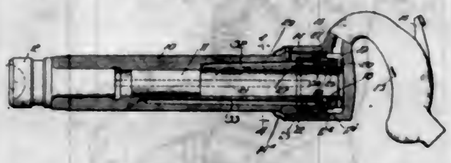
1. An electrical connecting unit, comprising a bottom member shaped to provide a trough extending lengthwise of the unit, a connection block detachably secured to said

bottom member and overlying the open side of said trough, a plurality of conductor attaching terminals spaced along the outer surface of said block, said con-



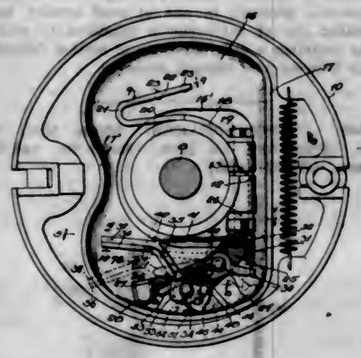
nection block having a plurality of slots in one side edge adapted to guide electrical conductors into position to engage respectively adjacent terminals.

1,639,311. APPARATUS FOR MAKING ELECTRICAL MINE IGNITERS. OTTO SCHMITT, Schonbeck, Germany. Filed Sept. 14, 1926, Serial No. 135,472, and in Germany Dec. 12, 1925. 3 Claims. (Cl. 113—59.)



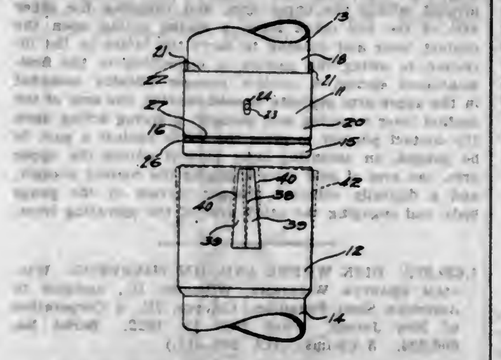
1. An apparatus for positioning a filament in notches of a previously formed and notched strip comprising a frame, a rotary spool carrying said strip, a guide and tension roller for said strip, a driven spool to receive said strip from said first-named spool, a roller carrying the filament and from which the latter is conveyed to said driven spool, a soldering iron having means for guiding the filament and strip at the point of juncture to position said filament in the notches of said strip, a receptacle containing molten solder and a feed leading from said receptacle to the point of juncture and feeding said solder to the parts to be soldered.

1,639,312. TOOL FOR PLACING WASHERS IN RUBBER HEELS. CHARLES I. SCHROCK, Pasadena, Calif., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 9, 1923. Serial No. 667,565. 28 Claims. (Cl. 18—1.)



1. A device for applying washers to the pins of a mold for rubber heels comprising, a tubular magazine adapted to receive a charge of conical washers coaxially stacked with the apexes of the respective washers extending in the same direction, a guide adapted to direct a mold pin into the hole in the lowermost washer of the stack, said guide also constituting a support for the stack of washers having its supporting surface inclined to the direction of movement of the device, and means adapted to maintain said magazine a determined distance from the face of the mold.

1,639,313. FLUID-PRESSURE-OPERATED TOOL. ERNEST H. SHAFF, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 5, 1920. Serial No. 371,445. 21 Claims. (Cl. 121—28.)



1. In a pressure fluid operated tool having a piston chamber and a piston reciprocable therein, a reciprocatory valve having a forward pressure surface, a chamber communicating with said surface, a passage connecting with said chamber and the piston chamber arranged to deliver motive fluid from the piston chamber to the pressure surface in the forward stroke of the piston, the rear end of said passage being closed by the valve member when in its rear position to prevent exhaust of a quantity of the pressure fluid thus admitted through said passage whereby to hold the valve member in its rear position, and means to relieve the pressure on said pressure surface in the return stroke of the piston.

1,639,314. AUTOMOBILE THEFT ALARM. JOHN H. SHARP, Chicago, Ill. Filed Jan. 8, 1925. Serial No. 1,307. 3 Claims. (Cl. 116—33.)

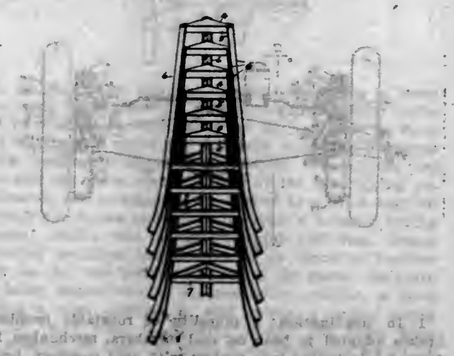
1. In a vehicle, a frame, a wheel, a brake drum constrained to rotate with the wheel, an expanding brake band engageable with said drum, a gong disposed within the brake band, means for mounting said gong upon said frame, a clapper, means for pivotally mounting said clapper upon said frame, a lever pivotally mounted upon said frame, a pawl pivotally mounted upon said lever and engageable with said clapper, a second lever constrained to rotate bodily with said drum and pivotally mounted with respect thereto, a pin carried by said second lever and movable therewith into a position wherein it will engage the first lever when the vehicle is in motion, and means for locking said second lever in said position.

1,639,315. JOINT FOR STOVEPIPE CASINGS. MARION R. SHIPLEY, Manhattan Beach, Calif. Filed Sept. 20, 1924. Serial No. 738,887. 12 Claims. (Cl. 285—186.)

1. A joint comprising: a tubular member having a female portion formed on the end thereof; a tubular member having a male portion formed at the end thereof, said male portion being arranged for insertion into said female portion without rotation of either portion; a packing member arranged to form a tight seal between said male and female portions when compressed; and means movable relative to and actuated by a relative rotation between said male and female portions for compressing said packing member axially and radially.

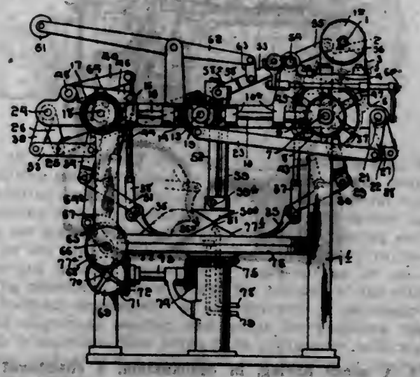
1,639,316. POLISH. CHARLES W. TROUT, Overland, Mo., assignor, by direct and mesne assignments, to N. S. T. Automobile Polish Mfg. Co., St. Louis, Mo., a Corporation of Missouri. Filed Jan. 10, 1927. Serial No. 160,301. 1 Claim. (Cl. 134—24.)

A composition of the character described, comprising the following ingredients in the following proportions: cylinder oil, 4 ounces; varnish, 2 drops; beeswax, 2 drops; gasoline, 10¾ ounces.



1,639,317. SEED-DISPENSING MECHANISM. WILLARD A. VAN BRUNT, Los Angeles, Calif., assignor to Van Brunt Manufacturing Company, Horicon, Wis., a Corporation of Wisconsin. Original application filed June 10, 1918. Serial No. 239,109. Divided and this application filed Sept. 4, 1920. Serial No. 408,212. 3 Claims. (Cl. 221—140.)

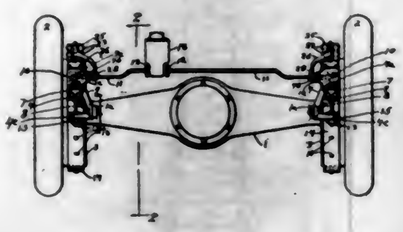
1. A seed dispensing mechanism comprising a hopper having an opening in the bottom thereof, two seed delivery passages communicating with said opening, a transverse partition in said hopper between said passages, transversely-disposed ribs rising from and extending across the bottom of the hopper at opposite sides of said partition, and a plate pivotally mounted on said partition and adapted to be turned down so that its outer portion will lie closely upon the upper edge of the rib at either side of the partition to cut off the admission of seed to the corresponding passage.



2. A seed dispensing mechanism comprising a feed-wheel, two tapered feed-rings of different inside diameters on opposite sides of said wheel, and housing members co-operating with said wheel and said feed-rings for forming seed passages at opposite sides of the wheel leading partially across the lower portion of the wheel, the housing member associated with the feed-ring of smaller diameter being extended laterally a shorter distance across the wheel to a point of intersection with the feed-ring, and having an end surface of steeper pitch than the housing member at the opposite side.

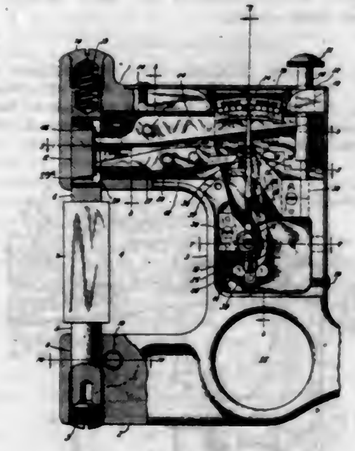
1,639,318. PLANT STAND. JOHN H. VIEWEGH, Indianapolis, Ind. Filed Sept. 5, 1925. Serial No. 54,629. 2 Claims. (Cl. 211—24.)

1. A flower stand comprising downwardly spreading legs each formed out of an angle bar placed with the inner angle of the bar toward the center of the stand, and an angular sheet metal top having its edges bent down between the angles of the top to form marginal flanges, the angles of the top being inserted in the corresponding angles of the legs with the legs outside of the flanges and lapping and closing the joints between the flanges the space between the spread legs being ample and unobstructed such that the stands may be freely nested in and on one another for the major portions of their lengths without reducing the space between the legs of the inner stands.



1,639,319. CANDY MIXING AND KNEADING MACHINE. WALTER S. WEBER and EARL T. SNYDER, Reading, Pa.; said Walter S. Weber assignor to Robert Carl Rahm, Wyomissing, Pa. Filed July 3, 1924. Serial No. 723,900. 15 Claims. (Cl. 107—33.)

5. A mixing and kneading machine including a table adapted to support a slab of plastic material, means for cooling the surface of the table to prevent said plastic



material from adhering to the table, combined scraping and paddling blades operating over the table and adapted to fold edge portions of the slab toward the center of the table, means for moving said blades toward and away from the center of the table, and means for spreading out the slab on the table.

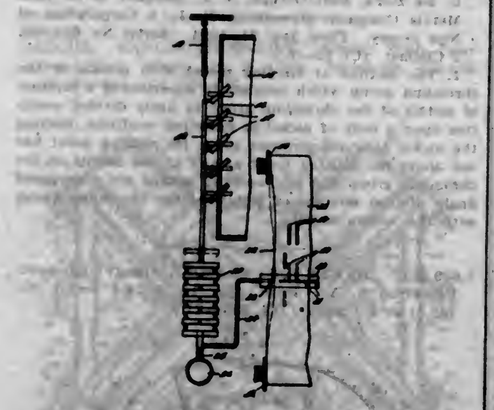
1,639,320. EQUALIZING BRAKE FOR VEHICLES. SAMUEL K. WELLMAN and GORDON R. PENNINGTON, Cleveland Heights, Ohio. Filed Dec. 7, 1923. Serial No. 679,207. 9 Claims. (Cl. 188—2.)

1. In combination: a plurality of rotatable members, brakes adapted to bear on said members, mechanism for forcing said brakes into contact with said members, brake carrying elements receiving the frictional forces resulting from said contact, and hydraulic means connected to said brake carrying elements and operated by the said frictional forces to equalize the latter forces.

1,639,321. GAUGE. ERNEST O. WHEELOCK, Rockford, Ill. Filed May 15, 1925. Serial No. 30,426. 12 Claims. (Cl. 33—147.)

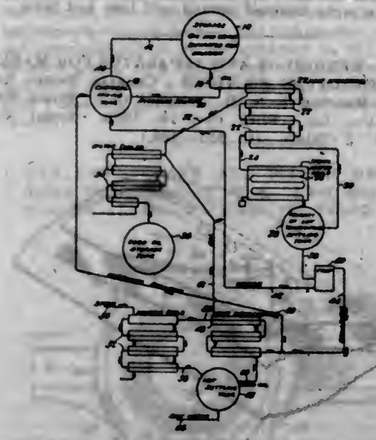
1. A gauge having, in combination, a chambered U-shape gauge body comprising an upper arm, a lower arm and a connecting arm, a contact on the lower arm, a dial carried by the upper arm, a pointer pivoted within the connecting arm, a spring connected to the pointer and tending to move the latter across the dial, a bell crank lever pivoted within the gauge body and having one arm connected with the pointer, a contact lever pivoted within the upper arm, and engaging the other arm of the bell crank lever, a spring acting upon the contact lever and tending to move the latter in the direction to swing the pointer in opposition to the first-mentioned spring, a contact plunger slidably mounted in the upper arm opposite to said contact, one arm of the contact lever engaging said plunger, a spring acting upon the contact plunger to press the latter against a part to be gauged, an operating lever pivoted within the upper arm, one arm of said lever engaging the contact plunger, and a digitally actuated plunger carried by the gauge body and engaging the other arm of the operating lever.

1,639,322. DISK WHEEL AND RIM THEREFOR. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Dec. 13, 1922. Serial No. 606,624. 5 Claims. (Cl. 301—11.)



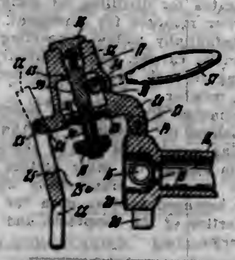
4. In a device of the class described a rim having a split snap side ring and said side ring having an inwardly extending portion adapted for use in clamping the assembled rim on the wheel body.

1,639,323. SPRINGBOARD. FRANK ALBACH, St. Louis, Mo., assignor to Fred Medart Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 29, 1926. Serial No. 138,396. 4 Claims. (Cl. 272—66.)



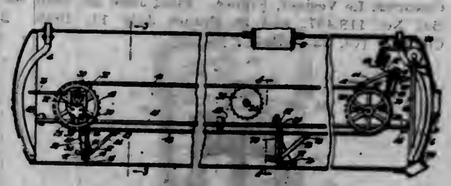
1. In combination, a spring board, a holding pedestal having attachment with one end of said board, and a fulcrum pedestal attached near the midlength of said board and comprising upper, lower and intermediate transverse members, with the intermediate member adapted to permit independent longitudinal movement of the upper member.

1,639,324. SWELL-SHUTTER-CONTROLLING MECHANISM. JOHN T. AUSTIN, Hartford, Conn., assignor to The Austin Organ Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 3, 1925. Serial No. 6,511. 6 Claims. (Cl. 84—89.)



4. In combination, a swell box, shutter means therefor, a pneumatic operatively connected with said shutters, an exhaust chamber, said pneumatic having a bleed opening leading to said chamber, a tracker bar having a port communicating with said pneumatic, and a note sheet controlling said port.

1,639,325. PROCESS OF DEHYDRATING OILS. SIDNEY BORN and HOWARD EDGAR BONNETTE, Bartlesville, Okla., and JOHN CHARLES WALKER, Eldorado, Kans., assignors to Empire Gasoline Company, Dover, Del., a Corporation of Delaware. Filed Apr. 20, 1920. Serial No. 375,222. 12 Claims. Cl. 196—4.)



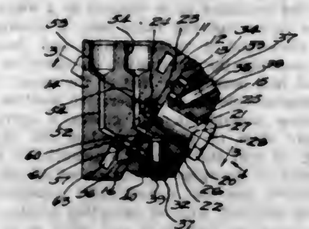
1. A process of dehydrating petroleum which comprises separating water from said petroleum, adding a hydroxide of an alkali metal to said separated water in an amount less than that required to substantially affect the hardness of the water associated with the oil, and mixing said alkali solution with said petroleum.

1,639,326. FAUCET. JOHN W. BURNETT, Cambridge, Mass. Filed Nov. 11, 1926. Serial No. 147,666. 2 Claims. (Cl. 251—156.)

1. An internally cleanable faucet, comprising a spout attachable to a reservoir, and having an annular outer end face, a recess surrounded by the end face, a valve seat within the recess and laterally extending discharge nozzle communicating with the recess, between the end face and the valve seat, the bore of the spout being unobstructed and arranged to be cleaned by a swab inserted through the recess and the valve seat, a housing having internal guides and a complemental end face, means separably confining the housing in an operative position with its end face bearing on that of the spout, the housing being displaceable to an inoperative position, a valve having a stem movable in said guides, a spring acting on the valve stem to yielding project the valve from the housing, so that the valve is automatically seated on the valve seat of the spout by movement of the housing, to its operative position, a rock-shaft journaled in the housing anrd provided with an operating handle, and connections between the rock-shaft and valve stem, whereby when the shaft is rotated in one direction, the valve is opened against the closing pressure of the spring, and arrangement being such, that when the housing is displaced from its operative position, access of a swab to the bore of the spout is permitted.

1,639,327. APPARATUS FOR DISTILLING OIL. JOHN W. COAST, Jr., Tulsa, Okla., assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 3, 1920. Serial No. 421,494. 14 Claims. (Cl. 196—122.)

1. An apparatus for distilling oil comprising a still, a supporting member shaped to conform substantially with the heating surface of the still, an endless carrier for the supporting member, means for operating said carrier to move the supporting member adjacent to the heating surface of the still, scraper blades mounted loosely in the supporting member for movement relatively to the supporting member so as to follow the contour of the still and inclined downwardly in the direction of movement of the supporting member, and means for weighting the blades to maintain them normally in engagement with the heating surface of the still when said member is moving adjacent thereto.



3. An apparatus for distilling oil comprising a still, a supporting member, blades carried by the supporting member for scraping the bottom of the still, an endless carrier for moving the supporting member along the still,

and means separate from the carrier for sustaining the weight of the supporting member during its movement along the still.

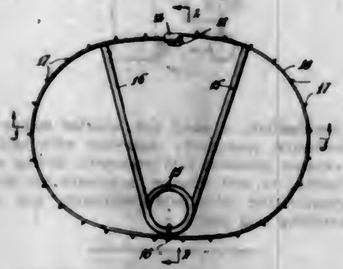
10. An apparatus for distilling oil comprising a still, an endless carrier mounted for movement lengthwise of the still, a substantially hollow supporting member carried by the endless carrier, and a plurality of scraping members passing through the top and bottom walls of said supporting member.

12. In a mechanism for scraping a receptacle, an endless carrier mounted for movement lengthwise of the receptacle, scraping members carried by the endless carrier and disposed to engage the inner surface of the lower portion of the receptacle, transversely disposed chains on the carrier arranged to drag upon the inner surface of the lower portion of the receptacle, and means for operating the carrier.

1,639,328. TURRET TIP FOR TORCHES. CLARENCE J. COBERLY, Los Angeles, Calif., assignor to Kobe, Inc., Los Angeles, Calif., a Corporation of California. Filed Nov. 8, 1924. Serial No. 748,574. 6 Claims. (Cl. 158—27.4.)

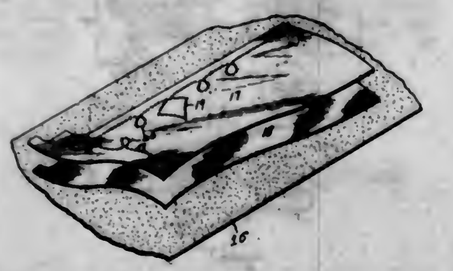
1. In a device of the class described: a supporting member having a gas supply passage and an oxygen supply passage; and a turret member rotatable relative to said supporting member and having a plurality of gas passages and oxygen passages selectively communicable with said gas supply passage and said oxygen supply passage respectively, said gas passages and oxygen passages retaining their separate identity throughout their continuance in the said turret member.

1,639,329. DISPENSING DEVICE. JOSEPH ANTOINE CONQUES, Le Vesinet, France. Filed June 25, 1926, Serial No. 118,437, and in France July 11, 1925. 2 Claims. (Cl. 221—79.)



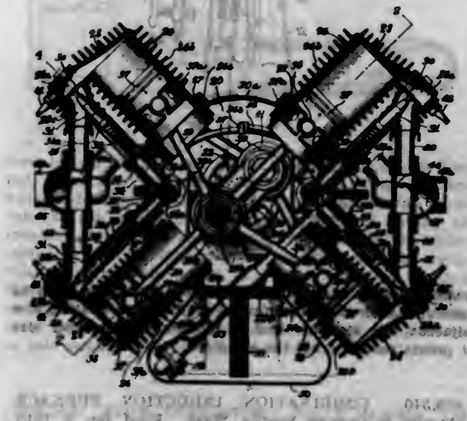
1. A dispensing device for semi-liquid substances comprising in combination a container, having a laterally disposed orifice at its lower end and a central recess in its bottom, a cover having a central opening screwed upon the upper end of said container, a screw-threaded rod supported in said recess, a piston screwed on said rod, means on the piston ensuring a tight fit of the same in the container, an operating knob secured on said rod and having a diameter substantially equal to or less than the central opening in the cover and projecting outwardly, a flange on the rod having a face upon which the cover is adapted to bear and a longitudinal rib on the inner surface of the container, adapted to engage into a longitudinal slot in the piston.

1,639,330. METHOD OF MAKING ALLOYS. JEAN H. L. DE BATS, East Orange, N. J., assignor to De Bats Metals Company, Bloomfield, N. J., a Corporation of New Jersey. Filed Jan. 24, 1924. Serial No. 688,304. 2 Claims. (Cl. 75—1.)



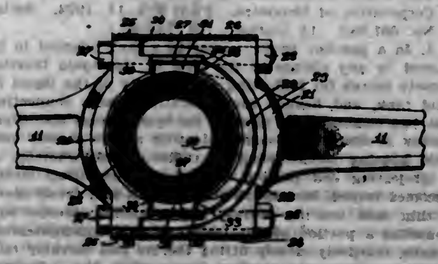
1. The method of alloying nickel with metals of the chromium group which consists in superposing a mixture of metals of the chromium group in finely divided condition upon a body of nickel in unmelted condition, heating the nickel to a temperature above its melting point but not above the melting point of any of the metals of the chromium group and mechanically mixing the superposed finely divided mixture of metals of the chromium group with the molten nickel.

1,639,331. HAT-BLOCK CLAMP. HENRY DIAMOND, Brooklyn, N. Y. Filed Apr. 10, 1924. Serial No. 705,511. 2 Claims. (Cl. 223—21.)



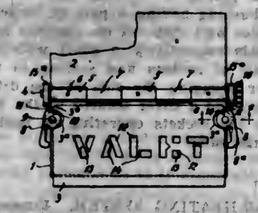
2. In a device of the class described, having a curved band with overlapping engaging ends, the combination of a heavy steel wire formed intermediate of its ends with a loop, the ends of said heavy steel wire being attached to the said curved band at a short distance from the ends thereof, the said loop abutting the inner face of said curved band, and means for securing said loop to the adjacent portion of said curved band, said means consisting of a strap fastened around said loop and band.

1,639,332. METHOD OF AND APPARATUS FOR MARKING SHOE-UPPER SECTIONS. CHARLES ELMER EDWARDS, Manchester, N. H., assignor to C. Elmer Edwards Co., Inc. Filed Dec. 15, 1926. Serial No. 155,068. 5 Claims. (Cl. 101—426.)



1. The method of marking shoe upper sections formed of fabric or leather and made in a definite size and outline, comprising placing an embossing plate of substantially the same size and outline and having boss or bosses upon one side of the shoe upper section so that the boss or bosses contact with the shoe upper section and matching the edges of the embossing plate and shoe upper section, placing a transfer sheet in contact with the opposite side of the shoe upper section, the arrangement being such that the transfer sheet leaves the shoe upper section and embossing plate uncovered so that the matching of their edges may be effected, and subjecting the elements thus assembled to the action of pressure through the medium of an elastic member.

1,639,333. EXPLOSIVE ENGINE. HENRY FORD, Dearborn, Mich. Filed Aug. 2, 1920. Serial No. 400,638. 26 Claims. (Cl. 122—65.)

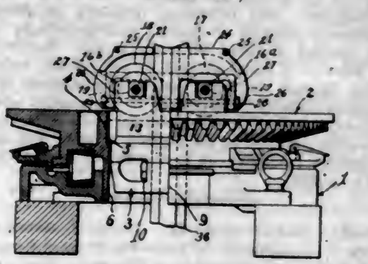


1. In an internal combustion motor of the Otto cycle type, a crank shaft, a plurality of cylinders symmetrically disposed with respect to said shaft, and pistons for the cylinders operatively connected with the crank shaft, said cylinders being arranged in more than a single circular series in the direction of length of the shaft with each series having the pistons of its cylinders operatively connected to the same crank of the shaft with the connections of the pistons and crank shaft similar with each of the pistons of the series, each cylinder being inclined relative to planes extending horizontally and vertically through the crank shaft axis, the cylinders on one side of the vertical plane having the intake and exhaust service instrumentalities in common and independent of the similar instrumentalities of the cylinders on the other side of such plane, each intake and exhaust service instrumentality including a combined intake and exhaust manifold formation positioned between the cylinders served thereby.

1,639,334. CRANK AND PITMAN MECHANISM. HENRY FORD, Dearborn, Mich. Filed May 25, 1921. Serial No. 472,589. 3 Claims. (Cl. 74—17.)

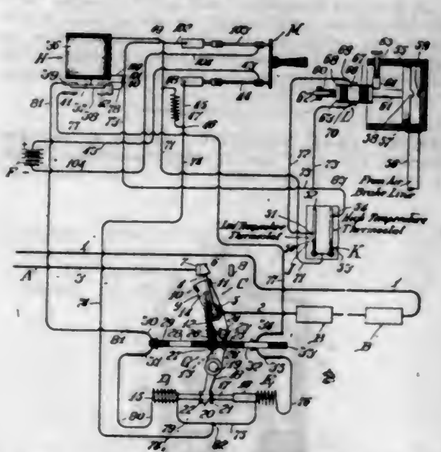
1. In a crank and pitman mechanism, the combination with a crank pin and a plurality of radiating pitmen, of a composite pitman head common to the crank pin and the pitmen, said head embodying a plurality of angularly spaced crank pin bearing segments seating on the crank pin and each individually attached to one of the pitmen, and capping means co-operating with the bearing segments for completing the pitman head formation and its constrainment, said formation including peripheral and circumposed elements presenting correspondingly co-operating bearing surfaces for each pitman distributed on both sides of a plane normal to the pitman length and passing through the crank pin axis, a segment of a circumposing element being carried by one pitman and superposed with respect to a segment of another pitman with the bearing surfaces of the element segment and the bearing segment extending on arcs differing in the length of the arc radius.

1,639,335. BLADE HOLDER. HENRY J. GAISMAN, New York, N. Y., assignor to Autostrop Patents Corporation, Dover, Del., a Corporation of Delaware. Filed June 24, 1924, Serial No. 721,972. Renewed Nov. 17, 1926. 10 Claims. (Cl. 30—12.)



1. The combination of a blade having spaced apertures in the form of a designation, with a holder having one or more projections complemental to one or more of said apertures to retain the blade from displacement on the holder, and means to detachably retain the blade on the holder with said apertures and projections in cooperation.

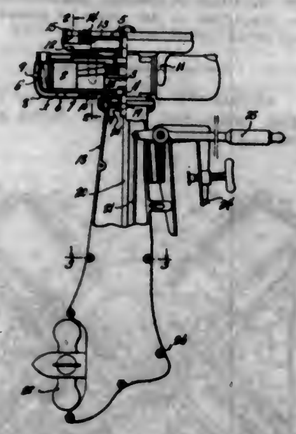
1,639,336. LAMP MOUNTING. HOMER E. GANNETT, Berwyn, Ill. Filed June 27, 1924. Serial No. 722,651. 5 Claims. (Cl. 240—90.)



1. A lamp mounting of the character described, comprising a supporting shell having an apertured end wall, a contractible socket forming member slidably mounted on said end wall, a plurality of springs intermediate of the sides of the socket forming member and the shell for yieldingly maintaining the socket forming member in position, a lamp holding conduit disposed through said apertured end wall and provided with a spherical portion seatable in said socket forming member so as to permit oscillatory movement of the conduit, and a helical spring within said shell and disposed about the end of said conduit.

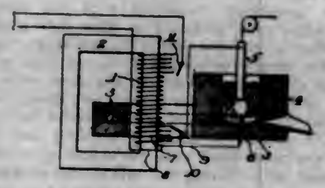
1,639,337. DRILL-STEM ROLLER DRIVING BUSHING. EDWIN W. GOESER, Los Angeles, Calif., assignor to Union Tool Company, Torrance, Calif., a Corporation of California. Filed Sept. 10, 1923. Serial No. 661,863. 2 Claims. (Cl. 255—23.)

1. In a rotary drill table construction, the combination of a rotary table having an opening therein through which the drill stem passes, a bushing carried in the said opening, said bushing having a pair of sockets open on their upper sides and disposed on opposite sides of the axis of the table respectively, a shaft with a roller between each pair of sockets and seating in the sockets from above for engaging the side of the drill stem to rotate the same, and a cover secured to the bushing and extending over the sockets operating to hold the roller shafts within the same.



1,639,338. CAR-HEATING SYSTEM. EGBERT H. GOLD, Chicago, Ill. Filed June 20, 1925. Serial No. 38,464. 28 Claims. (Cl. 219—20.)

1. The combination with a railway car, and an electrical heating apparatus thereon, of a controlling mechanism for the heating apparatus which is made effective automatically by disconnecting the car from a train and thus taking it out of service to maintain the car at a determinate temperature below the normal temperature of occupancy when the car is in service.

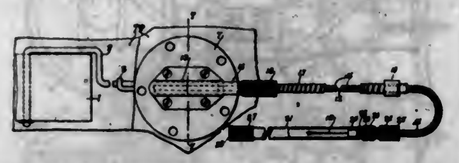


1,639,339. OUTBOARD MOTOR. GEORGE W. GRASS, Milwaukee, Wis. Filed Mar. 4, 1926. Serial No. 92,265. 3 Claims. (Cl. 115—18.)

1. In an outboard motor, the combination of a cylinder provided with a plurality of radial fins, an annular fin joining the outer portions of the radial fins, a casing surrounding said cylinder and having an opening adjacent the head of the cylinder for the admittance of air; a pair of pipes opening into the casing at diametrically opposite points, a fly wheel provided with air propelling means, and a casing associated with the fly wheel and

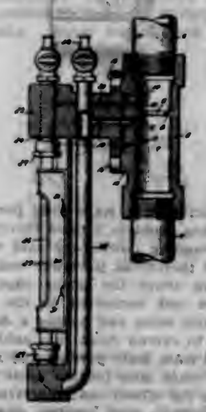
communicating with said pipes, the annular fin forming apertures with the radial fins of gradually decreasing size adjacent the air pipe and of gradually increasing size at points remote from the air pipe.

1,639,340. COMBINATION INDUCTION FURNACE. ALBERT E. GREENE, Seattle, Wash. Filed Jan. 3, 1913, Serial No. 740,034. Renewed Dec. 19, 1917. Serial No. 207,966. 79 Claims. (Cl. 204—64.)



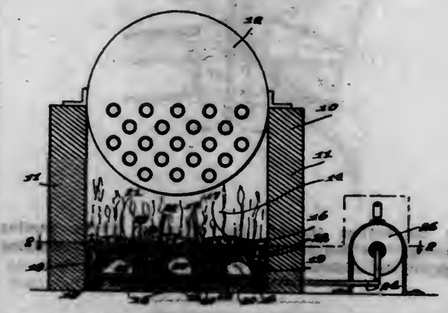
1. In an electric furnace, the combination of a channel for holding molten metal encircling a magnetic core, a primary winding thereon, means of connecting this winding to a source of alternating current power, and means of connecting portions of the winding to an arc circuit for generating heat in the furnace.

1,639,341. GASOLINE GAUGE. FRANK A. GROVES and JOHN FREDERICK GROVES, Dayton, Ohio, assignors to The Groian Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 11, 1924. Serial No. 691,883. 11 Claims. (Cl. 73—82.)



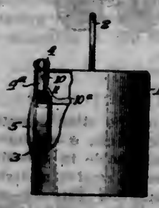
1. In a gasoline gauge, means in a tank adapted to be moved by any change in the level of the liquid therein, remote means for indicating the quantity of the liquid in said tank, and flexible communicating means connecting the two means to one another for synchronous operation, means to house said communicating means at one end, said housing means being of sufficient size whereby, if a projecting end portion of the communicating means becomes looped, bent or twisted, it may still freely move within said housing means, and a guiding means surrounding a portion of the length of said communicating means, relatively closely fitting thereto and movably telescoping within said housing means when the indicating means is being adjusted to zero position.

11. In a gauge equipment, a tank unit, a communicating wire connected at one end to a movable member of said tank unit and adapted to be actuated thereby according to the amount of liquid in the tank, a relatively closely fitting guide casing connected at one end to said tank unit and surrounding the communicating wire, a head at the free end of said guide casing, said wire being adapted to project beyond said guide casing, a protecting casing surrounding said guide casing to a point near the free end of the guide casing, a collar for connecting said protecting casing to the guide casing and adapted to form an abutment, a connecting guide tube slidably



mounted on the free end of the guide casing, which does not have the protecting casing, a clamping member adapted to clamp said guide casing and connecting guide tube to one another, said clamping member having an internal shoulder to engage with the head on the guide casing to prevent disconnection of the connecting guide tube and said guide casing, said collar abutment limiting the telescoping movement of said connecting guide tube, an internally threaded head on said guide tube, an indicator casing connected to said head, and indicating means in said casing adapted to be connected with said wire.

1,639,342. FLOW INDICATOR. ROY E. HANSON, Los Angeles, Calif., assignor of one-half to Barton Jones, Los Angeles, Calif., and one-half to James B. Morey, Culver City, Calif. Filed Nov. 10, 1925. Serial No. 68,143. 3 Claims. (Cl. 73—167.)

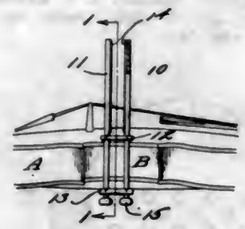


2. A device of the character described comprising; a flow fitting provided with a faced exterior surface, with a bore therethrough, with a diaphragm having a flow-measuring orifice therethrough intermediately intercepting said bore, and with separate passages leading from said surface to the bore on opposite sides of the diaphragm; and a differential pressure indicator having a correspondingly faced exterior surface and separate passages leading therefrom; said fitting and indicator being detachably connected with said exterior surfaces engaging and said respective pairs of passages in communication; and one of said surfaces having a circular groove therein communicating with one of said passages and concentric with the outlet of its other passage, whereby said connection may be effected in selective angular relations of the surfaces.

1,639,343. GRATE. STEPHEN S. S. KENNEDY, Pontiac, Mich. Filed July 8, 1925. Serial No. 42,225. 1 Claim. (Cl. 110—74.)

In a grate structure a series of hollow bodies closed at their ends, said bodies being arched transversely and the bodies being provided at their edges with outstanding flanges which completely circumscribe the same, a support holding the flanges in a common plane and substantially abutting each other, fire resisting elements set upon the flanges and extending in series completely around the bodies, the opposite side walls of the bodies being provided with openings located above the upper surfaces of the fire resisting elements and below the top of the arched walls of the bodies.

1,639,344. COIN BANK. ISIDOR J. KUSEL, Chicago, Ill. Filed Oct. 16, 1922. Serial No. 594,715. 2 Claims. (Cl. 194—54.)



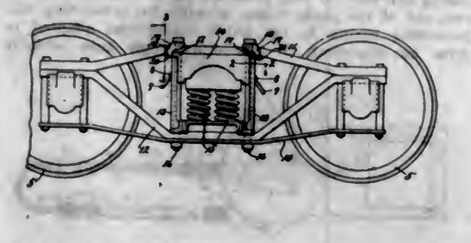
1. A coin bank provided with a time piece having a winding stem, and having a plurality of slots and also a member extending across all of said slots in the path of movement of a coin introduced into any of said slots and means whereby the introduction of the coin into any of said slots actuates said member and controls the winding of said time piece.

1,639,345. GUIDE DEVICE FOR MUSICAL INSTRUMENTS. STEPHEN LASCO, Tunkhannock, Pa. Filed May 12, 1926. Serial No. 106,631. 1 Claim. (Cl. 84—283.)

A bow guiding means for attachment upon a violin, comprising a pair of similar guide devices disposable at opposite sides of the body of a violin at the waist portion thereof, means for clamping said guide devices in place, each of said guide devices including a pair of

spaced uprights arranged in parallel relation and connected by transverse elements, one transverse element being disposed upon the top of the body and the other

at the bottom thereof, and clamping screws passing through the bottom transverse member and engaging against the underside of the body.



1,639,346. LOADING APPARATUS. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Sept. 17, 1920. Serial No. 410,968. 25 Claims. (Cl. 198—72.)

1. In a machine of the class described, the combination of a supporting frame, a conveyor on said frame, a chute angularly adjustable in a horizontal plane relative to said conveyor to receive material therefrom, and an interlocking connection between said chute and a fixed part of the machine normally locked by the weight of said chute to maintain the chute in any predetermined position of adjustment.

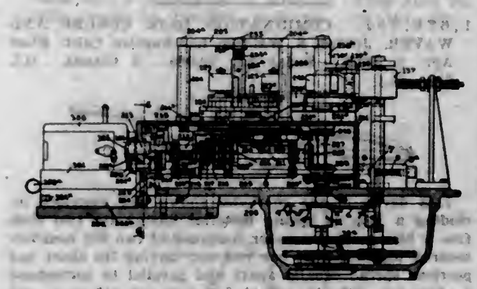
1,639,347. LUBRICANT FOR AUTOMOTIVE ENGINES. LUTHER B. LOCKHART, Atlanta, Ga., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Feb. 20, 1926. Serial No. 89,764. 3 Claims. (Cl. 196—151.)

1. The herein described marketable lubricating oil for cold weather use in automotive engines of the type in which liquid fuel enters the oil from the cylinders, clear in appearance, free from suspended solids, colloidal carbon and marked disagreeable odor, and characterized further by having a flash point above 150° F., a Saybolt viscosity of at least 140 at 100° F., a relatively low loss in viscosity during use and a content of between 7 and 15% of fractions boiling between about 360° F. and 460° F.

1,639,348. RAILWAY TRUCK. WILLIAM A. MITCHELL, Denison, Tex., assignor to Universal Draft Gear Attachment Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 1, 1924. Serial No. 729,440. 12 Claims. (Cl. 105—204.)

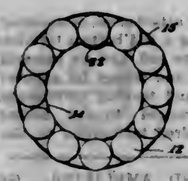
1. As an article of manufacture, an anchoring member for bracing a column of a truck frame of the arch bar type, comprising a body portion having a vertical opening therein and provided with depending portions spaced apart for engaging the side edges of an arch bar of a truck and adapted to form by contact only a stop for said column.

1,639,349. METAL CONTAINER. JAMES H. O'NEIL, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed June 23, 1926. Serial No. 118,064. 1 Claim. (Cl. 220—53.)



A container including a main body portion having an inwardly projecting shoulder formed therein, an auxiliary body portion extending down over said main body portion and secured thereto at its lower end, said auxiliary portion extending above the upper edge of said main body portion, an end connected to the auxiliary body portion by a double seam and having a depressed central portion adapted to extend down into said auxiliary body portion and said main body portion and rest against the shoulder in said main body portion so as to prevent endwise pressure on the closed container from distorting or rupturing the auxiliary body portion, said auxiliary body portion being formed of metal which is easily severed or ruptured.

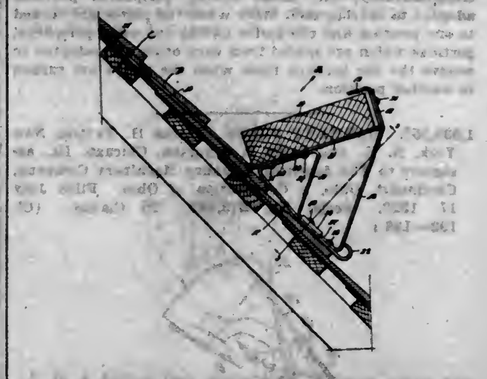
1,639,350. MACHINE FOR PRINTING VARIOUS DENOMINATIONS OF POSTAGE ON MAIL MATTER, ETC., AND REGISTERING AMOUNT THEREOF. ARTHUR H. PITNEY and JACOB W. OSBUN, Stamford, Conn., assignors, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed Mar. 10, 1923. Serial No. 624,228. 23 Claims. (Cl. 235—101.)



1. In mechanism of the character specified, having a printing die having a plurality of printing surfaces and

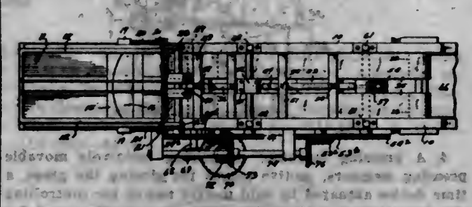
adjustable on its own axis to bring any one of such surfaces to printing position; an inking mechanism, and means whereby when the die is adjusted the inking mechanism is adjusted, so that each die surface will be supplied with ink of its own distinctive color.

18. In mechanism of the character specified having a rotatable support; and a printing member rotatably mounted upon said support provided with a plurality of printing surfaces; said member being adjustable so as to bring any one of said printing surfaces into operative position; a common register for said printing surfaces; means for holding the printing member in adjusted position on the support and means controlled by the adjustment of the printing member whereby the common register is actuated for each operation of the printing member in accordance with the value or denomination of that printing surface which has been adjusted to operative position.



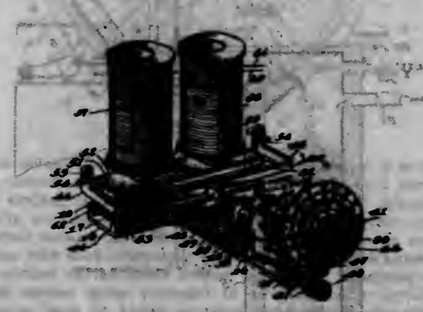
1,639,351. PROCESS OF MAKING ROLLER BEARINGS. CLARENCE E. ROSSON, Philadelphia, Pa. Filed Mar. 11, 1924. Serial No. 698,866. 4 Claims. (Cl. 29—84.)

1. The process of assembling a roll-set for a roller bearing, comprising the forming of inner and outer circular retaining bands, the distortion of one of said bands from its normal circular form, inserting rollers having annular grooves to receive said bands between said bands, and then restoring said distorted band to its normal circular form.



1,639,352. ROOFING BRACKET. EDMUND A. SCHADE, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 23, 1926. Serial No. 83,868. 2 Claims. (Cl. 304—20.)

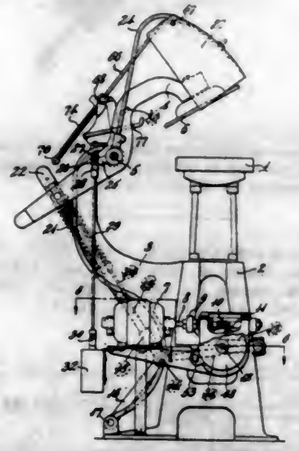
1. A roofing bracket of the character described having a forwardly extending tang provided with means for anchoring the same, a shelf extending outwardly from said tang, and a brace for said shelf having a roof engaging portion and a strut between the roof engaging portion and shelf, the rear end of said roof engaging portion



extending beyond said strut and being hooked to provide an anvil which may be struck when disengaging the tang from the member to which it is anchored.

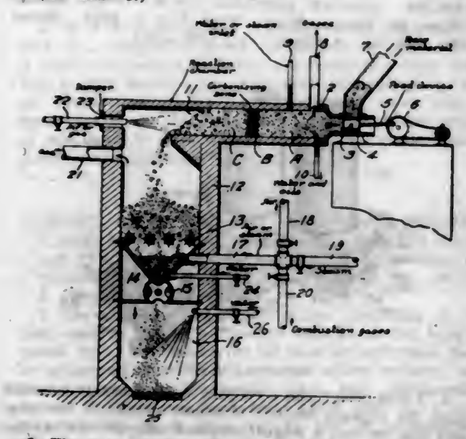
1,639,353. MACHINE FOR ATTACHING PINS TO LEAVES. HENRY R. SCHLUETER and ALPHONSUS H. HATKE, Richmond, Va. Filed Sept. 21, 1926. Serial No. 136,883. 14 Claims. (Cl. 41—1.)

1. In a machine for attaching pins to leaves, a leaf magazine, means for withdrawing leaves from the magazine, a knife operating to cut the stems of the leaves, means then operating to present a pin to the leaf stem, and means then operating to clip the pin upon the stem.



1,639,354. ENGINE IGNITION LOCK. JOHN GEORGE SCHULER, Dutton, Mont. Filed July 2, 1924. Serial No. 723,773. 4 Claims. (Cl. 200—45.)

1. A lock comprising a support, a bar movably mounted upon the support, electric terminals carried by the support and the bar, a magnet disposed adjacent the bar for holding said bar in position with said terminals disengaged when said magnet is energized, locking plates mounted for turning movement and located one at each

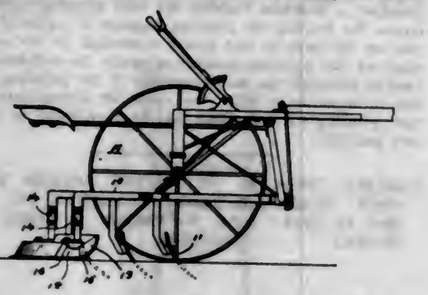


side of the bar for holding said bar in position with said terminals in engagement, means for turning the plates simultaneously, the plates having peripheral portions adapted to overlap each other when the plates are turned to one position and the plates having cut away peripheral portions which are spaced from each other and adapted to receive the bar between them when the plates are turned to another position.

1,639,355. GARMENT PRESS. JAMES H. TAYLOR, New York, N. Y., and JOHN P. SINOISER, Chicago, Ill., assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 17, 1922. Serial No. 575,649. 20 Claims. (Cl. 192—133.)

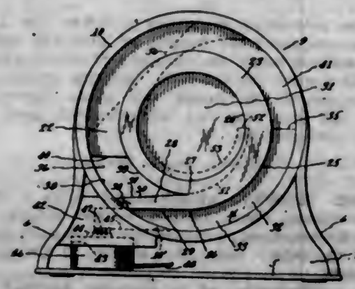
4. A pressing machine, comprising relatively movable pressing members, motive means for closing the press, a time device actuated by said motive means for controlling the operation of said motive means, a movable guard for the press, and means controlled by movement of said guard for rendering said timing device effective.

1,639,356. PROCESS OF MAKING ACTIVATED CARBON. GEORGE W. WALLACE, San Francisco, Calif. Filed Jan. 13, 1926. Serial No. 81,120. 5 Claims. (Cl. 252—3.)



1. The process of making activated carbon which comprises establishing and maintaining a relatively short moving pervious column of material to be carbonized with one end at a relatively low temperature, projecting a current of hot flame gases against the other end and producing a movement of such gases through such column in counter-current whereby a stationary zone of carbonization is established and maintained and subjecting hot carbonized material emerging at such other end to partial oxidation by another draft current.

1,639,357. COMBINATION HAIR CURLER AND WAVER. JOSEPH S. WALTON, Los Angeles, Calif. Filed Apr. 2, 1925. Serial No. 20,064. 2 Claims. (Cl. 132—41.)



1. A device of the character shown and described including a loop of spring material having its two ends free, a hair holding member composed of two flat members secured together near one end and having its short end portions spread equally apart and parallel to correspond in distance with the spaced free ends of said loop, said ends being connected pivotally with said free ends, whereby said hair holding member folds into said loop equally spaced from the opposite sides of said loop.

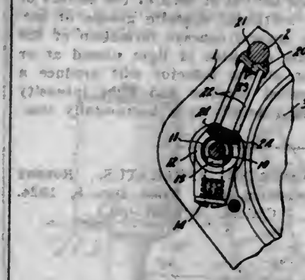
1,639,358. CULTIVATOR ATTACHMENT. HENRY F. WESTRICK, New Point, Ind. Filed July 16, 1926. Serial No. 122,895. 3 Claims. (Cl. 97—179.)

1. A cultivator attachment comprising a ground engaging member having a flat bottom terminating to provide a cutting edge at one end, and an upwardly curved wall at the opposite end, and means for supporting said member for both tilting and turning movements, whereby either end may be arranged directly behind the cultivator shovel at the desired inclination to the ground.

1,639,359. SOUND AMPLIFIER. GUSTAVE C. WILHELMI, Cleveland, Ohio. Filed June 9, 1926. Serial No. 114,745. 10 Claims. (Cl. 181—27.)

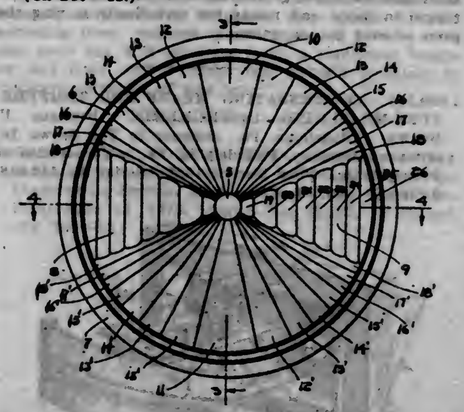
1. A sound amplifier comprising a casing having front and rear convolute tapered sound passages in parallel planes, the larger end of the rear passage communicating with the smaller end of the front passage, the rear passage having a peripheral inlet and the front passage having an enlarged axial outlet.

1,639,360. MARKING MACHINE. ROY V. WOODWORTH, St. Louis, Mo., assignor to Western Supplies Co., St. Louis, Mo., a Corporation of Missouri. Filed June 26, 1926. Serial No. 118,665. 9 Claims. (Cl. 101—301.)



1. A machine of the character described comprising a support, arms pivotally supporting said support for swinging movements to and from the work, a device attached to certain of said arms for moving said support from the work, a handle for swinging said support to and from the work, a die plate for making impressions upon the work, and means in connection with said handle for holding the die plate in connection with said support.

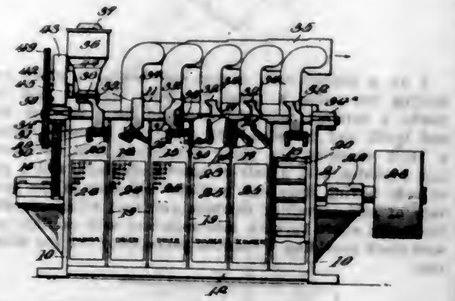
1,639,361. RING BOOK. HENRY T. ADAMS, Chicago, Ill. Filed Apr. 13, 1925. Serial No. 22,812. 2 Claims. (Cl. 129—1.)



1. A fastening device for ring books and the like comprising a metal back plate having inturned edges, notches in said edges, and a ring adapted to engage said notches and having oppositely disposed lateral extensions adapted to engage said plate and to lie beneath said edges to hold said ring in an erect position.

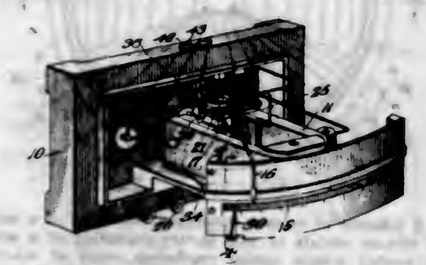
1,639,362. LINE-GUIDE MECHANISM FOR FISHING REELS. WALTER L. ADAMS, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed June 26, 1924. Serial No. 722,522. 7 Claims. (Cl. 242—84.4.)

1. In a fishing reel, spaced end heads, a pillar connecting the same, a spool rotatable between said end heads, a carriage movable back and forth between said end heads and provided with a pair of spaced openings, a block engaging the pillar connecting said end heads and provided with a pair of spaced openings, and a pair of rods having their end portions engaging in the openings of said travelling carriage and said pillar engaging block, the space between said rods and said carriage and said block providing a confined passageway for the fishing line.



1,639,363. LIGHT-PROJECTING REFLECTOR. JOHN GRAEME BALSILLIE, Melbourne, Victoria, Australia, assignor, by mesne assignments, to The American Flatlite Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 6, 1924. Serial No. 718,288. 1 Claim. (Cl. 240—41.)

A reflector of concave formation, consisting of a series of sectors, certain of said sectors consisting of a series of vertical stripes having contiguous edges of substantially parallel disposition relatively to each other, the striped sectors being arranged horizontally opposite each other with each containing substantially the same number of stripes as the other striped sector, the remaining of said sectors being arranged in two vertically opposite groups, each of which contains substantially the same number of sectors, each of the vertically opposite groups of sectors consisting of a relatively wide angular sector located at the center of each of the vertically opposite groups of sectors, and a series of sectors of decreasing angular width located upon each side of each relatively wide centrally located angular sector of the vertically

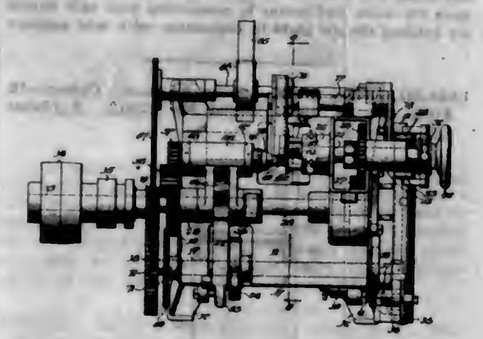


disposed groups of sectors, with the narrowest one of the sectors of decreasing angular width on that side of the adjacent relatively wider angular sector which lies toward the series of horizontally opposite vertically striped sectors, the transverse cross section of each of the vertically disposed stripes of the horizontally disposed sectors and the transverse cross section of each of the sectors of the second mentioned vertically opposite groups of sectors varying from the general concave formation of the entire reflector, whereby a source of light placed at or about the focal center of the reflector will produce a projected beam of desired contour and light intensity distribution conforming generally to a horizontally elongated ellipse.

1,639,364. GRAIN-SCOURING APPARATUS. ROBERT H. BARKER, Chambersburg, Pa. Filed Dec. 8, 1924. Serial No. 754,609. 7 Claims. (Cl. 83—30.)

1. A grain scouring apparatus comprising a plurality of chambers having laterally disposed openings establishing communications between the respective chambers, agitator members mounted in the respective chambers, pivotally-supported laterally-movable cam controlled gates arranged in pairs, and means for periodically moving the gates of each pair in unison.

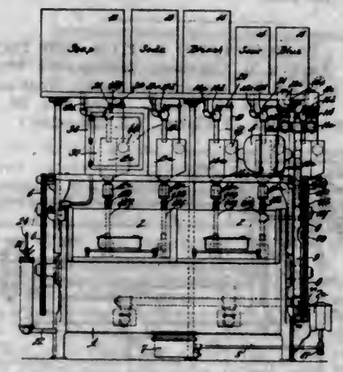
1,639,365. COMPENSATING MEANS FOR TEMPERATURE-MEASURING INSTRUMENTS. RICHARD P. BROWN, Philadelphia, Pa., assignor to The Brown Instrument Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 1, 1921. Serial No. 512,018. 6 Claims. (Cl. 73—32.)



1. In a pyrometer, the combination of a scale, a pointer arranged to cooperate with said scale for indicating purposes, means responsive to the cold junction temperature of a thermo-couple for setting said pointer on said scale to an indication determined by said cold junction temperature, means also responsive to said cold junction temperature for locating on said scale the indication corresponding to said cold junction temperature, and means responsive to the hot junction temperature of said thermo-couple for causing said pointer to indicate said hot junction temperature.

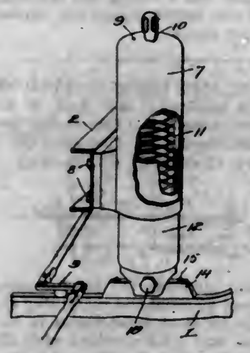
1,639,366. BATH-BRUSH HOLDER. WILLIAM M. BROWN, Council, Idaho. Filed Dec. 18, 1925. Serial No. 76,259. 2 Claims. (Cl. 4—184.)

1. A brush holder consisting of a substantially rectangular body having brush back engaging flanges at its sides and one end, said body being provided with slits extending inwardly from the opposite end and providing a centrally disposed spring tongue, said tongue having a lip at its free extremity and a boss projecting upwardly adjacent the lip and adapted to enter a recess in a brush back, and means to secure said body to a supporting surface.



1,639,367. CAP-THREAD-ROLLING MACHINE. WILLIAM CAMERON, Chicago, Ill., assignor to Cameron Can Machinery Company, Chicago, Ill., a Corporation of Illinois. Filed July 23, 1923. Serial No. 653,059. 18 Claims. (Cl. 153—72.)

1. In a cap threading machine, the combination of a cap magazine, a movable feed member cooperating therewith and adapted to convey one of said caps to a required position, reciprocal die means operable in a direction normal to the movement of said member adapted to project into said cap when the same is in said position, and means for engaging the outer wall of said cap to thread the same.

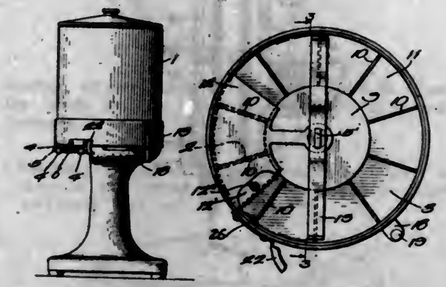


1,639,368. AUTOMATIC WASHING MACHINE. EMIL J. CARROLL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 23, 1920. Serial No. 405,274. 8 Claims. (Cl. 68—18.)

3. A washing machine, comprising an outer casing having a door, a hollow movable washing member therein having a door, an operator for said member, means for delivering washing material to said machine, a controller for said means, means for stopping said member, means for causing said stopping means to operate in timed relation with said controller, and controlling means for said stopping means associated with said member and located

in proper angular relation with respect to its door to cause said member to stop with its door in registry with the casing door.

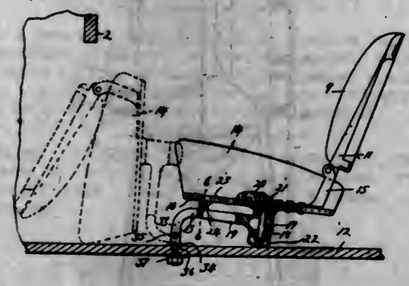
1,639,369. SHOCK-ABSORBING MEANS FOR VEHICLES. ALFRED J. CORMIER, Long Beach, Calif. Filed Jan. 4, 1926. Serial No. 79,161. 2 Claims. (Cl. 267—34.)



1. In a shock absorber and in combination, a chassis portion, a member disposed below the chassis portion, a cylinder carried by the chassis portion, a piston movable in said cylinder, spring means interposed between the cylinder and the piston, and a connection between the piston and the said member below the chassis portion, said connection including a bearing connected with the said member, a bushing turnable in said bearing, and a pin keyed in the bearing off the center thereof and connecting the piston and bearing.

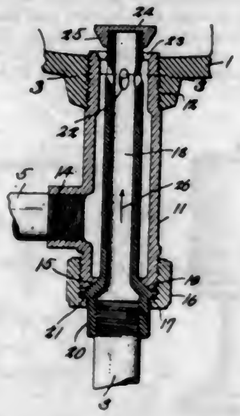
1,639,370. DISPENSER. HARRISON D. FLEGEL, Racine, Wis., assignor to Arnold Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed May 6, 1926. Serial No. 107,071. 21 Claims. (Cl. 221—146.)

1. In a dispenser, a container having a bottom with an extending bearing post, said bottom having a discharge aperture therein, measuring and discharging mechanism in said container comprising a cylindrical hub journaled upon said post, and a plurality of resilient partitions extending radially from said hub.



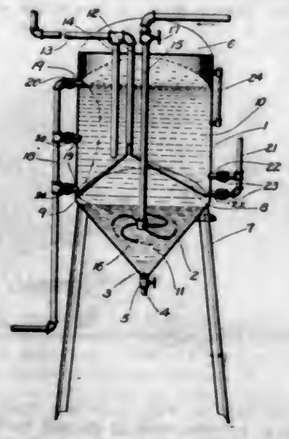
9. In a dispenser, a container having a bottom with an extending bearing post, said bottom having a discharge aperture therein, measuring and discharging mechanism in said container comprising a cylindrical hub journaled upon said post, a plurality of resilient partitions extending radially from said hub, said partitions being of less height than the thickness of said hub, and an actuating shaft extending through said bearing post supporting said hub and partitions, out of contact but in close proximity to said bottom, said shaft having a non-circular portion engaging a similar aperture in said hub to key said shaft and hub together.

14. In a dispenser, a container having a discharge aperture in its bottom and a seating surface bounding said aperture, a shaft journaled in said bottom, a lever supported on said shaft, said lever supporting for universal movement a sliding closure for said aperture, and resilient means urging said closure against said seating surface.



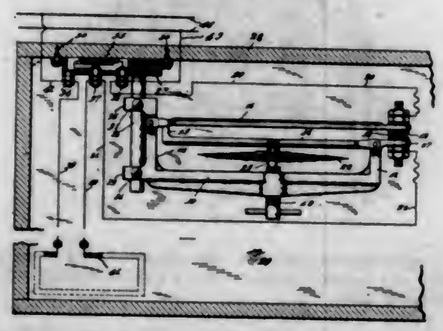
21. In a dispenser, a container having measuring and discharging mechanism within the same, a shaft journaled in a wall of said container to actuate said mechanism, a wheel having a plurality of shoulders, said wheel being fixed on said shaft, an actuating lever rotatively supported on said shaft and having a pivoted cam lever engaging between said shoulders, stop means for said actuating lever, resilient means tensioned between said cam lever and said actuating lever, a transverse handle on said lever, and a thumb rest on said container to facilitate actuation of said lever.

1,639,371. SEAT CONSTRUCTION. LOWELL C. FREEMAN, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed June 15, 1925. Serial No. 37,328. 7 Claims. (Cl. 155—13.)



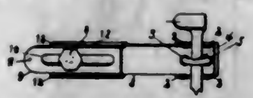
1. The combination with a vehicle body having a floor board, of a spider mounted on said floor board and having a rearwardly projecting leg, an enlargement at the free end of said leg adapted to rest on said floor board, a spindle mounted in said enlargement, and a seat mounted to rotate on said spindle.

1,639,372. VALVE. ARTIMUS C. GAINES, Portland, Oreg. Filed Aug. 12, 1926. Serial No. 128,795. 1 Claim. (Cl. 103—262.)



In a device of the class described, a casing having an open end, a nozzle within the casing and extended at one end beyond the open end of the casing, said end of the nozzle being closed and being provided with a lateral deflector spaced from the open end of the casing but located in the path of fluid passing through the open end of the casing, the nozzle being provided with openings located closely adjacent to the open end of the casing and disposed at an acute angle to the axis of the nozzle so as to discharge laterally and outwardly into the casing near to the open end thereof, an inlet for the nozzle and an inlet for the casing, the open end of the casing having a flared mouth, and the deflector having an inclined edge surface disposed approximately parallel to the wall of the mouth.

1,639,373. APPARATUS FOR RECLAIMING USED GASOLINE. WILLIAM C. GLOVER, Kansas City, Mo. Original application filed Oct. 23, 1922, Serial No. 596,446. Divided and this application filed Jan. 21, 1926. Serial No. 82,759. 9 Claims. (Cl. 196—15.)

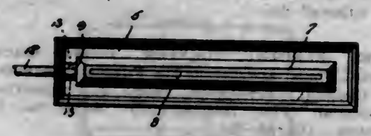


4. In an apparatus for reclaiming used gasoline, a gasoline clarifying tank, a baffle located in said tank and adapted to afford communication between the upper and lower portions thereof, means for delivering used gasoline to the lower portion of the tank, means for drawing off clarified gasoline from the upper portion of the tank, and means for venting air from beneath the baffle to the exterior of the tank.

1,639,374. THERMOSTATIC SWITCH FOR INCUBATORS. ARTHUR M. GOLDBERG, Indianapolis, Ind., assignor to Electric Controller Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 28, 1922. Serial No. 584,662. 1 Claim. (Cl. 200—140.)

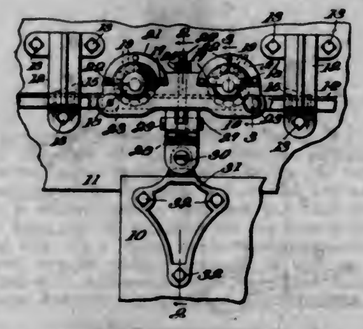
A thermostatic switch, comprising a base, a supporting post carried by said base, a frame adjustably mounted on said supporting post and adjustable to different positions along the post, and a switch and thermostatic operating means for the switch completely carried by said adjustably mounted frame.

1,639,375. ADJUSTABLE EXTENSION FOR TREADLES. ARTHUR SAMUEL GREENBERG, New York, N. Y. Original application filed June 26, 1926, Serial No. 118,747. Divided and this application filed June 26, 1926. Serial No. 118,746. 2 Claims. (Cl. 74—81.)



1. An adjustable extension for treadles comprising an arm formed of sheet material and comprising sides formed by bending the material at right angles to its face, and at one end of the said sides provided with aligned slots to form jaws for engaging the sides of a treadle lever, means in the bottom of said arm for entering a U-bolt, an extensible member slidably mounted to said arm and spaced from said jaws, and means secured to said arm for clampingly engaging said extension member, and means for securing a belt to said extension member.

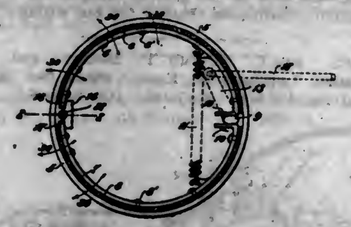
1,639,376. CURVED CORDED-EDGE TAPE FOR SHOES. PAUL F. HESSE, Valley Falls, R. I. Filed May 13, 1925. Serial No. 29,983. 2 Claims. (Cl. 24—205.)



1. The combination with a shoe of a woven oppositely curved tape secured to the closure edges of the shoe upper, and having a woven tubular concave edge and a relatively large cord woven in said tubular edge.

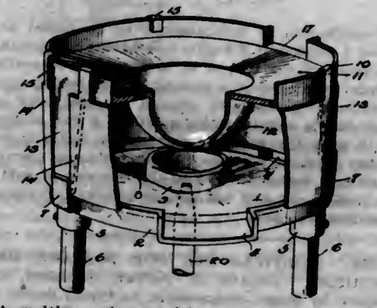
1,639,377. OIL BURNER. THOMAS H. KELLY, New Castle, Pa. Filed Nov. 9, 1926. Serial No. 147,286. 1 Claim. (Cl. 158—91.)

An oil burner of the class described comprising a relatively elongated rectangular shaped oil pan having an elongated slot extending longitudinally through the bottom wall thereof, upstanding flanges at the edges of the slot extending above the upper edges of the side and end walls of the pan, the upper edges of the upstanding flanges converging inwardly to provide an air discharge nozzle, and means for facilitating the introduction of oil into the pan around the upstanding flanges comprising a boss interconnecting one end of the pan and the adjacent end of the upstanding flanges, said end wall being provided with a socket, a fuel supply pipe fitted at one end in said socket, said boss being formed with a passage, which communicates at one end with the socket, said boss being formed with an additional passage disposed transversely to the aforementioned passage and communicating therewith for delivering the fuel into the pan from opposite sides of the boss.



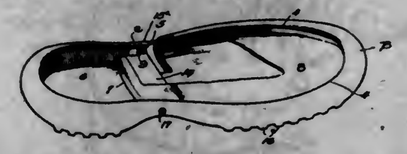
1,639,378. DOOR HANGER. GEORGE H. KNIGHT, Waterbury, Vt. Filed Jan. 16, 1926. Serial No. 81,752. 2 Claims. (Cl. 18—88.)

1. In a hanger for a sliding door adapted to move upon spaced parallel tracks, a carriage having a depending portion extending downwardly between the tracks, means to support said carriage for movement along said tracks, and to prevent a relative rocking of said carriage about an axis perpendicular to the line of the tracks, said carriage having a pocket therein at one side opposite one of said tracks, and a ball located in said pocket to engage said track to hold said carriage against a rocking movement about an axis parallel to the line of the tracks, and door supporting devices carried by said carriage.



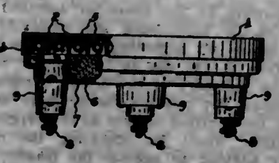
1,639,379. BRAKE-ADJUSTING DEVICE. MOSES LA LONDE, Springfield, Mass., assignor to Walter B. Russell, Springfield, Mass. Filed Dec. 10, 1926. Serial No. 153,849. 8 Claims. (Cl. 188—78.)

1. In combination, an axle housing having a threaded opening, a brake drum, brake shoes within the drum having their ends spaced from each other, devices for adjusting the brake shoes from the outside of the axle housing comprising a block member which is inserted between spaced ends, the block member having grooves with inclined bottom surfaces with which the spaced ends of the brake bands engage, a threaded device attached to the block which engages the threaded opening of the axle housing, and extending to the outside of the



housing, whereby when the threaded device is operated the bands will be moved outward and their radius increased.

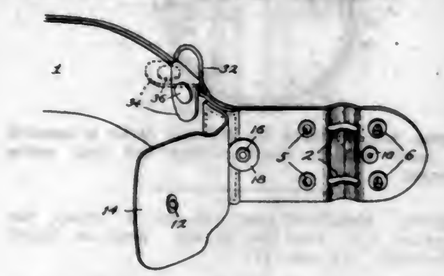
1,639,380. MELTING POT. JOSEPH O. LUTHY, San Antonio, Tex. Filed Dec. 7, 1925. Serial No. 73,803. 10 Claims. (Cl. 263—14.)



1. A melting pot comprising a central bowl, a shelf surrounding, extending from and inclined toward the periphery of the bowl to support the material being melted, means for supporting the shelf and bowl, and a burner disposed below the bowl.

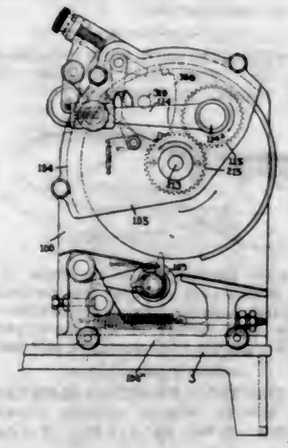
1,639,381. PNEUMATIC SHOE SOLE. GEORGE MANELAS, Harrisburg, Pa. Filed Nov. 29, 1926. Serial No. 151,534. 7 Claims. (Cl. 36—29.)

1. A removable pneumatic sole for shoes or the like, comprising a flexible shell of impervious material initially shaped to conform substantially to the outlines of a shoe sole, a hollow bead formed on the upper periphery of said shell, and a flexible wire carried in said bead.



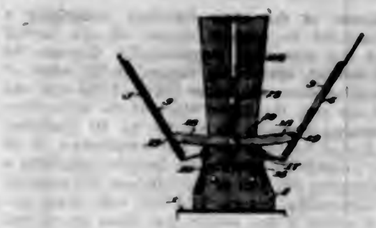
1,639,382. ELECTRIC HEATING ELEMENT. FREDERICK W. MOFFAT, Weston, Ontario, Canada. Filed June 8, 1926. Serial No. 114,447. 8 Claims. (Cl. 219—37.)

1. An electric heating element comprising a metal disk ribbed to form a groove; a series of porcelain blocks fitted into said groove, each block being formed with a



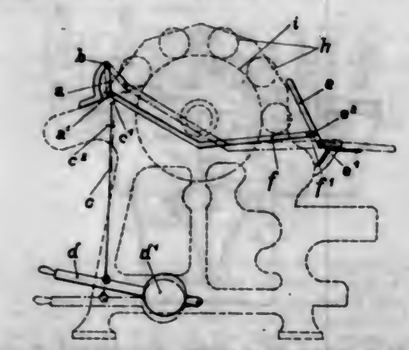
groove to receive resistance wiring; and a bridge adapted to retain the wire in the groove, the grooves forming a substantially continuous channel for the wiring.

1,639,383. BELT. COSIMO P. MORETTI and EGISTO MEZZERA, Leavenworth, Kans. Filed Dec. 6, 1926. Serial No. 152,904. 1 Claim. (Cl. 241—8.)



In combination, a belt adapted to be folded at one end over a portion of a buckle and having an opening for the passage of the tongue of said buckle, separable co-engaging fastening means secured to said belt at opposite sides of said opening and adapted to detachably secure the end of the belt in folded position, a flap secured to the belt near the end above-mentioned and adapted to cover the adjacent portions of said fastening means and the buckle, a socket secured to the free end of said flap, and a stud on the belt adapted to detachably engage the last-mentioned socket.

1,639,384. MULTIPLE DIE FOR POSTAGE METER MACHINES. ARTHUR H. PITNEY, Stamford, Conn., assignor, by mesne assignments, to Pitney-Bowes Postage Meter Company, Stamford, Conn., a Corporation of Delaware. Filed June 19, 1923. Serial No. 646,443. 6 Claims. (Cl. 235—91.)



1. In mechanism of the character specified having a rotatable drum, a multi-faced die rotatably mounted therein and means for adjusting the die to enable any printing surface of the die to be brought to printing position at the periphery of the drum; a register in the drum; and means for rotating the drum to take an impression from the printing surface at the periphery of the drum; a master wheel for operating the register; a multiple gear adapted to operate the master gear, said multiple gear having sets of teeth respectively corresponding in number to the denominations of the respective printing surfaces of the die, and a cam member operated by the shifting of the die whereby the multiple gear is shifted when the die is shifted thereby causing the register to be operated in accordance with the denomination of the adjusted die.

1,639,385. ELECTRIC TOASTER. LUDWIG REICHOLD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Jan. 8, 1925. Serial No. 1,220. 9 Claims. (Cl. 53—5.)

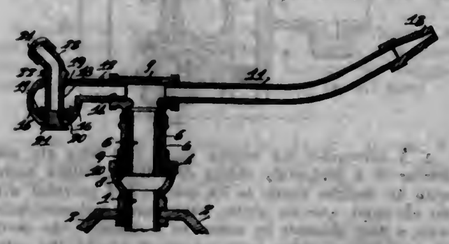
2. In a toaster having a heater element, a frame, a pair of slice holders mounted on pivots in said frame, a slider mounted on said frame, a pair of toggle links pivoted to said holders and to said slider, and means to hold said toggle links in their end positions.

1,639,386. SAFETY DEVICE FOR STEAM MANGLES. EMIL RUMACH, Forst-Lausitz, Germany. Filed Aug. 3, 1925. Serial No. 47,779, and in Germany May 16, 1925. 1 Claim. (Cl. 192—137.)

A power operated machine of the mangle type, provided with front and rear safety guards hinged to suitable supports near their upper and lower edges respectively, a connecting rod, pivotally attached to said guards near their lower edges and having a slot at its rear end, a connecting pin projecting from the side edge of the rear guard and engaging with said slot, and automatic mechanism for stopping the operation of the machine on the opening of either guard, the connections between the guards being constructed and adapted to allow the front guard to be opened independently of the rear guard, and to cause the rear guard when opened to assume a dead centre position with reference to its pivotal connection, and thus to prevent the closing of the front guard, and the starting of the machine, while the rear guard remains open.

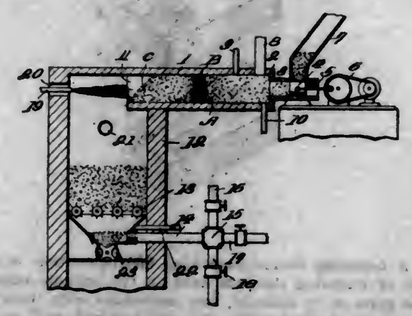
1,639,387. BOOKCASE. LESLIE WOOD SEWARD, Atlantic City, N. J., assignor to Record Book Cabinet Company, a Corporation of New Jersey. Filed Feb. 27, 1926. Serial No. 91,081. 6 Claims. (Cl. 45—1.)

1. A book-case comprising stationary plate rails extending inwardly from the sides of the case and formed with upwardly and lateral inwardly-extending portions at their inner ends, rollers journaled on the upwardly-extending portions of said rails, a shelf resting and slidable on said rollers, and brackets mounted on the under-face of



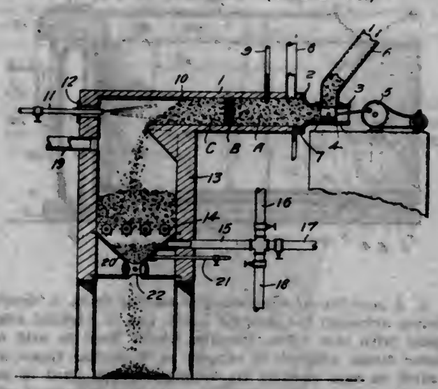
said shelf, said brackets carrying rollers bearing against the laterally-extending portion of the rail carrying the shelf-supporting rollers.

1,639,388. DISPENSING DEVICE. EUGENE STEBBINS, Des Moines, Iowa. Filed Oct. 19, 1925. Serial No. 63,322. 3 Claims. (Cl. 221—79.)



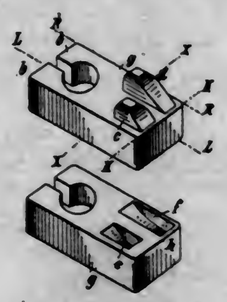
1. A dispenser of the class described comprising a tubular casing noncircular in cross section and having an inturned flange at its upper end, a disk adjacent said flange, a gasket between said disk and said flange, a piston actuating rod rotatably but non-slidably mounted in said disk and a piston, screw threadedly mounted on said rod whereby turning movement of said rod causes said piston to dispense material from said casing and maintains said disk tightly against said gasket and flange.

1,639,389. LAWN SPRINKLER. WILLIAM CHARLES TODD, Victoria, British Columbia, Canada. Filed Mar. 24, 1927. Serial No. 178,019. 5 Claims. (Cl. 299—69.)



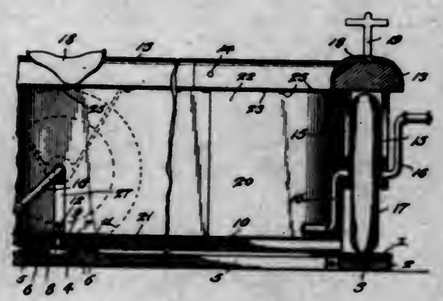
1. In sprinklers of the type stated, a stand pipe, a cross coupling rotatably mounted on the stand pipe, a long tubular arm secured to the coupling, a short tubular arm secured to the coupling, a main reaction nozzle secured to the long arm and directed angularly laterally thereof, a hollow balancing head on the end of the short arm having a vertical bore therethrough, a control nozzle comprising a hollow angularly directed portion and a hollow vertical shank, and means to adjustably secure the vertical shank in said bore against leakage and to vary the angular projection of the control nozzle relatively to said short arm.

1,639,390. CARBONIZING APPARATUS. GEORGE W. WALLACE, San Francisco, Calif. Filed May 18, 1925. Serial No. 31,148. 10 Claims. (Cl. 202—9.)



1. In a carbonizing apparatus, a short and wide, substantially horizontal reaction chamber in the form of a conduit, stoker means for supplying fresh material at one end and advancing the same therethrough as a charge filling the entire cross-section of said conduit, means for removing gases and vapors at the same end and localized heating means for impinging hot gases against a charge in the chamber at the other end, such localized heating means being adapted to permit the establishment and maintenance of a substantially stationary carbonising zone at one point in said reaction chamber.

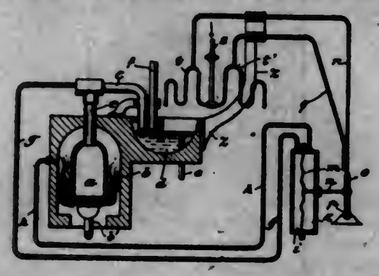
1,639,391. PROCESS OF DISTILLING AND GASIFYING SOLID CARBONACEOUS FUEL. GEORGE W. WALLACE, San Francisco, Calif. Filed Jan. 13, 1926. Serial No. 81,119. 6 Claims. (Cl. 202—16.)



1. In the low temperature distillation and carbonisation and gasification of solid fuel containing volatile matter, the process which comprises establishing and maintaining a substantially horisontal moving column of material to be carbonised, impinging a flame of burning gases on one end of said column, passing said burning gases through the material in countercurrent, maintaining the opposite end relatively cool, whereby an intermediate stationary zone of carbonisation is established and maintained at a self-regulating temperature, and gasifying the hot materials coming from the end against which the flame gases are directed by passing a draft current through the materials to effect such gasification.

1,639,392. FASTENING DEVICE. ROBERT WITTENBERG, Breslau, Germany. Filed Jan. 11, 1927, Serial No. 160,408, and in Germany Aug. 6, 1926. 1 Claim. (Cl. 24—205.)

A fastening device comprising in combination, a number of fastening elements fixed on the opposite edges of the parts to be fastened, two projections with three substantially vertical walls and one inclined wall on one surface of each fastening element said element having two cavities in the lower surface and corresponding in shape and dimensions with said projections, said projections and said cavities standing at a certain distance the one from the other so that between every two projections a narrow gap and between every two cavities a narrow web is produced.

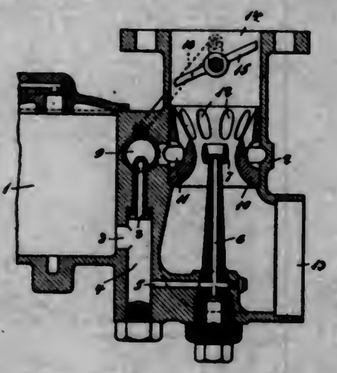


1,639,393. ROUNDABOUT. BENJAMIN F. WOODRUFF, Blue Diamond, Ky., assignor of one-half to William J. McHargue, Blue Diamond, Ky. Filed Nov. 23, 1925. Serial No. 70,794. 8 Claims. (Cl. 272—33.)

1. A roundabout comprising a circular track, a circular frame arranged for rotation above and in vertical alignment with said track, traction wheels fixed to said circular frame adapted to support said circular frame and travel on said circular track, pedal cranks fixed to said wheels, and a circular pan of a diameter coincident with that of the circular frame fixed to and supported below said circular frame for rotation therewith as a unit.

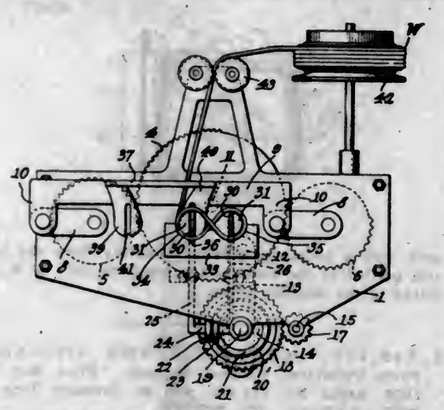
1,639,394. RETORT AND GAS-FLOW REGULATING APPARATUS. ERICH PAUL GUIDO WÜNSCH, Steglitz, near Berlin, Germany, assignor to Askania-Werke Aktiengesellschaft vormals Centralwerkstatt Dessau und Carl Bamberg-Friedenau, Berlin-Friedenau, Germany. Filed Apr. 10, 1925, Serial No. 22,122, and in Germany Apr. 26, 1924. 3 Claims. (Cl. 48—113.)

1. A gas flow regulating apparatus having in combination, a gas retort, a heating furnace for the gas retort, a liquid seal wash box, a regulator controlled by the pressure of the gas in the retort, liquid admission means to the liquid seal of the wash box, a regulating device con-



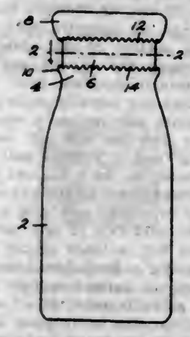
trolled by said regulator and controlling said liquid admission means, the gas flow being controlled by the height of the liquid seal in the wash box.

1,639,395. ADHESIVE LACQUER OR VARNISH COMPOSITION. CHARLES R. BRAGDON, Cincinnati, Ohio, assignor to The Ault & Wiborg Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 16, 1926. Serial No. 81,771. 9 Claims. (Cl. 134—26.)



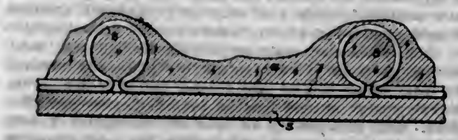
5. A lacquer or varnish composition which is non-adhesive at ordinary temperatures after baking, but which will become strongly adhesive when subsequently heated, which includes a mixture of varnish resins, consisting of copal resin and rosin; drying and semi-drying oils; calcium hydrate, resinate of manganese; and a bituminous coloring material,—substantially in the proportions as described, the mixture being reduced to liquid form by the addition of mineral spirits.

1,639,396. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. CARL CARLSSON, Stockholm, Sweden. Filed Apr. 23, 1925, Serial No. 25,286, and in Sweden Feb. 21, 1925. 5 Claims. (Cl. 261—41.)



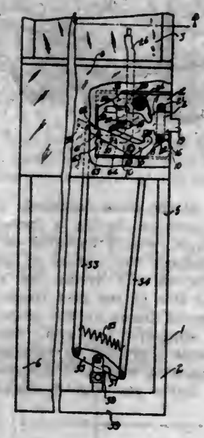
1. A carburetor for mixing liquid fuel with air, consisting of a preferably chiefly cylindrical, hollow casing with an upright nozzle in its centre, and provided with an air inlet and an outlet, said nozzle communicating with a float chamber by means of a channel; the cavity of said hollow casing being narrowed around the outlet opening of said upright nozzle by means of a separate venturi; said channel from the float chamber to said upright nozzle branching out into a channel in the wall of the said hollow casing, the last named channel opening by means of a nozzle into the interior of a hollow valve that controls a channel communicating with holes in the said venturi, said holes opening into the interior of the venturi.

1,639,397. WIRE-BENDING MACHINE. WILLIAM L. CLOUSS, Tiffin, Ohio, assignor to The National Machinery Co., Tiffin, Ohio. Filed Nov. 13, 1926. Serial No. 148,292. 9 Claims. (Cl. 140—71.)



1. A machine for bending wire into a figure 8 coil including a stationary shaping element having separate stock receiving recesses, shaping cores movable into the respective recesses, means for advancing and retracting the cores alternately, and separate forming dies for bending stock successively over the respective cores and into the recesses.

1,639,398. MILK BOTTLE. DAVID F. CUNNINGHAM, Kansas City, Mo. Filed Aug. 17, 1925. Serial No. 50,706. 1 Claim. (Cl. 215—31.)



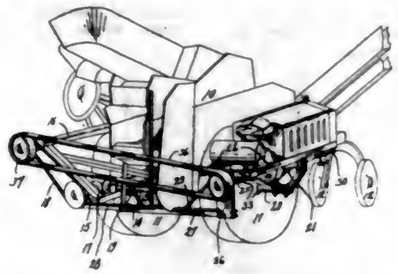
A bottle having a neck with a panel for holding a label, and moldings at the top and bottom of said panel provided with irregular adjacent margins for engagement with the upper and lower margins of said label.

1,639,399. BUILDING CONSTRUCTION. DANIEL B. DANIELSON, Milwaukee, Wis. Filed Jan. 11, 1926. Serial No. 80,593. 2 Claims. (Cl. 72—101.)

1. In a building construction, a cast member, an elongated non-yielding rod formed with off-set portions, the off-set portions being embedded in said cast member, and the entire rod portion being spaced from the surface of the cast member, and a plaster base tied at spaced points to said rod.

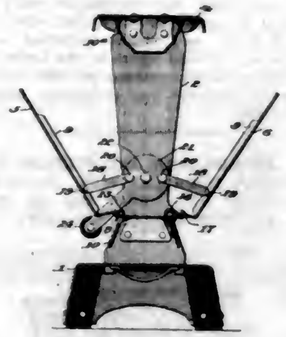
1,639,400. DOOR LATCH. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Mar. 9, 1925. Serial No. 14,264. 17 Claims. (Cl. 292—173.)

1. The combination with a door, and a latch having a case plate and a cover plate, of rivets permanently secured to one of said plates, and means extending through said rivets for securing the assembled plates to said door.



8. In a door latch, the combination with two levers operable from opposite sides of a door, and arranged to retract said latch, and means including a horizontal projection on one of said levers at the lower end thereof engageable in a certain position of said lever with the other lever to lock the last mentioned lever from effective operation.

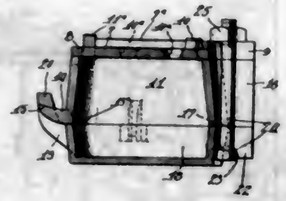
1,639,401. ROTARY BOLT AND STRIKER PLATE FOR AUTOMOBILE DOOR LATCHES. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Aug. 30, 1924. Serial No. 735,146. 3 Claims. (Cl. 292—340.)



1. In a vehicle door latch, the combination of a latch bolt pivotally mounted on the door, a striker plate mounted on the door jamb and having an inclined wall arranged to force the inward swinging of the latch bolt during the closing of the door and an arcuate latch bolt retaining wall arranged to be engaged by the latch bolt after it has ridden over said inclined wall, and a spring arranged on the door to normally press the latch bolt outwardly from the door, the latch bolt being mounted to swing from a center other than that from which the retaining wall of the striker plate is struck.

1,639,402. MOTOR MOUNTING FOR CORN HARVESTERS. JOHN C. ERICKSON, Marathon, Iowa. Filed Nov. 25, 1925. Serial No. 71,377. 4 Claims. (Cl. 56—18.)

4. In a device of the class described, the combination of a harvesting machine, having a frame, an axle supported on the frame, wheels mounted on the axle, said axle projecting beyond the wheels at one side of the machine, a power unit, a frame for supporting said power unit at the side of the first frame, a member for supporting the second frame on the projected end of the axle, a member supported on said frame, said power unit having an axle journaled in said member and another member connected with said first-described member and the second frame and rigidly connected with the first frame.



1,639,403. ELECTRIC TOASTING DEVICE. MAURICE F. FITZGERALD, Winsted, Conn., assignor to The Fitzgerald Mfg. Co., Torrington, Conn., a Corporation of Connecticut. Filed Feb. 12, 1925. Serial No. 8,769. 7 Claims. (Cl. 53—5.)

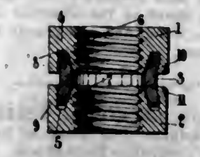
1. In a toaster having a vertical heater element, a pair of horizontally pivoted slice holders, resilient means to move said holders inwardly about their pivots toward the heater element, links connected to said holders, a rotatable actuating member, pivotal connections between said links and said member eccentric to the axis of said member so that said holders are moved simultaneously to open and closed position by rotation of said member, means to limit the movement of said member when said holders are being brought towards said heater element, and means to limit the movement of said member when said holders are being moved from said heater element.

1,639,404. DENTAL FLASK. DAVID FOLB, Akron, Ohio. Filed May 8, 1926. Serial No. 107,812. 3 Claims. (Cl. 18—33.)

1. A dental flask of the class described including, in combination, a bottom body part, a top body part and a cap plate, means at the rear of the parts and plate to hold them together, a loop-like frame projecting forwardly and upwardly from the front of the bottom body

part, and a tongue projecting forwardly from the bottom portion of the front of the top body part to be received in the loop-like frame.

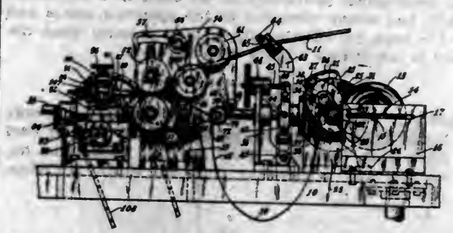
1,639,405. BUTTONHOLE-SEWING APPARATUS. FRITZ FRÖHLICH, Breslau, Germany. Filed May 24, 1926. Serial No. 111,447, and in Germany June 5, 1925. 2 Claims. (Cl. 112—77.)



1. A buttonhole sewing apparatus, comprising a horizontal plate having a fork-shaped aperture at the right end and a rectangular aperture for the needle of the sewing machine, a semi-circular aperture close to said fork-shaped aperture and an aperture near the left end, a foot on the upper surface of said plate for fixing said plate on the presser bar of the sewing machine, a ratchet wheel rotatably mounted near the left end on said plate, a feeding bar movably mounted on the lower surface of said plate and having a central aperture, a rectangular cavity near the left end and a longitudinal slot near the right end, a vertical axle of said ratchet wheel, a pinion keyed on the lower end of said axle and extending into said aperture at the left end of said plate, a longitudinal bar extending over said ratchet wheel and fixed on said plate, said axle of said ratchet wheel being journalled in said bar, a blade spring on said longitudinal bar and having a hook-shaped end engaging with said ratchet wheel, an upright support on said plate, a two-armed lever pivotally mounted in said support and having a longitudinal slot in its front arm and an open slot in the end of its front arm gripping over the guide screw of the needle bar, a pawl hingedly mounted on the rear end of said two-armed lever and engaging with said ratchet wheel, a system of articulated levers upon the front part of said plate, a stud on the rear end of said system of articulated levers and engaging with said longitudinal slot of said two-armed lever, an apertured plate having two inclined surfaces oscillatably mounted on said supporting plate at the front end of the same, a downwardly projecting stud at the front end of said system of articulated levers and engaging with said aperture of said oscillatable plate and with the fork-shaped aperture of said supporting plate, a downwardly projecting pin on said oscillatable plate projecting through said semi-circular aperture of said supporting plate and through the longitudinal slot of said feeding bar, a feeder on the central portion of said feeding bar on the lower surface of the same and having an aperture corresponding with said central aperture of said feeding bar, and means in the rectangular cavity of said feeding bar at the left end of the same for operatively engaging said pinion on said ratchet wheel.

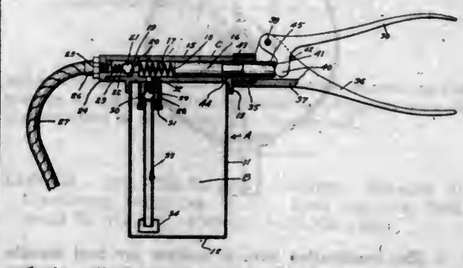
1,639,406. APPARATUS FOR SPINNING YARNS. ELLIS HARTLEY, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Oct. 5, 1926. Serial No. 139,625. 1 Claim. (Cl. 118—40.)

In a machine of the character described, in combination, a stationary spindle, a bobbin tube slidably and rotatably mounted on said spindle, a cap supported by said spindle, a collar adjustably mounted on the lower part of said cap, a spinning ring supported by said collar, a traveler coacting with said ring, and a nut locking the ring to the collar.



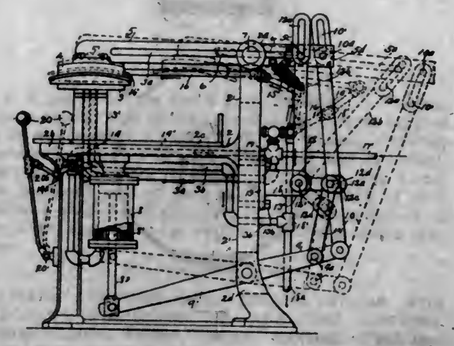
1,639,407. LOCK NUT. HENRY THOMAS HUTTON, Donaghadee, Ireland. Filed Nov. 2, 1926, Serial No. 145,769, and in Great Britain Feb. 11, 1926. 5 Claims. (Cl. 151—15.)

1. A locknut comprising two separate nuts having recesses at their adjacent ends concentric with the taphole, the walls of said recesses being of gradually decreasing diameter toward the adjacent ends of the nuts, and a ring engaging said walls, the ring being of generally curved form in cross section, and the diameters of the walls of the recesses and the resistance thereof to distortion being such that the ring cannot normally bed on the bottoms of the recesses, so that upon screwing the nuts together upon a bolt the end threads of the nut are pressed circumferentially into the threads of the bolt thus securing a locking effect.



1,639,408. METHOD AND APPARATUS FOR COVERING TUBING. WILLIAM E. JAQUITH, BENJAMIN A. EVANS, and GEORGE FOERSTNER, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1924. Serial No. 729,946. 16 Claims. (Cl. 154—6.)

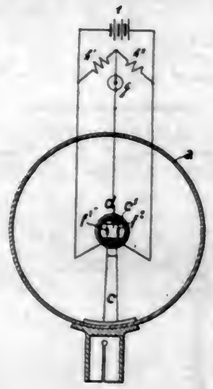
1. The method of applying a rubberised fabric cover to rubber tubing which comprises flattening the tubing against rubberised fabric tape by progression lengthwise of the tubing and tape to cause adhesion of a comparatively wide longitudinal zone of the wall of the tubing thereto, releasing the flattening pressure to permit the tubing to assume its normal shape, then folding the tape about the normal-shaped tubing progressively from the attached to a marginal portion thereof by an abrupt



wiping of the tape into contact with the tubing effected by progression lengthwise of the work and concurrently along a line disposed helically of the work.

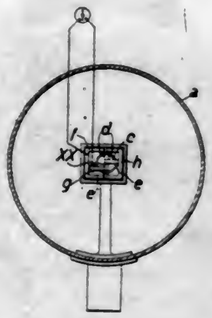
1,639,409. OIL INJECTOR. JOHN S. JOHNSON and AUGUST JOHNSON, Fargo, N. Dak. Filed Jan. 13, 1923. Serial No. 612,496. 3 Claims. (Cl. 221—51.)

1. An oil injector comprising an oil reservoir, a cylinder secured to said oil reservoir having a uniform bore throughout its length, check valved passages connecting said cylinder with the exterior and interior of said reservoir, a piston of a maximum diameter equal to the bore of said cylinder, normally extending outwardly beyond the same, said piston being formed with an annular passageway of a length substantially equal to the stroke of said piston, said passageway being at all times within the bore of said cylinder and a drainage port from said cylinder to said reservoir, communicating with said passageway.



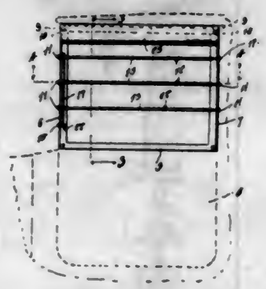
1,639,410. POWER PRESS IRONER. WILLIAM J. LEWIS, Syracuse, N. Y. Filed Dec. 24, 1926. Serial No. 156,896. 6 Claims. (Cl. 68—9.)

1. A power press ironer including a frame, a movable head and a stationary buck carried by the frame, a beam for supporting the head, guiding means carried by the



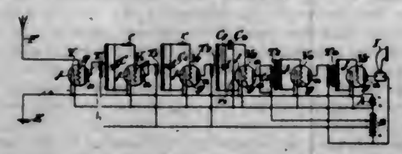
frame and movably supporting said beam, operating means, a bell-crank operated by said operating means, means connecting the bell crank with the beam for effecting longitudinal movements of the beam in a horizontal plane, and means connected to the operating means and to the beam for effecting the ironing pressure when the head is moved into registry with the buck.

1,639,411. RECEIVER FOR HEAT SIGNS. ROBERT MECHAU, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921, Serial No. 492,135, and in Germany Nov. 25, 1916. 2 Claims. (Cl. 73—32.)



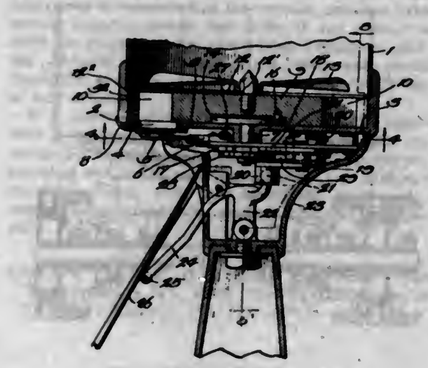
1. The combination with a receiver for heat signals, comprising a casing having an aperture therein, a collective optical system fixed relatively to the aperture, and two heat sensitive devices, both said devices being located in the said casing in the focal plane of the said system near each other, and one of the same coinciding with the focal point of the said system, of a source of current, a current indicator and means connecting both said devices and the current indicator in such a manner that one of the devices influences the current indicator in the opposite sense to the other.

1,639,412. INDICATOR FOR HEAT RAYS. ROBERT MECHAU, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 13, 1921, Serial No. 492,136, and in Germany Oct. 25, 1917. 2 Claims. (Cl. 73—32.)



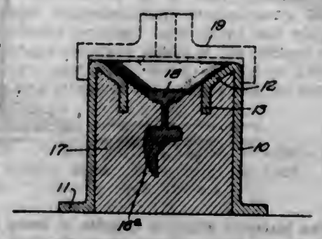
1. In an indicator for heat rays the combination with a casing having an aperture therein, of a collective optical system fixed relatively to the aperture, a semispherical mirror having a smaller diameter than the said system and being fixed within the said casing, the centre of curvature of this mirror coinciding with the focal point of the said system and its opening facing this system, and a heat sensitive device located in the said casing in the focal plane of the said system, set off from the axis of the same.

1,639,413. AUTOMOBILE SUNSHADE ATTACHMENT. JOHN MENZIES, Fresno, Calif. Filed July 20, 1926. Serial No. 123,769. 3 Claims. (Cl. 296—95.)



1. A sun shade attachment for automobile doors comprising a rectangular frame open at the center and provided with side flanges, a plurality of panels extending transversely across the center of the frame and equipped with terminal trunnions journalled in said flanges to provide a pivotal mounting for the panels, a vertically extending actuating bar mounted to lie inwardly of one of said side flanges and pivotally secured to each of said panels, a bolt having a head engaging the outer surface of said last-mentioned flange, a squared portion slidable in a vertical slot formed in said flange and a shank passing through an opening in said actuating bar, and a handle member threaded on said shank to bear against the inner side of said actuating bar, said handle being adjustable on the shank in the direction of the actuating bar to secure the latter and the panels in various positions of adjustment.

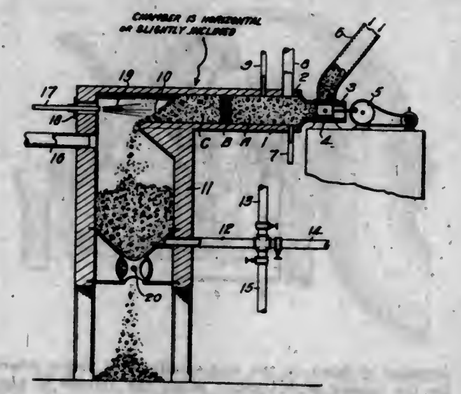
1,639,414. RADIO RECEIVING SYSTEM. JOHN M. MILLER, Philadelphia, Pa., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 23, 1926. Serial No. 117,964. 17 Claims. (Cl. 250—20.)



1. A radio receiving system comprising the combination with an absorption structure, of a receiving set comprising a plurality of three-electrode thermionic devices in cascade and at least one of which amplifies the absorbed radio frequency energy, devices associated with said thermionic devices for tuning circuits in cascade to the same wave lengths throughout the same range of wave lengths, and means for insuring that the adjustable elements of said tuning devices shall partake of equal extents of movement in adjusting from resonance for one wave length to resonance for another wave length comprising a three-electrode thermionic amplifier whose output circuit is coupled to the input circuit of the first of said thermionic devices and whose grid and cathode are directly connected with said absorption structure.

1,639,415. DISPENSER. STEPHEN J. POPLAWSKI, Racine, Wis., assignor to The Arnold Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed June 28, 1924. Serial No. 722,998. 16 Claims. (Cl. 221—108.)

1. In a dispenser, a container having an aperture in its lower side, said aperture being bounded by a flat seating surface, measuring and discharging mechanism in said container including a rotatable member having vibratable partitions, a sliding closure resiliently pressed against said seating surface and common means to actuate said measuring mechanism and said closure.



1,639,416. DENTAL CASTING FLASK. HARRY SPIRO, Chicago, Ill. Filed Aug. 28, 1926. Serial No. 132,211. 2 Claims. (Cl. 22—97.)

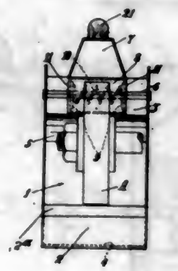
1. An integrally formed dental casting flask comprising a cylindrical portion having a wide supporting flange at its base, and an inverted cone-shaped sprue-gate at its top terminating in a depending flange forming a short cylinder concentric with the aforesaid cylindrical portion and of relatively large diameter in relation to the sprue.

1,639,417. METHOD OF CARBONIZING FUEL. GEORGE W. WALLACE, San Francisco, Calif. Filed May 24, 1926. Serial No. 111,391. 7 Claims. (Cl. 202—8.)

1. In the production of coke or smokeless fuel and by-products by carbonization the process which comprises establishing and maintaining a moving substantially horizontal pervious column of fragmentary solid carbonizable material in a chamber of conduit form as a full area charge, one end of said column being formed by incoming relatively cool material, impinging a flame on the other end of said column and transmitting hot flame

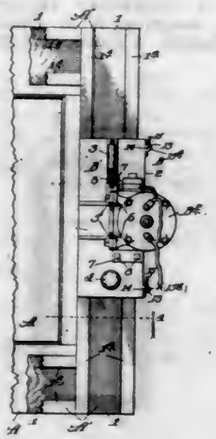
gases through said column in a direction counter to the passage of solid materials, whereby a stationary zone of carbonization is established and maintained.

1,639,418. ICE-CREAM-CAN JACKET. RICHARD C. WASHBURN, Saugerties, N. Y. Filed Apr. 30, 1924. Serial No. 710,125. 6 Claims. (Cl. 150—52.)



1. A jacket for ice cream cans including in combination, a tubular body portion closed at the bottom, adapted to fit and insulate a can, and formed of heat insulating material, a plurality of pairs of opposed flaps of insulating material to close the end of said jacket over a can, the combined area of each pair of flaps being of such size and shape as to substantially close the open end of the jacket and means for holding the flaps in closed position.

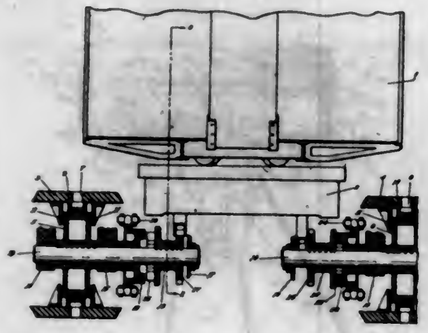
1,639,419. TROUGH AND SPLASH GUARD FOR ROTARY POLISHING OR ABRADING DEVICES. SAMUEL HOGG WILSON, Glasgow, Scotland. Filed Dec. 21, 1926, Serial No. 156,184, and in Great Britain Sept. 26, 1925. 4 Claims. (Cl. 51—268.)



1. In rotary abrading devices, the combination of a rotatable shaft and any one of a number of interchange-

able abrading members adapted to be supported thereby, with a broad trough, a spindle fixed in and spanning the sides of the trough, a narrow canopy slidable and

turnable by hand on the said spindle, and means whereby the canopy when turned about the spindle is automatically retained in its adjusted position.



1,639,420. EDGE PLANER. JOHN E. AHLVIN, Joliet, Ill. Filed July 24, 1926. Serial No. 124,654. 6 Claims. (Cl. 144—117.)

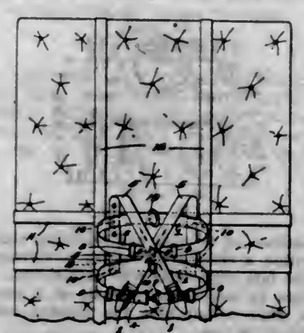
2. An edge-planer comprising a base-plate equipped at its upper side with handles and at one lateral edge with a guide-flange; a vertical revolving cutter journalled at one lateral edge of said plate and depending below said guide-flange; and a vertical motor mounted on said guide-plate and having its armature shaft connected directly with the shaft of said cutter.

1,639,421. STEAM SHOVEL. HARRY J. BARNHART, Marion, Ohio, assignor to The Osgood Company, Marion, Ohio, a Corporation of Ohio. Filed Sept. 10, 1921. Serial No. 499,797. 4 Claims. (Cl. 180—92.)

1. A steering device for steam shovels of the endless chain type comprising traction units, driving mechanism for each of said units including a clutch member provided with a flange having cut away portions about its periphery thereof adapted to be moved into or out of operative engagement with said mechanism, and a locking dog provided with a pin at its lower end movably mounted

upon the steam shovel frame adapted to engage a cut away portion of said clutch member to lock the same in its inoperative position and against rotation.

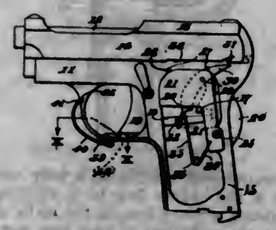
1,639,422. ADJUSTABLE WIRE MATTRESS. EMANUEL ERNST BARNA, Bratislava, Czechoslovakia. Filed Aug. 13, 1924, Serial No. 731,840, and in Czechoslovakia Oct. 15, 1923. 3 Claims. (Cl. 5—202.)



1. A wire mattress which is capable of being adjusted both in the longitudinal and transverse direction, comprising in combination two longitudinal rails and two transverse rails constituting a frame, the transverse rails each consisting of a tubular part and two tubular members capable of sliding in the same, a longitudinal slot in the tubular part and a longitudinal slot in each of the two tubular members, and the longitudinal rails each consisting of two parts and an adjustable hinge connecting the two parts, and further comprising a wire net, the transverse edges of the net being capable of being inserted in the said slots of the two transverse rails, a wire capable of being threaded through the meshes at the edges of the net within the slotted transverse rails for retaining them there, and means for attaching the ends of the transverse edges of the net to the exterior ends of the said two slidable members of the transverse rails, whereby the net may be adjusted in width by sliding the slidable members of the transverse rails apart and thereupon tensioned in length by straightening the hinges of the longitudinal rails, as set forth.

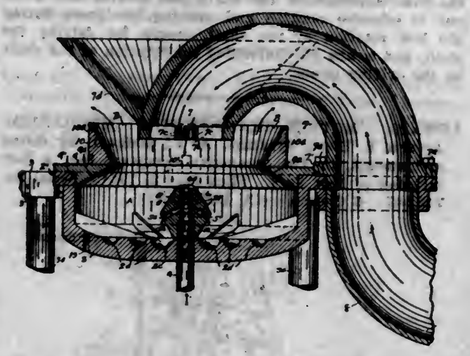
1,639,423. PREPARATION OF PIGMENTS AND PAINTS. JOSEPH BLUMENFELD, London, England, assignor to Blumann Rare Earths Chemical Company, a Corporation of Delaware. Filed Apr. 22, 1926, Serial No. 103,972, and in Great Britain Apr. 22, 1925. 9 Claims. (Cl. 134—58.)

1. Process for the preparation of a coating material containing a compound of the type of titanium oxide and having covering power, but little, if any, action on the acids in paint vehicles, comprising adding to said coating material a metallic oxygen compound capable of liberating hydrogen peroxide by reaction with the acid in said vehicles.



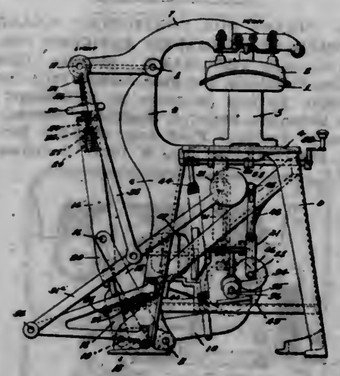
8. A coating material resulting from the association with a calcined titanium oxide compound, and another compound of lesser pigmenting power, of an oxygen compound of one of the metals of the first two groups of the periodic system, said last mentioned compound being capable of reacting with acid to liberate hydrogen peroxide.

1,639,424. BABY HARNESS. MARGARET BRESLIN, Watertown, N. Y. Filed Apr. 21, 1925. Serial No. 24,884. 3 Claims. (Cl. 128—134.)



1. The combination of a baby harness comprising spaced apart transverse back straps and a base having correspondingly arranged back straps and rings through which the corresponding straps of the harness and of the base extend, said rings being capable of sliding along both the back straps of the harness and the straps of the base.

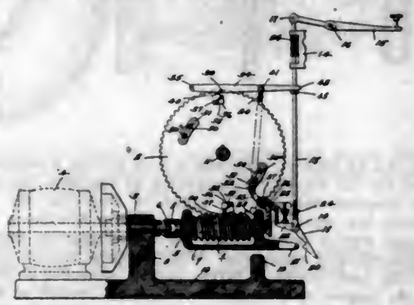
1,639,425. AUTOMATIC FIREARM. VINCENZO CAPOLUPO, East Boston, Mass. Filed Sept. 24, 1925. Serial No. 58,443. 7 Claims. (Cl. 42—3.)



1. In combination with an automatic firearm of the breech recoil type, wherein a breech slide retracts a firing pin and places the latter in cocked position to be retained by a sear, and wherein a trigger connector operates the sear, and wherein means is provided for holding the trigger connector disengaged from the sear, means for operating the sear operable by the breech slide.

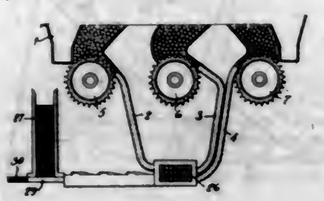
1,639,426. OIL BURNER. DOMINICK CASWELL, Watertown, N. Y. Filed Mar. 7, 1927. Serial No. 173,898. 6 Claims. (Cl. 158—91.)

1. An oil burner comprising a base having a normally open top, an air conduit supported by the base, its free end disposed above and adapted to discharge the air toward the center of the base, said conduit being arranged with a frusto-conical portion adapted to spread the products of combustion rising from the base, a cover for the base having a flaring portion arranged parallel to the tapered wall of the frusto-conical portion to provide an annular outlet for the heat, a mixing member rigid to the bottom of the base having an oil passage pointing towards the discharge end of the conduit, an oil pipe protruding through the bottom of the base and threaded into the mixer member, and a gravitative valve for controlling the flow of the oil from said passage.



1,639,427. PRESSING MACHINE MECHANISM. ALBERT B. CLISSON, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 7, 1924. Serial No. 730,760. 7 Claims. (Cl. 68—9.)

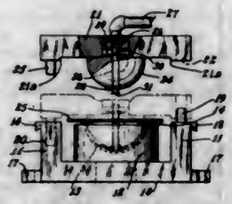
1. In a pressing machine, the combination of cooperating pressing elements, one movable toward and from the other, means for actuating the movable element comprising a power member, connections between the power member and the movable element including parts normally out of effective motion transmitting relation and movable into effective relation by a preliminary closing movement of the movable element, an intermittently rotatable shaft having means associated therewith for coacting with the



power member to actuate it, and motion transmitting members between said shaft and the movable pressing element to preliminarily close the press and bring the parts into effective motion transmitting relation during the first movement of the shaft, and moving said parts out of effective relation and opening the press during the last rotation of the shaft, means for driving the shaft, and means for controlling the rotation of the shaft by the driving means.

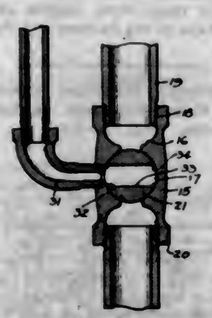
1,639,428. MOTION-TRANSMITTING MECHANISM. JOSEPH P. DALY, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., a Corporation of New York. Filed May 9, 1924. Serial No. 712,047. 6 Claims. (Cl. 192—139.)

1. A motion transmitting mechanism, comprising driving and driven elements, the driving elemeut including a worm, and the driven element including a worm gear for meshing with the worm, a carrier for the worm shiftable to carry the worm into and out of mesh with the worm gear, manual means for shifting the carrier to carry the worm into mesh with the worm gear, a holding member for holding the carrier with the worm engaged with the worm gear, means for releasing the holding member, the manual means comprising a connecting member and means for operating the connecting member to disengage the manual means from the carrier after the holding means is operatively engaged with the carrier.



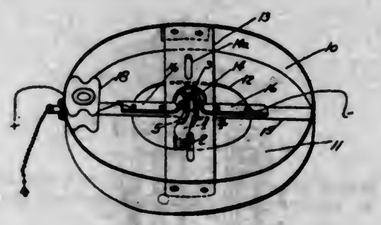
1,639,429. MEANS FOR PORTIONING CIGARETTES OR OTHER STAFF-SHAPED ARTICLES FOR THE PACKING OF THE SAME. GUNNAR CHRISTIAN EKSTRÖM, Stockholm, and BARON ANDERS EMIL JOHNSON, Appelviken, Sweden, assignors to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Filed Aug. 29, 1925, Serial No. 53,420, and in Sweden June 9, 1923. 2 Claims. (Cl. 226—5.)

1. In a device for portioning staff-shaped articles for the packing of same the combination of guide-ways for the said articles which at an assembling place extend in a substantially horizontal direction and are located above each other, so that the articles are gathered in parallel superposed rows, a piston for pushing a set of articles out from the said assembling place, members provided at the assembling place and means for forcing the said members against those articles, which are located nearest to the set of articles in each guideway in order to retain the articles in the guide-ways during the return stroke of the piston.



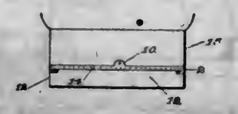
2. In a device for portioning staff-shaped articles for the packing of same and for incorporating a coupon, photo or the like to each set of articles the combination of guide-ways for the said articles which at an assembling place extend in a substantially horizontal direction and are located above each other, so that the articles are gathered in parallel superposed rows, a slide reciprocated at a magazine containing the coupons and provided with yielding members located behind each other and adapted to catch a coupon in the magazine and to transport the same onto the gathered set of articles, stationary members adapted to engage the coupon and hold the same in its new position, while the slide returns, and a piston for pushing a set of articles together with the coupon out from the said assembling place.

1,639,430. METHOD AND APPARATUS FOR MAKING HOLLOW RUBBER ARTICLES. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 700,513. 11 Claims. (Cl. 18—56.)



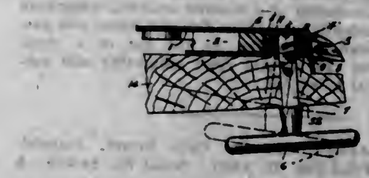
1. The method of forming and retaining plastic sheet material within a mold cavity which comprises pressing said material into conformity with said cavity, and holding it therein by mechanical pressure at a central part of its area while withdrawing the pressing means from another part of its area.

1,639,431. GAS-CONTROL COCK. HUGH B. HATTON, Jr., Glendale, Calif. Filed Apr. 29, 1926. Serial No. 105,551. 7 Claims. (Cl. 251—105.)



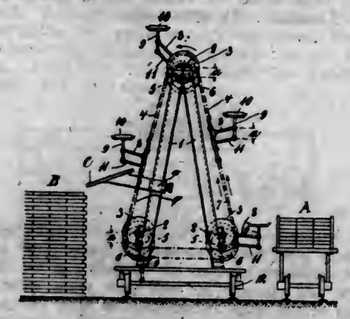
2. A gas control cock comprising a body adapted to be connected in a gas supply line to a building having a duct therethrough, a valve seat in the walls of the duct, a vent port in the valve seat, a vent pipe communicating with the vent port, a valve rotatable in the valve seat having a port therein to aline with the duct when in open position and to aline with the vent port when in closed position whereby leakage of gas past the valve will be vented to atmosphere through the vent pipe, to thereby prevent the passage of gas into the pipe line beyond the valve.

1,639,432. FIXTURE HANGER. GEORGE B. HOOBLER, Norwood, Ohio. Filed Aug. 18, 1925. Serial No. 51,056. 2 Claims. (Cl. 173—338.)



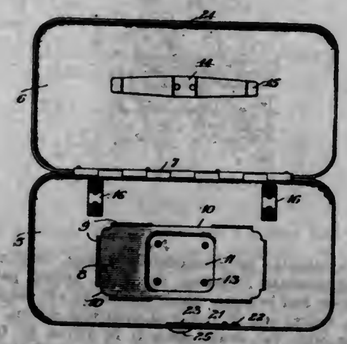
1. A fixture hanger comprising in combination with a mounting member having a rod of insulating material mounted on the member, spring contacts disposed on the rod, the spring contacts connected with a source of current, and a fixture engaging member with insulated hook shaped conductive plates thereon adapted to be connected with lights in the fixture, and the engaging member adapted to hook on the rod with the conductive plates in contact with the spring contacts.

1,639,433. DETACHABLE HEEL FOR BOOTS, SHOES, CLOGS, AND THE LIKE FOOTWEAR. FRANCIS ALEXANDER HUTCHISON, Wimbledon Park, England. Filed Aug. 28, 1925, Serial No. 53,186, and in Great Britain Dec. 12, 1924. 2 Claims. (Cl. 36—42.)



1. The combination of two plates of metal or other suitable material, and a heel-wearing-piece only, of wearable substance, one of the said plates having a rectangular channel on its outer edges save at the breast or instep arch end, and the other being perfectly flat save at the breast or instep arch end which is turned to form a protecting flange; either of which plates can be secured to the bottom face of the permanent heel of a boot, shoe or the like, and to the other can be affixed the said wearing-piece; both plates slidingly engaging and disengaging the one with the other, and having an internal locking device in the form of complemental indentations, automatic in action, one part in each plate, all substantially as set forth.

1,639,434. LATCH FOR AUTOMOBILE DOORS AND THE LIKE. LEWIS J. MORGAN, Syracuse, N. Y. Filed Feb. 14, 1922. Serial No. 536,592. 8 Claims. (Cl. 292—169.)



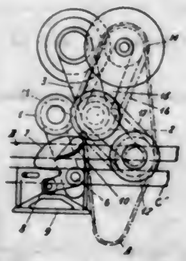
1. A door latch mechanism comprising a casing, a latch member movable in the casing and operating means for the latch-member comprising a part coacting with the latch member and a universal joint located in the latch casing and operable relatively to said part without disturbing the relation of said part to the latch member and a handle having a shank fixed to one member of the universal joint to move into a different angular position therewith relatively to said part.

1,639,435. CONVEYING AND PILING APPARATUS. HOLGER AUGUST ERIK NILSSON, Ockelbo, Sweden. Filed Aug. 26, 1924, Serial No. 734,342, and in Sweden Nov. 24, 1923. 2 Claims. (Cl. 198—138.)

1. In piling apparatus for boards, the combination of a frame number of wheels journalled in said frame, a number of groups of endless conveying members working over said wheels in such manner that said members in each group form congruent geometrical figures, which are located at different heights, a number of pairs of supporting arms the inner ends of which are rigidly fastened to certain of said endless members, the attaching points of the arms of each pair being located at a vertical distance from one another equal to the difference in height between the wheels, and a number of carrying members, each connected to a pair of arms so that the supporting surface of each member is thereby positively held in a horizontal direction during the working of the endless members and at a sufficient distance from said endless members for making it possible to pile boards.

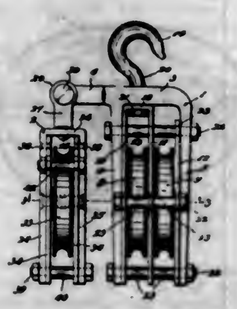
1,639,436. CASE FOR HEMACYTOMETER AND SIMILAR APPARATUS. WILLIAM L. PATTERSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Filed May 12, 1923. Serial No. 638,636. 5 Claims. (Cl. 206—16.)

1. A case of the character described, comprising relatively movable body and cover sections, a tray within said body section comprising a dished portion secured to



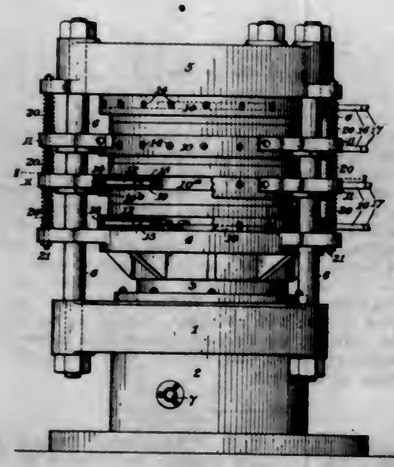
the body section and adapted to receive a slide cover plate, said portion having two of its sides extended in spaced and in substantially parallel relation to the casing wall upon which it is secured, said extensions being adapted to receive a slide and means upon the cover section adapted when the latter is closed to engage and hold the slide upon said extensions.

1,639,437. ELECTRICAL CONNECTER SOCKET OF THE WALL AND PLUG TYPE. MAURO GONZALEZ SAENZ, Colonia Postal, General Anaya, Mexico. Filed Aug. 6, 1925, Serial No. 48,549, and in Mexico June 8, 1925. 2 Claims. (Cl. 173—338.)



1. An attachment plug receptacle comprising an insulating body with recesses in one end thereof, two pairs of passages extending between the recesses and the front of the body, one passage of each pair being enlarged at the front of the body, in combination with two pairs of contacts having members disposed in the respective recesses and each disposed in its respective one of the pairs of passages, one contact of each pair being adapted to co-operate with one form of plug jack, the other contact of each pair being tubular to cooperate with a different form of plug jack and having one end flanged outwardly at the bottom of the enlarged front end portion of the passage in which it is disposed, the differing contacts of each pair being electrically connected together and adapted for connection with separate conductors at said recessed end of the body.

1,639,438. MACHINE FOR TREATING YARNS IN HANKS WITH LIQUID. JACQUES SCHLUMPF, Oberwinterthur, Switzerland. Filed June 3, 1924, Serial No. 717,629, and in Switzerland July 1, 1923. 2 Claims. (Cl. 8—19.)



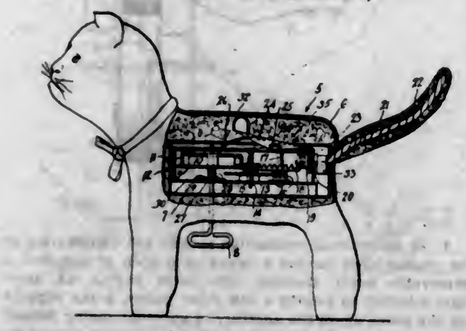
1. In a machine for continuously dyeing, washing and otherwise similarly treating yarns in hanks, pairs of rollers upon and between which the hanks are suspended, of which rollers one of a pair is positively driven, whilst the other with the hanks upon it is driven by friction from the first said roller, and means to lead-off the liquid squeezed out by the co-operating rollers from the hank, said means comprising a shallow trough adjustably mounted below the line of contact of the two rollers.

1,639,439. PULLEY BLOCK. WILLIAM G. SHEDENHELM, Tiffin, Ohio. Filed May 17, 1926. Serial No. 109,708. 4 Claims. (Cl. 254—192.)

1. A pulley block comprising a main frame, an auxiliary frame disposed at one side of said main frame, a hanger having its lower end swiveled to said auxiliary frame and its upper end pivotally connected with said main frame for swinging toward and away from the same, and pulleys rotatably carried by said frames.

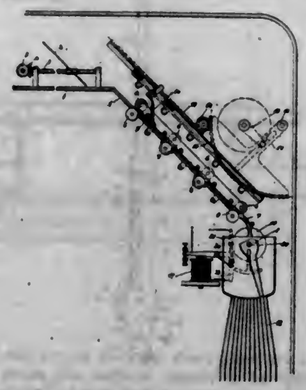
1,639,440. STEAM PLATEN. FRANK H. SMITH, Cleveland, Ohio, assignor to Southwark Foundry & Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 21, 1926. Serial No. 117,539. 12 Claims. (Cl. 18—17.)

1. A disk-like heating platen having a continuous passage for the circulation of a heating medium, comprising a series of substantially radially disposed holes, and passages substantially tangential to the arc of a circle struck from the axis of said plate connecting said substantially radial holes.



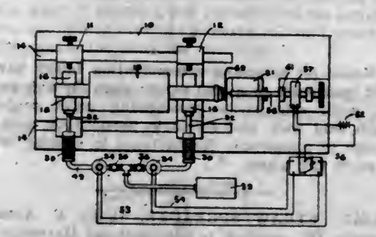
1,639,441. SAFETY RAZOR. OTTO SPAHR, Philadelphia, Pa. Filed Jan. 28, 1926. Serial No. 84,310. 3 Claims. (Cl. 30—12.)

1. A safety razor comprising a frame for a blade, a handle for the frame, and a universal connection between the hand hold of the handle and frame including a spherical like head and a spring pressed element engaging the head for frictionally retaining the frame and handle in their adjusted positions, said head having a



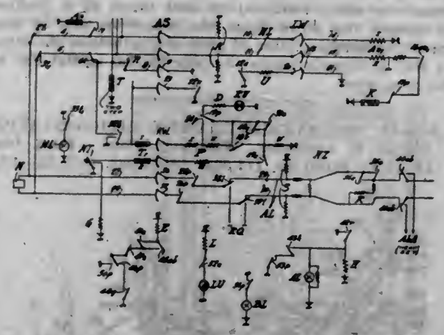
flattened end forming a seat for the spring pressed element for positioning the handle perpendicular to the frame.

1,639,442. TAIL-WIGGLING TOY. FERDINAND STRAUSS and OTTO R. STARKE, New York, N. Y., assignors to The Ferdinand Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 1, 1926. Serial No. 85,188. 4 Claims. (Cl. 46—40.)



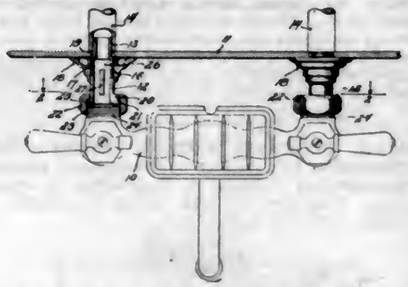
1. A toy of the nature described, comprising a body, a motor within said body, a resilient tail member rotatably mounted in the body, a pinion on the tail associated with said motor and an eccentrically mounted counterweight on said resilient tail member adapted to cause same to wag.

1,639,443. ARRANGEMENT FOR SORTING PERFORATED CARDS USED FOR STATISTICS, BOOKKEEPING, AND THE LIKE. GUSTAV TAUSCHEK, Vienna, Austria. Filed July 28, 1925, Serial No. 46,684, and in Austria Apr. 10, 1924. 9 Claims. (Cl. 209—110.)



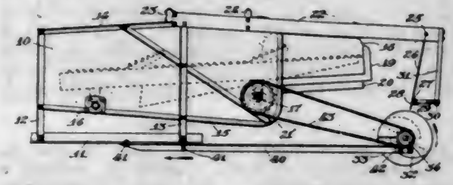
1. An apparatus for sorting perforated cards, comprising a support along which the cards are adapted to travel, a feeler adapted to enter the perforations of the card, a charger for receiving the cards from the delivery end of said support, said charger having an outlet movable to different positions for distributing the cards, a ratchet-wheel having a lost-motion operative connection with the charger, whereby said wheel may move without affecting the charger, electric means for feeding said ratchet-wheel, a circuit controlled by said feeler and operatively associated with said electric means to feed the ratchet-wheel, and a device for moving the charger to a position corresponding to the one to which the ratchet-wheel has been set by the said feeding means.

1,639,444. BALANCING MACHINE. MATSON C. TERRY, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 11, 1924. Serial No. 749,261. 20 Claims. (Cl. 73—51.)



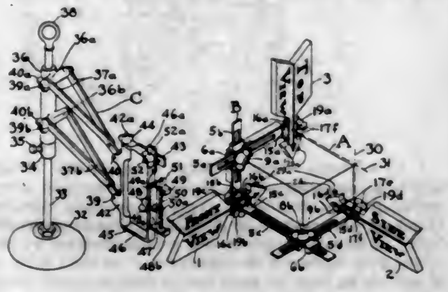
1. In a balancing machine, a stationary member, a movable member for supporting a body to be balanced, means for rotating the body, mechanism cooperating between the stationary member and the movable member for resisting movement of the movable member due to the unbalanced condition of the body an electrical circuit, and means responsive to the flow of current in the electrical circuit for controlling the application of energy to said mechanism.

1,639,445. TELEPHONE SYSTEM. ADOLF WASCHNACK, Neu Finkenkrug, Germany, assignor to Siemens & Halske Aktiengesellschaft, Wernerwerk, Siemensstadt, near Berlin, Germany. Filed May 22, 1924, Serial No. 714,998, and in Germany Sept. 20, 1923. 13 Claims. (Cl. 179—27.)



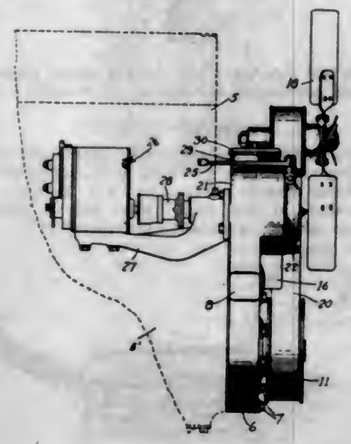
1. In a private branch exchange, a calling line, a finder switch, a connector switch, local telephone lines and a special line terminating in the banks of said connector switch, means operated by the calling line to cause said finder to find said calling line, means operated by said calling line to operate said connector to connect with one of said local lines or said special line, a second finder switch, an outgoing trunk to the main exchange, and means responsive to the connection of said connector with said special line to operate said second finder to connect the calling line with said trunk.

1,639,446. ATTACHING MEANS FOR COMBINATION FAUCETS. ROBERT C. ZANNOTH, Milwaukee, Wis., assignor to The Roberts Brass Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 31, 1927. Serial No. 164,762. 6 Claims. (Cl. 277—18.)



1. Means for attaching a combination faucet having a pair of inlet ports to spaced supply pipes through an apertured wall, said means comprising units projectable through said wall, and eccentric portions on said units rotatable to compensate for variance in spacing between said ports and pipes.

1,639,447. STRAW SPREADER. EMIL F. ANDERSON, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Mar. 1, 1922. Serial No. 540,159. 1 Claim. (Cl. 275—3.)

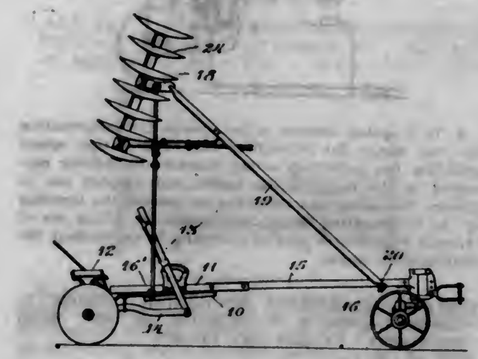


The combination with a harvester thresher having a frame carrying a grain and straw separator, of a straw spreading attachment therefor comprising a pair of oppositely pitched spiral spreading members arranged on a transverse shaft journaled on said frame in a position to receive the straw from the separator, one of said spreading members being of greater length than the other so that it extends across the longitudinal medial line of the separator.

1,639,448. MECHANICAL-DRAWING DEMONSTRATOR. ROBERT F. ASHBROOK, Waterbury, Conn. Filed June 21, 1926. Serial No. 117,362. 18 Claims. (Cl. 35—12.)

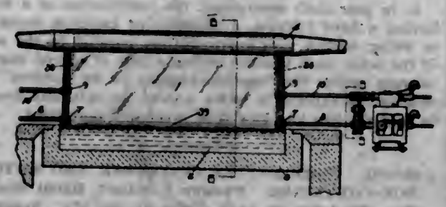
1. In a mechanical drawing demonstrator, a pair of direction finder members, each of said finder members having an arm connected thereto, a common support for said arms, and means for rotatably connecting said arms to said support for permitting said arms to be rotated into a common plane.

1,639,449. INTERNAL-COMBUSTION ENGINE. DAVID B. BAKER, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Nov. 12, 1921. Serial No. 514,496. 5 Claims. (Cl. 123—195.)



1. In an internal combustion engine, the combination of an engine block having a crank case open at one end, a removable cover therefor, the cover having an aperture adapted to receive a fan drive pulley, a fan support on the cover above the aperture, a governor casing formed in the cover, and a bracket adapted to support a magneto secured to the cover.

1,639,450. TORCH. CHARLES L. BASTIAN and JULIUS APSIT, Chicago, Ill., assignors to The Bastian Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 25, 1924. Serial No. 752,092. 4 Claims. (Cl. 158—27.4.)

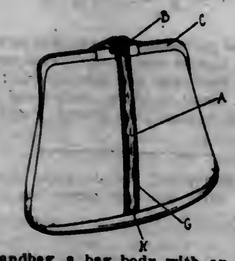


1. A torch having a tubular handle, a valve block at the rear end thereof and provided with a pair of separate passages therethrough, a pair of needle valves in said valve block, one for each passage, a pair of shut-off valves in said valve block, one for each passage, and positioned between said needle valves and said handle but outside of the latter, and an operating member for said shut-off valves pivoted to said valve block outside of said handle and between said needle valves and said shut-off valves extending lengthwise of and within said handle, and having an actuating part outside of the handle adjacent to the front end of the latter.

1,639,451. DISK HARROW. SHERMAN W. CADY, Hamilton, Ontario, Canada, assignor, by mesne assignments, to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 17, 1922. Serial No. 553,768. 12 Claims. (Cl. 55—83.)

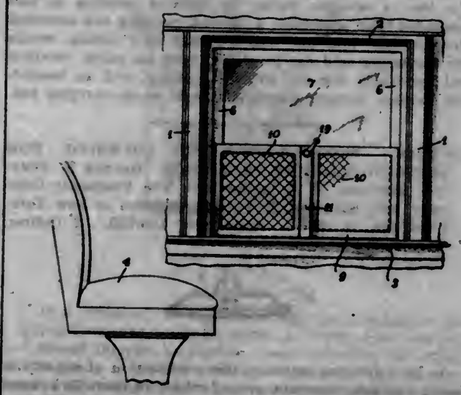
1. The combination with a harrow comprising a frame and a pair of angularly adjustable disk gangs, of an auxiliary angularly adjustable gang positioned beyond and ahead of the outer end of each disk gang and connected to the frame for independent vertical floating movements during normal operation of the harrow.

1,639,452. DRAWING SHEET GLASS. JOHN L. DRAKE, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 15, 1924. Serial No. 713,390. 18 Claims. (Cl. 49—17.)



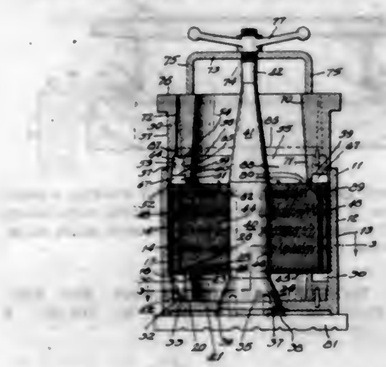
1. In the art of drawing sheet glass from a mass of molten glass, the method consisting in applying longitudinal drawing forces to the sheet edges only at the sheet source, applying supplemental drawing forces to the sheet edges only at a greater drawing speed at points beyond the sheet source, and subsequently applying a still faster drawing force to the entire body of the sheet.

1,639,453. SHEET-GLASS WIDTH-MAINTAINING SHIELD. ENOCH T. FERNOREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Original application filed Dec. 26, 1924, Serial No. 758,133. Divided and this application filed Sept. 17, 1925. Serial No. 56,852. 9 Claims. (Cl. 49—17.)



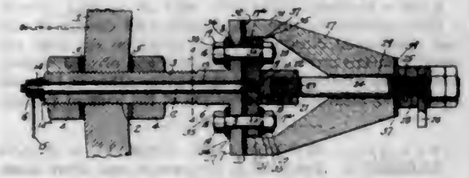
1. In sheet glass apparatus, means for drawing a sheet from a mass of molten glass, including width maintaining means, and means arranged beneath the said width maintaining means for shielding the same.

1,639,454. HANDBAG. RUBIN FISHBEIN, New York, N. Y. Filed Jan. 29, 1927. Serial No. 164,453. 3 Claims. (Cl. 150—33.)



1. In a handbag, a bag body with an opening therein, a metal closure to effect the opening and closing of said bag, said metal closure having a plate on one side and metallic means attached to said plate and pivoted therein, and a strap attached to said means, the other end of said strap being attached to the bottom of the body of the bag.

1,639,455. WINDOW AND OPERATING MEANS THEREFOR. BERTRAM J. GOLDSMITH and EMIL KOEB, New York, N. Y., assignors to Perfect Window Regulator Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Aug. 13, 1925. Serial No. 50,089. 8 Claims. (Cl. 20—52.)

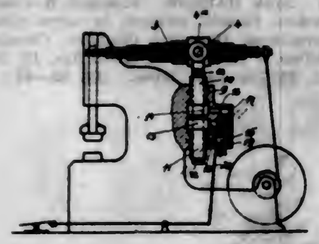


1. In a window, a frame providing a window opening, a fixed screen member adjacent one end of said opening, a movable sash in said opening adapted to close the same and means connecting said screen member and sash for actuating said sash.

1,639,456. METHOD OF PRODUCING ROTORS. CARL E. JOHNSON, Los Angeles, Calif., assignor to United States Electrical Manufacturing Company, Los Angeles, Calif., a Corporation of California. Original application filed July 8, 1924, Serial No. 724,800. Divided and this application filed Apr. 27, 1925. Serial No. 26,110. 11 Claims. (Cl. 22—204.)

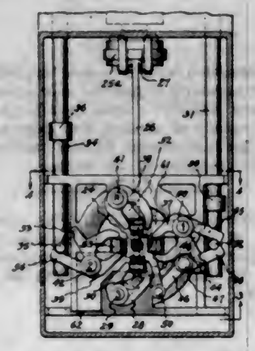
1. The method of making rotors, said method comprising: preheating a mold and a rotor core; pouring molten metal into the mold and the core therein; shaking the mold while the metal is being poured and for a period thereafter; and cooling the poured metal slowly and gradually.

1,639,457. ELECTRODE. ALEXANDER KIRKALDY, New York, N. Y. Filed Nov. 13, 1925. Serial No. 68,885. 6 Claims. (Cl. 204—25.)



1. An electrode for use in electrolytic systems for the protection of boilers and the like comprising a metallic tube adapted to fit directly into the shell of a boiler or the like, a metallic fitting in endwise relation to and insulated from said tube, a current carrying rod extended through said tube and engaged with said fitting, means for insulating said rod from said tube, an anode carrying rod removably engaged with said fitting, and an insulating distance member surrounding said anode carrying rod.

1,639,458. WOVEN-WIRE-CLOTH COVERING FOR PRESSING-MACHINE ELEMENTS. GEORGE F. SIMPSON, Syracuse, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 5, 1926. Serial No. 139,732. 2 Claims. (Cl. 68—9.)



1. In a pressing machine, the combination of upper and lower pressing elements, one of which is movable toward and from the other and one being formed hollow for receiving a heating medium and provided with a line of jet openings through its pressing face for ejecting fluid and a metallic flexible sheet covering the pressing face of said element and spaced apart therefrom and formed with perforations throughout the greater part of the area thereof covering the pressing face forming a distributing chamber for the fluid ejected through said jet openings and said sheet having means in line with said jet openings for deflecting the fluid laterally through said chamber.

1,639,459. SPRING HAMMER. LEO KNÖCHL, Vienna, Austria. Filed Apr. 30, 1924, Serial No. 710,191, and in Austria May 9, 1923. 3 Claims. (Cl. 78—31.)

1. In a spring hammer a tup, means for reciprocating the tup, means for controlling the reciprocating means including two oppositely acting members operatively connected to the reciprocating means and adapted one to prevent the rising and the other to prevent the lowering of the reciprocating means, and means for lifting one of the said members, to control according to requirement the reciprocating means.

1,639,460. GEAR-SHIFT MECHANISM. ERNEST P. LOBCH, Brooklyn, N. Y. Filed Oct. 19, 1926. Serial No. 142,747. 7 Claims. (Cl. 74—39.)

1. In gear shift mechanism, the combination of a lever having a fixed fulcrum, a plurality of knuckles mounted to swing around axes approximately parallel to the axis of the lever, each knuckle having a pair of spaced fingers between which the lever is adapted to be received for causing the knuckle to swing around its axis, and means to hold the idle knuckles from accidental movement.

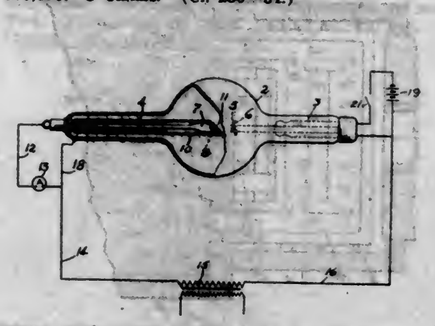
1,639,461. COMBINATION CIGARETTE AND MATCH-BOX CONTAINER. THOMAS J. MAXEY, Miami Shores, Fla. Filed Oct. 28, 1922, Serial No. 597,578. Renewed Jan. 10, 1927. 1 Claim. (Cl. 206—38.)

A container comprising a casing open at its upper edge and provided at the upper edges of opposite side walls with flaps, one of which is adapted to completely bridge the space between the opposite side walls and the other flap being of such transverse breadth as to partially bridge said space, a partition located interiorly of the casing and dividing the same into a cigarette compartment and a match retaining compartment, said flaps

adapted to fold over both compartments and means for projecting the end portion of a match beyond the end

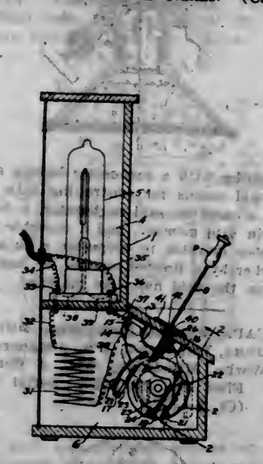
of the match compartment when the broad flap is opened and the narrower flap is closed with relation to the open side of the casing.

1,639,462. MATTRESS-ADJUSTING APPARATUS. FRANCIS P. MCLAUGHLIN, Pittsburgh, Pa. Filed Aug. 19, 1925. Serial No. 51,152. 1 Claim. (Cl. 5—327.)



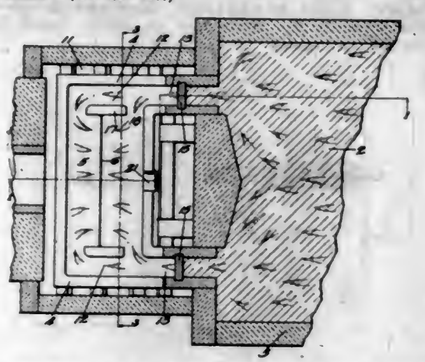
In combination, with a bed, a mattress adjusting apparatus comprising a supporting bar positioned between the mattress and springs of the bed, each end of said supporting bar formed with a threaded aperture, a pull bar shiftably supported on the side rails of the bed and proivded at each end with an angularly disposed fixed elevating arm, a pair of toggle arms pivotally connected to the side rails of the bed, bearing bolts mounted in said apertures for pivotally connecting the associated ends of said elevating and toggle arms to respective ends of said supporting bar, a flexible member connected with said pull bar for shifting the latter to adjust said supporting bar, and means for securing said flexible member to maintain said supporting bar in the adjusted position, substantially as described and for the purpose set forth.

1,639,463. CULTIVATOR. INOLE W. MILLER and LIDA E. MILLER, Darke County, Ohio. Filed June 2, 1926. Serial No. 113,290. 4 Claims. (Cl. 97—188.)



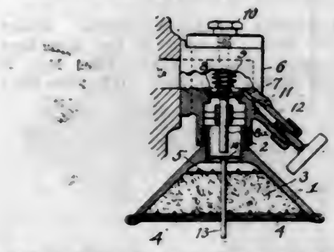
1. In combination, a cultivator tooth, a guard pivoted on the bottom thereof extending upwardly substantially parallel to the tooth and across the top thereof, and means to adjustably connect the top of the guard to the top of the tooth.

1,639,464. X-RAY APPARATUS. MONTFORD MORRISON, New York, N. Y. Filed June 26, 1922. Serial No. 570,856. 8 Claims. (Cl. 250—34.)



1. In an X-ray tube the combination of an evacuated envelope, a target and a cathode therein, an electrically conductive shield surrounding said target, said shield having an opening therein adjacent the X-ray emitting surface of said target, and means connected to said target for measuring the current flowing thereto and independent means for shunting the current flowing to said shield.

1,639,465. ELECTRICAL CIGAR LIGHTER. HENRY OVEREN, Seattle, Wash., assignor to The King-Keys Advertising Company, Seattle, Wash. Filed Mar. 3, 1925. Serial No. 12,905. 2 Claims. (Cl. 200—161.)

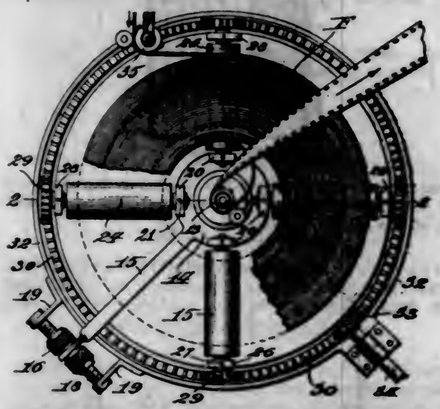


1. In a device of the class described, the combination of a spring tensioned rotatable drum, a double wire electric cord wound thereon, an electric circuit including the wires of the cord, a pivoted switch included in the electric circuit and having spaced arms, and switch tripping means carried by the drum and disposed between the arms of the switch for alternate engagement therewith during reverse movements of the drum to move the switch in opposite directions past the dead center thereof.

1,639,466. DRAWING SHEET GLASS. JOSEPH A. REECE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 29, 1924. Serial No. 716,565. 16 Claims. (Cl. 49—17.)

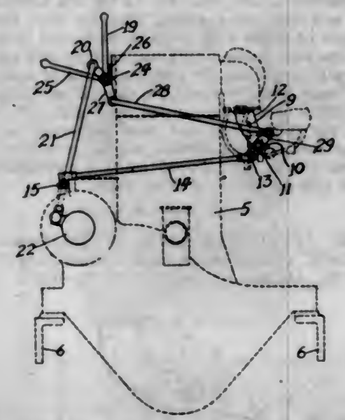
1. The method of drawing sheet glass, which consists in supplying a draw-pot with sub-surface glass from a glass melting furnace, drawing a sheet vertically therefrom, and flowing from said pot any surplus glass contained therein.

1,639,467. AIR CLEANER. THOMAS A. REILLY, Cleveland, Ohio, assignor, by mesne assignments, to The Federal Foundry Supply Company, a Corporation of Ohio. Filed May 13, 1921. Serial No. 469,156. 1 Claim. (Cl. 261—97.)



The combination with a carbureter having an air inlet, a fuel inlet, and means for controlling both said inlets, of a member secured to said carbureter, a body of hair confined within said member, and a movable part within the said member movable to cooperate with said controlling means whereby a limited amount of liquid fuel may be delivered on the said hair like material.

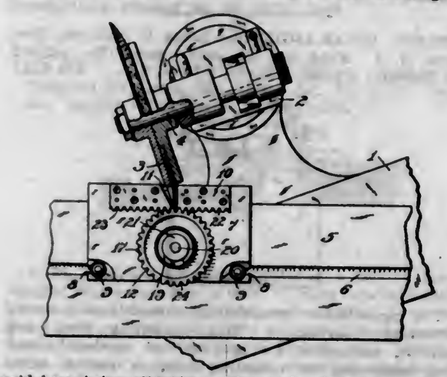
1,639,468. CAP. SAMUEL ROSENBERG, Milwaukee, and ELMER N. JOHA, Wauwatosa, Wis., assignors to Reliable Knitting Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 25, 1927. Serial No. 170,813. 10 Claims. (Cl. 2—172.)



10. A cap having a substantially flexible and inelastic crown portion and depending side flaps composed of knitted material bound and relatively inelastic at their margins as compared with their central portions.

1,639,469. FILM SUPPORT FOR MOTION-PICTURE-PROJECTING MACHINES. LYNN M. SCOFIELD and HERBERT J. THOMAS, Los Angeles, Calif., assignors to Harry S. Merritt, Los Angeles, Calif. Filed July 31, 1924. Serial No. 729,275. 7 Claims. (Cl. 88—18.7.)

1. In a motion picture film support, a series of radially arranged film supporting rollers, pivoted bearings for said rollers and means for simultaneously moving the bearings at the inner ends of said rollers so as to change the angular positions of the axes of said rollers.

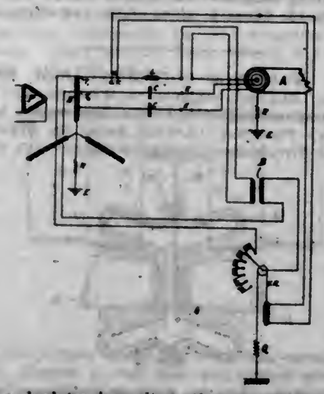


1,639,470. THROTTLE-VALVE CONTROL MEANS. OTTO R. SCHOENROCK, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Apr. 7, 1921. Serial No. 459,490. 4 Claims. (Cl. 264—3.)

1. In combination, an engine, a governor, a throttle valve having a stem, said valve controlling the supply of motive fluid to the engine, a lever secured to the stem, operating means connecting the lever and governor, a second lever journaled on the stem adjacent the first named lever, segmental portions on the levers, and means for adjusting the position of the second lever on the stem, the segments on the levers engaging each other when the throttle valve has been opened to a predetermined extent by the governor.

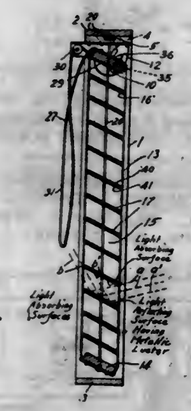
1,639,471. GEAR GRINDER. HARVEY G. SHAFER, Indianapolis, Ind. Filed Apr. 25, 1924. Serial No. 708,863. 5 Claims. (Cl. 51—52.)

1. In a gear grinding machine, the combination with a grinding wheel and a bed, of a guide plate having a rack, means for supporting the plate on said bed with the rack in predetermined relation to the grinding wheel, and a blank supporting unit including a base, a master gear on said base and means for securing the blank on the base in predetermined relation to the master gear,



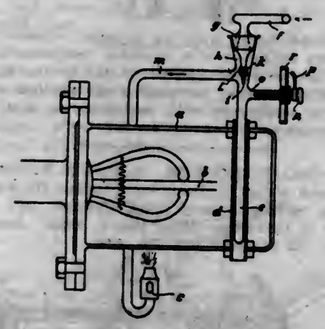
said base being slidable on the guide plate in two directions at an angle to one another to permit the master gear to be moved laterally into and out of engagement with the rack and be rolled on said rack.

1,639,472. HOOK TAPE. DAVID SILBERMAN, New York, N. Y. Original application filed July 28, 1924, Serial No. 728,645, Patent No. 1,622,743, dated Mar. 29, 1927. Divided and this application filed Mar. 21, 1927. Serial No. 177,082. 1 Claim. (Cl. 2—265.)



Hook tape comprising a strip of integrally woven tape having a single ply at one edge divided into two plies near its median line, one of said latter plies being wider than the other, a plurality of spaced hooks secured to the wider of the latter plies, the bills of said hooks extending over the narrower of the latter plies whereby the bases of the hooks and securing means are covered, concealed and protected, and adapted to have a garment edge secured to the single ply.

1,639,473. ELECTRIC-POWER TRANSMISSION. ALFRED MILLS TAYLOR, Erdington, Birmingham, England. Filed Sept. 27, 1926, Serial No. 137,990, and in Great Britain July 16, 1925. 8 Claims. (Cl. 171—97.)

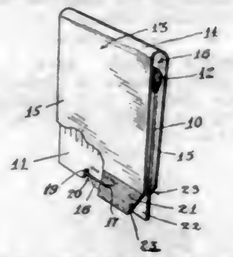


1. In a high-tension alternating-current transmission system, the combination of a cable comprising concentric insulated conducting cores, means to transmit current through the cable, and means to increase the proportion of the current carried by the outer core or cores with the increase of load on the cable.

1,639,474. WINDOW BLIND. JOHN P. WHITMORE, San Marino, Calif., assignor to Columbia Mills Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 11, 1926. Serial No. 147,740. 3 Claims. (Cl. 156—17.)

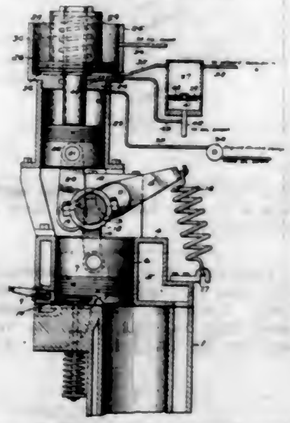
1. In a Venetian blind, a slat provided with an upper surface having a metallic luster and a lower surface of light absorbing material.

1,639,475. PROCESS FOR THE PRODUCTION OF ARTICLES AND COVERS FROM RESINOUS COMPOSITIONS. EBERHARD WIELAND, Pforsheim, Germany. Filed Sept. 18, 1924, Serial No. 738,523, and in Germany July 23, 1924. 11 Claims. (Cl. 18—55.)



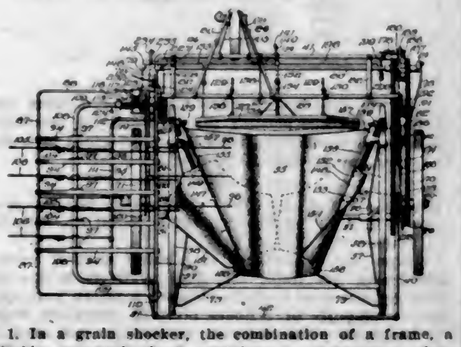
1. In the heat and pressure process of molding and hardening resinous plastics, the process which comprises subjecting a viscid resin, while under continued pressure, to a slow and gradual increase in temperature.

1,639,476. BOOK MATCH. CHARLES E. WILLIS, New York, N. Y. Filed Nov. 27, 1926. Serial No. 151,167. 1 Claim. (Cl. 206—29.)



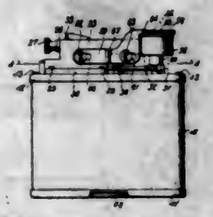
A book match consisting of a shield member formed with spaced side walls, held fixed relatively to one another, by means of a staple element, a match strip carrying a plurality of matches pivotally connected about one leg of the staple element, whereby the said strip is movable about its pivot center to position the matches

outside of the shield member or to position the matches in a predetermined shielded position within the spaced



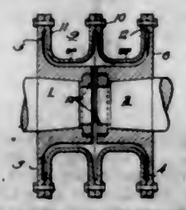
side walls of the shield member, the other leg of the staple element forming a positive stop against which the match strip engages in its shielded position.

1,639,477. UNIFORM COMPRESSION INTERNAL-COMBUSTION ENGINE. THEODORE R. WILSON, Peshastin, Wash. Filed May 4, 1926. Serial No. 106,638. 10 Claims. (Cl. 123—48.)



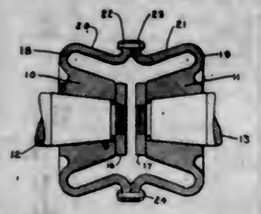
1. The combination with an internal combustion engine and its cylinders of a movable compression abutment and means under control of the intake manifold pressure of said engine for varying the position of said abutment in accordance with variations in said intake manfold pressure.

1,639,478. GRAIN SHOCKER. SAMUEL H. YANCEY, Rock Island, and HARRY S. DICKINSON, Moline, Ill., assignors to Berry Shocker Incorporated, Chicago, Ill., a Corporation of Delaware. Filed May 7, 1924. Serial No. 711,614. 32 Claims. (Cl. 56—424.)



1. In a grain shocker, the combination of a frame, a tiltably mounted shock container, a compressor plate closable against the head portion of the shock, a ground engaging tread member for tilting the shock container, and means for closing the compressor plate before the container is tilted, substantially as described.

1,639,479. CIGAR LIGHTER. LOUIS V. ARONSON, Newark, N. J. Filed Oct. 16, 1926. Serial No. 142,022. 5 Claims. (Cl. 67—7.1.)



1. A cigar lighter comprising, in combination, a fuel containing reservoir, a wick projecting from said reservoir, mechanism for igniting fuel carried by said wick comprising an operating lever, a partial shield for said spark mechanism carried by said lever and normally covering a lateral portion of the spark producing means, and a second stationary partial shield laterally enclosing a portion of said mechanism at all times.

1,639,480. FLEXIBLE COUPLING FOR SHAFTS. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 4, 1922. Serial No. 540,964, and in Great Britain Mar. 24, 1921. 3 Claims. (Cl. 64—96.)

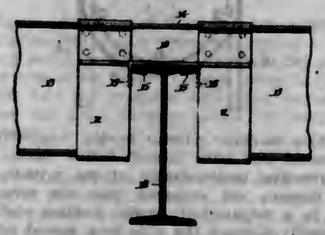
1. In a flexible coupling for shafts, the combination of a coupling head secured to each shaft, each coupling head having a rigid and a laterally extending flange portion, a plurality of torque transmitting members for connecting the coupling heads together, each of said torque transmitting members having unitary formed and laterally extending flexible end portions, means for connecting the flexible end portions of adjacent torque transmitting members together, and means for connecting the remaining end portions of the torque transmitting members to the flange portions of the respective coupling heads.

1,639,481. FLEXIBLE COUPLING. KARL BAUMANN, Urmston, England, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 13, 1923, Serial No. 674,575, and in Great Britain Dec. 5, 1922. 5 Claims. (Cl. 64—96.)

1. In a flexible coupling for rotary members, the combination of coupling heads adapted to be secured to the

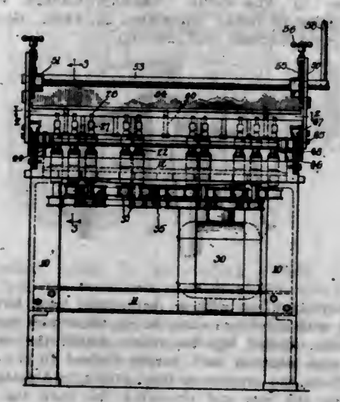
members, a sleeve-like, torque transmitting member enveloping a head and having an inwardly-extending curved portion integral with the outermost marginal portion of the same head, and means for connecting the torque transmitting member to the other head.

1,639,482. ADVERTISING DEVICE. CHARLES E. BETZLER, St. Louis, Mo. Filed Jan. 28, 1927. Serial No. 164,159. 2 Claims. (Cl. 40—126.)



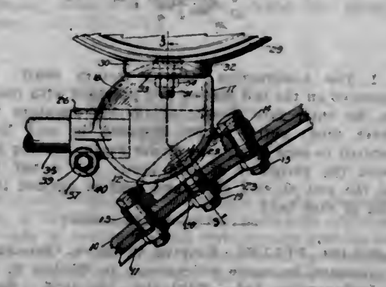
1. An advertising device comprising a pair of spaced upright frame members, a pair of glass panels mounted between said frame members and forming a confined space between them, inwardly extending hooks on said frame members in the spaces between said panels, a series of wires having their ends releasably engaging and supported by said hooks, and a series of differently colored beads on each of said wires, the several series of beads being arranged to form desired outlines.

1,639,483. JOIST HANGER. CHARLES S. BOARDMAN, Pittsburgh, and JOHN W. FREE, Woodlawn Borough, Pa., assignors to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 23, 1926. Serial No. 96,835. 8 Claims. (Cl. 189—36.)



1. A joist hanger or the like comprising a support, a saddle member arranged on said support, a stirrup member depending from the saddle member and secured thereto at its upper end, and a spacing clip carried by said stirrup to prevent movement of said stirrup toward said support.

1,639,484. JOIST HANGER. CHARLES S. BOARDMAN, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 23, 1926. Serial No. 96,838. 8 Claims. (Cl. 189—36.)



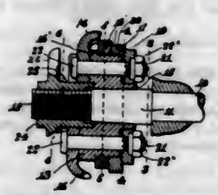
1. A joist hanger or the like comprising straight saddle members adapted to rest upon and project over the top flange of a supporting beam or girder member and U-shape stirrup members suspended from the projecting ends of said saddle members, said stirrup members connecting said saddle members and forming seats for the ends of adjacent joists on opposite sides of said supporting member.

1,639,485. ROUTING MACHINE. GEORGE H. CARLSON, Rockford, Ill., assignor to Redin, Ekstrom & Co., Rockford, Ill., a Corporation of Illinois. Filed Mar. 22, 1926. Serial No. 96,386. 14 Claims. (Cl. 144—136.)

1. A machine for grooving boards comprising, in combination, a frame supporting a bed having opposite front and rear ledges, a plurality of bars supported at their opposite ends on said ledges, each of said bars having elongated vertical slots at opposite ends, devices operable to clamp the ends of said bars against said ledges including bolts extending through said slots, a vertically disposed bearing housing threaded through each of said bars, a spindle journaled in each of said housings and carrying a cutting tool at its upper end and a drive pulley at the lower end, belt driving means for said pulleys, a table mounted to slide horizontally on said frame, and means for clamping a board to be grooved upon said table.

1,639,486. HEADLIGHT MOUNTING. HAROLD D. CHURCH, Cleveland Heights, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 1, 1926. Serial No. 112,924. 5 Claims. (Cl. 240—57.)

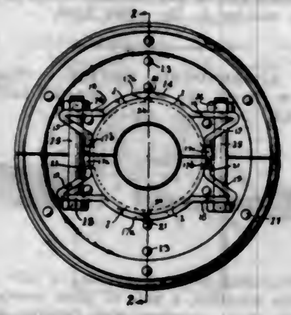
1. A headlamp support comprising a hollow pivotal supporting member having apertured spheroidal bearing surfaces, a headlamp pivotally supported on one of the said bearing surfaces, a stud affixed to the said headlamp and extending through said aperture, a nut within said hollow supporting member coacting with said headlamp stud, an apertured socket engaged by another of said



bearing surfaces, a bolt having a convex head engaging an inner wall of the said supporting member, and extending through said aperture in the supporting member, a rectilinear shoulder intermediate the ends of the bolt engaged by said socket aperture and a nut upon a portion of the shank of the bolt extending through said socket.

1,639,487. APPARATUS FOR REMOVING CONTENTS OF EGG CASES. HAROLD G. COLLIS, Clinton, Iowa, assignor to The Collis Company, Clinton, Iowa, a Corporation of Iowa. Filed Dec. 22, 1926. Serial No. 156,298. 4 Claims. (Cl. 24—1.)

1. In combination with a rectangular case having an open top with a vertical stack of egg fillers and separators therewithin, angled legs insertable within the case, one of said legs adjacent each corner thereof to the outside of the fillers and separators therewithin, and plate means connecting the legs and overlying the open top of the case, the case when inverted being removably vertically along the legs without touching the separators and fillers which rest upon the plate means, the legs and plate means being thereafter movable laterally to leave the separators and fillers exposed on all sides, substantially as described.

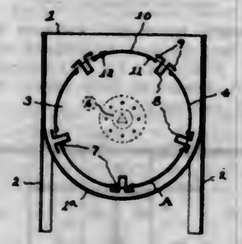


1,639,488. CUTTER HEAD. JOHN E. COVILLE, Swampscott, Mass., assignor of one-third to Theodore W. McNichol and one-third to Thomas T. McNichol, Swampscott, Mass. Filed Aug. 26, 1926. Serial No. 131,781. 10 Claims. (Cl. 144—219.)

1. The combination with a rotary shaft; a head mounted on the end thereof and provided with radial slots in the outer face thereof at varying distances from its inner face; cutter blades disposed in said slots and secured to said head, said blades having cutting edges beyond the periphery of said head; and a nut threaded to the end of said shaft and bearing against the outer end of said head.

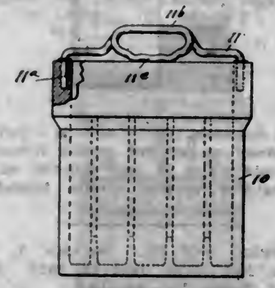
1,639,489. PULLEY. PATRICK CULHANE, Cleveland, Ohio, assignor, by mesne assignments, to William T. Hensley, Indianapolis, Ind. Filed Oct. 26, 1925. Serial No. 64,811. 4 Claims. (Cl. 287—52.)

3. A clamp portion for sectional pulleys comprising a metal strip shaped at its central and end portions to substantially conform to portions of the perimetric surface of a pulley hub and adapted to be securely fastened to said hub and having intermediate portions extending outwardly from said central portion substantially perpendicularly to the transverse median plane of said strip to form bearing surfaces for fastening means and extending angularly back to the end portions to form stiffening members, said intermediate portions connecting said central and end portions and having aligned holes therein for receiving fastening means.



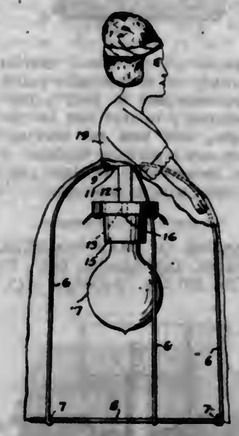
1,639,490. PULLEY. PATRICK CULHANE, Cleveland, Ohio, assignor, by mesne assignments, to William T. Hensley, Indianapolis, Ind. Filed Dec. 9, 1925. Serial No. 74,311. 3 Claims. (Cl. 64—17.)

1. A pulley comprising a hub, end plates mounted on said hub, a body of fibrous laminated material secured upon the hub and between the end plates, the said hub being shaped to form an internal keyway and an external rib and having its external surface conforming substantially in contour to its internal surface, the portion of the hub adjacent to said keyway and rib being thinner than the rest of the hub, so that said pulley is substantially balanced for smooth, efficient operation on a power shaft.



1,639,491. WASHING MACHINE. ALEXANDER DANIEL, Cleveland, Ohio. Filed Mar. 16, 1926. Serial No. 95,027. 1 Claim. (Cl. 68—18.)

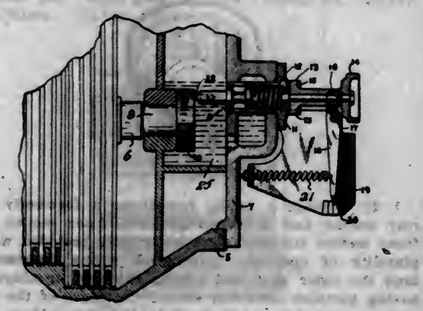
A washing machine cylinder having longitudinal slots in the curved side walls thereof, hollow channel shaped baffles extending longitudinally of the cylinder on the interior thereof, and arranged with the sides thereof disposed in a substantially radial position and projecting outwardly through the slots in a spaced relation to the edges of the slots, and comparatively short oppositely projecting flanges at the outer ends of the sides of the channel shaped baffles, said flanges being in a spaced and substantially parallel relation to the exterior of



the cylinder and cooperating with the outwardly projecting ends of the baffles to forcibly direct the cleansing fluid into the interior of the cylinder when the cylinder is rotated in either direction.

1,639,492. STORAGE-BATTERY CONTAINER. CARL J. DUNZWEILER, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Nov. 11, 1926. Serial No. 147,627. 3 Claims. (Cl. 16—125.)

1. A storage battery case formed of molded composition and having wire handles at the ends thereof, said handles having their ends secured to the case and having a loop between their ends so that the upper portion thereof will form a handhold and the lower portion of the loop may receive a battery hold-down.



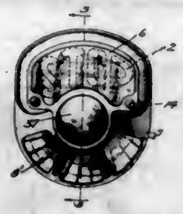
1,639,493. BOUDOIR LAMP. CHARLES FISCHER, New York, N. Y. Filed Mar. 28, 1925. Serial No. 17,089. 7 Claims. (Cl. 240—10.)

1. A lamp doll frame of the character described having in combination a wire frame comprising a series of ribs and a metal, perforated cap to which the outside of the upper ends of the ribs of the wire frame are separately secured, said cap provided with arms extending into the frame, the arms forming means for supporting a lamp socket.

1,639,494. CLEARANCE INDICATOR FOR TURBINES. WARREN B. FLANDERS, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 28, 1920. Serial No. 377,412. 8 Claims. (Cl. 33—172.)

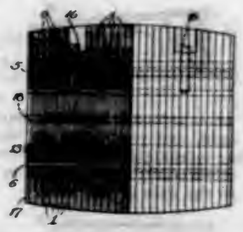
1. In a longitudinal-position indicator for a rotating body having an end portion adapted to run in oil, the combination with a stationary member adjacent said end portion of the rotating body, of a longitudinally movable member mounted upon said stationary member in eccentric relation to said end portion of the rotating body, means for resiliently holding said movable member in contact with said end portion of the rotating body, said resilient means exerting a constant force upon the movable member, means for maintaining a body of oil in contact with the contacting portions of the movable member and the end portion of the rotating body, means for indicating the resultant position of said movable member, and means for locking said movable member out of engagement with said rotating end portion against the action of said resiliently acting means.

1,639,495. MANHOLE. WILLIAM S. FRAME, Schenectady, N. Y. Filed Nov. 24, 1926. Serial No. 150,442. 14 Claims. (Cl. 94—34.)



1. A section of a sectional manhole, having the form of an endless band, and comprising an inclined bearing surface extending substantially entirely around the band, and disposed substantially throughout its length in a plane inclined to the axis of the band.

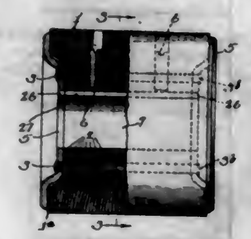
1,639,496. OUTLET-BOX SUPPORT. HENRY GINSBURG, New York, N. Y., assignor to Roach-Appleton Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1926. Serial No. 89,607. 2 Claims. (Cl. 247—22.)



2. The combination of a bar hanger of the character described, a U-shaped carrier strap apertured adjacent the free ends to receive the bar therethrough and having the closed end of the strap provided with a threaded opening, an outlet box having a hollow screw threaded projection to provide a well to receive the closed end of the strap, the latter having opposite projections to fit depressions in the wall of the well to prevent relative turning movement of the box and bar, and a screw extending through and engaging the hollow screw threaded portion and adjustable in the threaded opening in the strap to move the latter to draw the box against the bar.

1,639,497. COMBINATION TAIL LAMP. CHARLES E. GODLEY, Detroit, Mich., assignor, by mesne assignments, to C. M. Hall Lamp Company, a Corporation of Michigan. Filed Mar. 16, 1925. Serial No. 15,847. 2 Claims. (Cl. 177—329.)

1. In a lamp, a casing comprising a forwardly open rear section and a rearwardly open front section; the front section comprising an outer part provided with a plurality of openings, translucent means disposed behind the outer part and closing the said openings and having portions extending beyond the edges of the openings, an inner part disposed behind the said portions of the translucent elements, and means connecting the said inner and outer parts to clamp the translucent means between them in a rigid assembly; the inner and outer parts of the front section having at their peripheries rearwardly projecting flanges disposed one within the other and separated by a substantially uniform space, the forward end of the main member being socketed between the said rear flanges in the said space.

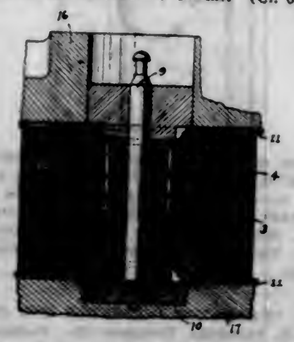


1,639,498. PULLEY. WILLIAM T. HENSLEY, Marion County, Ind. Filed Apr. 6, 1922. Serial No. 550,001. 17 Claims. (Cl. 64—17.)

1. A laminated power transmitting pulley in which the laminæ are compressed together and reduced materially more in bulk in the zone of the hub of the pulley than elsewhere in the pulley body in a manner to form a permanently set body having a cohesive comparatively hard and dense interior for direct driving engagement with the shaft or other support, and having a relatively softer exterior formed by the exposed outer edges of the laminæ or frictional driving engagement with the belt.

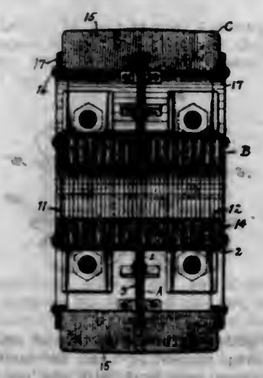
1,639,499. PULLEY. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed Jan. 2, 1923, Serial No. 610,175. Renewed May 16, 1927. 11 Claims. (Cl. 64—17.)

1. A laminated pulley for power transmission comprising a pair of opposed end plates, fibrous laminæ of compressible material of substantially the same internal diameter as the pulley and adapted to form the outer working face of the pulley, a plurality of non-circular, multi-sided plates of relatively hard material of materially less external diameter than the end plates uniformly distributed through the body of the pulley between the fibrous laminæ and concentrically arranged relative to said laminæ, said plates having rivet apertures formed therein aligned with corresponding apertures formed in the fibrous laminæ, each aperture of said plates being arranged symmetrically with respect to the sides of the polygonal plates, and rivet bars extending through the pulley body adapted to fit said apertures to hold the end plates, the fibrous laminæ, and the plates of hard ma-



terial in rigid assembled relation to form a pulley having a relatively dense internal hub surface formed by said laminæ and said plates of hard material and a relatively soft exterior working surface formed by the laminæ.

1,639,500. SPLIT PULLEY. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed June 18, 1923. Serial No. 646,117. 32 Claims. (Cl. 64—18.)

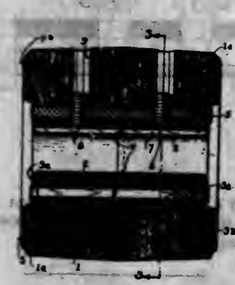


21. A split pulley of the fibrous character described including a plurality of fibrous split pulley sections, a plurality of bars embedded in each pulley section and extending longitudinally thereof and to the sides thereof, means engaging said bars for drawing the bars of adjacent pulley forming portions together, a pair of end plates adapted to lie adjacent the same, and means securing said pair of end plates to said bars.

1,639,501. PROCESS OF MAKING PULLEYS. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed Dec. 17, 1923. Serial No. 681,154. 5 Claims. (Cl. 64—17.)

1. The process of making pulleys which comprises forming a plurality of apertured laminæ of relatively soft material and a plurality of similarly apertured metal plates, interposing the plates between said laminæ, assembling said laminæ and plates substantially concentrically with apertures alined, passing rivets through certain of said apertures in each of said plates, and subsequently compressing the central portions of said assembly, so that the density of the fibrous material between the metal plates is substantially increased, and riveting them together through said central portions, whereby a pulley having a relatively dense interior and a relatively soft exterior is produced.

1,639,502. SPLIT PULLEY. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed Feb. 25, 1924. Serial No. 695,001. 10 Claims. (Cl. 64—18.)



1. A pulley comprising metal members having opposing hub portions formed therein, opposing web portions and alined, annular, peripheral portions connected to said web portions and adapted to receive a rim, a laminated hub core mounted between said metal hub portions, an annular, cylindrical rim secured to said peripheral portions, means disposed axially of said pulley to rigidly secure said hub portions, web portions and peripheral portions together, certain of said means passing through said metal hub and said core and certain of said means passing through said rim, said metal members being divided along an axial plane to form two rigid pulley units of substantially identical construction, and means for rigidly but detachably securing the units together about a shaft.

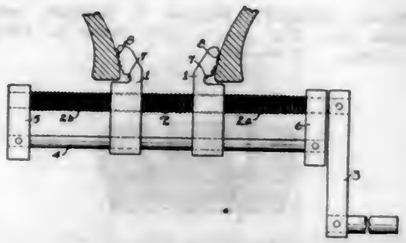
1,639,503. PULLEY. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed Feb. 25, 1924. Serial No. 695,002. 13 Claims. (Cl. 64—17.)

1. A pulley comprising a core of laminate fibrous material, a pressed metal body having a hollow hub portion adapted to receive and house said core and a web portion encircling the hub portion, and a laminated rim secured to the peripheral portion of the web.

1,639,504. PULLEY. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed Aug. 1, 1924. Serial No. 729,437. 6 Claims. (Cl. 64—17.)

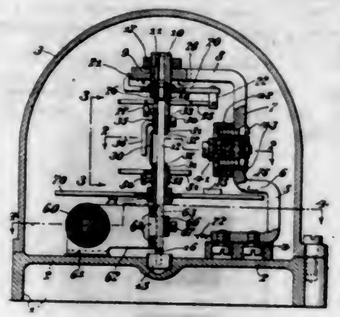
1. A pulley for power transmission comprising fibrous laminæ of compressible material, a pair of sheet metal tubular hub members each carrying an end plate, said end plates each having inwardly extending portions of less diameter than the fibrous laminæ, and shouldered rivets for holding said end plates against relative movement in each direction axially of the pulley, whereby said fibrous laminæ when compressed will have a relatively dense inner portion and a relatively soft, frictional outer portion.

1,639,505. PULLEY. WILLIAM T. HENSLEY, Indianapolis, Ind. Filed Feb. 27, 1925. Serial No. 12,163. 10 Claims. (Cl. 64—17.)



1. A pulley comprising a pair of opposing hub members of relatively light metal having cup-shaped hub portions, a hub core of light material secured to said members, webs projecting outwardly from said members, and a pair of end plates having opposing inner web portions adapted to engage and be secured to said hub web portions to complete the pulley web, said end plates being axially outturned to receive and support a relatively light pulley rim face and being radially outturned to form flanges that overlie and support the ends of the pulley rim, and means to secure said web portions together and to secure said rim between the end plates.

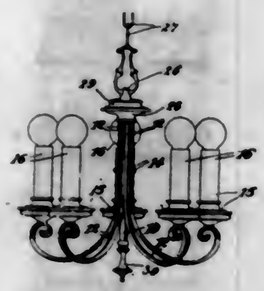
1,639,506. TIRE-SPREADING DEVICE. HUGH T. HUMMS, Cleveland, Ohio, assignor to The Wadsworth Core Machine & Equipment Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 10, 1926. Serial No. 147,478. 7 Claims. (Cl. 152—27.)



1. A tire spreading tool comprising in combination, a shaft having a right hand threaded portion and a left

hand threaded portion, a jaw associated with each threaded portion, said jaws being adapted to engage the

inside walls of a tire, and means adjacent one end of the shaft for rotating it and for effecting relative motion of said jaws along said shaft.



1,639,507. ELECTRIC FLASH-LIGHT CONTROLLING MEANS. GEORG KARL VILHELM JOHANSON, Stockholm, Sweden, assignor to American Gasaccumulator Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 25, 1926, Serial No. 137,716, and in Sweden May 1, 1924. 14 Claims. (Cl. 200—90.)

1. In electric flashlight controlling means, the combination of relatively movable contacts, yielding means tending to hold said contacts in closed relation to each other, means movable in one direction for causing relative movements of said contacts to open the same, and other yielding means adapted to act upon said second named means to cause movement thereof in the opposite direction to permit relative movements of said contacts into closed relation with respect to each other.

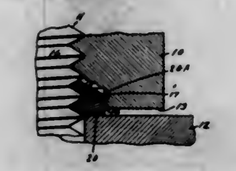
14. In electric flashlight controlling means, the combination of a stationary contact, a pendulum device comprising a rotatable shaft, an electro-magnet the poles of which extend laterally and are located upon opposite sides of the said shaft, which poles are provided with inwardly extending projections, an armature mounted upon the said shaft and extending in a plane normally out of alinement with the plane of the inwardly extending portions of the said poles, the said armature being adapted to move into alinement with the said inwardly extending portions of the said poles upon energization of the said electro-magnet to cause rotation of the said shaft in one direction, a movable contact, a lever rotatably mounted upon the said shaft upon one end of which the said movable contact is supported, yielding means interposed between the said lever and the said shaft which tends to hold the movable contact pressed against the stationary contact, means carried by said shaft for engaging the said lever when the said shaft is rotated by the actuation of the said armature, and yielding means operating to cause movement of the said shaft in the opposite direction to permit closing movement of the movable contact, substantially as described.

1,639,508. LIGHTING FIXTURE. WALTER R. KAHNS and KARL KELLER, Brooklyn, N. Y., assignors to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed May 20, 1926. Serial No. 110,349. 9 Claims. (Cl. 240—78.)

1. In a lighting fixture, a section of pipe, a plurality of tubular lamp supporting arms surrounding said pipe with their upper ends flush with the top of said pipe, said arms bearing against the outer surface of the pipe a portion of their length, means for detachably connecting the upper ends of the arms to the pipe, and means for detachably connecting said arms to the pipe at a predetermined distance below their upper ends.

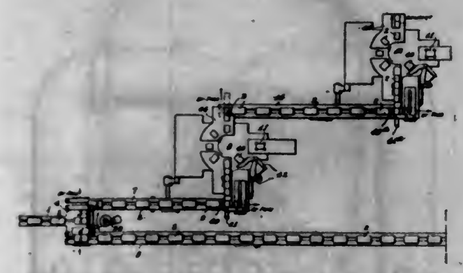
1,639,509. CONTAINER. JOSEPH KAUFMAN, Bronxville, N. Y., assignor to American Safety Razor Corporation, New York, N. Y., a Corporation of Virginia. Filed Feb. 19, 1925. Serial No. 10,193. 5 Claims. (Cl. 206—1.)

5. In a device of the character described, in combination, a shaving outfit container, a closure therefor, a coin container arranged and adapted to be associated therewith in superimposed relation, whereby said coin container simulates and forms a cover for said razor outfit container, the coin container being provided in its bottom with an opening and a closure therefor, whereby said closure will be hidden from view when the two containers are in associated relation.



1,639,510. EXTENSION TABLE. RICHARD KRÜGER, Nienburg-on-the-Saale, Germany. Filed Apr. 22, 1926, Serial No. 103,698, and in Germany Feb. 9, 1924. 3 Claims. (Cl. 45—118.)

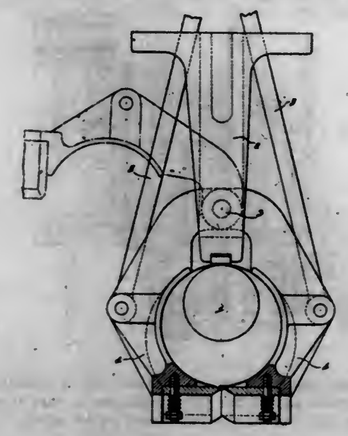
1. Extension-table with two extension-leaves on each side of the table, both said extension-leaves being hingedly connected with one another, and with wedge-shaped extension-bars for said leaves, auxiliary extension-bars for the outer leaves, said auxiliary bars being slidably arranged in grooves of said wedge-shaped extension-bars and being horizontally guided therein, revoluble arms arranged on the table frame beneath said wedge-shaped



extension-bars, and means arranged on the lower surface of said wedge-shaped bars for engaging and turning said revoluble arms.

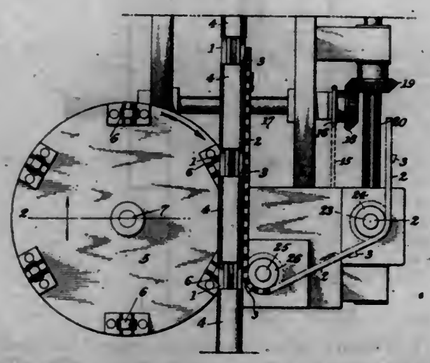
1,639,511. LOCK NUT. GEORGE LAFEVER, Ridgefield, Wash., assignor to American Lock Nut Company, Longview, Wash. Filed Oct. 12, 1925. Serial No. 62,008. 7 Claims. (Cl. 151—1.)

1. The combination with a bolt and a nut of a split ductile ring engaging the bolt and the nut, in which the nut has a counterbored undercut and the space between the ends of the ring is such that upon application of the nut the metal of the ring will flow and will engage the roots of the bolt threads before closing upon itself.



1,639,512. SYSTEM OF HANDLING CAN BODIES. PAUL H. LANGE, Bridgeport, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Jan. 17, 1925. Serial No. 2,989. 10 Claims. (Cl. 198—19.)

1. A system of handling bodies including: two heading machines, a main body-feeding device to advance a procession of bodies, two auxiliary body-feeding devices arranged in parallel and each including one of the heading machines, a distributing device to separate the procession of bodies and to feed them to the auxiliary body-feeding devices, and a by-pass associated with each auxiliary body-feeding device through which excess bodies will be discharged by the distributing device in case of interruption in the normal operation of an auxiliary feeding device.

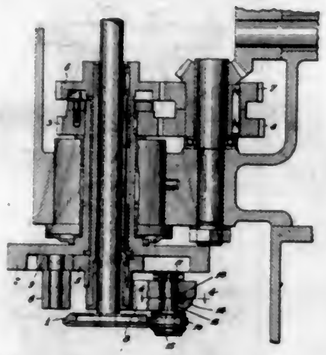


1,639,513. BODY-FORMING MECHANISM. PAUL H. LANGE, Bridgeport, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Oct. 9, 1925. Serial No. 61,444. 9 Claims. (Cl. 113—8.)

1. Body-forming mechanism including: a horn, body-forming members to fold a blank around the horn, a clamping member above the horn and intermediate the body-forming members to engage a blank on the horn before it is acted upon by said body-forming members, spring means for normally urging said clamping member

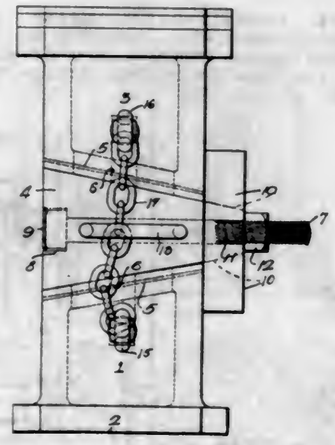
away from the horn, and timed mechanism to overcome the action of the spring means to thereby bring the clamping member toward the horn.

1,639,514. HORN-SUPPORTING MEANS. PAUL H. LANGE, Bridgeport, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Oct. 20, 1925. Serial No. 63,801. 1 Claim. (Cl. 113—115.)



The combination with a horn, of means for supporting the free end thereof including: a rotatable member mounted on a vertical axis and extending part way beneath the horn, horn-engaging members in spaced relation on said rotatable member to successively engage and support the horn, and a stationary member to support the rotatable member at the point where the latter passes beneath the horn.

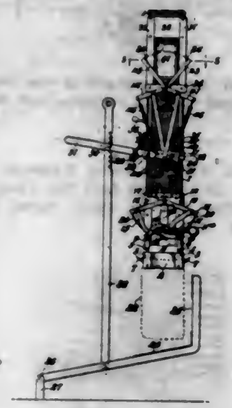
1,639,515. SEAMING MECHANISM. PAUL H. LANGE, Bridgeport, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Apr. 23, 1926. Serial No. 104,186. 4 Claims. (Cl. 113—19.)



1. Seaming mechanism including: a head, a bell crank, constituting a seaming tool carrier, pivoted intermediate its ends on said head, means for supporting said bell crank on said head consisting of a dependent boss at the

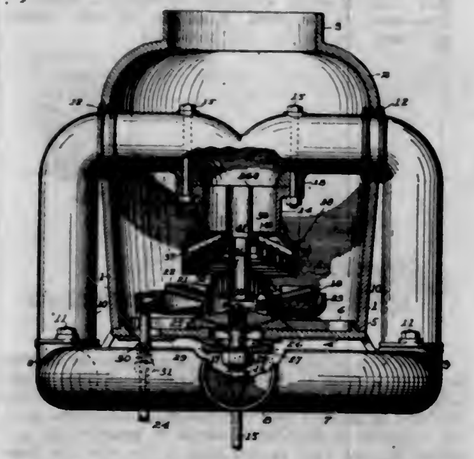
periphery of the head, a cover plate carried by the boss, the bell crank being held between the head and the cover plate, and a pivot passing through the cover plate, bell

crank and head, a cam roll at one end a seaming tool at the other end of the bell crank, and a cam to engage the cam roll to turn the bell crank on its pivot.



1,639,516. SHORING DEVICE. ERNEST J. LANGHAM, Johnstown, Pa. Filed May 12, 1925. Serial No. 29,812. 4 Claims. (Cl. 254—100.)

1. A shoring device comprising upper and lower sections having oppositely inclined adjacent ends, a substantially wedge-shaped intermediate element adapted for insertion between the upper and lower sections and to form therewith a rigid post, and means including a bolt extending through said intermediate section and supporting a member at the narrow edge of the latter adapted to be passed between the upper and lower sections when in one position and when turned at right angles thereto to overlap the said upper and lower sections for detachably retaining the intermediate section in position between the said upper and lower sections.

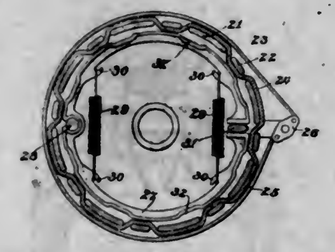


1,639,517. BAG-FILLING DEVICE. PETER LASSEN, Roanoke, Tex. Filed Aug. 16, 1926. Serial No. 129,547. 15 Claims. (Cl. 226—58.)

1. In a bag filling device, a chute adapted to carry falling grain or the like, an automatically operated upper valve adapted to cut off the supply, a lower valve adapted to confine an exact bagful between the same and the upper valve, bag holders mounted at the lower end of the chute, a hand lever connected to simultaneously close the lower valve and release the filled bag from the holders, depressible means for catching the filled bag to

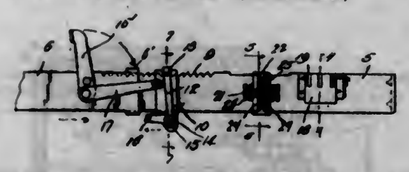
be actuated thereby, and means connecting the bag-catching means with the upper valve to open the latter and allow a bag full of grain or the like to fall on the closed lower valve.

1,639,518. BURNER. SHERMAN G. LONG, Peoria, Ill. Filed July 30, 1925. Serial No. 47,008. 6 Claims. (Cl. 158—66.)



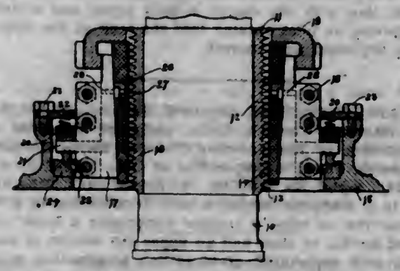
1. In a burner, the combination of a burner base, a fuel delivery passage thereto, a cap portion mounted above the base portion, means for delivering air downwardly to the cap portion, and a plurality of concentric skirts depending from the lower face of the cap portion for distributing air downwardly to promote combustion of fuel.

1,639,519. BRAKE DRUM AND LINING. ALBERT LONSON, Ulen, Minn. Filed Aug. 13, 1925. Serial No. 50,049. 5 Claims. (Cl. 188—218.)



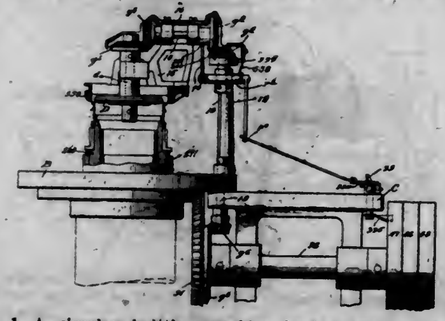
1. A brake for motor vehicles comprising, in combination, a substantially cylindrical drum presenting a series of slots, a relatively wide strip of brake lining threaded

through said slots having alternating service brake and emergency brake portions on the outer and inner peripheries thereof and an emergency brake shoe having de-



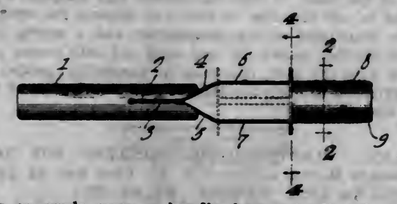
pressions therein to receive the inwardly projecting portions of the lining and tending to lock the drum positively against movement.

1,639,520. SHADE AND CURTAIN HANGER. PERRY O. LOWERS, Fredonia, Kans. Filed Aug. 23, 1926. Serial No. 130,951. 5 Claims. (Cl. 156—23.)



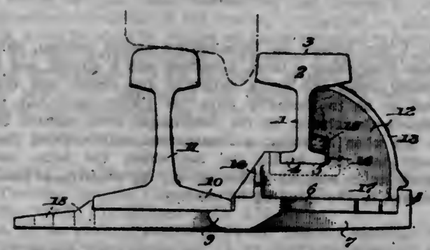
1. In a combined shade and curtain hanger of the class described, a pair of bars slidably interconnected, means at the outer ends of the bars for biting engagement with the sides of a window frame, means whereby the bars may be initially loosely secured in predetermined adjusted relation, said means comprising a strap member slidable along one of the bars and adapted for locking engagement on the bar in any adjusted position, additional means for drawing the bars inwardly to a predetermined degree so that the outer ends of the bars will bite into the sides of the window frame, and shade brackets arranged on the bars.

1,639,521. METALLIC PACKING. JOHN A. MACMURCHY, Ridley Park, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 24, 1921. Serial No. 439,630. 7 Claims. (Cl. 286—9.)



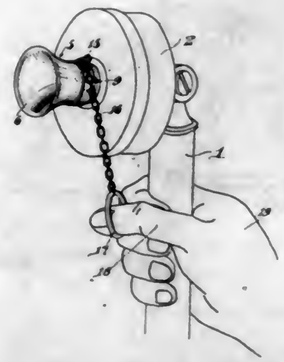
1. In combination with a rotor shaft, a corrugated sleeve on the shaft, a wedge shaped metallic packing having an inner cylindrical surface in line contact with the apices of the corrugations, and a follower to increase the contact between the corrugations and the inner cylindrical surface of the sleeve packing.

1,639,522. SAFETY DEVICE FOR KNITTING MACHINES. CLINT MADARIS, Chattanooga, Tenn., assignor to Scott & Williams, Incorporated, New York, N. Y., a Corporation of Massachusetts. Filed Nov. 30, 1926. Serial No. 151,746. 5 Claims. (Cl. 66—157.)



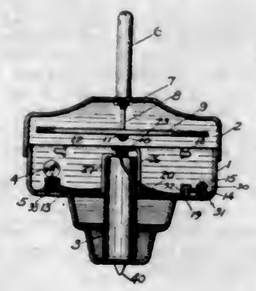
1. A circular knitting machine having two carriers each carrying knitting elements and gearing for driving one carrier capable of being disconnected, in combination with means adapted to stop the machine when said gearing is not properly connected.

1,639,523. APPLE AND PEAR CORER. CARRIE A. MAILE, Tulsa, Okla. Filed Mar. 27, 1925. Serial No. 18,830. 1 Claim. (Cl. 146—53.)



In an apple corer, a handle, bars extending from the handle, a cylindrical cutting member mounted at the outer ends of the bars, an oblong plate having cut out portions adapted to accommodate the bars and permit the plate to move over the bars, a rod extending from the central portion of the plate, a plunger mounted at the outer end of the rod and adapted to move through the cylindrical cutting member to force a core from the tubular cutting member, said plate having its ends extending beyond the bars to provide finger pieces, said cylindrical cutting member having an internal triangular rib extending throughout the length thereof, and said plunger having a cut out portion to accommodate the rib.

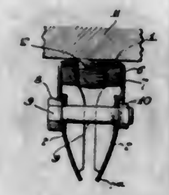
1,639,524. GUARD-RAIL FASTENER. THOMAS MANEY, Louisville, Ky. Filed Oct. 9, 1926. Serial No. 140,592. 10 Claims. (Cl. 238—20.)



7. The combination of a guard-rail, a chair for bracing said guard-rail and having a space between it and a portion of the guard-rail, and a resilient key inserted in said space for exerting tension on the guard-rail and chair.

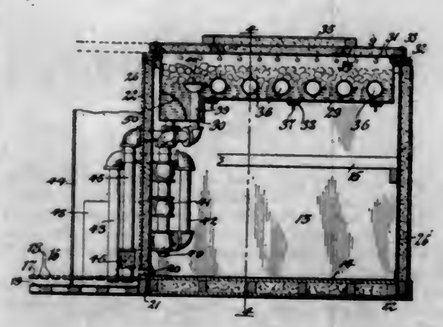
1,639,525. TELEPHONE ATTACHMENT. WINFIELD S. MARR, Council Bluffs, Iowa. Filed Jan. 31, 1927. Serial No. 164,868. 11 Claims. (Cl. 179—188.)

1. An attachment for telephone transmitters for the purpose set forth comprising a mouthpiece for connection to the transmitter, a longitudinally shiftable shell mounted within and supported solely by the rear portion of the body of said mouthpiece and adapted when shifted in one direction to abut and prevent the activity of the diaphragm of the transmitter, and a spring controlled shifting means for said shell and said means connected with the shell, operating in, carried by, guided by and extended through the body of said mouth-piece at the rear thereof.



1,639,526. ELECTRICAL ILLUMINATED TOY TOP. GUSTAVE MAYER, Brooklyn, N. Y. Filed Feb. 12, 1925. Serial No. 8,820. 2 Claims. (Cl. 46—32.)

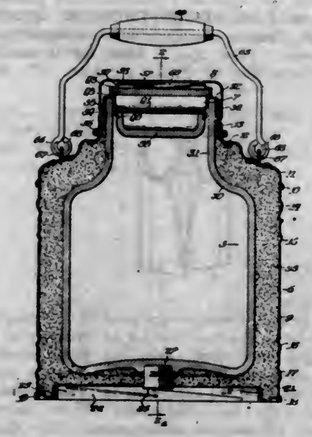
1. A top having an illuminating means therein, said means comprising a lamp, a battery and a circuit, and a movable make and break device in the circuit and disposed so as to normally have the circuit open but to complete the circuit by the centrifugal force created by the top when spinning, a transparent multi-colored disc loosely mounted within the top above the lamp and adapted to be rotated within the top by centrifugal force produced in the spinning of the top.



1,639,527. CONDUCTOR SUPPORT. WALTER S. MAYER, Philadelphia, Pa. Filed Apr. 10, 1924. Serial No. 705,574. 4 Claims. (Cl. 191—43.)

1. A supporting device formed of a blank bent to form an end member forming a seat for a stud engaging nut and bowed members extending transversely to said end member and converging to form terminal clamping jaws, and a bolt passing through said bowed members and

having thereon a nut, which, when tightened up, is locked against vibratory rotation by expansion pressure of the bowed members.



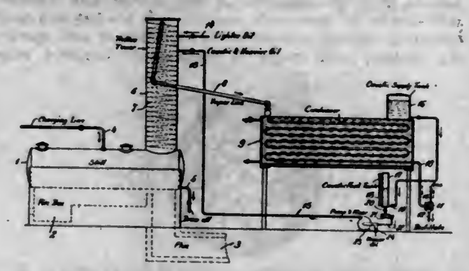
1,639,528. REFRIGERATING APPARATUS. FREDERICK MEYER, Buffalo, N. Y., assignor to Meyer Body Co. Inc., Buffalo, N. Y., a Corporation of New York. Filed July 25, 1924. Serial No. 728,127. 1 Claim. (Cl. 62—54.)

A refrigerating apparatus comprising a refrigerating compartment adapted to receive the articles to be cooled, a refrigerating tank arranged in the upper part of said compartment and having an elevated part and a depressed part, said elevated and depressed parts being arranged side by side, a plurality of air pipes arranged within the tank above the elevated part of the same while the space above the depressed part thereof is devoid of such pipes, an overflow pipe having an inlet arranged within the tank and in line with the center of said pipes, and a drain pipe having an inlet opening into the tank at the bottom of the depressed part thereof.

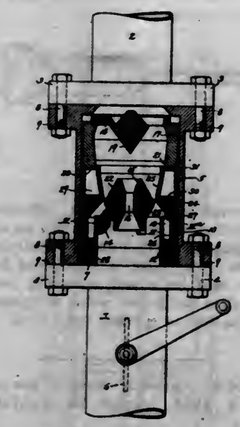
1,639,529. CONTAINER. AURIN E. PAYSON and WILLIAM R. HASTEDT, Norwich, Conn., assignors, by mesne assignments, to The American Thermos Bottle Company, Norwich, Conn., a Corporation of Ohio. Filed Mar. 4, 1924. Serial No. 696,740. 6 Claims. (Cl. 215—12.)

1. In a container having a neck terminating in a flat annular rim or edge, a stopper comprising a lower cup-shaped section of glass and an upper cap section of sheet metal, said cup-shaped glass section terminating at its outer open end in an annular rib, said cap section being bent inwardly into locking engagement with said rib, whereby the two sections are rigidly united to form a closed hollow stopper, an outwardly projecting annular shoulder on said cap, said shoulder having a flat under-surface arranged to rest on the upper rim or edge of the container, the top of said metal section forming the entire top of the stopper, and a cap adapted to be screwed down over the neck of the container and having means to engage the metal top of said stopper along a circular

contact line in close proximity to said annular shoulder, whereby said annular shoulder is forced down over the upper rim of the container to form a sealed joint.



1,639,530. STAPLE. EDWARD B. PAYSON, Spooner, Wis., assignor of one-half to Marvin T. Winston, Spooner, Wis. Reflled for abandoned application Serial No. 271,640, filed Jan. 17, 1919. This application filed Oct. 21, 1926. Serial No. 143,307. 1 Claim. (Cl. 85—49.)

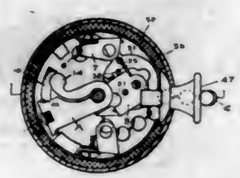


A staple having a pair of spaced legs, a head from which said legs depend, said legs and head at their junction being connected by a substantially arcuate wall to constitute a wedge, said legs having side walls diverging from said head and at their penetrating ends being beveled from opposite sides, and said head being wedge shaped and narrow adjacent said arcuate wall.

1,639,531. REFINING OF HYDROCARBON OILS. ERNEST B. PHILLIPS, East Chicago, and JAMES G. STAFFORD, Whiting, Ind., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 22, 1924. Serial No. 745,135. 11 Claims. (Cl. 196—35.)

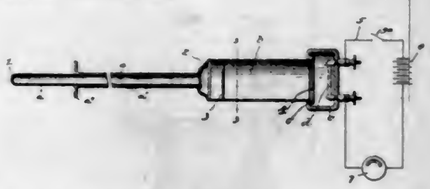
11. An improved method of treating hydrocarbon oils which comprises subjecting the oil to refining treatment with sulphuric acid, subjecting a body of oil to distillation in a still provided with a reflux tower, and introducing the acid treated oil and an alkali into the upper end of the tower in direct contact with the vapors therein.

1,639,532. FLUID-CONTROL MEANS FOR MOTORS. FRANK POKORNY, Mamaroneck, N. Y., assignor, by direct and mesne assignments, of one-half to Francis W. Keegan, New York, N. Y. Original application filed May 1, 1920, Serial No. 378,190. Divided and this application filed Sept. 18, 1924. Serial No. 738,398. 1 Claim. (Cl. 137—153.)



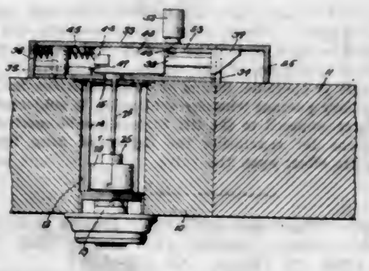
In a fluid supply means for internal combustion engines, in combination, a control valve, means whereby said valve is caused to open under the suction pull created by the aspiratory operation of the engine, a chamber in which said valve is operable, means of communication including an auxiliary passage whereby said valve is subjected to a drag force, opposed to the lift force, by said suction pull, and means for regulating the degree of drag force to modify its effect upon the valve.

1,639,533. ELECTRIC SWITCH. ARTHUR RYAN RICE, Toronto, Ontario, Canada. Filed Jan. 28, 1925. Serial No. 5,326. 11 Claims. (Cl. 173—354.)



1. In an electric switch, a switch element movable on a horizontal plane from one to its alternate position, an operating element reciprocable on a horizontal plane from one to its alternate position and comprising a body portion and spaced superposed arms rotatably mounted on a vertical bearing fixedly mounted in said switch, a bracket pivoted in said arms adjacent to said bearing

and extending therebeyond, a compression spring connecting said switch element and the outer end of said bracket, a latch plate pivotally supported by an extension from the outer end of said bracket and provided with means to operatively connect said bracket and said operating element whereby on the rotation of said operating element said spring is compressed, insulated stop

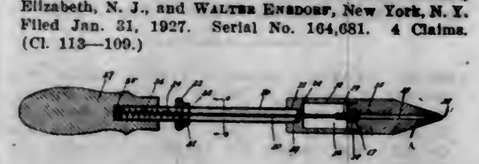


members carried by said switch in opposed relation to each other, a finger carried by said latch plate and engaging alternate stops in the movement of the switch, means whereby on the engagement of said finger with the adjacent stop the pressure of said spring moves said latch plate and said operating element to their alternate positions in operative engagement with one another, and a pull member carried by said operating element.

1,639,534. PYROMETER. SAMUEL RUBEN, New York, N. Y. Filed May 28, 1921. Serial No. 473,458. 4 Claims. (Cl. 73—32.)

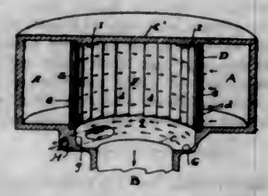
1. In a pyrometer, a body of refractory material adapted to emit light rays when heated, an electric meter, a circuit including said meter and a substance whose conductivity is affected by light, a light-proof housing closed at one end by said body and enclosing said substance, and a colored glass partition, which is opaque to radiant heat but transparent to certain light rays, in said housing.

1,639,535. LOCK. ANGELO RUSSO, Burlington, Mass. Filed June 4, 1926. Serial No. 113,720. 1 Claim. (Cl. 70—46.)



In combination with a cylinder lock; wherein the lock is provided with a key operated rotatable part; a cylindrical extension extending from the lock, a plate having pins projecting therefrom into recesses provided in said rotatable part, and provided with a stem, a roll back stem having a head rotatable in the cylindrical extension, means for holding the head in the cylindrical extension, said head being provided with a slot for receiving the stem of the plate, and a spring in the cylindrical extension impinged against the plate and against the head.

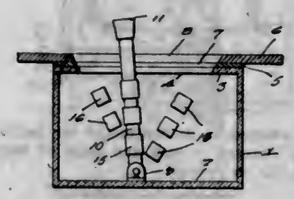
1,639,536. SELF-PROPELLED VEHICLE. LÉON SAIVES, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed Apr. 1, 1924, Serial No. 703,888, and in France May 19, 1923. 1 Claim. (Cl. 305—8.)



In a self propelled vehicle equipped with a parallel axle double rear drive, the combination of two sets of driving tires arranged in tandem, each set being made up of a plurality of laterally adjacent tires, and a removable endless belt between and supported by the adjacent side of each set of tires, and frictionally driven thereby, the outer surface of the belt being substantially flush with the tire treads.

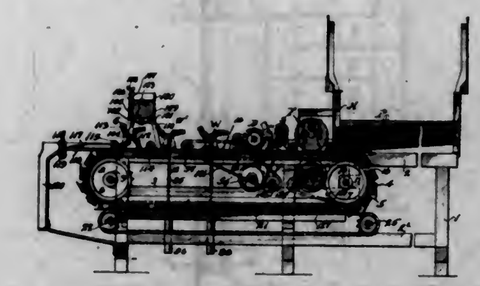
1,639,537. SOLDERING IRON. JOHANNES SANDBERG, Elizabeth, N. J., and WALTER ENSDORF, New York, N. Y. Filed Jan. 31, 1927. Serial No. 164,681. 4 Claims. (Cl. 113—109.)

1. In a soldering iron, a soldering head having a channel passing therethrough, a reservoir attached to said head, a stem on said reservoir, a plunger slidable in said stem and reservoir, a detachable valve on said plunger, a detachable valve seat mounted in said head at the reservoir end of said channel cooperating with said valve to open or close said channel, and means on said stem for reciprocating said plunger.



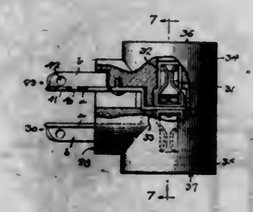
1,639,538. CENTRIFUGAL APPARATUS. JOSEPH MARTIN SCHUTZ, Chicago, Ill., assignor, by mesne assignments, to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Original application filed Feb. 5, 1924, Serial No. 690,861, Patent No. 1,539,435. Divided and this application filed Mar. 3, 1925. Serial No. 12,892. 6 Claims. (Cl. 183—81.)

1. The herein described improvement for the centrifugal purification of fluid without resort to rotating parts, comprising a circular collecting bowl having a substantially flat bottom provided with a heavy substance outlet at its periphery and having a large central outlet for the purified fluid, in combination with a perpendicular



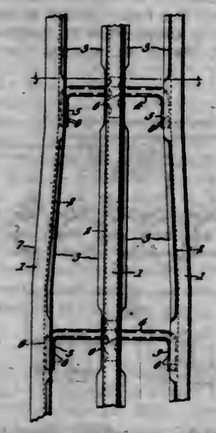
closure axially opposed to said bowl, and a circumferential series of operatively overlapping tangential fluid admission tuyères between said closure and said bowl, serving to whirlingly direct the fluid into said bowl and into said central outlet whereby the heavier substances are collected and discharged through the peripheral outlet while the lighter or purified fluid is whirlingly discharged along the axis of the bowl and outlet and outward through the latter.

1,639,539. CONTROL SWITCH FOR THE A BATTERIES OF RADIO RECEIVING SETS. LEMUEL H. SMILEY, Knoxville, Tenn. Filed Feb. 25, 1925. Serial No. 11,508. 3 Claims. (Cl. 200—6.)



1. A switch apparatus of the class described including a casing having its upper wall provided with a slot, an arm pivoted at its end to the lower wall so as to extend through the slot, a series of contacts on each side wall of the casing alined between one end of the slot and the fulcrum of the arm, a second series of contacts on each side alined with the other end of the slot and fulcrum of the arm, and spaced contacts on the arm adapted to be engaged between either of the aforementioned series of contacts.

1,639,540. PAN-TREATING APPARATUS. GEORGE SMITH, Richmond, Va. Original application filed Apr. 17, 1925, Serial No. 23,980. Divided and this application filed June 11, 1926. Serial No. 115,403. 19 Claims. (Cl. 91—38.)

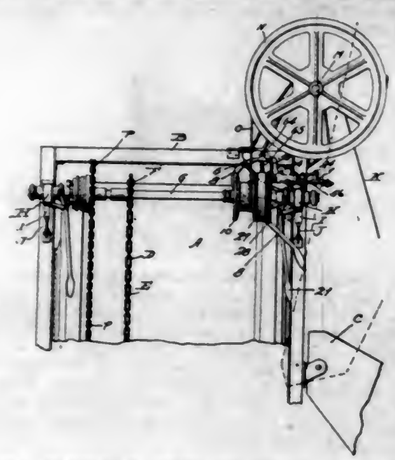


1. A pan treating mechanism including a body rotatable upon a horizontal axis and having a fixed support radial thereto, a contact member pivoted upon said support to swing into position at an angle thereto when engaging a cooperating surface, and a wiper carried by said member.

1,639,541. ELECTRIC FITTING. WILLIAM A. STACEY, Chicago, Ill., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 9, 1924. Serial No. 718,907. 5 Claims. (Cl. 173—330.)

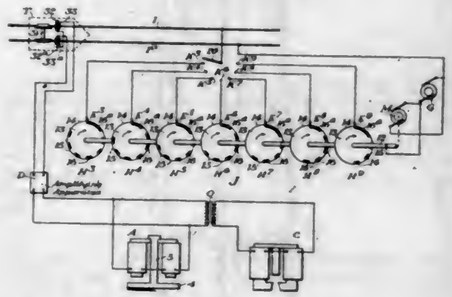
5. A plug fitting having an insulating body recessed to form a pair of inner chambers, blades T-shaped in cross section projecting from one face of the body and extending respectively into the chambers thereof, together with receptacle contacts associated with the portions of said contacts extended into the chambers of the insulating body, the latter being apertured on opposite faces at right angles to the face from which the blades project, to admit the blades of cooperating attachment plugs to the contacts in said chambers.

1,639,542. POLE OR POST. ARMEN H. TASHJIAN, Cleveland, Ohio. Filed Dec. 31, 1925. Serial No. 78,582. 2 Claims. (Cl. 189—25.)



1. A pole or post, or the like, comprising a plurality of channeled longitudinal members having lips flanking their channels, and transverse members having arms for cooperation with the longitudinal members, said arms adapted to be positioned within said channels and provided with knobs for engagement with said lips, and said lips adapted to be clinched upon said arms, said clinching imbedding said knobs in said lips to form a rigid connection between the longitudinal and transverse members.

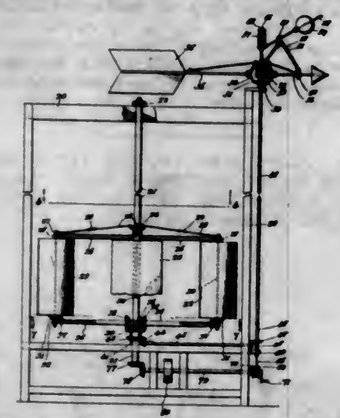
1,639,543. CLUTCH AND BRAKE CONTROL MECHANISM. GEORGE KENNETH VIALL, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1925. Serial No. 78,212. 12 Claims. (Cl. 83—78.)



1. The combination of a power shaft, supports therefor adjustable to permit the position of the shaft to be changed, gearing taking power from the shaft, in-

cluding a clutch and a brake mechanism, and means for operating the clutch and the brake supported by the adjustable supports of the shaft, whereby adjustment of

the said supports to change the position of the shaft does not affect the relations of the said operating devices to the parts they control.

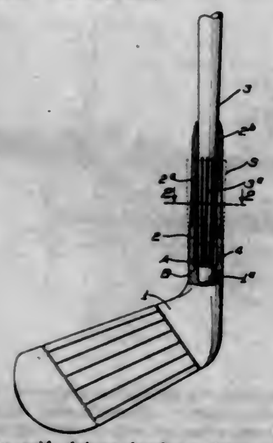


1,639,544. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 14, 1926. Serial No. 115,831. 13 Claims. (Cl. 246—63.)

1. Railway traffic controlling apparatus comprising means for supplying the trackway with energy in the form of coding impulses separated by time intervals during which the trackway is supplied with holding impulses, train carried means responsive to the lengths of said coding impulses, and other means on the train responsive to said holding impulses for controlling said train carried means.

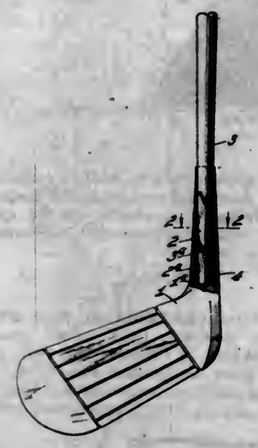
1,639,545. AUTOMATIC CONTROL FOR WINDMILLS. LONNIE C. WEAVER, Deming, N. Mex. Filed Nov. 22, 1926. Serial No. 150,011. 4 Claims. (Cl. 170—75.)

1. In a windmill, the combination of a revoluble member, a plurality of vanes carried by the revoluble member, a normally stationary master element connected to the vanes for causing the same to turn in a definite angular relation with respect to one another, a shaft geared to said master element, an arm fixed to the shaft, a second arm pivoted to the shaft, means for normally swinging the free ends of said arms apart, and blades carried by said arms for impact with air currents to counter-balance the arms and move said master element for positioning the vanes for impact with air currents,



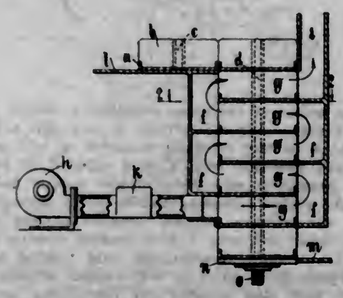
said arms adapted to be contracted for further shifting said master element to vary the angle of impact of the vanes with the air current.

1,639,546. DIAPHRAGM FOR TELEPHONE RECEIVERS. CHARLES G. WIELAND, New York, N. Y. Filed Apr. 4, 1924. Serial No. 704,131. 1 Claim. (Cl. 179—181.)



In combination with the horseshoe magnets of telephone receivers, a diaphragm comprising a one-piece thin metal disk, a relatively thick mass of magnetic material formed at the center of said disk opposite the poles of the magnet, to present a magnetic field of increased strength, and a relatively thin marginal part on said disk formed by the rapid decrease in thickness from the thick mass at its central portion towards the disk edges and terminating in a substantial knife edge for preserving the flexibility of the diaphragm.

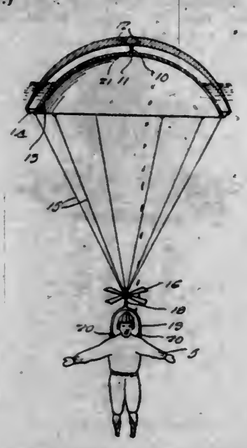
1,639,547. GOLF CLUB. GEORGE E. BARNHART, Pasadena, Calif. Filed Oct. 14, 1926. Serial No. 141,644. 16 Claims. (Cl. 273—80.)



11. In a golf club, a head member provided with a socket and with a shaft, the latter being secured at its one end within the inner portion of the socket, the portion of the shaft near the outer end of said socket being freely movable within and relative to and about the outer end portion of said socket to prevent buckling of said shaft at the outer end of the socket.

1,639,548. GOLF CLUB. GEORGE E. BARNHART, Pasadena, Calif. Filed Nov. 23, 1926. Serial No. 150,222. 14 Claims. (Cl. 273—80.)

1. A golf club having a shaft provided with spiral slots, and means covering and sealing the whole of the slotted portion of the shaft.

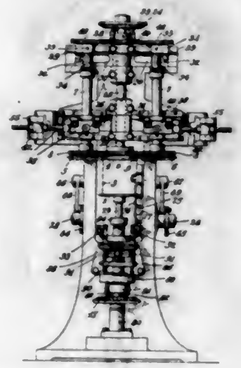


1,639,549. EGG-PRESERVATION PROCESS AND PRODUCT THEREOF. ARCHIBALD JOHN BELLAMY, Wolverhampton, England, assignor, by mesne assignments, to Egg Patents Limited, London, England, a Corporation of Great Britain and Ireland. Filed Sept. 2, 1925, Serial No. 54,149, and in Great Britain May 13, 1925. 4 Claims. (Cl. 99—5.)

1. A process for the preservation of eggs consisting of removing the shells and mixing the remainder with from 2½% to 15% of glycerine and evaporating the mixture until the residue contains not more than 35% (by weight) of moisture, substantially as described.

4. A product comprising egg material associated with glycerine and dehydrated to at least such degree as to be concentrated to a pasty mass, and characterized by the fact that the glycerine is mixed, in proportions of from 2½% to 15%, with the egg material prior to dehydration.

1,639,550. TOY. FREDERICK C. BENDER, Mineola, N. Y. Filed Jan. 25, 1926. Serial No. 83,648. 1 Claim. (Cl. 46—37.)

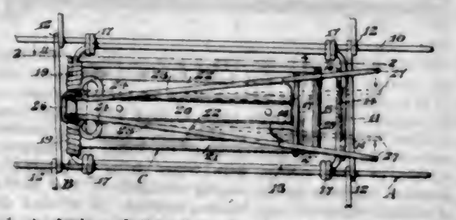


In a toy of the class described, a semi-spherical tapered plate of buoyant material with its convex side disposed upwardly and provided with openings, a semi-spherical shaped plate of non-buoyant material, smaller than the first plate, disposed within the first plate, with its convex side upwardly, flexible means at the edges of the plate to limit the separation of one from the other, a pin depending downwardly from the center of the buoyant plate and piercing an opening in the center of the non-buoyant plate, said pin having a valve head at its bottom end for closing the opening in the non-buoyant plate, a gas producing means disposed beneath the plate, and means for suspending said gas producing means from the non-buoyant plate whereby when the toy is submerged in a body of water, the buoyant plate will maintain the valve closed so that gas escaping from the gas producing means will be trapped, within the non-buoyant plate and when sufficient gas has collected in the non-buoyant plate to cause the same to rise to expose a portion of the buoyant plate above the surface of the water said buoyant plate will remain stationary while the non-buoyant plate continues to rise so that gas may escape through the opening and out to the atmosphere through openings provided in the buoyant plate.

1,639,551. CURTAIN ROD. GEORGE A. BOOTH, Holyoke, Mass., assignor of one-half to Elmer J. Johnson, Holyoke, Mass. Filed July 29, 1926. Serial No. 125,770. 2 Claims. (Cl. 156—19.)

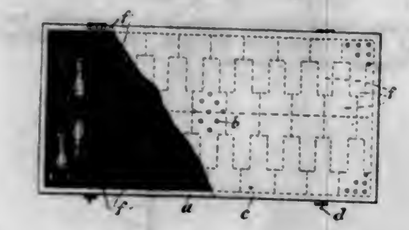
1. A curtain rod comprising a pair of tubular sections, one having its inner end extending into the inner end of the other, each of said sections of uniform diameter throughout, said sections open at each end, a retaining element for each of said sections, each retaining element mounted on and projecting from the outer end terminal portion of that section with which it is associated, a pressure exerting spring loosely mounted in the section of smaller diameter and bearing against one of said elements intermediate the ends thereof, and a plurality of spring tensioning rods of different lengths, each having the periphery thereof plane throughout, said rods selectively mounted in both of said sections, bearing against the other of said elements and against said spring for limiting the expansion of the latter.

1,639,552. SEAMING MACHINE. JULIUS BRENZINGER, Fairfield, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed Jan. 27, 1925. Serial No. 5,018. 16 Claims. (Cl. 113—24.)



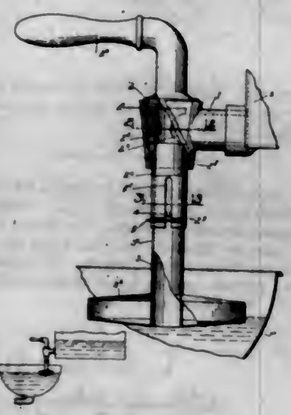
1. A seaming tool having a certain stroke toward and away from the work, and actuating means to cause said tool to complete its stroke toward the work substantially at the beginning of its seaming operation.

1,639,553. SUPERPLANE. JOHN ENLOE BROYLES, Russellville, Mo., assignor of one-half to Henry Emmet Robertson and Theodore Henry Weller, Russellville, Mo. Filed Mar. 25, 1926. Serial No. 97,277. 2 Claims. (Cl. 244—14.)



1. A super-plane including, in combination, a fuselage having a nose provided with upwardly and rearwardly inclined top merging into a downward and rearward inclination, and a bottom inclined downwardly and rearwardly and merging into a concavity, supports projecting from the nose and sides of the fuselage, and propeller motor frames mounting on the supports and having vertical and horizontal axes.

1,639,554. FOX FEED TROUGH. CEPHAS C. BUCK, Sandpoint, Idaho. Filed Oct. 23, 1926. Serial No. 143,671. 7 Claims. (Cl. 119—63.)

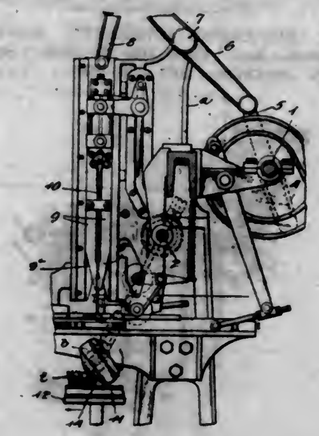


1. A device of the character described, comprising a frame adapted to be mounted in an opening of an enclosure, a combined supporting and closure element swingingly connected with the frame, a container removably carried by said element, and means on the element for locking the same closed relative to the frame.

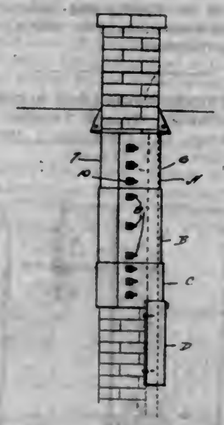
1,639,555. SHIPPING CRATE. HENRY ALLAN CLARK, Old Harry, Magdalen Islands, Quebec, Canada. Filed Aug. 25, 1926, Serial No. 131,526, and in Canada June 16, 1925. 10 Claims. (Cl. 119—2.)

1. A shipping crate for live lobsters comprising a casing and a tray subdivided into parallel T-shaped compartments matching so as to employ all the space in the tray with the exception of two half compartment spaces at either end of the tray.

1,639,556. FLOAT-CONTROLLED FAUCET. ALBERT B. CRAVATH, Holtville, Calif. Filed June 2, 1925. Serial No. 34,330. 4 Claims. (Cl. 137—104.)



1. In a means of the class described, a hollow faucet member having a tapered portion at one end, a hollow tapered plug member rotatably mounted in said tapered portion and provided with a port adapted to register with the passage in said hollow faucet member and having a right angled extending handle on its normally upper end and with a tubular extended portion on its normally lower end, and a float member provided with a portion extending therethrough, said tubular portion being reciprocally mounted in said tubular extended portion and said plug member for controlling the flow of liquid therefrom.



1,639,557. BRUSH-MAKING MACHINE. CHARLES E. FISHER, Baltimore, Md., assignor, by mesne assignments, to The Fisher Automatic Brush Machine Company, Inc., Baltimore, Md., a Corporation of Maryland. Filed Jan. 11, 1923. Serial No. 612,084. 5 Claims. (Cl. 300—8.)

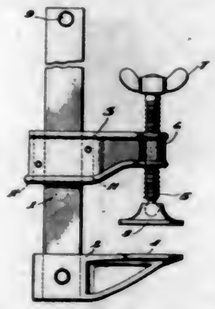
1. In a brush-making machine, the combination with reciprocating tuft-delivering devices, of a tuft guide adapted to receive said devices and comprising two

parallel guide plates connected at their lower forward edges by a bridge-piece, said plates extending above the bridge-piece, the rear edges of said plates and their forward edges above said bridge-piece being unconnected, and means for intermittently rotating said guide in time with the movements of said devices.

1,639,558. HOUSE-FLUE JACKET. WILLIAM E. FROBISH, Columbus, Kans. Filed June 28, 1926. Serial No. 119,082. 1 Claim. (Cl. 72—94.)

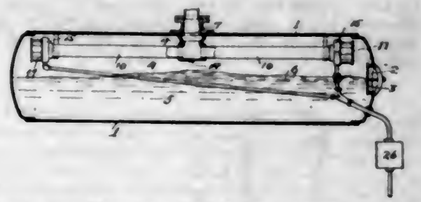
In a dwelling flue jacket of the class described, a plurality of sheet metal units entirely surrounding a completed flue within the attic of the dwelling, the units being separate from the flue, each unit comprising a pair of complementary half sections adjustably secured together, means for interconnecting the units in overlapping relation, the upper ends of the sides of the uppermost units extending to the roof of the dwelling and adapted to be bent back to provide attaching flanges adapted to be secured to the roof, and a metallic plate secured at its upper edge to the lower portion of the lowermost unit, the side edge portions of the plate being bent laterally for disposition between the dwelling studdings, said laterally disposed portions being bent outwardly to provide wings adapted to be attached to the studdings.

1,639,559. FLY SWATTER. MILTON W. GATCH, Baltimore, Md. Filed Apr. 8, 1927. Serial No. 182,101. 1 Claim. (Cl. 43—137.)



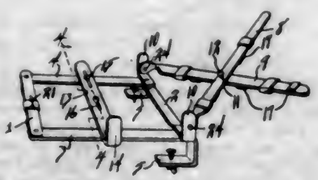
A fly swatter comprising an elongated handle, relatively wide at one and and tapering toward the other end, said handle having a perforation extending transversely through its wider portion and having grooves on its opposite edges extending from said perforation to the end of its tapered portion, a shank comprising a wire doubled upon itself, forming two strands, the central portion of said wire extending through said perforation and said strands lying in said grooves, said strands being secured together adjacent the handle to hold the wires in the grooves, and a flexible sheet secured to the ends of said strands.

1,639,560. HUNTING BOOT. WILLIAM J. HAMILTON, Kenmore, N. Y., assignor of one-half to Paul C. Dunning, Buffalo, N. Y. Filed Feb. 2, 1927. Serial No. 165,436. 11 Claims. (Cl. 36—50.)



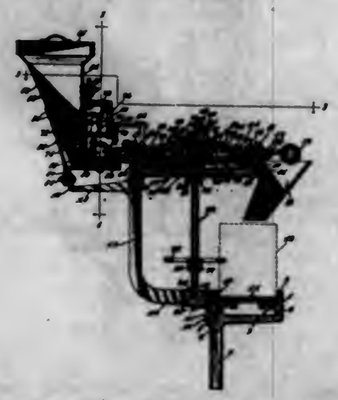
10. A method of constructing a hunting boot having a foot part, an upper including a pair of opposed fastening edges, and a tongue, which consists in securing the side edges of said tongue to said edges of said upper, securing the lower portions of said edges together in front of the lower portion of said tongue, and finally securing the lower edge portion of said upper, said secured portions of said edges and said lower portion of said tongue to the top edge of said foot part by continuous rows of stitching passing around said boot.

1,639,561. CLAMP. JOHN M. HARGRAVE, Cincinnati, Ohio. Filed Aug. 9, 1926. Serial No. 128,302. 5 Claims. (Cl. 144—308.)



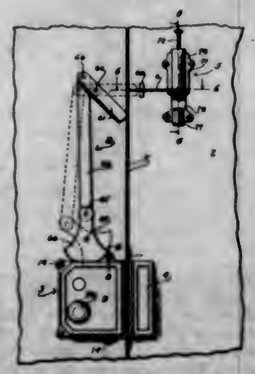
1. In a clamp, a longitudinal bar, an adjustable work engaging jaw having an aperture therein through which said bar extends, mounting blocks secured in said aperture at opposite edges of said bar, toothed elements and springs mounted in recesses formed by grooves in said blocks and the side walls of the jaw, the toothed elements diagonally located so as to grip the bar when the jaw is canted due to pressure against the work and the springs located opposite each toothed member so as to normally maintain the teeth against the bar when the jaw is in set position and not engaging the work.

1,639,562. CENTRIFUGAL FIXTURE. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 28, 1924. Serial No. 752,722. 1 Claim. (Cl. 122—491.)



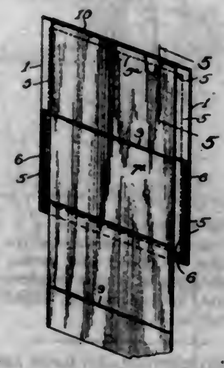
A centrifugal fluid purifying fixture adapted to operate upon its horizontal axis, comprising an annular race member having a tangential drain opening in its bottom and provided with a tangentially opposed peripheral discharge nozzle, in combination with a multiply tuyered ring adapted to whirlingly direct fluid into said race member.

1,639,563. TILTING CARRIER. B D HAYS, Fort Worth, Tex. Filed May 10, 1927. Serial No. 190,224. 5 Claims. (Cl. 224—29.)



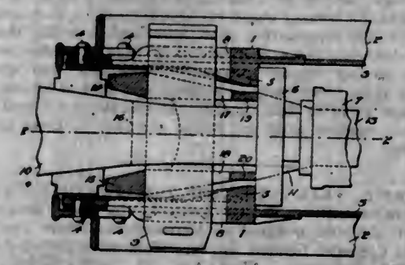
1. A tilting carrier comprising a rigid frame, a tilting frame pivotally connected to one edge of said rigid frame and normally lying thereon; a headed bolt rigid with said tilting frame and depending therefrom, and a locking bar slidably mounted on and connected to said rigid frame and provided with a slot to receive said headed bolt for locking said tilting frame to said rigid frame.

1,639,564. DISPENSING APPARATUS. FRANK HUBER, Middletown, Ind. Filed July 7, 1926. Serial No. 120,992. 15 Claims. (Cl. 226—99.)



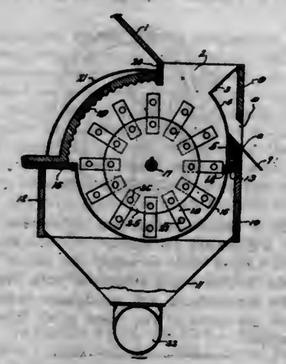
1. A dispensing apparatus comprising a horizontally disposed intermittently operable, revoluble carrier, a combined guide and trip element, a plurality of spaced radially disposed dispensers shiftably connected with and bodily movable with the carrier and travelling on said element, and said element and dispensers having co-acting means acting during the travel of the dispensers for turning each dispenser successively in opposite directions, at spaced intervals, on its longitudinal axis to alternately position it in dipping and dumping position to provide for a successive material take-up and material dumping actions therefor.

1,639,565. COMBINED DOOR-LOCK MECHANISM AND BURGLAR ALARM. GEORGE JAKOPEC and VINCENT SCHWARZ, Chicago, Ill. Filed Apr. 1, 1926. Serial No. 99,144. 5 Claims. (Cl. 116—8.)



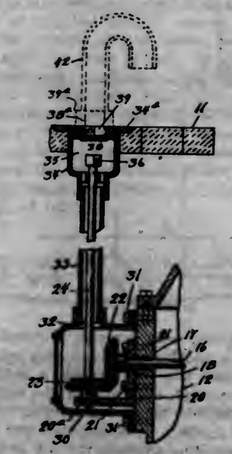
4. In a combined door lock and burglar alarm, a lock mechanism comprising a sliding bolt, a burglar alarm device, mechanism interposed between the alarm device and sliding bolt adapted to be automatically moved to alarm operating position upon locking projection of the bolt, a cam rack forming a part of the operating means for the bolt, the mechanism including a rack segment adapted to be engaged and operated by the cam rack during locking projection of the bolt, a lever pivotally supported on the door and a link connecting the rack segment and lever for moving the lever to operative position relative to the alarm device upon projection of the bolt and operation of the rack segment.

1,639,566. PATENT ENVELOPE. JAMES C. JOHNSON, Sacramento, Calif. Filed Nov. 17, 1926. Serial No. 148,857. 1 Claim. (Cl. 229—92.1.)



In a combined letter sheet and envelope, an envelope of rectangular formation embodying two sections, one foldable upon the other and adhesively secured together adjacent their marginal edges, a weakened line of tearing perforations adjacent and inwardly of the gummed edges, a rectangular letter sheet extended from one end of the envelope and separately foldable therein, said letter sheet being of a diameter less than the distance between the parallel side edge tearing perforations, a line of tearing perforations extending across the letter sheet adjacent its end attached to the envelope and adapted to register with the adjacent end line of tearing perforations in the envelope whereby when the letter sheet is folded within the sealed envelope access to the letter sheet and severance from the envelope is had upon severance of the gummed edge of the envelope on the lines of tearing perforations.

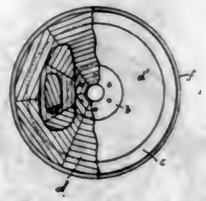
1,639,567. DRAFT RIGGING. BYRON W. KADEL, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Sept. 16, 1925. Serial No. 56,760. 11 Claims. (Cl. 213—56.)



1. The combination with a slotted coupler, of slotted draft lugs connected to the inner faces of the draft sills, a slotted yoke, the slots in said draft lugs being of such length as to limit the travel of the coupler key to less than the travel of the coupler, those portions of said lugs adjacent the rear ends of said slots being materially reinforced by relatively thick metal which is extended for substantially the full width of said lugs to engage the key therealong and reduce the effective beam length thereof, the slot in the coupler normally engaging one edge of the key and spaced from the opposite edge thereof, whereby the coupler and yoke move as a unit in one direction and have relative movement in the opposite direction.

1,639,568. PROCESS AND APPARATUS FOR DELINTING COTTONSEED HULLS. THOMAS J. KIDD, Birmingham, Ala. Filed June 2, 1924. Serial No. 717,224. 35 Claims. (Cl. 19—44.)

1. In a defibrating machine for cotton seed hulls and the like, a defibrating chamber having a hull inlet, a rotor having a multiplicity of fast spinning cutter blades adapted to separate fiber from the hull skins and drive the hulls in a peripheral whirl about said chamber, means to induce a strong air current to traverse the chamber and the whirling mass of hulls, and means to permit the escape of the defibrated hull skins, there being a multiplicity of small outlets for the air with the entrained fiber over which the blades are adapted to drive the larger hulls and skin particles.

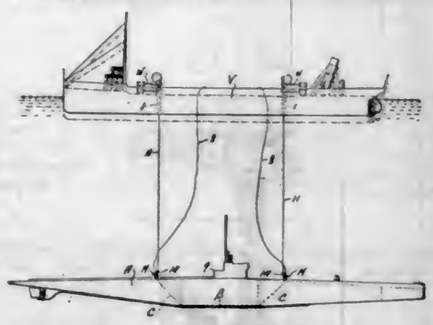


1,639,569. MANHOLE SWITCH. PAUL W. KOCH, Chicago, Ill., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 14, 1924. Serial No. 706,326. 5 Claims. (Cl. 200—153.)

1. The combination of an underground compartment, an electric switch contained in said compartment having an enclosing casing, an operating member extended through said casing and terminated adjacent the surface, a conduit enclosing said operating member and extended from the surface of the switch casing and having a water tight connection with said switch casing,

and a removable closure for the surface-end of said conduit above the end of said operating member, said conduit and switch casing having provision for free gaseous intercommunication.

1,639,570. VEHICLE WHEEL. ARTHUR ALEXANDER DASHWOOD LANG, London, England. Filed Nov. 29, 1924, Serial No. 752,971, and in Great Britain Nov. 30, 1923. 8 Claims. (Cl. 301—6S.)



7. A vehicle wheel comprising a wooden body constituted by a plurality of laminæ or discs each built up of segments placed edge to edge, the joints of the segments in one lamina being staggered with respect to the joints of the segments in any contiguous lamina and the directions of the grain of the wood being different in the several laminæ.

1,639,571. FERMENTATION OF CELLULOSE. HERBERT LANGWELL, Epsom, England. Filed Jan. 7, 1921, Serial No. 435,734, and in Great Britain Jan. 8, 1920. 2 Claims. (Cl. 195—20.)

1. The process of obtaining alcohol which comprises preparing a mash of cellulose-containing material, inoculating said mash with an organism which is adapted to attack cellulose and thereby to produce ethyl alcohol and aliphatic acids, allowing said mash to ferment with aeration and increasing the degree of aeration above that at which mainly aliphatic acids are formed, until mainly ethyl alcohol is produced.

1,639,572. SALVAGING APPARATUS. HENRY LOTZ, Boston, Mass. Filed Nov. 7, 1925. Serial No. 67,663. 2 Claims. (Cl. 114—16.5.)

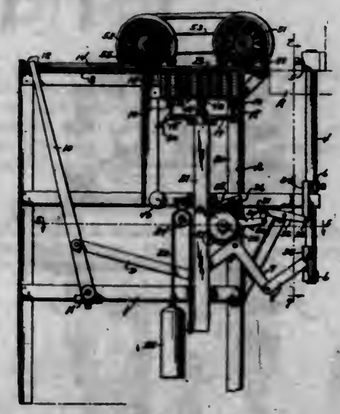
1. In combination with a vessel provided with a deck, a subdeck and a midship structure, said subdeck fore and aft being provided with an opening, a saddle underlying the midship structure, each end of the saddle being provided with a flexible member extending up through an opening in the subdeck, attaching members each comprising a shank extending through the top deck and secured to one of said flexible members at a point between the top deck and the subdeck, said shank extending above the top deck, the portion of the shank above the top deck being provided with a spear head, the apex of which being upwardly disposed, a lead line secured to the apex portion of the spear head, and a buoyant member connected to the lead line.

1,639,573. VEHICLE WHEEL. ANDRÉ JULES MICHELIN, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a Corporation of France. Filed Mar. 4, 1927, Serial No. 172,893, and in France Oct. 18, 1926. 11 Claims. (Cl. 152—20.)

9. A metal rim for tires comprising a channeled annulus having circular seats to engage the beads of the tire when the tire is inflated and having its inner circumference in the form of a ring eccentric to the circle of the bead seats, but adapted to engage the circular contour of a wheel body.

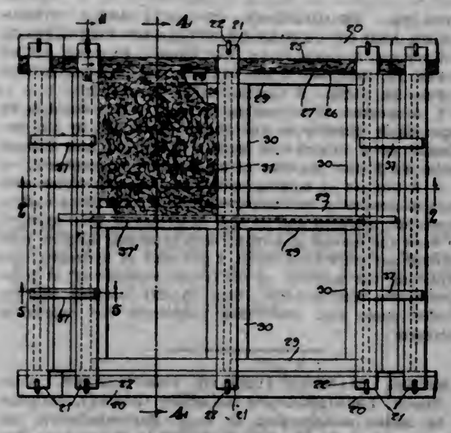
1,639,574. HANDLE FOR HAND BAGS AND THE LIKE. DANIEL I. REITER, New York, N. Y. Filed Feb. 16, 1926. Serial No. 88,584. 3 Claims. (Cl. 150—33.)

1. A slip strap connector for coupling the ends of a pair of straps serving as a handle, comprising a metal holder or envelope secured about the coupled end of each strap, each holder terminating at its outer end in a ring securing extension and a ring carried by each extension, each ring having loosely threaded therethrough the other strap than to which it is secured, and said envelopes or holders being of such length that the rings are held in spaced relation with the straps extended to serve as a handle.



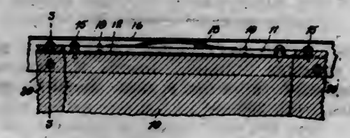
1,639,575. SEAL, JOINT, AND THE LIKE OF VACUUM CONTAINERS. ERNEST YEOMAN ROBINSON, Manchester, England, assignor to Metropolitan-Vickers Electrical Company Limited, London, England, a British Joint Stock Company. Filed Aug. 20, 1923, Serial No. 658,409, and in Great Britain Aug. 25, 1922. 17 Claims. (Cl. 176—126.)

10. In an apparatus which is adapted to be evacuated, a gas-tight seal between portions thereof comprising an



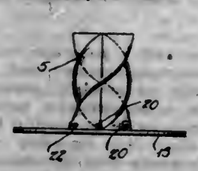
alloying medium which is flowable under a force applied thereto, said medium being co-related to and between adjoining surfaces which consist respectively of a metal capable of alloying with said medium.

1,639,576. TILE-RECEIVING MACHINE. JOHN J. SEMANKO, Morrisville, Pa. Filed Jan. 23, 1926. Serial No. 83,278. 5 Claims. (Cl. 214—6.)



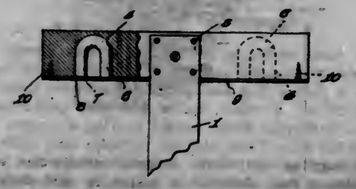
1. An apparatus of the class described, comprising a reciprocatory tray, an elevator, a weight for normally holding the elevator in raised position, a truck carried by the elevator, means for causing the articles on the tray to drop therefrom upon the truck, means for reciprocating the tray, means for lowering the elevator step by step and means actuated by the truck leaving the elevator for rendering the lowering means inactive to permit the weight to raise the elevator.

1,639,577. PORTABLE BUILDING. GEORGE F. SLATER, West Palm Beach, Fla. Filed Sept. 2, 1926. Serial No. 133,267. 4 Claims. (Cl. 20—2.)



1. In a portable building, the combination with opposite wall sections, of cross-beams spaced apart and mounted on the wall sections with their ends secured thereto, said cross-beams having longitudinal grooves in their inner faces, mold strips seated in said grooves to form a seat open on its upper side clear of the inner faces of the cross-beams, and a ceiling panel introduced from above the cross-beams and resting on said seat.

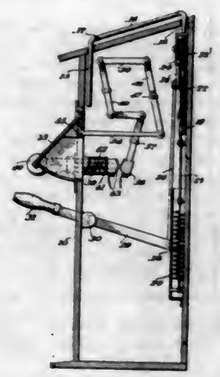
1,639,578. HOLD-UP ALARM. SIGMUND STEINHARDT, New York, N. Y. Filed July 3, 1926. Serial No. 120,396. 2 Claims. (Cl. 200—86.)



2. Foot operated circuit closing mechanism for a hold-up alarm including an elongated substantially rigid base bar of nonconducting material adapted to be placed upon the floor, a series of springs supporting a flexible conductive switch bar in spaced relationship to the base bar, a plurality of contacts connected to a common lead wire and arranged at spaced points along the base bar, whereby a circuit may be closed when the switch is locally depressed to compress adjacent springs and engage any one of said contacts, said springs comprising bowed plate-like elements having their ends resting on the base bar and their intermediate portions supporting the switch bar, and pins in the base bar engageable with the ends of the springs to limit longitudinal displacement thereof.

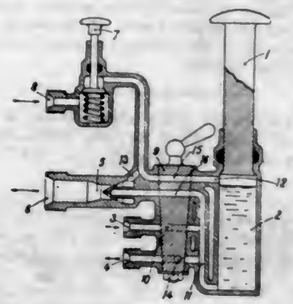
1,639,579. GASEOUS-FUEL MIXER. UROS TELECSKY, Akron, Ohio. Filed Oct. 14, 1926. Serial No. 141,572. 1 Claim. (Cl. 48—180.)

A fuel mixer for internal combustion engines comprising a spiral bladed device adapted to be introduced into the intake manifold of the engine, and a mounting gasket adapted to be firmly clamped between the joint flanges of an end of the manifold and an adjacent end of a carbureter outlet pipe, said gasket having a central fuel passage opening, said bladed device being rigidly attached to the gasket in line with said fuel passage opening of the latter, pairs of opposed equally spaced ears projecting inwardly of the opening of said gasket, said bladed device comprising a pair of cross spirally twisted blade plates having adjacent corner portions flatly contacting the sides of and secured to said ears, said blade plates being of elongated rectangular form before being twisted and having longitudinal slots respectively extending from opposite ends thereof to substantially midway the lengths thereof, whereby the adjacent ends of the blades are substantially flush when the blades are interfitted and arranged in crossed relation.



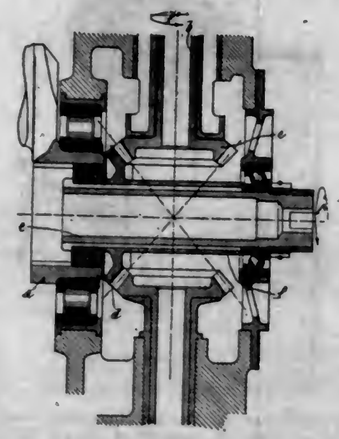
1,639,580. MAGNETIC T-SQUARE. WADE B. THOMPSON, Detroit, Mich. Filed Feb. 12, 1927. Serial No. 167,789. 4 Claims. (Cl. 33—76.)

1. A T-square of the character described comprising a blade, a head fixedly secured thereto and being provided with recesses along its contact face, horse shoe magnets



in the respective recesses and a metallic strip secured to the said face and receiving the poles of the horse shoe magnet for the purpose specified.

1,639,581. PIVOTED-CLOSURE OPERATING MEANS AND CIRCUIT CLOSER. JOSHUA E. VAUGHN, Los Angeles, Calif. Filed Oct. 8, 1923. Serial No. 667,317. 1 Claim. (Cl. 200—54.)



The combination with a receptacle having a pivoted closure, of a transversely arranged shaft within the receptacle, a plurality of pivotally connected links arranged to provide a parallelogram vertically disposed within the receptacle, one of the vertical links being connected with said shaft, arms depending from said shaft, arms projecting forwardly from the aforementioned arms and connected with said closure, a lever depending from the lowermost horizontal link and pivoted between its ends, an electric contact supported by said lever, a sliding plunger mounted on the front of the receptacle and movable within the latter, and an electrical contact carried by the plunger and adapted to engage the first mentioned contact to operate said shaft for the purpose specified.

1,639,582. AUTOMATIC STARTING DEVICE FOR INTERNAL-COMBUSTION ENGINES. PAUL VIET, Billancourt, France. Filed Feb. 6, 1926, Serial No. 86,640, and in France June 15, 1925. 5 Claims. (Cl. 123—180.)

1. A starting device for internal combustion engines comprising a fuel chamber, a piston in said fuel chamber, a fuel inlet, a conduit for compressed air, a carburetor, and a multiple orificed valve, said valve being adapted to provide communication between said chamber and said inlet when in one position and when in another position to place said chamber in communication with said carburetor and said conduit.

1,639,583. VALVE-GEAR-OPERATING DEVICE. MARC BIRKIGT, Bois Colombes, France. Filed July 18, 1924, Serial No. 726,875, and in Belgium July 18, 1923. 1 Claim. (Cl. 123—41.)

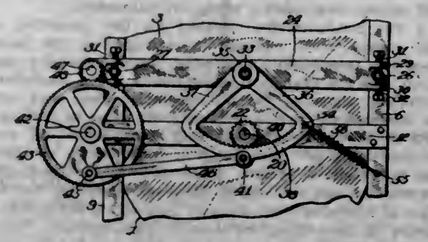
A valve operating gear for piston engines of the internal combustion and like type including a crank shaft and a valve operating shaft disposed at right angles to each other, of a third shaft axially alined with said crank shaft and keyed thereto, cooperating beveled gears on said valve operating shaft and said third shaft, the gear on said third shaft being capable of reverse positioning whereby said valve operating shaft may be rotated in opposite directions.

1,639,584. PRODUCTION OF ACTIVATED NITROGEN AND OF OXIDES OF NITROGEN THEREFROM. WILLIAM ARTHUR BONE, St. Albans, England. Filed Feb. 19, 1924, Serial No. 693,918, and in Great Britain Feb. 28, 1923. 9 Claims. (Cl. 23—164.)

1. A method of activating nitrogen which consists in exposing it directly to the energy developed by the explosion of a mixture of carbon monoxide and oxygen under an initial pressure of at least 30 atmospheres.

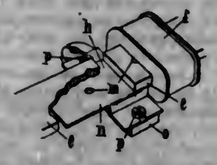
9. A process of making oxides of nitrogen, which consists in producing an explosive mixture comprising carbon monoxide, nitrogen and oxygen in excess of that required to burn the carbon monoxide, said explosive mixture containing not more than about 2 per cent of hydrogen, and exploding the mixture at an initial pressure of at least seventy-five atmospheres, then rapidly cooling the exploded gases and recovering therefrom the oxides of nitrogen.

1,639,585. MANUFACTURE OF FERTILIZERS. CARL BOSCH, Ludwigshafen-on-the-Rhine, Germany, assignor, by mesne assignments, to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed July 9, 1920, Serial No. 395,147, and in Germany July 29, 1916. 13 Claims. (Cl. 71—9.)



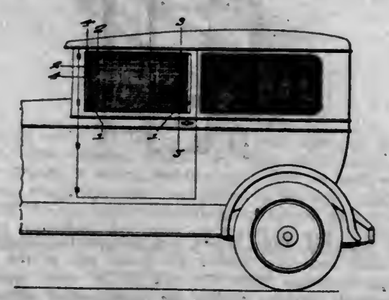
1. As a new composition of matter, a compound fertilizer comprising the elements of ammonium, potassium, and the anions of nitric and hydrochloric acid in about equivalent proportions.

1,639,586. FOUNTAIN SPRAY BRUSH. EDWARD H. BOUCHER, Stillwater, N. Y. Filed June 23, 1926. Serial No. 118,004. 3 Claims. (Cl. 15—128.)



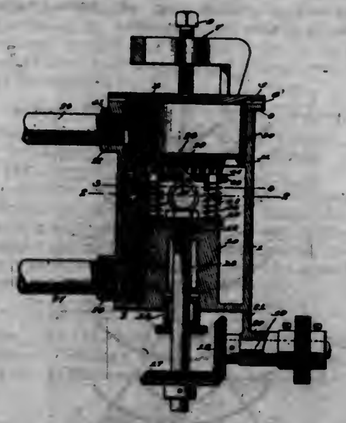
1. In a fountain spray brush, the combination with a brush head having seats provided with means for the passage of fluid from one side to the other side thereof, of removable fluid applying units having thimbles received in said seats, and a perforated plate bearing on said thimbles and holding them in position.

1,639,587. POWER WASHING MACHINE. FRANK E BOWERS, Indianapolis, Ind. Filed Sept. 27, 1924. Serial No. 740,217. 4 Claims. (Cl. 74—14.)



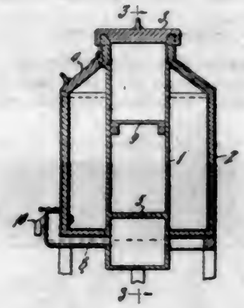
1. A power gearing including a main frame bar to be horizontally secured in place, an adjustable frame bar to be horizontally secured above the main frame bar having two vertical slots in proximity to the opposite ends respectively of the bar, the bar having also an ear above and an ear below each of the slots, two securing screws to be arranged in the slots respectively, two set-screws arranged in the upper ears to engage the securing screws respectively, two set-screws arranged in the lower ears to engage the securing screws respectively, a curved rack-bar having arms pivoted to the adjustable frame bar intermediately of said slots, a shaft rotatively supported by said main bar intermediately of its ends, a pinion secured to the shaft and being in engagement with the rack-bar, a gear wheel rotatably supported by said main bar adjacent to one end thereof and having a crank pin, and a rod connected to said crank pin and pivoted to said rack-bar.

1,639,588. APPARATUS FOR TRANSMITTING OR REPRODUCING SOUND. SIDNEY GEORGE BROWN, North Acton, London, England. Filed June 29, 1926, Serial No. 119,490, and in Great Britain Sept. 19, 1925. 5 Claims. (Cl. 179—119.)



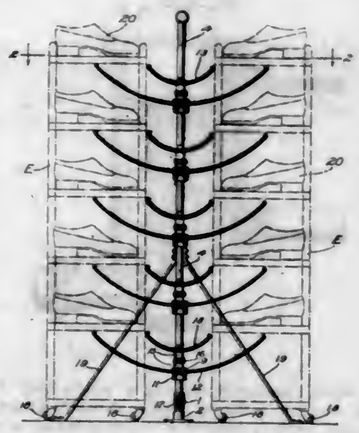
1. In phonic apparatus the combination comprising an electro-magnet having pole pieces with an air gap therebetween, a flexible non-magnetic yoke piece mounted upon and bridging the gap between said pole pieces, a rigid member supporting said yoke piece, an armature situated over said air gap and means attached to said rigid member for bending said yoke piece together with said pole pieces towards and away from said armature, as set forth.

1,639,589. SCREEN FOR AUTOMOBILES. NORMAN L. COLLTON, Newport News, Va. Filed Sept. 4, 1926. Serial No. 133,624. 3 Claims. (Cl. 296—48.)



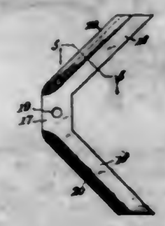
1. In combination with a window of a vehicle, channel shaped guiding strips having hooks at their upper ends and placed at the sides of the window opening with their hooks engaging portions of the window frame, a screen frame slidably mounted in the channel shaped strips, means connected with the movable part of the window for raising said screen frame when said movable part is raised, frictional means for holding the screen frame in raised position and a handle connected with the screen frame to permit the same to be lowered.

1,639,590. SCREEN CLEANER. LEVIN O. CORKRAN, Rhodesdale, Md. Filed Dec. 6, 1926. Serial No. 152,987. 4 Claims. (Cl. 210—152.)



1. A screen cleaner comprising a hollow body having an inlet and an outlet, a screen disposed within said hollow body between said inlet and said outlet, a rotary shaft extending into said hollow body on the inlet side of said screen, a pair of spaced studs supported on said rotary shaft and operable by said shaft, said studs having free end portions, and a brush having openings in its back for the reception of the free end portions of said studs and having bristles in contact with said screen, said brush back having a central opening through which material may pass from said inlet to said screen.

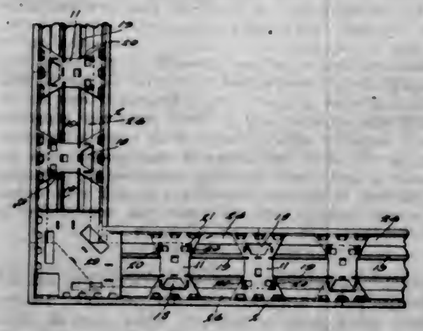
1,639,591. REFRIGERATOR. SAVERIO COZZOLINO, Bosburg, Wash. Filed June 20, 1924. Serial No. 721,305. 1 Claim. (Cl. 62—83.)



A combined water cooler and refrigerator comprising an inner and outer casing, the lower end of the inner casing extending below the end of the outer casing, a horizontal partition within the inner casing above the plane of the bottom of the outer casing and forming a drain chamber in the lower end of the inner casing, a supporting rack arranged in a horizontal position and in spaced relation with said partition to form an article receiving chamber and an ice chamber beneath the same, a cover for each of said casings, an L-shaped water passage having its lower end communicating with the drain chamber and its upper end arranged slightly above the horizontal partition adjacent the lower end of the inner casing, said L-shaped water passage being adapted to act as a gauge for the drain chamber, and a faucet having connection with the interior of the outer casing as and for the purpose specified.

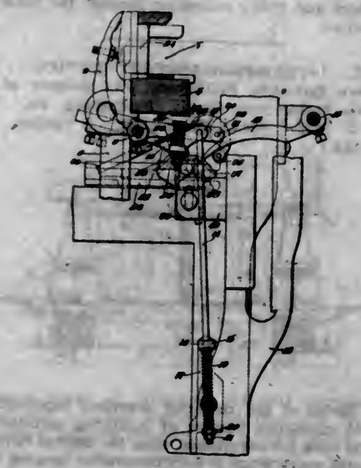
1,639,592. SHOE-SOLE DRIER. LOUIS HERMAN DASTIS, Brooklyn, N. Y. Filed Aug. 28, 1926. Serial No. 132,298. 3 Claims. (Cl. 34—26.)

1. A drier, including a support, heating elements on the support, and deflectors on the support above and below the heater, the upper deflectors being narrower than the lower deflectors, said deflectors and heaters having fixed relationship and the upper edges of both deflectors being in substantially the same horizontal plane.



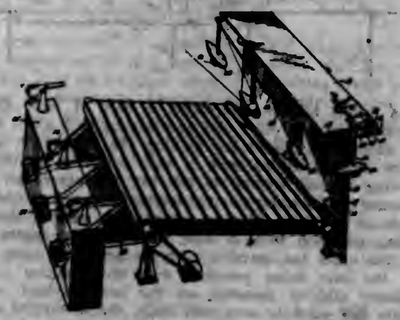
1,639,593. HEEL SWEEP AND METHOD OF MAKING THE SAME. HENRY A. DEAN, Rome, Ga., assignor to Towers & Sullivan Manufacturing Co., Rome, Ga., a Corporation of Georgia. Filed Dec. 7, 1925. Serial No. 73,712. 2 Claims. (Cl. 29—148.3.)

1. An improved heel sweep comprising an enlarged perforated intermediate portion and angularly extending wing portions stamped from the metal stock into angular relation with the wing portions narrower than the intermediate perforated portion, the forward longitudinal edges of said wing portions being drawn out and beveled to sharpened edges, the original stamped cross section of said intermediate portion being left untouched.



2. The hereindescribed method for the production of heel sweeps which consists in cutting from the metal stock the intermediate and wing portions forming each sweep with the wing portions originally cut at rearwardly extending angles to the intermediate portion and with the intermediate portion originally cut wider as compared with the wing portions, both said intermediate and wing portions being cut rectangular in cross section and with the intermediate portion perforated, and subsequently drawing out and beveling to sharpened edges the forward edges of the wing portions only, leaving the intermediate portion in its original rectangular cross section.

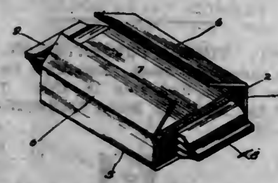
1,639,594. BUILDING FORM. FRANK L. DECKER, Kimble, Pa. Filed June 21, 1924. Serial No. 721,542. 1 Claim. (Cl. 72—30.)



A hollow wall construction comprising two spaced courses of slabs which are arranged in staggered relationship in the same course and also with relation to the other course, said slabs having grooves extending across their two horizontal surfaces, tie plates having flanges received in said horizontal grooves, horizontally arranged spacer plates of a length equal to the length of a slab supported by said tie plates, said spacer plates consisting of horizontal elements, the ends of which receive the tie plates, and vertical elements in right angular relationship, said vertical elements being slitted centrally and having spaced arms with inturned ends which straddle U-shaped vertical wall plates of the height of a slab and a filling of mortar in the voids formed by said spacer plates and said wall plates.

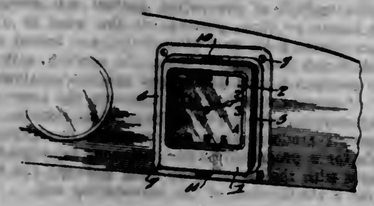
1,639,595. SHUTTLE-BOX TENSION-CONTROLLING MECHANISM FOR LOOMS. CLARE H. DRAPER, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Nov. 7, 1924. Serial No. 748,339. 1 Claim. (Cl. 139—225.)

A weft replenishing loom of the bobbin changing type having, in combination, weft replenishing mechanism including a change shaft, a lay having shuttle boxes provided with binders, a dagger rod on the lay, binder fingers on the dagger rod, a forwardly extended lever on the dagger rod, a rearwardly extended lever on the change shaft cooperating with the lever on the dagger shaft to turn the dagger shaft to relieve the pressure on the binders when the change shaft is operated to cause weft replenishment.



1,639,596. AMUSEMENT DEVICE. ARTHUR M. DRITZ, New York, N. Y. Filed Apr. 7, 1927. Serial No. 181,771. 6 Claims. (Cl. 273—101.)

1. An amusement device, including a moving frangible prize-supporting target, and means for projecting a projectile at said target, whereby hitting and breaking of the same releases the prize supported thereby for delivery to the participant.



1,639,597. CONDENSER. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Original application filed May 23, 1922, Serial No. 562,946. Divided and this application filed Feb. 27, 1924. Serial No. 695,570. 1 Claim. (Cl. 175—41.)

A condenser comprising a stack containing one or more sheets of conductive material separated by insulation, a clamp embracing said stack, the clamp being of stiff, strong, bendable material, and extending over one face of the stack, the clamp being bent across both sides of the stack with its ends turned down against the opposite face, the ends of the clamp being separated, a plate on said opposite face with its opposite edges beneath the

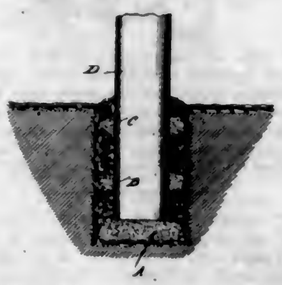
separated ends of the clamp and held thereby firmly against said opposite face of the stack, said clamp and plate forming a casing for the stack open at both ends, through which the two extremities of the stack appear, part of the conductive sheets being exposed at one end of the condenser, and part at the other end to enable the condenser to be connected to an electric circuit.

1,639,598. AUTOMOBILE CLOCK. LEO EDELMANN, Chicago, Ill., assignor to E. Edelmann & Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 17, 1925. Serial No. 3,169. 6 Claims. (Cl. 58—56.)

1. An automobile clock comprising a clock case, a mounting case adapted to removably receive the clock case, and means by which the clock case is given sliding and swinging support with respect to the mounting case to be withdrawn from the case and turned with its back forward for winding.

1,639,599. PAINT FORMULA. LOUIS FRANCIS, Miami, Fla. Filed Feb. 1, 1926. Serial No. 85,391. 1 Claim. (Cl. 134—54.)

The process of forming a transparent paint composition which comprises finely grinding inner tubes and rubber tires, mixing approximately three and one half parts of the ground tubes and tires with approximately five parts of rosin and boiling the mixture until the ground inner tubes and casings have been dissolved.

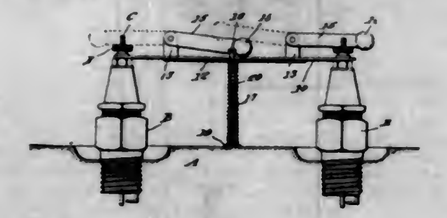


1,639,600. HEADLIGHT ATTACHMENT. CARRIE B. FRIBERSON, Cleveland, Miss. Filed Mar. 30, 1926. Serial No. 98,551. 4 Claims. (Cl. 240—48.4.)

1. A glare shield attachment for automobile head lights including a bendable visor-like tapered plate adapted to have its transversely curved rear edge secured to a

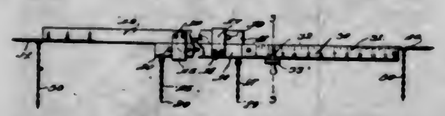
head light casing the rear portion of the plate being parallel with the central longitudinal axis of the casing and including a bendable tapered forward extension adapted to screen the forwardly projected horizontal rays of a light in the casing, said extension being bent forwardly and downwardly at a sharp angle and terminating below the plane of the central longitudinal axis of the casing.

1,639,601. TIMBER PRESERVATION. HENRY C. GARDINER, Anaconda, Mont. Substitute for application Serial No. 44,532, filed July 18, 1925. This application filed Apr. 28, 1927. Serial No. 187,255. 3 Claims. (Cl. 99—12.)



1. The method of preventing against rot, decay, and insect injury to those portions of the wood in articles such as posts, poles and piles which are buried in the ground which comprises placing in contact with such buried portions a solid pulverulent arsenic-containing material of gradual dissolvability, encasing the arsenic containing material with a relatively pervious covering which will permit gradual seepage of moisture therethrough to provide for a progressive and continuous impregnation of the poles with the arsenic-containing material and to provide for a sterilization of the surrounding soil.

1,639,602. TOY PARACHUTE. HENRY GAY, Newark, N. J. Filed July 23, 1926. Serial No. 124,434. 1 Claim. (Cl. 244—21.)

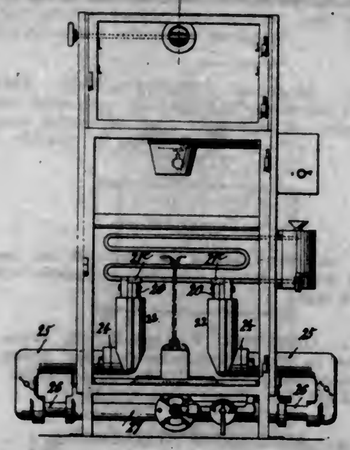


In a toy parachute, a rod, an annular enlargement at its inner end of elongated formation, an enlarged head at the outer end of the rod, an apertured disk freely slidable on the rod between the annular enlargement and head and limited in sliding movement thereby, a fabric parachute body having peripheral cord connections with the disk, a projecting device comprising a barrel to receive the rod with the annular enlargement moving therein like a piston, a reciprocating plunger within the barrel inwardly of the rod, elastic connections between the plunger and the outer end of the barrel and a pull cord for operating the plunger attached at one end to the plunger and freely extending through the inner end of the barrel.

1,639,603. SPARK-PLUG-TESTING DEVICE. FRED WILLIAM GOWRAND, Philipsburg, Pa., assignor of one-half to Frank Coen Croyle, Philipsburg, Pa. Filed Nov. 7, 1925. Serial No. 67,628. 2 Claims. (Cl. 175—183.)

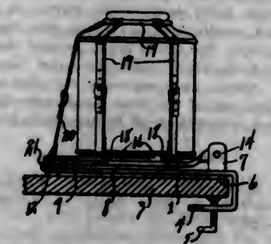
1. A device of the character described comprising an elongated supporting member of insulating material slotted at its ends for engagement upon the central electrodes of adjacent spark plugs a metallic member secured to the underside of said insulating strip and having ears located above the strip, a spring pressed plunger slidable through both strips and in electrical contact with the metallic member and adapted to engage the engine to provide a ground connection and contact arms equipped with handles and pivotally mounted on said ears to be capable of swinging into engagement with the central electrodes of the spark plugs.

1,639,604. DEVICE FOR ALIGNING WHEELS. JOSEPH H. GRAY, St. Joseph, Mo. Filed Mar. 12, 1927. Serial No. 174,958. 1 Claim. (Cl. 33—203.)



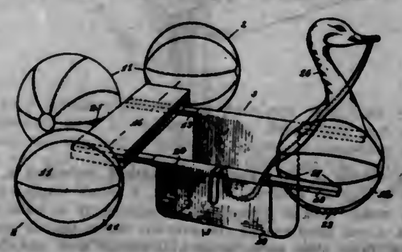
A wheel aligner comprising a pair of bars slidably mounted on each other and over-lapping each other at one of their ends, means for guiding the bars, each of the bars being provided with a slot, a spring in the slot having an end secured to one bar, the other end being secured to the other bar for maintaining the over-lapping ends of the bars in close association, one of the bars being provided with a scale with the over-lapping end of the other bar movable over the scale, the other ends of the bars being provided with tire-engaging rods, a pointer slidably mounted on the bar provided with a scale and movable over said scale, chains carried by the last-mentioned bar and having tips at the free ends adapted to engage the floor for determining the initial horizontal position of the aligner when applied to a pair of wheels.

1,639,605. GAS HEATED AND RADIATING ELEMENT. WILLIAM GUY-PELL, London, England. Original application filed Aug. 8, 1925, Serial No. 48,941, and in Great Britain Dec. 9, 1924. Divided and this application filed Oct. 20, 1926. Serial No. 142,987. 6 Claims. (Cl. 126—41.)



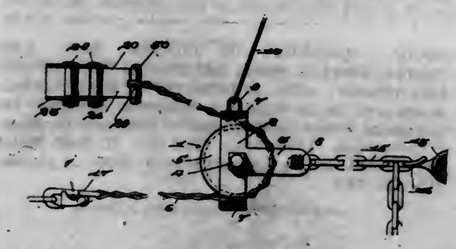
1. In apparatus of the character described, a heat radiating element embodying a vertically arranged metal plate, heating means for said plate, means supported on

said heating means and supporting said radiating element free of metallic contact with said heating means, com-



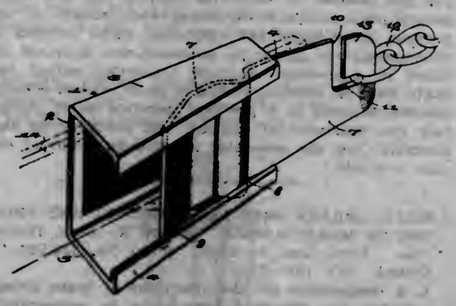
prising a frame of refractory material marginally engaging said radiating element and therewith forming a combustion chamber adjacent said heating means.

1,639,606. TILTING PACKAGE CARRIER. B D HAYS, Fort Worth, Tex. Filed May 27, 1927. Serial No. 194,684. 4 Claims. (Cl. 224—29.)



1. A tilting carrier comprising a rigid frame provided with upstanding bearing lugs on its outer edge and upstanding lugs on its inner edge and a tilting frame consisting of diagonally arranged bars loosely pivoted together and provided with openings at its inner edge to receive said lugs and provided with pivot lugs for engaging said bearing lugs.

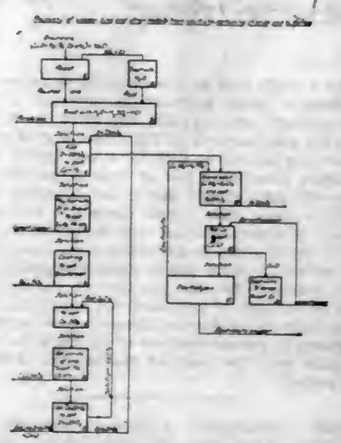
1,639,607. WATER-SPORT APPARATUS. BEULAH LOUISE HENRY, New York, N. Y., assignor of one-half to Edwin A. Guinsburg, New York, N. Y. Filed June 19, 1926. Serial No. 117,123. 3 Claims. (Cl. 9—21.)



1. A water sport apparatus comprising a buoyant supporting structure, and inflatable and deflatable buoying means which aids to sustain said supporting structure to which said means is connected, said supporting structure comprising longitudinals, a seat, a foot rest, loops on the seat, a strap on each of the longitudinals, the straps engageable respectively with the loops, and means holding the straps detachably engaged with the loops.

1,639,608. HITCH FOR DRAFT ANIMALS. CHRISTIAN HOFLAND, Newburg, N. Dak. Filed Mar. 24, 1926. Serial No. 97,048. 3 Claims. (Cl. 54—32.)

2. In a draft gear of the character described, a pulley comprising a frame substantially elliptical in cross sectional contour and a sheave supported for rotation between the side portions of the frame and about an axis substantially coincident with the minor axis of the frame, said frame including a pair of arms respectively disposed at opposite sides of said sheave and extending in parallel relation to each other, means connecting said arms with a vehicle or implement that is to be drawn, means whereby said pulley frame is suspended from the harness of a draft animal, a chain passed about the periphery of the sheave between the side portions of the pulley frame, means at one end of said chain for connecting the latter with a hame of the draft equipment of said draft animals, and means at the opposite end of the chain for connecting the chain with the trace of the harness of the leading draft animal.

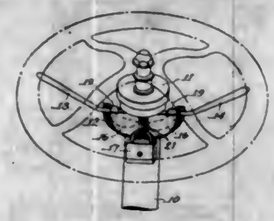


1,639,609. COUPLING. CHRISTIAN HOFLAND, Newburg, N. Dak. Filed Aug. 27, 1926. Serial No. 131,953. 2 Claims. (Cl. 24—194.)

1. A device of the character described comprising a body substantially U-shaped in cross sectional configuration and comprising a substantially flat bottom and a pair of parallel sides having inturned longitudinally extending free edge portions constituting lips, said sides of the body decreasing in width regularly from one end of the body to its opposite end so that said lips are inclined longitudinally of the body, a clamping member having a main portion of uniform width adapted to fit slidably in the body between the side members of the body and in sliding contact with the inner faces of said inclined lips, said clamping member also including an attaching end portion tapering in width toward its outer end, the main portion of said clamping member being bent trans-

versely adjacent to its juncture with said attaching portion to produce a substantially U-shaped corrugation and being also bent at its free end until the free edge of said main portion of the clamping member is substantially flush with the crest of said U-shaped transverse portion of the clamping member, the faces of said main portion of the clamping member which are opposite to said transversely bent U-shaped portion and said end portion being substantially flush and constituting clamping faces, said attaching end portion of the clamping member being adapted for engagement with a chain.

1,639,610. RECOVERY OF COPPER, ZINC, AND OTHER METALS FROM SOLUTIONS CONTAINING CHLORIDES AND SULPHATES. KARL MATTENKLODT and HANS SCHRAMM, Duisburg, Germany, assignors to Duisburger-Kupferhutte, Duisburg, Germany, a Corporation of Germany. Filed Nov. 17, 1926, Serial No. 149,010, and in Germany Apr. 9, 1925. 5 Claims. (Cl. 75—18.)



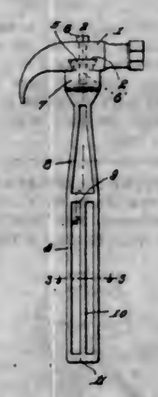
1. The process of recovering copper, zinc and other metals from solutions containing such metals in the presence of chlorides and sulphates, which consists in precipitating the copper by means of zinc hydroxid obtained in a previous operation, separating sodium sulphate from the solution, adding so much calcium chloride solution obtained in a previous operation as to precipitate the remainder of sulphur, and precipitating zinc hydroxid from the remaining solution by means of calcium hydroxid.

1,639,611. BRAKE DRESSING COMPOUND AND PROCESS OF MAKING SAME. GEORGE W. NASH, Denver, Colo. Filed Sept. 4, 1926. Serial No. 133,727. 5 Claims. (Cl. 134—11.)

1. A composition for the treatment of brake linings comprising the following ingredients in substantially the named proportions, viz: 1 gallon lubricating oil, 1 ounce powdered mica, 1 ounce fuller's earth, 1 ounce bicarbonate of soda, ½ ounce pumice stone and ⅛ ounce oil of eucalyptus.

1,639,612. LOCKING DEVICE FOR MOTOR CONTROLS. JOHN F. NEVIUS, New York, N. Y. Filed Mar. 17, 1926. Serial No. 95,241. 2 Claims. (Cl. 70—126.)

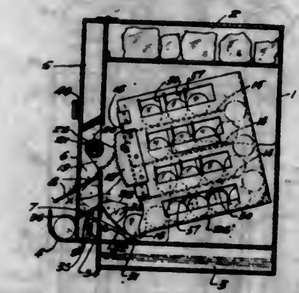
1. The combination with a control assemblage including a quadrant, movable control levers, and a housing; of a locking device comprising companion parts each adapted to rest upon the quadrant, each of said parts having a hook engageable with one of the control levers and a portion of the quadrant, each of said parts having a portion engageable with the under side of the housing,



each of said parts having an apertured lug, and key actuated locking means releasably engageable with the apertured lugs.

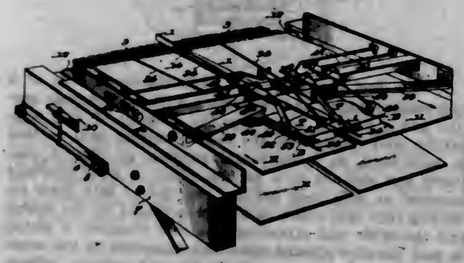
1,639,613. DIGESTER. CARLTON RIDDLE, Akron, Ohio, assignor to The McNeil Boiler Company, Akron, Ohio, a Corporation of Ohio. Filed July 11, 1925. Serial No. 43,042. 12 Claims. (Cl. 92—18.)

1. In a digester for the uses and purposes set forth, a tank having inlet and outlet ports in the central region thereof, shells located within the tank at either side of said ports, the shells being secured directly to the wall of the tank about circumferential lines at either side of the ports, and supports for the ends of the shells at either end of the tank, said supports permitting expansion and contraction of the shells independently of the tank.



1,639,614. HAMMER. ALPINE B. ROSSON, Lincoln, Ark. Filed June 9, 1925. Serial No. 35,993. 1 Claim. (Cl. 306—27.)

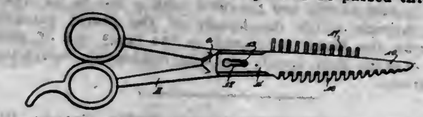
A device of the character described including a handle having an enlarged inner end, a transversely extending wedge tongue formed at the extremity of said inner end, a tool head having transversely wedge-shaped grooves with their side walls beveled inwardly and adapted to receive therein the wedge shaped tongue on the handle, said enlarged inner end having a threaded bore centrally thereof and extending longitudinally, the head



having an opening aligning with the bore and a threaded bolt passed through the tool head and threaded into the bore of the handle for retaining said tool head against movement relative to the handle.

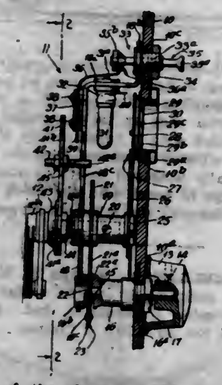
1,639,615. BOTTLE-VENDING MACHINE. JAMES E. SAPP, Bainbridge, Ga., assignor of one-half to Roland Bower, Bainbridge, Ga. Filed May 20, 1926. Serial No. 110,409. 8 Claims. (Cl. 211—8.)

1. In a bottle vending machine, a receptacle pivotally mounted in unbalanced relation, with the preponderance of weight toward the front, causing the bottom of said receptacle normally to assume a position in which the bottom thereof is inclined downwardly toward the front, partitions in said receptacle lying parallel to the bottom, said partitions being spaced apart, and from said bottom, to form bottle receiving tiers, the lowermost of which is open at the front, said partitions being arranged to form space at the back to permit descent of bottles to the lowermost tier, means to permit the discharge of but one bottle from the front of the lowermost tier, when the receptacle is in normal position, and means for elevating the front of said receptacle sufficiently to reversely incline said partitions and bottom.



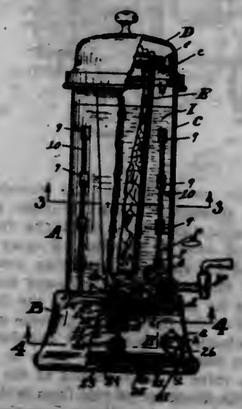
1,639,616. TOOL AND MACHINE FOR FETTLING FLOOR AND WALL TILE. MALCOLM A. SCHWEIKER, Lansdale, Pa., and JAMES R. WESTBROOK, Metuchen, N. J. Orginal application filed Apr. 16, 1923, Serial No. 632,590. Divided and this application filed July 21, 1924. Serial No. 727,835. 7 Claims. (Cl. 25—104.)

1. In a machine for fettling floor and wall tiles, the combination with a carrier belt for supporting and advancing the tiles, of a bridge arranged in crosswise relation to, and located above, said belt, and tile fettling means carried by said bridge adapted to chamfer an edge of the tiles.



1,639,617. COMBINED HAIR COMB AND CUTTER. EUGENE SEAVEY, Ridgefield Park, N. J. Filed Dec. 7, 1925. Serial No. 73,841. 3 Claims. (Cl. 30—13.)

1. An attachment for shears presenting spaced sides having longitudinal series of teeth, one of said sides having a shank at the rear end formed with a keyhole slot, together with a screw adapted to be passed through



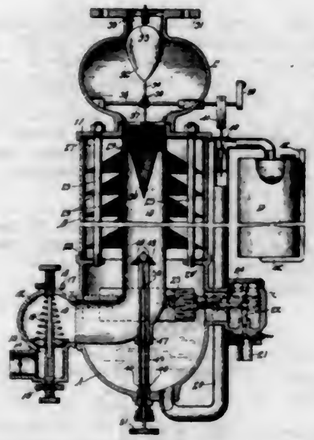
shear blades for pivotally connecting the same, said screw having an undercut end to receive said slot at its narrowest portion.

1,639,618. ILLUMINATED DIAL CONTROL. SAM A. SHAPIRO, New York, N. Y., assignor, by mesne assignments, to Arthur Dorsey, New York, N. Y. Filed Dec. 20, 1926. Serial No. 155,987. 10 Claims. (Cl. 240—2.)

1. A device of the character described comprising a panel, and control means adapted to operate a tuning device mounted on the rear side of the panel, said means including a drive shaft extending through the panel adapted to be manipulated from the front side thereof, a dial mounted at the rear of the panel and adapted to move with said device, and a light for the dial mounted at the rear of the panel, said panel having a window for observing the dial from the front of the panel.

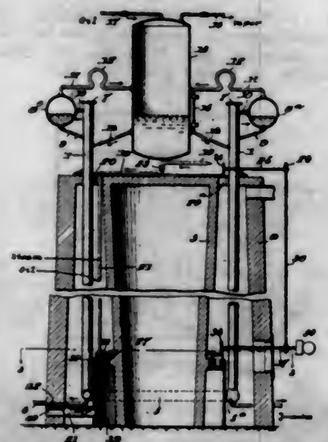
1,639,619. DRINK DISPENSER. HARRY C. SMITH, Los Angeles, Calif. Filed Aug. 21, 1924. Serial No. 733,312. 4 Claims. (Cl. 225—21.)

1. In a fluid dispenser, a container for the fluid, an agitator comprising a perforated air tube mounted in the bottom of said container, an air compressor mounted on



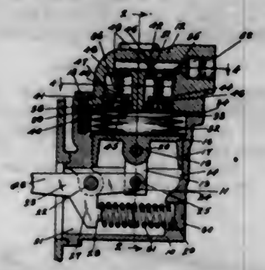
said container to which said tube is connected, a handle for operating said compressor, a link connected at one end to said handle and provided with a slot in its other end through which the handle of the faucet extends whereby the faucet is opened as the inner end of said slot engages said handle and the compressor completes its stroke.

1,639,620. RAIL JOINT. CHARLES TROUP, Watseka, Ill. Filed July 24, 1926. Serial No. 124,623. 2 Claims. (Cl. 238—203.)



1. A rail joint including a base to receive meeting rail ends and having a fixed side plate to overlie the rail ends at corresponding sides thereof, a clamping plate to overlie the rail ends at their opposite corresponding sides and provided with a substantially V-shaped lug, a clamping block slidably connected with the base and having a substantially V-shaped cavity to accommodate said lug, and a wedge to coact with the block for advancing the block and clamping the rail ends between said plates.

1,639,621. CARBURETOR. ALBERT E. WEAVER, Indianapolis, Ind., assignor, by mesne assignments, to Ira T. Swarts, trustee, Indianapolis, Ind. Filed June 15, 1920. Serial No. 389,155. 6 Claims. (Cl. 261—72.)

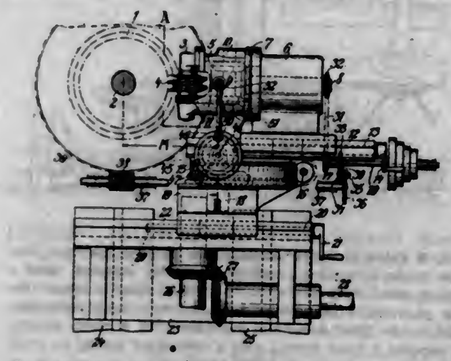


6. A carburetor comprising a fuel chamber, an air passage leading through said fuel chamber and having passages forming communication with the fuel chamber above the normal level of the fuel, a spray nozzle extending into said air passage and having communication with the fuel in the fuel chamber adjacent the bottom of the same, means for admitting air into the fuel chamber beneath the level of the fuel said air passage and passages forming communication with the fuel chamber above the level of the fuel being open at all times to the suction of the engine, a valve movable axially of the air passage for controlling the discharge of fuel from said carburetor, a rack on said valve, and a pinion engaging said rack for moving the valve to permit a larger or smaller amount of fuel to pass by the same, substantially as set forth.

1,639,622. APPARATUS FOR HEATING OILS. FRANK E. WELLMAN, Kansas City, Kans., assignor to Kansas City Gasoline Company, Kansas City, Kans., a Corporation of Kansas. Filed June 3, 1922. Serial No. 565,633. 12 Claims. (Cl. 196—110.)

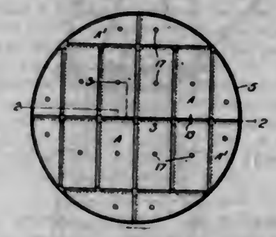
12. A heating system for pipe stills, having stationary liquid containing pipes and a burner adapted to pass a flame intermittently and individually over the heating surfaces of the pipes in periodic rotation.

1,639,623. FUEL PUMP. JOHN WILLIAM WHITE, Buffalo, N. Y. Filed Nov. 28, 1924. Serial No. 752,554. 4 Claims. (Cl. 103—148.)



1. In a fuel pump mounted upon the crank case of a hydrocarbon engine and comprising a chambered body portion and a head, a bellows in the chamber of said body portion and secured by the means uniting said portion to said head, in a horizontal position so that it contracts and expands in a vertical plane, a lever pivotally mounted on said body portion, one end of said lever extending into said crank case to be actuated by the engine and the other end extending into said chamber, a piston in said chamber pivoted upon and supported by the other end of said lever in contact with said bellows, adjustable spring means normally holding said lever and piston to permit the bellows to expand and valve mechanism in said head comprising intake, outlet and relief valves.

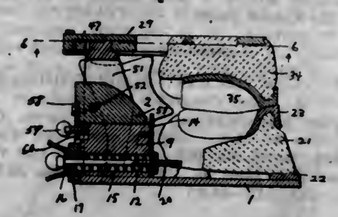
1,639,624. MACHINE FOR CUTTING GEARS. FRIEDRICH WOLTZENDORFF, Berlin, Germany. Filed Oct. 5, 1922, Serial No. 592,479, and in Germany Oct. 7, 1921. 12 Claims. (Cl. 90—4.)



1. A machine for cutting gears, comprising a rotatable blank carrier, a bracket carrier, a rotatable cutter bracket mounted to swing on said bracket carrier upon an axis at

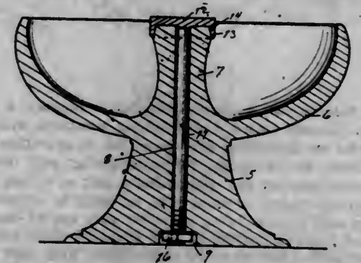
right angles to the axis of the blank carrier, a cutter carrier mounted for rotatable adjustment of said cutter bracket about an axis at right angles to the axes of rotation of said blank carrier and said cutter bracket, the bracket carrier being adapted for adjustment of said cutter bracket toward and away from the blank carrier axis.

5. A machine for cutting gears, comprising a rotatable blank carrier, a main slide movable toward and from said carrier, a cutter carrier movable in unison with said slide and also mounted to swing relatively thereto about an axis parallel with the path of said slide, an auxiliary slide mounted on said carrier and movable toward and from the axis of such cutter carrier, a cutter bracket mounted to swing on said auxiliary slide about an axis parallel to the path of said slide, and a cutter journaled in said bracket to rotate about an axis lying in a plane perpendicular to the path of said slide.



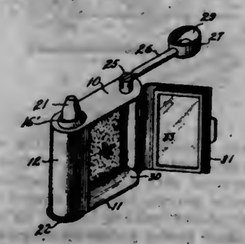
1,639,625. OIL-STORAGE TANK. IVAN RODIONOVITCH AFONIN, Baku, Caucasus. Filed Apr. 25, 1927, Serial No. 186,528, and in Russia Feb. 7, 1926. 6 Claims. (Cl. 220—26.)

5. Means according to claim 8 for preventing the evaporation of fluid in a storage tank wherein each of the floats has an upper wall and a lower wall and comprising tubes extending through said upper and lower walls for the escape of gas contained in the spaces between the depending side walls of the floats and means for closing the upper ends of said tubes.



1,639,626. DENTAL ARTICULATOR. WILLIAM R. RADGER, Hubbard, Ohio. Filed Sept. 4, 1925. Serial No. 54,526. 2 Claims. (Cl. 32—1.)

1. A dental apparatus for the purpose set forth, comprising a lower body member and an upper overlying body member, said lower member having its sides rounded to the center thereof, and its said sides at the rear thereof formed with extensions whose outer corners are rounded and whose inner edges are formed with approximately central extensions, the upper body member having its rear portion extended laterally and its outer portion rounded from the sides to the center thereof, said lateral extensions designed to rest upon the rounded corners of the first mentioned extensions and being formed with guide flanges which project over the sides of the said first mentioned extensions, means for removably connecting the rear portions of the bodies, said means including slidable cooperating blocks, spring means influencing the block of one of the members in one direction over the



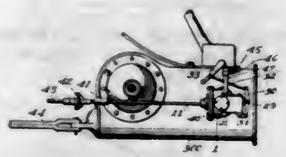
block of the other member, adjustable means for limiting such sliding movement in both directions, a hinged connection between one of said blocks and one of said members, and means between said hinged connection and said body member permitting a lateral adjustment of said body member and a limited lateral movement of said body member after such adjustment.

1,639,627. NUT-BOWL FITTING. RAYMOND K. BAILEY, Nogales, Ariz. Filed Apr. 21, 1926. Serial No. 103,594. 3 Claims. (Cl. 146—14.)

1. In a device of the character described the combination with a nut bowl having a bore formed therethrough, of a rod passing through said bore, an anvil secured to said rod, said anvil having a depending internally tapered annular flange, means for securing said rod and said anvil to said bowl in such a manner as to compress the fiber of said bowl at its point of contact with said flange.

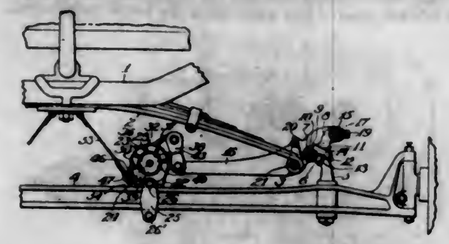
1,639,628. TOILET ARTICLE. WILLIAM L. BASS, New York, N. Y. Filed May 31, 1927. Serial No. 195,371. 11 Claims. (Cl. 206—56.)

7. A toilet article adapted to be held in the hand for applying lip rouge, said article having an upper plate provided with an aperture near the front thereof, a lip-



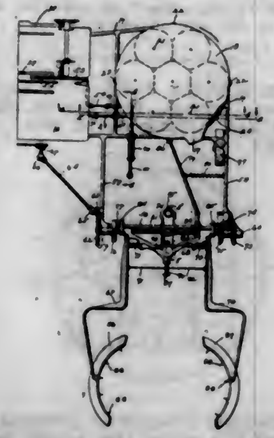
stick refill carried underneath the upper plate in a position to permit the pencil of the lipstick refill to be passed outwardly through the aperture in the upper plate, and a cap pivoted on the rear part of the upper plate a sufficient distance back of the aperture to permit swinging the cap away from the tip of the lipstick pencil where it will not interfere with the application of the same, said cap being capable of being shifted by the thumb to uncover the lipstick pencil.

1,639,629. CLICK MECHANISM FOR FISHING REELS. FRANCIS M. CASE, Cleveland, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Original application filed July 26, 1923, Serial No. 653,916. Divided and this application filed June 26, 1925. Serial No. 39,725. 1 Claim. (Cl. 242—84.6.)



In a fishing reel, a frame including a support, a spool rotatable in said frame, a click pinion rotatable with said spool, and an adjustable click pawl for co-operation with said pinion, spring means for maintaining said pawl in the desired position and comprising a pair of spring wires each having its end portions bent laterally in opposite directions, said support being provided with spaced openings to receive one end portion of each wire, the other end portions of said wires being in engagement with said pawl, and clips mounted on said support for securing said wires thereto.

1,639,630. POWER-TAKE-OFF DEVICE. JOHN M. CUSTENBORDER, Mackinaw, Ill., assignor to The Revo Manufacturing Co., East Peoria, Ill., a Corporation of Illinois. Filed Aug. 3, 1925. Serial No. 47,724. 5 Claims. (Cl. 180—14.)



1. In a power take-off the combination of a housing arranged to be mounted on a tractor, a drive shaft in the housing and provided with a gear for engagement with a part of the tractor gearing behind the main clutch of the tractor, power take-off gearing driven by the shaft, a power take-off shaft driven by the latter gearing, an overload clutch between the latter gearing and the power take-off shaft and means controlled by the over-load clutch for disengaging the tractor clutch when the power take-off shaft is over-loaded.

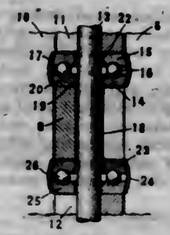
1,639,631. SHOCK ABSORBER AND REBOUND CHECK. EMERSON DAVIS, Indianapolis, Ind., assignor of one-half to George P. Ruth, Indianapolis, Ind. Filed Sept. 10, 1925. Serial No. 55,547. 15 Claims. (Cl. 267—26.)

1. A shock absorber including an adapter having a base jaw to be secured to and have gravity support upon a spring perch and having also a stem directly above the jaw provided with a pivot head, a controllable lever pivoted to the pivot head and provided with a pivot directly to support a main spring, and a controlled spring to yieldingly support and control the lever.

1,639,632. GRAIN SHOCKER. CHARLEY WESLEY LIVINGSTON, Coon Rapids, Iowa, assignor of one-half to Lyle L. Etner, Glidden, Iowa. Filed Jan. 21, 1925. Serial No. 3,752. 5 Claims. (Cl. 56—413.)

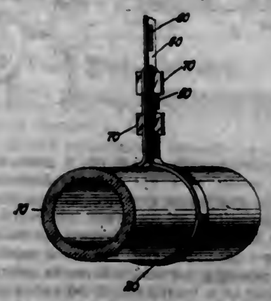
1. In combination with a binder, a grain shocker comprising a frame, a platform mounted on said frame, an arm capable of engaging the new made bundle near one end, so that when said arm carries said bundle to said platform the force of gravity will turn the bundle from a horizontal to a vertical position, a means for actuating said arm, and a means for holding said bundle on said platform while said arm is being withdrawn from said bundle, for the purposes stated.

1,639,633. BALL-BEARING HINGE. HORACE H. RAYMOND, New Britain, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Dec. 14, 1923. Serial No. 680,600. 10 Claims. (Cl. 16—136.)



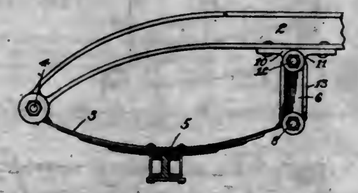
1. A ball bearing hinge comprising a pair of leaves with coacting knuckles, an anti-friction device between

adjacent knuckles comprising two hardened washers with a series of anti-friction members adapted to roll between



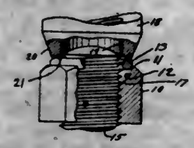
them and a surrounding casing, one of said knuckles having an integral collar spun over the inner edge of one of the washers to hold the anti-friction device in place.

1,639,634. BALL-BEARING HINGE. HORACE HOVEY RAYMOND, Berlin, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Original application filed Dec. 14, 1923, Serial No. 680,600. Divided and this application filed Aug. 26, 1926. Serial No. 131,662. 8 Claims. (Cl. 16—136.)



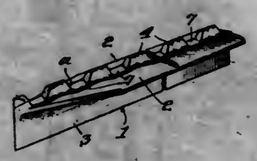
7. A hinge comprising leaf members having overlapping knuckles with aligned passages therein, an anti-friction bearing unit between adjacent overlapping knuckles and having a passage in alignment with the aligned passages in said adjacent knuckles and comprising two bearing members, devices adapted to roll between said bearing members and a housing enclosing the outer edges of and holding said bearing members together, means for securing said bearing unit to one of said adjacent knuckles including means separate from and within the passage walls in such knuckle and extending therefrom into the passage in the bearing unit and interlocking with an inner portion of said bearing unit while leaving the outer bearing member free to turn with the other of said adjacent knuckles, and a pintle connecting said adjacent knuckles and passing through said bearing unit.

1,639,635. PIPE HANGER. JOHN P. SEIFERT, Milwaukee, Wis., assignor to Atlas Metal Parts Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 31, 1921. Serial No. 473,634. 1 Claim. (Cl. 248—31.)



A pipe hanger comprising a band for supporting a pipe, the said band being provided with perforated ends which extend in substantial parallelism from one side thereof, a perforated fixed pendant arranged between the projecting ends of the band, a notched key passed through the aligned perforations to connect the band to the pendant, the side walls of the notch being inclined so as to force the said ends into engagement with the sides of the pendant under the gravitation of the pipe.

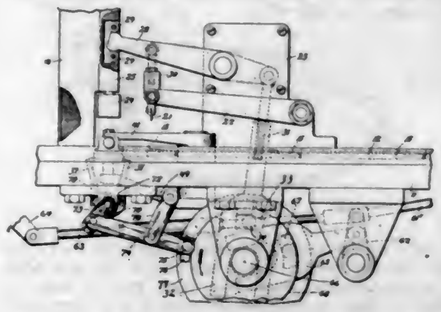
1,639,636. ANTIRATTLER SPRING SHACKLE. HENRY E. BLOMGREN, Brooklyn, N. Y., assignor to Rubber Shackle Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 8, 1927. Serial No. 159,786. 8 Claims. (Cl. 267—30.)



1. In a spring shackle, the combination with the spring sleeve and the bracket sleeve connected by the side links and a bolt passing through each sleeve and the links, of a block of resilient material maintained in a constantly compressed state between the sleeves and the links.

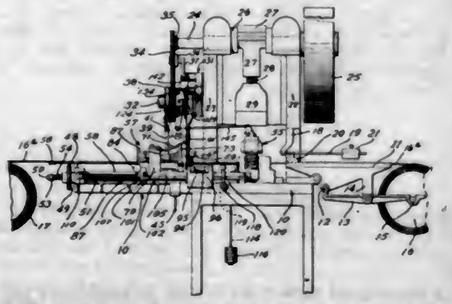
1,639,637. LOCK NUT. BATES E. HAWLEY, Vancouver, Wash., assignor to American Locknut Company, Longview, Wash. Filed Apr. 22, 1926. Serial No. 103,717. 7 Claims. (Cl. 151—1.)

1. A nut having one face recessed to receive a locking ring, said recess consisting of an annular groove having an arcuate radial section, whereby when the nut is placed on a bolt and the locking ring is placed in the annular groove of the nut and is driven in an axial direction, the groove will roll the locking ring into firm locking engagement with the threads of the bolt so that after such locking, the washer will not rotate upon the bolt when the nut is rotated in either direction.



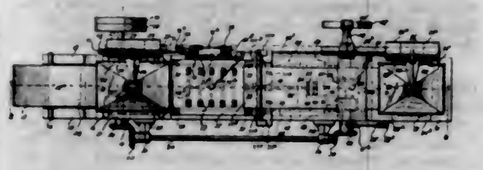
1,639,638. FENCEPOST. ARTHUR S. HOOK, Oak Park, Ill., assignor to Calumet Steel Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 26, 1924, Serial No. 701,939. Divided and this application filed Nov. 6, 1924. Serial No. 748,040. 1 Claim. (Cl. 256—58.)

A rolled metal fence T-bar in form to provide the post with front and rear flanges, a row of studs or lugs rolled on the front flange between its side edges and running the full length of the post, said lugs being closely spaced with the metal between the studs finished by rolling, and ledges between the lugs at the bases thereof and project-



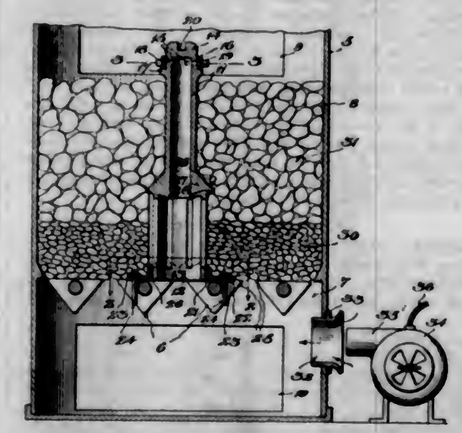
ing slightly above said front flange, said ledges being separated by the lugs and projecting laterally beyond the line of the same.

1,639,639. MATCH-PACKETING MACHINE. ADOLPH W. CHRISTIANSON, Burlington, Vt., and JOHN F. MILLIGAN, Ridgefield Park, N. J., assignors to Globe Match Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed May 2, 1924. Serial No. 710,575. 8 Claims. (Cl. 93—2.)



1. In a match packeting machine, a framework provided with a forming recess and a vertically extending receptacle for cover blanks adjacent the recess, horizontally movable means for pushing the lowermost blank in the pile into covering relation to the recess, horizontally movable means for pushing a match strip section into superposed relation to the cover blank, a vertically reciprocating plunger for forcing the match strip section and the cover blank into the recess to initially fold the ends of the cover blank, a pair of jaw members movable into position to center the match strip section on the cover and to hold the parts in position during the ascent of the plunger, a horizontally movable member movable to and fro with relation to the forming recess to fold one end of the cover blank, a yieldable plate underneath which the packet may be forced to fold the other end of the cover, and an ejecting slide member operating beneath the horizontally movable folding member to eject the packet from the recess.

1,639,640. ART OF AND APPARATUS FOR MAKING STORAGE-BATTERY PLATES. THEODORE S. COLE and SETH JOHNSON, New Haven, Conn., assignors to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Aug. 23, 1923. Serial No. 658,868. 60 Claims. (Cl. 29—2.)



1. In apparatus of the general nature of that herein described, in combination, a reciprocating die member adapted to operate upon sheet metal and having a row of spaced projections adapted to enter said sheet and displace the metal thereof, the surface of said die member between said projections being rounded so as to form rounded ribs in said sheet between the portions thereof which said projections enter, and means for actuating said die.

1,639,641. ART AND APPARATUS FOR MAKING STORAGE-BATTERY GRIDS. THEODORE S. COLE, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Aug. 23, 1923. Serial No. 658,887. 27 Claims. (Cl. 29—2.)

1. The herein described art of making grids for storage battery plates which consists in rotating at cutting speed a rotary cutting tool having a plurality of spaced cutters each adapted to mill a slot, feeding a sheet of lead past said rotating cutting tool thereby to form a plurality of bars integral with said sheet and spaced from each other by the slots cut by said cutters and in intermittently interrupting the cutting action of said tool during the feeding of said sheet to form therein a plurality of supporting ribs extending transversely to said bars.

1,639,642. APPARATUS FOR DISTRIBUTING GAS AND AIR IN FIRE BOXES. JAMES C. LAW, Scranton, Pa. Filed Feb. 6, 1926. Serial No. 86,551. 9 Claims. (Cl. 110—75.)

1. The combination with an ash-pit, a grate and a fire-box above the grate, of a gas and air distributor supported upon the grate and provided with a longitudinal passage communicating at its lower end with the ash-pit and having damper-controlled lateral discharge jets below and adjacent its upper end, the lower portion of the device having straight vertical side walls provided with longitudinal slots of a length to extend above the normal ash bed as and for the purpose described.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 361—No. 4. TUESDAY, AUGUST 23, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimer.

1,166,758.—*George H. Gibson*, Montclair, N. J. FLOW-CONTROLLING APPARATUS. Patent dated January 4, 1916. Disclaimer filed August 5, 1927, by the patentee.

Hereby enters this disclaimer to the flow controlling means specified in claim 2 of said Letters Patent except in steam generating apparatus to adjust the rate of flow of a fluid supplied thereto in such manner as to maintain a desired ratio between the rate of flow of such fluid and the rate of flow of steam being withdrawn from said apparatus.

Trade-Marks Canceled.

107,818. Mixed paint. Engineering Products Corporation, Newport News, Va. Registered December 28, 1915. Canceled August 2, 1927.

149,615. Canned grapefruit. Spanish American Fruit Co., Inc., Plainfield, N. J. Registered December 13, 1921. Canceled August 2, 1927.

189,682. Candy. Floyd B. Perkins, doing business as The Spot Candy Company, Chicago, Ill. Registered September 23, 1924. Canceled August 2, 1927.

210,784. Woolen goods in the piece. Kemp-Booth Company Limited, Seattle, Wash. Registered March 23, 1926. Canceled August 2, 1927.

224,566. Canned fish—namely, sardines. Feu Hermanos, Ayamonte, Spain, and New York, N. Y. Registered March 1, 1927. Canceled August 2, 1927.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,560,724, L. M. Potts, Regulating system, decided July 14, 1927, claims 1, 2, 3, 4, and 7.

Pat. 1,563,895, W. C. Coleman, Oven, decided August 5, 1927, claims 1 to 4, inclusive.

Pat. 1,607,993, R. G. F. Loewy, Container tube, decided July 16, 1927, claims 6, 7, and 8.

A final decision in interference has been rendered against the following trade-mark:

T. M. 188,278, Coffee, G. G. Buse, Buffalo, N. Y. Registered July 8, 1924. Decided August 2, 1927.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Aug. 10, 1927.*

Srinivas Ram Wagel, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Lester Kirschbraun, 160 North Wells Street, Chicago, Ill., and a patent granted August 17, 1926, No. 1,596,218, to Srinivas Ram Wagel, Vanderbilt Hotel, New York, N. Y., and a notice of such declaration sent by registered mail to said Wagel at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Wagel, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Aug. 12, 1927.*

Original Sample Cloak & Suit Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Lord & Taylor, 424 Fifth Avenue, New York, N. Y., for registration of a trade-mark, and trade-mark registered August 10, 1915, No. 105,697, to Original Sample Cloak & Suit Company, of Lyric Theatre Building, Cincinnati, Ohio, and a notice of such declaration sent by registered mail to said Original Sample Cloak & Suit Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Original Sample Cloak & Suit Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business August 12, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 68,102; Trade-Mark Division, 1,763. Oldest new case, Dec. 1, 1926; oldest amended, Dec. 1, 1926. The dates given are 1927 except where † indicates 1926.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

Ex parte Appleby.

Decided August 4, 1927.

Application—Divisional—Under Section 4886, Revised Statutes, Not Division of Reissue Application.

An application filed in accordance with the provisions of section 4886, Revised Statutes, with the oath required by section 4892, Revised Statutes, claiming matter shown in applicant's prior patent can not be regarded as a division of an application for the reissue of that patent.

On petition.

Application for patent.

Steam hot plate.

Mr. R. S. A. Dougherty and *Messrs. Watson, Coit, Morse & Grindle* for the applicant.

Kinnan, *First Assistant Commissioner:*

The Board of Appeals having determined that the applicant had mistaken his remedy by appeal to this Board from the requirement of the Examiner and having held the matter was one for petition to the Commissioner, the appeal will be construed as a petition and, since the points of the appeal were argued before me as a member of the Board of Appeals, it seems proper to decide the matters argued without further hearing. The case will be decided, therefore, without the filing of a formal petition.

The record shows that on April 15, 1924, petitioner was granted Patent No. 1,490,721, on an application filed June 25, 1921. Certain of the claims of this patent were so limited as to exclude the modified forms of the construction shown in Figures 5 and 6. On March 25, 1926, the applicant filed a reissue application for his patent and sought to obtain claims to cover these modifications or different species of these Figures 5 and 6. The Examiner denied these claims in the reissue application and his decision is not before me for review.

The Examiner does not appear to have denied patentability to applicant of the claims copied in his statement in answer to the appeal but has merely held this application here on review is not a division of the applicant's reissue application, and that the statement to this effect in the instant case should be canceled. The Examiner is clearly correct in such holding. The instant case does not contain a petition for reissue of the original patent, the necessary oath which must accompany an application for a reissue, nor has there been presented the reissue fee. Furthermore, there is no law or procedure with which I am familiar that would warrant considering the instant application a division of the reissue application. These two applications are filed under different sections of the statute and seek protection for different periods. The only decided case touching upon such a condition as here presented and of which I am aware is the unpublished decision in *Ex Parte Holt*, 119 MS. Dec. 448. That decision refers to the holdings in the cases of *Hayes-Young Tie Plate Co. v. St. Louis Transit Co.*, 137 Fed. Rep. 80, and *International Tooth Crown Co. v. Richmond et al.*, 30 Fed. Rep. 775.

The holding of the Examiner that the instant case is not a divisional application of the reissue application is sustained.

The petition is denied.

Court of Appeals of the District of Columbia.

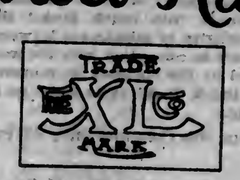
The Fries & Fries Company v. The Excel Company, Inc.

No. 1,372. Decided December 6, 1926.

Trade-Marks—Assignment of Mark Without Transfer of Business and Goodwill.

Where a trade-mark is assigned, but the business of the assignor is not transferred, and the goodwill of the assignor does not accompany the assignment, all that the assignee acquires is the right to use that mark as against its prior owner. It acquires no such right from the prior owner as would enable it to attach its use to the use made by its assignor.

Appeal from Patent Office. Affirmed.



Mr. J. H. Milans and *Mr. C. T. Milans* for The Fries & Fries Co.

Mr. James N. Ramsey for The Excel Co., Inc.

Before Martin, Chief Justice, Van Orsdel, Justice, and Hatfield, Judge U. S. Court of Customs Appeals.

Van Orsdel, *J.:*

This is a trade-mark interference between two applications for trade-marks to be used on denatured alcohol for massage purposes. The mark of the appellant company is "X L-Rub" and the mark of the appellee company is—

In its application The Fries & Fries Company, the senior party, alleges its earliest date of use February 1, 1922. The junior party, The Excel Company, established use of its mark at a date prior to the date claimed by the appellant company. The tribunals below held that the marks were confusingly similar and consequently were not both entitled to registration, and accorded registration to "Excel-Rub" the mark of appellee company.

It is now urged on behalf of appellant company that the mark "X L-Rub" was used by The X. L.

Pharmacal Company prior to 1913, and that under an assignment of said mark dated March 14, 1924, they are entitled to date their title back to 1913, a date prior to the earliest date claimed by appellee company.

It will be observed that this assignment was acquired almost two years after the application of appellant company was filed, but in any event it could not be made to relate back to the use of the mark by The X. L. Pharmacal Company, since the business of that company was not transferred and the goodwill of the business did not accompany the assignment of the mark. All that the appellee company acquired was the right to use that mark as against its prior owner. It acquired no such right from the prior owner as would enable it to attach its use to the use made by its assignor. The Commissioner was, therefore, right in holding that appellee company was entitled to no earlier date than February, 1922.

It is contended, however, that The Excel Company is not entitled to register the mark "Excel-Rub" for the reason that it is descriptive of the quality of the goods to which the mark is applied. This question can not be raised in this case, since priority of use is the only issue involved in an interference proceeding. The right of appellee company to register its mark "Excel-Rub", may be challenged in the Patent Office by a competent party in a proper action.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

THE HOLLAND RUSK COMPANY, INC., *v.* DIEDERICH.

No. 1961. Decided March 7, 1927.

TRADE-MARKS—OPPOSITION—MARKS DISSIMILAR.

Where the opposer had two registrations, one of the word "Holland" and the other of a picture portraying a windmill scene, and generally used these marks in combination, and the applicant had a registration displaying a picture of a boy and a girl dressed in Dutch costume, standing beside a country road and eating rusk, and was seeking registration of substantially the same country scene in combination with the disclaimed words "Old Dutch Rusk," *Held* there is such a dissimilarity in appearance between the picture used by opposer in connection with the word "Holland" and that used by the applicant in connection with the words "Old Dutch Rusk" as to make confusion in the trade unlikely.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. F. E. Liverance for The Holland Rusk Co., Inc.

Mr. A. F. Nathan for Diederich.

Before MARTIN, Chief Justice, ROBB, Justice, and GRAHAM, Presiding Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.*:

This is an appeal from concurring decisions of the Patent Office overruling appellant's opposition to the registration of a trade-mark applied for by appellee. It is conceded that the goods of the respective parties are identical in character, and the opposition is based upon the claim that appellee's trade-mark is deceptively similar to certain registered trade-marks in prior use by appellant.

Both of the respective parties bake and sell rusk which is a light, soft bread, often crisped in an oven. It is said that the article first became popular in Holland, and that it finds a large sale in this country among people of Dutch descent; and that the appellant has been engaged in this business for about thirty years, and has established a valuable trade and good will for the commodity. The appellee has been engaged in the trade in this country since about 1916 when he immigrated from Holland where he had carried on a similar trade for many years.

In the year 1906 the appellant obtained trade-mark registration of the word "Holland," under the ten year clause of the act of February 20, 1905, and subsequently in the same year obtained an additional registration of a picture portraying a windmill scene, and made use of the marks generally in combination. Appellant also advertised its rusk under such names as "Famous Dutch Food" and "Dainty Dutch Toasted Biscuit," as well as other descriptions containing the name "Dutch." Appellant, however, has not shown any exclusive right to these descriptions.

Afterwards, towit, in the year 1923, the appellee obtained a registration of its trade-mark for rusk displaying a picture of a boy and girl dressed in Dutch costume, standing beside a country road and eating rusk. The appellee also applied for a registration of substantially the same country scene in combination with the words "Old Dutch Rusk." It is this latter application which was opposed by appellant as deceptively similar to its prior trade-marks aforesaid, and that is the issue involved in this appeal.

The Commissioner of Patents, affirming the decision of the Examiner of Interferences, held against appellant's opposition, saying in part:

> So far as the words "Old Dutch" are concerned, they are descriptive and applicant has disclaimed them save in connection with the rural scene. Viewing applicant's combined mark as a whole, it is not believed there would be confusion in trade if it appeared upon packages of rusk in the same market with the opposer's mark "Holland," or the mark consisting of the representation of the windmill.

We agree with this decision. The applicant is entitled under the first registration to use the picture of the Dutch boy and girl at the side of the road as his trade-mark, and that specific mark viewed alone is not involved in this opposition. The sole question raised by the opposition is whether applicant may add the words "Old Dutch Rusk" to this picture. The applicant disclaims the use of these words except in connection with the picture, and we think there is such a dissimilarity in appearance between the picture used by appellant in connection with the word "Holland," and that used by appellee in connection with the words "Old Dutch Rusk," as to make confusion in the trade unlikely.

The decision of the Commissioner of Patents is accordingly affirmed.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 23, 1927.

[VOL. 361. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

RAW OR PARTLY-PREPARED MATERIALS.

Ser. No. 247,591. BERTON G. BAIRD, Newark, N. J. Filed Apr. 18, 1927.

DURALITE

Particular description of goods.—Indurated Fiber Made of Combined Compressed and Hardened Vegetable Fiber and is Used for Arch Supports, Innersoles, Shoehorns, Etc.

Claims use since March, 1926.

Ser. No. 250,794. GENERAL CLAY COMPANY, Los Angeles, Calif. Filed June 20, 1927.

PALEX

Particular description of goods.—Filtering and Bleaching Clay.

Claims use since Jan. 21, 1927.

Ser. No. 250,865. SPELTZ GRAIN & COAL CO., Albert Lea, Minn. Filed June 21, 1927.

Particular description of goods.—Coal.

Claims use since May, 1926.

CLASS 4.

ABRASIVE, DETERGENT, AND POLISHING MATERIALS.

Ser. No. 247,632. THE PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed Apr. 18, 1927. Under 10-year proviso.

CRYSTAL WHITE

Particular description of goods.—Soap.

Claims use since 1894.

Ser. No. 247,713. JOHN R. STARCK, doing business as National Jewelers Supplies, New York, N. Y. Filed Apr. 19, 1927.

No claim is made to the words apart from the mark shown in the drawing.

Particular description of goods.—Liquid Diamond Cleaner.

Claims use since August, 1926.

Ser. No. 248,546. HERMAN LEROY BEAVER, Philadelphia, Pa. Filed May 6, 1927.

FINBALS

Particular description of goods.—Metal Polishing and Burnishing Material Consisting of Small Polished Steel Elements.

Claims use since Mar. 3, 1927.

Ser. No. 249,474. GEIGY COMPANY, INC., New York, N. Y. Filed May 24, 1927.

ERIOPLYNON

Particular description of goods.—Chemical Preparations Suitable for the Washing of Wool.
Claims use since May 20, 1927.

Ser. No. 249,741. THE MIDLAND CHEMICAL LABORATORIES, INC., Dubuque, Iowa. Filed May 28, 1927.

MIDALCO

Particular description of goods.—Preparation of Soap and Other Ingredients for Use Especially in Dry Cleaning.
Claims use since about Dec. 1, 1925.

Ser. No. 249,742. THE MIDLAND CHEMICAL LABORATORIES, INC., Dubuque, Iowa. Filed May 28, 1927.

TILEOLEUM

Particular description of goods.—Cleaning Preparation of Pine Oil, Potash, and Other Ingredients in Any Convenient Form for Use in Cleaning Terrazzo or Marble Floors or Walls and Other Hard Surfaces.
Claims use since about Dec. 1, 1926.

Ser. No. 249,922. J. L. PRESCOTT COMPANY, New York, N. Y. Filed June 2, 1927.

CLIMAX

Particular description of goods.—Stove Enamel Polish.
Claims use since about 1885.

Ser. No. 249,923. J. L. PRESCOTT COMPANY, New York, N. Y. Filed June 2, 1927.

EASYBRIGHT

Particular description of goods.—Stove Enamel Polish.
Claims use since about 1889.

Ser. No. 250,116. MORRIS COHN, doing business as Crystal Chemical Company, Newark, N. J. Filed June 7, 1927.

JOCKEE

Particular description of goods.—Soap.
Claims use since about May 28, 1927.

Ser. No. 250,240. D. M. HOFFECKER, Boston, Mass. Filed June 9, 1927.

Particular description of goods.—Cleansing Soap.
Claims use since Jan. 2, 1920.

Ser. No. 250,594. BRIGHT METALS CORPORATION, New York, N. Y. Filed June 16, 1927.

TARNEX

Particular description of goods.—Polishing and Tarnish-Preventing Compounds for Metal Surfaces.
Claims use since June 8, 1927.

Ser. No. 250,934. THE PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed June 22, 1927.

CALUMET

Particular description of goods.—Soap.
Claims use since January, 1896.

Ser. No. 250,994. HOUBIGANT, INC., New York, N. Y. Filed June 23, 1927.

ROYAL FERN

Particular description of goods.—Toilet Soap and Soap Cream Used Before Shaving.
Claims use since June 17, 1927.

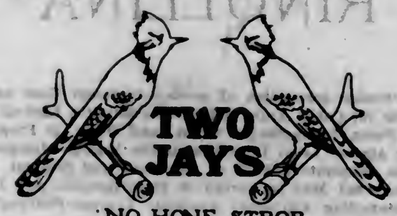
Ser. No. 251,006. MYRURGIA, S. A., Barcelona, Spain. Filed June 23, 1927.

Perfume Alado

No claim is made to the word "Perfume" apart from the mark as illustrated.
Particular description of goods.—Soap.
Claims use since October, 1922.

Ser. No. 251,468. THE SUCCESS BARBER SUPPLY, Moravia, Iowa. Filed July 2, 1927.

Smooth-O



Particular description of goods.—Strop Filler.
Claims use since October, 1926.

Ser. No. 251,525. J. A. WEBB BELTING COMPANY, INC., Buffalo, N. Y. Filed July 5, 1927.

Spider Webb

Particular description of goods.—Leather-Belt Filler.
Claims use since June 7, 1926.

Ser. No. 251,845. JOE JANECKA, Dallas, Tex. Filed July 11, 1927.

NO HONE STROP

No claim is made to the words "No Hone Strop" aside from the mark shown in the drawing.
Particular description of goods.—Barbers' Supplies—Namely, Razor Strops.
Claims use since Apr. 25, 1927.

Ser. No. 252,032. LEON COHN, doing business as Parfumerie Forest, Paris, France. Filed July 14, 1927.

Trousseau

Particular description of goods.—Toilet Soaps.
Claims use since Dec. 1, 1926.

CLASS 5.

ADHESIVES.

Ser. No. 247,239. RUBBER-WELD SALES COMPANY, Cambridge, Mass. Filed Apr. 9, 1927.

Rubber-Weld

Particular description of goods.—Rubber Cement.
Claims use since Dec. 27, 1922.

Ser. No. 248,730. THE SCHOLL MFG. CO., INC., Chicago, Ill. Filed May 9, 1927.

ADHESITE

Particular description of goods.—Glues, Cement, and Glue Cement.
Claims use since Mar. 5, 1927.

CLASS 6.

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.

Ser. No. 235,720. RALPH B. ADAMS, Monticello, Me. Filed Aug. 9, 1926.

H-K

Particular description of goods.—Insecticides.
Claims use since June, 1925.

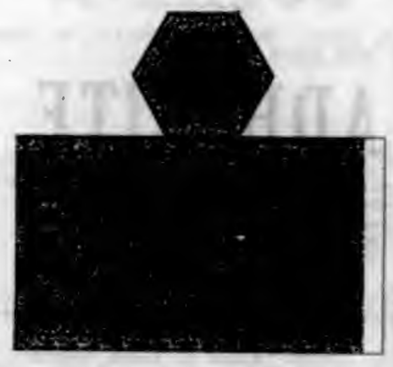
Ser. No. 237,671. LAUNDRY SERVICE CORPORATION, Dallas, Tex. Filed Sept. 24, 1926.

LASCO

Particular description of goods.—Laundry Blue, Laundry Soda, Laundry Sour, Laundry Starch, and Laundry Bleach.
Claims use since Aug. 20, 1924.

Ser. No. 239,871. JOHN WIETH & BROTHER, INCORPORATED, Philadelphia, Pa. Filed Nov. 9, 1926.

EPOCALE



Particular description of goods.—Medicinal Preparation—Namely, Anodyne, Antispasmodic, Uterine Tonic Indicated in the Treatment of Discomforts and Pains Incident to Inflamed or Congested Conditions of the Sexual Organs, Especially in the Treatment of Uterine Disorders, and the Relief of Menstrual Irregularities.
Claims use since Oct. 28, 1926.

Ser. No. 243,089. GRAVES & MEADE & BAKER COMPANY, New York, N. Y. Filed Jan. 20, 1927. Under 10-year proviso.

Dr. E. L. Graves
Unequaled
Tooth Powder

Particular description of goods.—Tooth Powder.
Claims use since Jan. 1, 1867.

Ser. No. 244,799. STOYANOFF, GERLI AND CO., New York, N. Y. Filed Feb. 23, 1927.

The words "Sofia, Bulgaria" appearing on the drawing are disclaimed apart from the mark as shown. The drawing is lined to indicate the colors yellow, blue, red, and green.

Blepharin

Particular description of goods.—Eyewater for Treating, Beautifying, and Disinfecting the Eyes, Eyelids, and Eyelashes.

Claims use since about July 14, 1926.

Ser. No. 248,247. PAX MANUFACTURING COMPANY, New York, N. Y. Filed Apr. 30, 1927.

AGRIPAX

Particular description of goods.—Insecticide.
Claims use since Jan. 1, 1927.

Ser. No. 248,286. CARLETON DREDERA, Winter Haven, Fla. Filed May 2, 1927.

KILRUST
TRADE MARK

The representation of the bottle and the words "Trade-Mark" and "Removes and Resists Iron Rust" are disclaimed apart from the mark as shown.

Particular description of goods.—Picking Solution, Oxide Removing Resisting Plating Compound.
Claims use since Apr. 30, 1927.

Ser. No. 248,733. SOCIETÀ ESERCIZIO FARMACIE E SPECIALITÀ MEDICINALI DI E. GRANELLI & C., Turin, Italy. Filed May 9, 1927.

RINOLEINA

Particular description of goods.—Ointment Used as a Specific for Colds, Acute and Chronic Rhinitis, Laryngitis, Hay Fever, Rhinarrhagia, Ozena, and Otitis, is Prophylactic Against Local Infections of the Mucous Membrane of the Respiratory Part of the Nose and General Infection That May be Spread in the Organism, and Has a Disinfecting Astringent Analgesic Laryngo-Pharyngitic Action.

Claims use since Jan. 1, 1912.

Ser. No. 248,783. MO-GROW CHEMICAL CO., Flora, Miss. Filed May 10, 1927.

MO-GROW

Particular description of goods.—A Fair-Skin Ointment, Skin Balm, Hair Dressing and Grower, and Pressing Compound for the Hair.

Claims use since Apr. 1, 1926.

Ser. No. 248,876. CAMPANA CORPORATION, Batavia, Ill. Filed May 12, 1927. Under 10-year proviso.

Italían
Balm

Particular description of goods.—Skin-Softening Preparation.
Claims use since on or about Jan. 1, 1895.

Ser. No. 248,877. CAMPANA CORPORATION, Batavia, Ill. Filed May 12, 1927. Under 10-year proviso.

Campana's

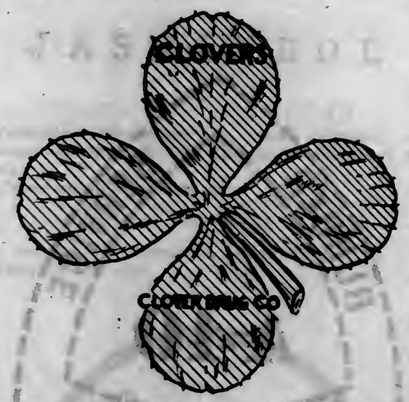
Particular description of goods.—Skin-Softening Preparation.
Claims use since on or about Jan. 1, 1895.

Ser. No. 249,587. PITTS MANUFACTURING CO., Wilmington, Calif. Filed May 25, 1927.

Homer R. Pitts.

The mark is a facsimile of the signature of one of the members of the copartnership.

Particular description of goods.—Medicine for Nausea, Indigestion, and Vomiting in Pregnancy.
Claims use since May 4, 1927.



Ser. No. 249,854. GEO. H. LEE CO., Omaha, Nebr. Filed June 1, 1927.

Flu-Koff

Particular description of goods.—Medicinal Preparation for the Treatment of Influenza, Coughs, and Colds in Livestock, and Roup, Colds, Bronchitis, and Pneumonia in Poultry.

Claims use since 1925.

Ser. No. 250,034. HARRY NOONAN, doing business as Clover Drug Co., Long Island City, N. Y. Filed June 4, 1927.

The mark consists of a four-leaved-clover-shaped device in green and containing the words "Clovers, Clover Drug Co.," as indicated on the drawing upon which the trademark is shown. The drawing is lined to indicate green.

Particular description of goods.—Medicated Confections—Namely, Headache Confection, Indigestion Confection, Cough and Halitosis Confection, and Constipation Confection.

Claims use since May 25, 1927.

Ser. No. 250,111. RICHARD E. BANKS, doing business as Naturlyte Co., Jefferson Valley, N. Y. Filed June 7, 1927.

Naturlyte

Particular description of goods.—Chemical Compound for Use in Recharging and Rejuvenating Storage Batteries.

Claims use since June 7, 1927.

Ser. No. 250,141. THE RUBBER SERVICE LABORATORIES COMPANY, Akron, Ohio. Filed June 7, 1927.

Particular description of goods.—Compound Used as a Vulcanization Accelerator in the Curing of Rubber Articles.

Claims use since Sept. 19, 1925.

Ser. No. 250,142. THE RUBBER SERVICE LABORATORIES COMPANY, Akron, Ohio. Filed June 7, 1927.

RUBBER SERVICE A-40 LABORATORIES

Particular description of goods.—Compound Used as a Vulcanization Accelerator in the Curing of Rubber Articles.

Claims use since Dec. 11, 1924.

Ser. No. 250,144. THE RUBBER SERVICE LABORATORIES COMPANY, Akron, Ohio. Filed June 7, 1927.

RUBBER SERVICE R.S.L. MOLD SOLUTION LABORATORIES

The words "Mold Solution" are hereby disclaimed apart from the mark as shown on the drawing.

Particular description of goods.—Solution of Chemical Nature Applied to Molds to Prevent Sticking of Molded Articles to the Mold.

Claims use since Jan. 13, 1927.

Ser. No. 250,145. THE RUBBER SERVICE LABORATORIES COMPANY, Akron, Ohio. Filed June 7, 1927.

RUBBER "RUSCO" SERVICE SODIUM XANTHATE LABORATORIES

The words "Sodium Xanthate" are disclaimed apart from the mark as shown on the drawing.

Particular description of goods.—Ore Concentration and Flotation Agent in the Nature of a Chemical Compound.

Claims use since Apr. 6, 1926.

Ser. No. 250,164. THE CHICAGO PHARMACAL COMPANY, Chicago, Ill. Filed June 8, 1927.

DERMATONE

Particular description of goods.—Remedies for Diseases of the Skin.

Claims use since May 20, 1908.

Ser. No. 250,325. HENRY E. SCHEITER, doing business as Phoenix Remedy Co., Mount Olive, Ill. Filed June 10, 1927.

Mother Scheiter's

The picture is a portrait of my mother, Johanna Scheiter.

Particular description of goods.—Compound for Treating Affections of the Teeth and Throat.

Claims use since Apr. 15, 1927.

Ser. No. 250,428. AMERICAN CHEMICAL PAINT COMPANY, Ambler, Pa. Filed June 13, 1927.

JUVENATOR

Particular description of goods.—Liquid Chemical for Improving the Operation of Internal-Combustion Engines by Opposing the Deposition and Accumulation of Hard Carbon Deposits.

Claims use since Oct. 8, 1926.

Ser. No. 250,626. EDWARD LASSERE, INC., New York, N. Y. Filed June 16, 1927.

PYNORA

Particular description of goods.—Preparation for the Treatment of Articular Rheumatism, Muscular Rheumatism, Muscular Soreness, Facial Neuralgia, Swollen and Stiff Joints, Lumbago, Sprains or Strains, Chest Colds, and Chilblains.

Claims use since Feb. 1, 1924.

Ser. No. 250,718. LUDWIG SCHERK, doing business as Parfümerie Scherk, Berlin, Germany. Filed June 17, 1927.

Mimikri

Particular description of goods.—Perfumery; Cosmetics—Namely, Face Powder, Talcum Powder, Face Cream, Rouge; Ethereal Oils, Bath Salts, Disinfectants, Face Lotion, Preparations for Bleaching, Starches, and Starch Preparations for Use in Washing.

Claims use since October, 1926.

Ser. No. 250,854. GRACE MORGAN, Atlantic City, N. J. Filed June 21, 1927.

NINGUNO MEJOR · ORGANIC · MUNDO ENTERO · HAIR GROWER

No claim is made to the exclusive use of any of the words appearing on the drawing aside from the mark shown. The picture shown is a portrait of myself.

Particular description of goods.—Preparation for Promoting the Growth of the Hair.

Claims use since June 1, 1927.

Ser. No. 251,036. HEINE & CO., New York, N. Y. Filed June 24, 1927.

JASMINDOL

Particular description of goods.—Perfumes and Natural and Synthetic Oils Suitable for Perfumery Purposes.

Claims use since Sept. 1, 1902.

Ser. No. 251,058. JOSEPHINE JAQUET, Jersey City, N. J. Filed June 24, 1927.

Jaquet

The trade-mark is the autographic signature of applicant.

Particular description of goods.—Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eyedrops, Hand Lotions, Skin Lotions, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Deodorants, Disinfectants, Aspirin, Bay Rum, Perfumes, and Toilet Waters.

Claims use since Apr. 10, 1922.

Ser. No. 251,174. CORN FIX CO., INC., Newark, N. J. Filed June 27, 1927.

COLD "FIX" TABLETS

Applicant disclaims the use of the word "Tablets" apart from the mark shown on the drawing.

Particular description of goods.—Remedy for Colds, La Grippe, Constipation, and Headache.

Claims use since May, 1920.

Ser. No. 251,249. SMITH BROTHERS, INC., Poughkeepsie, N. Y. Filed June 28, 1927.

SMITH BROTHERS

The two bust portraits of male figures forming part of trade-mark represent the Smith brothers, the portrait on the left representing William Douglas Smith, deceased, and the portrait on the right representing Andrew Smith, deceased.

Particular description of goods.—Cough Sirup.
Claims use since Apr. 20, 1927.

Ser. No. 251,563. HERMAN H. KRONBERG, doing business as Standard Drug and Sales Company, Philadelphia, Pa. Filed July 6, 1927.

JENTELS

Particular description of goods.—Vegetable Laxative Tablets.
Claims use since Mar. 1, 1924.

Ser. No. 251,608. CITRUS CHEMICAL CORPORATION, Elkton, Md. Filed July 7, 1927.

ORO-LETS

Particular description of goods.—Laxative Confections.
Claims use since May 25, 1927.

Ser. No. 251,687. RAYMOND H. RODGERS, doing business as Quaker Gray Products Company, Philadelphia, Pa. Filed July 8, 1927.

QUAKER GRAY

Particular description of goods.—Liquid Powder and Complexion Bleach, General Healing Cream, Cough Sirups, Face and Talcum Powders, Toilet Creams, and Dentifrices.
Claims use since July, 1926.

CLASS 6.

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS.

Ser. No. 251,901. GREENHILL AND SONS, LTD., London, England. Filed July 12, 1927.

CRESTALLINE

Particular description of goods.—Cigar Cases, Cigarette Cases, Cigar Holders, and Cigarette Holders.
Claims use since Aug. 24, 1923.

CLASS 10.

FERTILIZERS.

Ser. No. 250,644. EDWIN M. ROSENBLUTH, doing business as Chemical Products Division of Rose Manufacturing Company, Philadelphia, Pa. Filed June 16, 1927.

FEROGEN

Particular description of goods.—Ground Dressings and Fertilizers.
Claims use since Nov. 1, 1924.

Ser. No. 250,645. EDWIN M. ROSENBLUTH, doing business as Chemical Products Division of Rose Manufacturing Company, Philadelphia, Pa. Filed June 16, 1927.

HORTOGEN

Particular description of goods.—Horticultural Stimulants and Fertilizers.
Claims use since Oct. 15, 1925.

Ser. No. 251,873. SYNTHETIC NITROGEN PRODUCTS CORPORATION, New York, N. Y. Filed July 11, 1927.

Phosponite

Particular description of goods.—Fertilizers.
Claims use since about June 27, 1927.

CLASS 11.

INKS AND INKING MATERIALS.

Ser. No. 250,218. HAMPTON AULD, Newark, N. J. Filed June 9, 1927.

No registration rights are claimed for the word "Bodygum" and the representation of the goods.

Particular description of goods.—A Preparation for Mixing with Printing Ink to Give Body Thereto.
Claims use since Aug. 16, 1906.

CLASS 12.

CONSTRUCTION MATERIALS.

Ser. No. 245,322. H. L. BAUMGARDNER CORPORATION, Chicago, Ill. Filed Mar. 7, 1927.

DUROPHALT

Particular description of goods.—Waterproofing and Dampproofing Compound for Use in the Protection of Surfaces Exposed to Water or Dampness.
Claims use since Feb. 1, 1925.

Ser. No. 249,384. STANDARD OIL COMPANY (NEW JERSEY), Bayonne, N. J. Filed May 21, 1927.

Marcol

Particular description of goods.—Temperature-Insulating Material.
Claims use since Apr. 4, 1922.

Ser. No. 249,575. B & F N-DURING CEMENT CO., Binghamton, N. Y. Filed May 26, 1927.

Applicant makes no claim to the name "N-During" except as associated with other features of the mark.

Particular description of goods.—Building Cement Consisting of a Chemically-Treated Powdered Substance.
Claims use since Mar. 12, 1926.

Ser. No. 250,648. SEABOARD REFRACTORIES COMPANY, Valentines, N. J. Filed June 16, 1927.

OILFRAX

Particular description of goods.—Refractory Bricks.
Claims use since on or about Mar. 1, 1927.

Ser. No. 250,687. FARLEY & LOETSCHER MFG. CO., Dubuque, Iowa. Filed June 17, 1927.

Particular description of goods.—Doors.
Claims use since Apr. 15, 1927.

Ser. No. 250,780. ACME BRICK COMPANY, Fort Worth, Tex. Filed June 20, 1927.

TWO-IN-ONE

Particular description of goods.—Hollow Building Tile.
Claims use since May 6, 1926.

Ser. No. 250,886. ACME BRICK COMPANY, Fort Worth, Tex. Filed June 22, 1927.

COLONIAL

Particular description of goods.—Brick.
Claims use since January, 1927.

Ser. No. 250,889. ACME BRICK COMPANY, Fort Worth, Tex. Filed June 22, 1927.

QUEEN ANNE

Particular description of goods.—Brick.
Claims use since January, 1927.

Ser. No. 250,990. THE B. F. GOODRICH COMPANY, New York, N. Y. Filed June 23, 1927.

AEROBOARD

Particular description of goods.—Sheet Material Consisting Chiefly of Cellular Rubber for Structural Purposes.
Claims use since January, 1927.

CLASS 13.

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.

Ser. No. 247,219. SCOVILL MANUFACTURING COMPANY, Waterbury, Conn. Filed Apr. 9, 1927.

M-VB

Particular description of goods.—Ball Cocks, Flush Valves; Tank Fittings—Namely, Levers, Floats, Rods, Elbows, Flanges, Hooks, and Metal Tubing.
Claims use since August, 1909.

Ser. No. 248,501. KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Filed May 5, 1927.

The drawing is lined for blue.

Particular description of goods.—Enamel Ware—Namely, Combinettes, Teakettles, Coffeepots, Rice Boilers, Oval Dish Pans, Round Dish Pans, Teapots, Basins, Convex Saucepans, Toilet Pitchers, Mixing Bowls, Preserving Kettles, Convex Kettles, Sink Strainers, Pudding Pans, and Convex Saucepots.

Claims use since about March, 1926.

Ser. No. 248,550. THE BRISTOL COMPANY, Waterbury, Conn. Filed May 6, 1927. Under 10-year proviso.

The lining is for shading only.

Particular description of goods.—Metallic Fasteners for Belts.

Claims use since July 30, 1889.

Ser. No. 249,112. THE BRIDGEPORT CHAIN COMPANY, Bridgeport, Conn. Filed May 17, 1927.

Readi-Set

No exclusive claim is made to the representation of the goods apart from the mark as shown.

Particular description of goods.—Window Chains, Window-Chain Sets, and Fixtures.

Claims use since Apr. 22, 1927.

Ser. No. 251,275. HOOKLESS FASTENER COMPANY, Meadville, Pa. Filed June 29, 1927.

Particular description of goods.—Separable Fasteners Especially of the Slider-Controlled Type.

Claims use since Feb. 22, 1927.

Ser. No. 251,634. D. B. SMITH & COMPANY, INC., Utica, N. Y. Filed July 7, 1927.

AQUMATIC

Particular description of goods.—Hose Nozzles and Spray Nozzles.

Claims use since about Mar. 1, 1925.

CLASS 14.

METALS AND METAL CASTINGS AND FORGINGS.

Ser. No. 250,685. ELKON WORKS, INC., Weehawken, N. J. Filed June 17, 1927.

ELKONITE

Particular description of goods.—Metal Alloys, Compound Metals, and Tungsten-Containing Metallurgical Products for Use in Bearings, Contactors, Vibrators, Make-and-Break Devices, and Welding Electrode Elements.

Claims use since December, 1925.

Ser. No. 251,260. DOEHLER DIE-CASTING CO., Brooklyn, N. Y. Filed June 29, 1927.

The term "Zink" is hereby disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Die-Casting Metal and Die Castings.

Claims use since Feb. 1, 1925.

Ser. No. 251,261. DOEHLER DIE-CASTING CO., Brooklyn, N. Y. Filed June 29, 1927.

Particular description of goods.—Die-Casting Metal and Die Castings.

Claims use since Jan. 1, 1927.

Ser. No. 251,262. DOEHLER DIE-CASTING CO., Brooklyn, N. Y. Filed June 29, 1927.

Particular description of goods.—Die-Casting Metal and Die Castings.

Claims use since Jan. 1, 1927.

CLASS 15.

OILS AND GREASES.

Ser. No. 237,221. BEACON OIL COMPANY, Boston, Mass. Filed Sept. 14, 1926.

BEACON

Particular description of goods.—Gasoline.

Claims use since July, 1921.

Ser. No. 237,222. BEACON OIL COMPANY, Boston, Mass. Filed Sept. 14, 1926.

BEACON

Particular description of goods.—Fuel Oil.

Claims use since July, 1920.

Ser. No. 248,331. GEORGE W. SPANGLER, Akron, Ohio. Filed May 2, 1927.

Purathol
THE DRY GAS

No claim is made herein to the words "The Dry Gas" apart from the mark shown in the drawing.

Particular description of goods.—Energized Gasoline.

Claims use since June 1, 1925.

Ser. No. 249,139. UNION OIL COMPANY OF CALIFORNIA, Los Angeles, Calif. Filed May 17, 1927.

AURORA

Particular description of goods.—Fuel Oil, Gasoline, Lubricating Oil, Kerosene, Petroleum Distillates, Petroleum Waxes, and Lubricating Greases.

Claims use since June 1, 1907.

Ser. No. 250,485. ILLINOIS FARM SUPPLY COMPANY, Chicago, Ill. Filed June 18, 1927.

No claim is made for the word "Service" apart from the mark shown in the drawing.

Particular description of goods.—Petroleum Products and Oils—Namely, Gasoline, Kerosene, Distillate, Road Oils, Lubricating Greases, and Lubricating Oils.

Claims use since about Apr. 8, 1927.

CLASS 16.

PAINTS AND PAINTERS' MATERIALS.

Ser. No. 245,791. KEYSTONE VARNISH COMPANY, Brooklyn, N. Y. Filed Mar. 15, 1927.

No claim is made to the exclusive use of the words appearing on the drawing other than the words "Degrah" and "Keystone Varnish Company." The shading indicates green color.

Particular description of goods.—Varnishes and Enamel Paints.

Claims use since about Jan. 1, 1922.

Ser. No. 249,499. BOSTON VARNISH COMPANY, Everett, Mass. Filed May 25, 1927.

CELOID

Particular description of goods.—Enamel Paint.
Claims use since 1906.

Ser. No. 250,476. A. B. SORRELLS, Hartshorne, Okla. Filed June 13, 1927.

ABS

A B Sorrells

The name appearing as part of the mark is a facsimile of the signature of the applicant, A. B. Sorrells.
Particular description of goods.—Furniture and Automobile Polish.
Claims use since Nov. 15, 1925.

Ser. No. 251,292. THE AUFDEMKAMPE HARDWARE CO., Cincinnati, Ohio. Filed June 29, 1927.

No claim is made to the words "Quality, Service, Price" apart from the mark shown on the drawing.
Particular description of goods.—Enamel Paint, Ready-Mixed Paints, and Varnishes.
Claims use since Jan. 1, 1925.

Ser. No. 251,293. THE AUFDEMKAMPE HARDWARE CO., Cincinnati, Ohio. Filed June 29, 1927.

No claim is made to the words "Quality, Service, Price" apart from the mark shown on the drawing.
Particular description of goods.—Enamel Paint, Varnishes, and Ready-Mixed Paints.
Claims use since Jan. 1, 1925.

Ser. No. 251,595. WERNER & MERTZ AKTIENGESELLSCHAFT, Mainz, Germany. Filed July 6, 1927.

Erdal

Particular description of goods.—Polishing Wax for Floors.
Claims use since Nov. 24, 1922.

Ser. No. 251,723. THE EGYPTIAN LACQUER MANUFACTURING COMPANY, New York, N. Y. Filed July 9, 1927.

Particular description of goods.—Lacquers, Lacquer Enamels, Stains; Polishes for Automobiles, Furniture, and the Like; Glazes, Thinners, Primers, Fillers, and Intermediates—i. e., Materials Used for a Lacquer Base and as a Sealing Coat Between Old Varnish or Paint and Lacquer Finishes.
Claims use since Apr. 6, 1927.

Ser. No. 251,781. THE MORGAN COMPANY, Peoria, Ill. Filed July 9, 1927.

VELVET-KOTE

Particular description of goods.—Flat Wall Paint.
Claims use since about Apr. 1, 1907.

CLASS 17.

TOBACCO PRODUCTS.

Ser. No. 250,869. BROWN & WILLIAMSON TOBACCO CORPORATION, Winston-Salem, N. C. Filed June 11, 1927. Under 10-year proviso.

OLD NORTH STATE

Particular description of goods.—Smoking and Chewing Tobacco and Cigarettes.
Claims use since Jan. 1, 1873.

Ser. No. 251,175. ABRAM S. CRONK, Waterbury, Conn. Filed June 27, 1927.

ABE'S IRISH

ROSE

Particular description of goods.—Cigars.
Claims use since August, 1926.

CLASS 19.

VEHICLES, NOT INCLUDING ENGINES.

Ser. No. 231,717. AUTOMOTIVE SPECIALTIES COMPANY, Cleveland, Ohio. Filed May 17, 1926.

FOURSOM
Rumble Seats

The words "Rumble Seats" are disclaimed apart from the mark as shown.
Particular description of goods.—Rumble Seats.
Claims use since Jan. 1, 1926.

Ser. No. 245,233. THE SUNBEAM MOTOR CAR CO., LTD., Wolverhampton, England. Filed Mar. 4, 1927.

Particular description of goods.—Motor Cars.
Claims use since Sept. 16, 1926.

Ser. No. 250,824. CHRIS SMITH & SONS BOAT CO., Algonac, Mich. Filed June 20, 1927.

CADET

Particular description of goods.—Marine Runabouts, Boats, and Launches.
Claims use since Dec. 1, 1926.

Ser. No. 250,825. CHRIS SMITH & SONS BOAT CO., Algonac, Mich. Filed June 20, 1927.

Chris-Craft

No claim is made to the word "Craft" aside from the mark as shown.
Particular description of goods.—Marine Runabouts, Boats, and Launches.
Claims use since June 1, 1922.

CLASS 20.

LINOLEUM AND OILED CLOTH.

Ser. No. 248,351. CONGOLEUM-NAIRN INC., Philadelphia, Pa. Filed May 3, 1927.

LACOLEUM

Particular description of goods.—Prepared Floor Coverings of the Oiled-Cloth Type.
Claims use since Mar. 28, 1927.

Ser. No. 252,272. THE PARAFFINE COMPANIES, INC., San Francisco, Calif. Filed July 19, 1927.

MASTIPAVE

Particular description of goods.—Floor Covering for Industrial Use and Comprising a Felt Base Treated with a Bituminous Compound.
Claims use since Mar. 30, 1927.

CLASS 21.

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.

Ser. No. 233,149. E. M. SARGENT CO., Oakland, Calif., assignor to Radio Constructors Corporation, Oakland, Calif., a Corporation of California. Filed June 12, 1926.

INFRA-DYNE

Particular description of goods.—Radio Receiving Sets and Parts for Radio Receiving Apparatus, Particularly Amplifiers Comprising an Assembled Unit Having Three Stages of Radiofrequency.
Claims use since May 22, 1926.

Ser. No. 234,047. MONTGOMERY WARD & CO., INCORPORATED, Chicago, Ill. Filed July 2, 1926.

Airline

Particular description of goods.—Radio Receiving Sets and Radio Parts and Accessories—Namely, Vacuum Tubes, Tube Rejuvenators, Tuning Coils, Storage Batteries, B Batteries, Dry Cells, Battery Chargers, Trickle Chargers, Loud Speakers, Head Phones, B-Battery Eliminators, Transformers, Condensers, Grid Leaks, Knocked-Down Kits Containing Parts for Radio Receiving Sets, Dials, Rheostats, and Sockets.
Claims use since September, 1922.

Ser. No. 241,655. THE CREST COMPANY, Chicago, Ill. Filed Dec. 18, 1926.

Particular description of goods.—Electrical Lamps, Torchères, and Candelabra.
Claims use since January, 1918.

Ser. No. 246,121. RAINBOW LIGHT, INC., New York, N. Y. Filed Mar. 21, 1927.

Rainbow SUPER-TUBES

No claim is made to the word "Tubes" apart from the mark as shown.
Particular description of goods.—Illuminating Tubes—Namely, Electric Display and Advertising Luminous Tubes in the Form of Letters, Designs, or Signs.
Claims use since Mar. 12, 1927.

Ser. No. 246,273. A/S. FISKER & NIELSEN, Copenhagen, Denmark. Filed Mar. 24, 1927.

NILFISK

Particular description of goods.—Electrically-Operated Vacuum Cleaners and Parts Thereof, Motors, and Dynamos.
Claims use since 1910.

Ser. No. 246,557. LEAHY ELECTRIC CORP., New York, N. Y. Filed Mar. 29, 1927.

ON-T-I-T-E
SPLICING COMPOUND
O-N-T-I-T-E

No claim is made to the words "Splicing Compound" apart from the mark shown in the drawing.
Particular description of goods.—Friction Tape and Splicing Compound in the Form of Rubber Tape Used for Covering and Insulating Electric Wire.
Claims use since on or about Jan. 1, 1926.

Ser. No. 249,810. SCHLEICHER, INC., Chicago, Ill. Filed May 21, 1927.

STYKLE

Particular description of goods.—Electrical Radiators for Heating Air.
Claims use since May. 2, 1927.

Ser. No. 249,811. SCHLEICHER, INC., Chicago, Ill. Filed May 21, 1927.

KONVEKTAIR

Particular description of goods.—Electrical Radiators for Heating Air.
Claims use since May 2, 1927.

Ser. No. 250,118. JAMES W. DUFF, doing business as Van Dyke Laboratories, Newark, N. J. Filed June 7, 1927.

VAN DYKE

The drawing is lined to indicate shading.
Particular description of goods.—Radio Vacuum Tubes.
Claims use since Feb. 1, 1927.

Ser. No. 250,137. PEOPLE'S OUTFITTING COMPANY, Detroit, Mich. Filed June 7, 1927.

It's Easy to Pay—the People's Way

Particular description of goods.—Radio Receiving Sets and Parts Thereof—Namely, Tuned Radiofrequency Units, Radiofrequency Amplifying Units, and Thermionic Detecting Units.
Claims use since Apr. 14, 1922.

Ser. No. 250,291. ASPHALT PRODUCTS COMPANY, Chicago, Ill. Filed June 10, 1927.

ALRUBCO

Particular description of goods.—Mineral-Rubber and Asphaltic Insulating Compounds for Electrical Purposes.
Claims use since Nov. 1, 1906.

CLASS 23.

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.

Ser. No. 251,398. KITSON MACHINE SHOP, Lowell, Mass. Filed July 1, 1927. Under 10-year proviso.

KITSON

Particular description of goods.—Textile Machinery and Parts Thereof.
Claims use since 1849.

Ser. No. 251,720. JOHN DEERE TRACTOR COMPANY, Waterloo, Iowa. Filed July 9, 1927.

POWERFARMER

Particular description of goods.—Tractors.
Claims use since Apr. 29, 1927.

CLASS 24.

LAUNDRY APPLIANCES AND MACHINES.

Ser. No. 251,741. GRAYBAR ELECTRIC COMPANY, INC., New York, N. Y. Filed July 9, 1927.

GraybaR

Particular description of goods.—Electric Ironing Machines Used for Laundry Purposes.
Claims use since January, 1926.

CLASS 26.

MEASURING AND SCIENTIFIC APPLIANCES.

Ser. No. 251,733. GRAYBAR ELECTRIC COMPANY, INC., New York, N. Y. Filed July 9, 1927.

GraybaR

Particular description of goods.—Ammeters, Current Meters, Voltammeters, and Voltmeters.
Claims use since January, 1926.

Ser. No. 252,026. AUTOMATIC TICKET REGISTER CORPORATION, New York, N. Y. Filed July 14, 1927.

Cancellograph

Particular description of goods.—Ticket Printing, Registering, and Issuing Machines.
Claims use since June 29, 1927.

CLASS 27.

HOROLOGICAL INSTRUMENTS.

Ser. No. 249,445. THE SOCIÉTÉ ANONYME DES ETABLISSEMENTS LÉON HATOT, Paris, France. Filed May 23, 1927.

ATO

Particular description of goods.—Clocks.
Claims use since Jan. 10, 1920.

CLASS 28.

JEWELRY AND PRECIOUS-METAL WARE.

Ser. No. 232,370. YOUNG & MINK, INC., Springfield, Mass. Filed May 27, 1926.

La Moyne

Particular description of goods.—Necklaces and Rosaries Made in Part of Precious Metals.
Claims use since about Apr. 28, 1926.

CLASS 34.

HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.

Ser. No. 235,619. R. J. SCHWAB & SONS COMPANY, Milwaukee, Wis. Filed Aug. 5, 1926.

GILTEDGE

Particular description of goods.—Warm-Air Furnaces for Use with Coal, Wood, Oil, Gas, or Other Fuel.
Claims use since 1878.

Ser. No. 241,087. THE BUCKLEY, NEWHALL COMPANY, New York, N. Y. Filed Dec. 7, 1926.

BLUE RIBBON

Particular description of goods.—Gas, Vapor, and Oil Lamps; Heating-Radiator Covers for Ornament.
Claims use since Aug. 10, 1910.

Ser. No. 241,088. THE BUCKLEY, NEWHALL COMPANY, New York, N. Y. Filed Dec. 7, 1926.

The drawing is lined to indicate the color blue.
Particular description of goods.—Gas, Vapor, and Oil Lamps; Heating-Radiator Covers for Ornament.
Claims use since Aug. 10, 1910.

Ser. No. 244,886. THE QUINCY STOVE MANUFACTURING COMPANY, Quincy, Ill. Filed Feb. 25, 1927.

FIRESIDE

Particular description of goods.—Coal Heaters and Stoves.
Claims use since Apr. 15, 1925.

Ser. No. 250,940. ARTHUR O. ROSENLUND, doing business as American Heating Company, Philadelphia, Pa. Filed June 22, 1927.

LIFETIME

Particular description of goods.—Hot-Water, Steam, Vacuum Vapor, and Hot-Air Heating Systems Utilizing Coal, Oil, or Gas as Fuels and for Water Heaters, and Steam Boilers for Heating Systems.
Claims use since June 8, 1927.

Ser. No. 251,156. TUTTLE & BAILEY MANUFACTURING COMPANY, New York and Brooklyn, N. Y. Filed June 25, 1927.

TANVORY

Particular description of goods.—Heating and Ventilating Apparatus—Namely, Grilles, Screens, Registers, and Ventilators, Either Plain or Ornamental.
Claims use since Feb. 28, 1927.

Ser. No. 251,362. POTTER PRODUCTS CORPORATION, New York, N. Y. Filed June 30, 1927.

Potter

The mark consists in the word "Potter" in the handwriting of Leo Potter, vice president of Potter Products Corporation.
Particular description of goods.—Pocket Friction Lighters for Pipes, Cigars, and Cigarettes.
Claims use since Mar. 10, 1927.

CLASS 35.

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.

Ser. No. 252,096. THE FIRESTONE TIRE & RUBBER COMPANY, Akron, Ohio. Filed July 15, 1927.

COURIER

Particular description of goods.—Vehicle Tires of Rubber or Rubber Composition or Rubber and Fabric, and Inner Tubes Therefor.
Claims use since June 22, 1927.

CLASS 36.

MUSICAL INSTRUMENTS AND SUPPLIES.

Ser. No. 238,101. ARTCRAFT ORGAN CO., Santa Monica, Calif. Filed Oct. 4, 1926.

No claim is made to the geographical terms "Santa Monica, California" apart from the mark shown.
Particular description of goods.—Pipe Organs, Reed Organs, and Parts Thereof.
Claims use since Mar. 1, 1922.

Ser. No. 250,726. WEISER & SONS, Chicago, Ill. Filed June 17, 1927.

The Little Wonder

Particular description of goods.—Pianos.
Claims use since Apr. 23, 1927.

Ser. No. 251,301. LEEDY MANUFACTURING COMPANY, Indianapolis, Ind. Filed June 29, 1927.

VIBRAPHONE

Particular description of goods.—Xylophones.
Claims use since Apr. 21, 1927.

CLASS 37.

PAPER AND STATIONERY.

Ser. No. 228,490. SEAMAN PAPER COMPANY, Chicago, Ill. Filed Mar. 11, 1926.

No claim is made to the exclusive right to the words "Featherweight Enamel" forming part of said trade-mark except as in association with the mark as shown.
Particular description of goods.—Coated Printing Paper.
Claims use since Nov. 1, 1924.

Ser. No. 233,399. STUDENTS' PUBLISHING COMPANY, Oakland, Calif. Filed June 17, 1926.

UNITAB

Particular description of goods.—Separator Sheets for Loose-Leaf Folders.
Claims use since Mar. 20, 1926.

Ser. No. 234,847. KOH-I-NOOR BLEISTIFTFABRIK, L. & C. Hardtmuth, Budweis, Czechoslovakia. Filed July 21, 1926.

KOH-I-NOOR

Particular description of goods.—Label Dampeners, Paper Weights, Drawing Pins, Chalk Holders, Lead and Colored Pencils; Lead, Copying, and Colored Pencil Refills for Mechanical Holders (also Pocket Pencils), Ivory Utensils for Polishing and Folding Purposes, Copying Wells, Desk Protectors for Holding Penholders and Other Writing and Drawing Utensils, Graphites, Pocket Cases with Lead, Copying, and Colored Pencils, Holders, or Refills, Pen Boxes, Penwipers, Blotters, Sketching Charcoal; Writing, Drawing, and Marking Chalks.
Claims use since 1890.

Ser. No. 239,147. Schwan-Bleistift-Fabrik A.-G., Nuremberg, Germany. Filed Oct. 23, 1926.

Aldebaran

Particular description of goods.—Black-Lead Pencils, Colored Pencils, Copying Pencils, Slate Pencils, Mechanical Pencils, Lead Refills and Colored-Lead Refills, Chalks, Rubber Erasers, Penholders, Fountain Penholders, Gold Nibs, and Stylographics.
Claims use since July 23, 1900.

Ser. No. 239,148. Schwan-Bleistift-Fabrik A.-G., Nuremberg, Germany. Filed Oct. 23, 1926.

Othello

Particular description of goods.—Lead Pencils, Colored-Lead Pencils, Copying Pencils, Slate Pencils, Mechanical Lead Pencils, Chalk, Rubber Erasers, and Penholders.
Claims use since Jan. 1, 1898.

Ser. No. 239,149. Schwan-Bleistift-Fabrik A.-G., Nuremberg, Germany. Filed Oct. 23, 1926.

„Swan"

Particular description of goods.—Black-Lead Pencils, Copying Pencils, Colored Pencils, and Other Pencils, Mechanical Lead Pencils, Penholders, Chalks, Rulers, and Rubber Erasers.
Claims use since Oct. 12, 1885.

Ser. No. 250,221. Bradner Smith & Co., Chicago, Ill. Filed June 9, 1927.

Sunshine Greeting

No claim is made to the word "Greeting" apart from the mark as shown.
Particular description of goods.—Writing Paper, Envelopes, and Bristol Board.
Claims use since April, 1926.

Ser. No. 250,659. Charles W. Williams Co., Inc., New York, N. Y. Filed June 16, 1927.

Rajahtone

Particular description of goods.—Decorative Box Papers.
Claims use since Aug. 19, 1926.

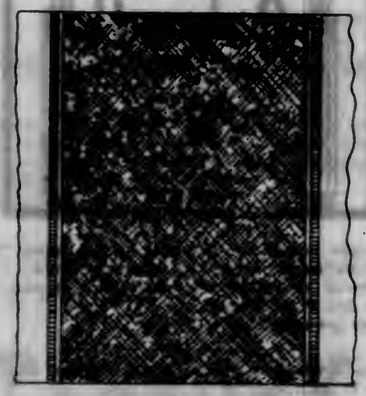
Ser. No. 250,660. Charles W. Williams Co. Inc., New York, N. Y. Filed June 16, 1927.

Sultantone

Particular description of goods.—Decorative Box Papers.
Claims use since Feb. 1, 1927.

Ser. No. 250,873. Universal Portland Cement Co., Chicago, Ill. Filed June 21, 1927.

Universal Blue Book



Applicant specifically disclaims the words "Blue Book" appearing upon the drawing separate and apart from the combination shown in drawing.
Particular description of goods.—Blank Books.
Claims use since May 11, 1927.
